STEAM RAILWAY DEPARTMENT AND GENERAL MATTER.

A

Acetylene gas transportation regulations.......... 234
Aerial Transportation in Canada........................ 256, 316, 492, 539, 596, 646
Alaska railway development....134, 190, 431, 536, 602
Alberta and Great Waterways Ry. development 26, 79, 134, 253, 431
Alberta-Hudson Bay Ry. development................ 253
Algoma Central and Hudson Bay Ry. Finance, Meetings, etc.............. 485, 536
Algoma Eastern Ry.—
  Appointments 247, 542
  Finance, Meetings, etc.............. 485, 536
Altimas, J. D.—Car service.............. 366
American Railroad Association.............. *172, 187, 347 to 364, 383, 578
  (See also Mechanical Conventions at Atlantic City).
American Railway Master Mechanics' Association.
  (See Mechanical Conventions at Atlantic City).
American Raiway Express Co.............. 54, 136, 228, 345, 630
American Railway Tool Foremen's Association 543
Appointments, Transportation 19, 71, 131, 177, 247, 310, 372, 440, 494, 542, 595, 646
Argentine Railways Requirements.............. 57
Athabasca and Grande Prairie Ry. Development 79, 134, 190
Athabasca, Grande Prairie and Fort Vermilion Ry. Development 431, 536
Atlantic, Quebec and Western Ry. Finance...... 601

B

Bathurst Lumber Co.'s Railway.............. 654
Beatty, E. W., Government Ownership of Railways 373
  Speech at Toronto.............. 648
Bell River Valley Ry. Development.............. 190
Birthdays of Transportation Men............ 7, 69, 114, 170, 234, 290, 384, 417, 471, 522, 581, 638
Board of Railway Commissioners—
  Acetylene gas regulations.............. 234
  Appointments 494
  Car demurrage rules.............. 371
  Cash payment of transportation charges 126, 291
  Crossing Inspectors' Pay.............. 491
  Guard rail, vestibule door and platform regulations 314
  Marker Sockets on Cars.............. 496
  Minimum Weight on Canned Goods in Carloads 27
  Obscuring Locomotive Headlights.............. 28
  Orders by, Summaries of........... 25, 76, 116, 200, 236 312, 376, 426, 480, 490, 544, 582, 659
  Railway Mail Car Specifications.............. 78
  Safety appliance standards 232
  Safety Appliances on Freight Cars.............. 597
  Traffic Orders 32, 74, 125, 255, 306, 383, 435, 496, 534, 604, 647
  Train and Interlocking Rules.............. 27
  Warnings of Switching 32
  Watchmen at Crossings.............. 428
  Weighing cars on track scales.............. 255
Boston and Maine Rd. Finance.............. 73
Bridge, proposed, over St. Lawrence River...... 230
British American Nickel Corporation.............. 381
Brake and Signal Equipment.............. 361
Burrard Inlet Tunnel and Bridge Co. Development 313, 381
British Railways and the War.............. 66, 642
Brown, L.—Railway Car Trucks.............. 55
Brunner, Mond, Canada Ltd.............. 79, 190
Burnett, J. A.—Locomotive Coaling Plants......*173

C

Calgary and Fernie Ry. Development.......... 26, 351
Calgary and South Western Ry. Development 26, 79, 253, 381, 536
Canada and Gulf Terminal Ry. Development 79, 190
Canadian Express Co.............. 54, 107, 136, 227, 287, 345, 409, 629, 686
Canadian Government Railways Employes Compensation Act 243
Canadian Government Rys.—
  Frog, Switch and Crossing Manufacture at Transcona Shops *65
  Operating Results 292
  Steel Bridge Replacements on Sydney Subdivision *58
  (See also Canadian National Rys).
Canadian National Express Co............ 572, 629, 686
Canadian National Rys.—
  Appointments 19, 71, 131, 177, 247, 310, 372, 440, 494, 542, 595, 646
  Board reorganization 652
  Canada's Great National Asset.............. 528
  Colonist cars *300
  Construction, Betterments, Etc........ 28, 80d, 128, 192, 246, 318, 379, 434, 485, 545, 590, 658
  Cylinder re-boring bar..............*238
  Directors' Inspection.............. 17
  Earnings and Expenses.............. 127, 315, 380, 427, 484, 533, 584, 590, 649
  Electric Railways Acquired by.............. 23
  Finance 414
  Inauguration of.............. 22
  Leaside Shops, Etc.............. 125, *289
  Locomotives 244
  Officials 199, 251
  President's Inspections.............. 258, 309
  President's Message to Employes.............. 15
  Rolling Stock.............. 22, 80, 120, 188, 257, 299, 303, 377, 433, 538, 603, 651
  St. Malo, Que., Shops.............. 315
  Steel rails ordered 378
  See also Canadian Government Rys. and Canadian Northern Ry.
Canadian Niagara Bridge Co..............431, 654
Canadian Northern Express Co.—.............. 80, 136, 227, 287, 345, 409, 520
  (See aso Canadian National Express Co).
Canadian Northern Ry.—
  Construction, Betterments, Etc..........15, 128, 192
  Earnings, Expenses, Etc.............. 72
  Finance 73, 192, 246, 317, 377, 427, 428, 430, 485, 539, 601, 647
  Montreal Tunnel Construction, Operation, Etc. *61
  Montreal Tunnel From an Economic Point of View 1
  Mountain Gradients *643
  Rails lifted for war purposes.............. 292, 495
  (See also Canadian National Rys).
Canadian Northern Rolling Stock Co.............. 127
Canadian Pacific Ry.—
  Aerial transportaton project.............. 316
  Agents, advice to.............. 234
  Appointments 21, 72, 132, 177, 247, 310, 372, 440, 494, 542, 595, 646
  Conductors' Co-operation 495
  Conference of Officers and Employes..............*193
  Construction, Betterments, Etc.............. 13, 75, 130, 189, 258, 319, 383, 432, *489, 535, 603, 661
  Earnings, Expenses, Etc.............. 72, 127, 380, 427, 484, 533, 584, 649
  Finance, Meetings, Etc.............. 192, 485, 652
  General Service Car..............*307
  Honor Roll.............. 6, 136, 170, 248, 384, 581
  Inspection 241
  Locomotive tenders *11
  Pensions 314
  Quebec Terminal Facilities 364
  Recreation Club at Toronto.............. 314
  Re-employment of returned soldiers...... 537, 661
  Refrigerator cars *585
  Report, annual 231, 301
  Rolling stock 80, 120, 188, 257, 299, 377, 433, 538, 603, 651
  Social clubs 251, 375, 525, 601
  Speeches at Quebec Board of Trade Dinner to President 599
  Stockholders, Alien 380
  Telegraphs 54, 107, 168, 227, 409, 520, 574
  Trans-Canada train 315, *378
  Troops, Handling of Returning.............. 6
  Viaduct at Toronto..............*109
  Welcome sign at Montreal *250
Canadian Railway Club, Annual Meeting.............. 320
Canadian Railway War Board—
  Per Diem Bureau for Canadian and U.S. Traffic 8
  Railways and the war.............. 252
  Record of Work.............. 13, 78, 133, 257, *297
  Transportation Charges, Cash Payment Ordered 5
  (See also Railway Association of Canada).
Canadian Ticket Agents' Association...... 485, 590

Canadian Western Ry. Development 253, 491
Car construction *352
Car journal brasses, machine for boring linings *245
Car labor prices 347
Car Lining and Loading for Potatoes *481
Car loading, heavy loading—quick release 416
Car material prices 347
Car Service 366
Car truck design and maintenance problems *237, 307, 416
Car Trucks 55, 349
Car wheels *351
Cars for Indian Railways *169
Cars, Canadian, Detained in U.S. 583
Cars, Shortage of 660
Cars, Tank 356
Car work, cut off saw for *252
Curve chart for resurveys *594
Cylinder re-boring bar *238
Caraquet and Gulf Shore Ry. Appointments 247, 372
Carbonization in Locomotive Valve Chambers and Cylinders *475
Central Canada Express Co 572, 629
Central Railway of Canada 70, 79, 232, 260, 381
Central Vermont Rd. (U.S.R.A.) Appointments 494
Coal conservation, shipments, etc 430
Coleman, D. C., Address at Calgary Industrial Congress 523
Collinson, F. E., Canadian Engineers First Tramways Company's Work in France *575
Commercial Cable Co 168, 519, 573
Coquitlam Terminal Co 295
Couplers 349
Crossings Inspectors Pay 491
Cumberland Railway and Coal Co 539

D

Delaware and Hudson Rd. Appointments 72
Deliveries on Public and Private Sidings 525
Depreciation of Freight Cars 348
Deubelbeiss, H. S., Design and Construction of Concrete Viaduct, C.P.R., Toronto *109

Canadian Railway and Marine World

January, 1919

The Canadian Northern Railway's Montreal Tunnel From an Economic Point of View.

By H. K. Wicksteed, B.A.Sc., C.E.

This paper has been written in response to a very kind invitation to give something of interest in connection with the history of the Montreal tunnel. What were the considerations which led up to it, and made it seem a practical scheme? As the Canadian Northern Passenger Department has put it in its window dressing, "Why was the tunnel built?" And I have given my paper the title of "The Montreal tunnel from an economic point of view."

With the actual construction of the tunnel I do not propose to deal to any greater extent than is necessary to enable you to understand the problem, not because there were not a great number of intensely interesting points about it, and not because I was not in the tunnel a great many times during its progress, but because the construction side has been dealt with very ably by my colleague, S. P. Brown, and I believe is to be dealt with further by one of his assistants, J. L. Busfield, and they are both better posted in details of it than I. Mr. Brown has made tunnelling a specialty, and his whole soul was in his work, and I may say that it is a pretty large and comprehensive soul.

Both by temperament and training it is the economic side of things which has always appealed to me most. Railways are commercial concerns, and the tunnel is an essential part of a great railway. If it cannot be justified in a commercial sense, if it cannot pay interest on its cost, it has no right to exist. The economic aspect of engineering works has come into great prominence of late years and [illegible] of railways. Nearly all our great tunnels have been built to carry railways past, or under, obstructions of one kind or another, so that the history of tunnelling is almost altogether confined to the last 70 or 80 years, and most of the great tunnels are much younger than that.

Railway construction started on a large scale first in England, where population was already dense, and traffic was waiting to be carried in large volume. A railway once built, even on what we should now consider very crude lines, was practically sure of paying its way from the very start, and the cost was a minor consideration as soon as the potentialities of the steam railway came to be understood. It was when the building of railways extended to this continent of great dis-

[illegible], and at the same time a sparse population, that it was found that not only [illegible] a very heavy drain on [illegible] [illegible], but that capital was very hard to get in any case, and had to be brought in from outside, hence the difference in [illegible] between the early American [illegible] and the English ones, and the expedients of sharp curvature, heavy [illegible] and [illegible] construction, which [illegible] [illegible] to reduce the capital cost; and [illegible] [illegible] [illegible] [illegible], English [illegible] [illegible] [illegible] American roads. As time went on and the traffic became heavier, [illegible] [illegible] [illegible] other lines were built between the same termini and competition became [illegible], [illegible] [illegible] the era when the balancing of cost against more perfect location and construction began to be a regular study, and while I think a good many of the earlier engineers, Latrobe, for instance, had thought a good deal about these matters (their works shewed that they did), it was Wellington who first committed his ideas to paper, and his writings are still useful as well as monumental.

The element of location, which conduces more than any other to reduce the cost of haul, is, of course, that of gradients, and in lessening gradients in rough country there is very often a strong temptation, and often an absolute necessity, to resort to tunnelling. Hence nearly all our tunnels are in the two great mountain ranges of the continent, one east and the other west of the Mississippi River. There are a few, however, on this continent, for the construction of which there are other or contributing causes; and a great many on the other side of the Atlantic, cases where property damage was to be avoided at almost any cost, or where navigation interests were paramount, and a tunnel was more practicable than a high level bridge. The Detroit-Sarnia and Hudson River tunnels are instances of the latter class, and the Baltimore and Washington tunnels are instances of the former, and to this class our own Montreal tunnel more properly belongs.

Towards the close of 1906, more than 12 years ago, I was instructed to commence surveys and location for the Canadian Northern Ry. from Montreal westward, primarily to the Georgian Bay, and eventually, as it turned out, to Port Arthur, to connect with the western system, which had already developed to very considerable proportions. My headquarters were at that time in Montreal, so that it was natural that a great deal of my attention should be devoted to what was in any case the problem of greatest interest and best worth studying out. Montreal and its problems and growth were not a new matter to me, for I had spent three years of my earlier life at McGill University, had geologized on Montreal Mountain with Sir William Dawson, and one of my closest friends was a prominent business man and an ex-mayor of Westmount.

The Canadian Northern, two or three years before, had purchased and completed the Chateauguay & Northern Ry. from Hochelaga to Joliette, and about the same time purchased the Great Northern Ry. of Canada, extending from Hawkesbury to Rivière à Pierre on the Quebec & Lake St. John Ry., which constituted a sort of [illegible] system by which part of the grain freight from Parry Sound by the Canada Atlantic found its way to an elevator at Quebec. The Superintendent of that railway system was offered one of the farms near Longue Pointe and we [illegible] to purchase this for the railway, and by this means secured an approach to the river front, and within a very short time thereafter, a connection with the Harbor Commissioners' tracks. This had already secured for the road an ocean terminal, and it developed later that from this farm, now the Longue Pointe yard (and a very busy yard indeed), there extended a very marked depression clear across the island to the Riviere des Prairies, and the only one of its kind between Racine and Bout de l'Isle. Everywhere else there was a high, broad-backed ridge of limestone to the north of the mountain itself, and to the south a long talus slope of sand and glacial drift.

The Northern Colonization Ry., afterwards the Quebec, Montreal & Occidental Ry., and now part of the C.N.R., climbed over the top of the limestone at Mile End, at an elevation of 200 ft. above the river, and down again with a very strenuous grade of 90 ft. to the mile, to Hochelaga. The Ontario & Quebec Ry., the C.P.R.'s entry from the southwest, climbed over talus debris, and dropped similarly, although not so viciously, to the Windsor St. Station.

Our discovery gave us an entry somewhat circuitous, it is true, but with a short maximum grade of 30 ft. to the mile.

This, then, was the obvious route for a freight line from the west to Montreal harbor, and it must be remembered that the C.N.R. was at that time purely a granger road and interested almost exclusively in the hauling of wheat to the seaboard. Here, therefore, was the starting point of the survey to Port Arthur, and we still hope to see this line built at a very early date. The surveys west showed that an excellent line could be had north of the Great Lakes to Port Arthur at moderate cost; in proportion to cost probably the best long distance line in the world. The Pacific coast extension also gave wonderful results, and the system promised to be easily the best of all the transcontinental lines on this continent or any other. While, however, this arrangement was entirely satisfactory as regards through freight traffic to and from the west, it did not meet the requirements of the local traffic, both passenger and freight, of the city itself. Moreover, a transcontinental, such as that described, must of necessity have a suitable terminal in the eastern metropolis to make it complete and well balanced, and this became the new study of the location staff.

Montreal proper, as everyone knows and many have said, is wedged in between the river and the mountain, on a narrow strip of territory consisting first of a river flat half a mile wide, and farther back a terrace 70 ft. higher, and of about the same width, extending to the mountain slope. Up to 30 years ago the site was an ideal one for a city of moderate size, although even then it was remarkable among American cities for its density of population. While Toronto was building up, with detached houses with lawns and gardens, Montreal adhered to long terraces of houses of grey limestone, built right up to the street, and extending for miles almost without a break. Only on the slopes of the mountain the "seats of the mighty," of the Allans, the Redpaths, the Angus's, and other merchant princes showed more attractive surroundings, even if built on a sharp slope. Westmount was then in its infancy and was deterred in its growth by the long distances from the commercial center of the city.

Thirty years ago was marked by the advent of the C.P.R. and the selection of Montreal as its headquarters. Montreal began to grow very rapidly indeed, and is said to be increasing in population nearly 10% a year, and has now a population of over 800,000. Montreal a few years ago had an area of 19 square miles, and a population of 580,000. Cleveland, with about the same population, occupied 45 square miles; Boston, with 670,000, covered 43 square miles. Between 1900 and 1910 Montreal added 10,000 people to each square mile, New York only 4,000, and Chicago only 2,500. Montreal, to use the words of a writer in an American paper, was "choking to death for want of room." In its efforts to find this it has extended down the river almost to Bout de l'Isle, and upward almost to Lachine, and answers much more closely even than Duluth itself, to the Eastern Yankee's description of that city as being "25 miles long, a mile wide, and pretty nearly a mile high."

The long-sighted men, my business friend for one, and Sir Wm. Van Horne for another, had repeatedly cast wistful and prophetic eyes towards the hinterland, "the great beyond" on the other side of the mountain. The Montreal Tramways Co. built a line around it, and Sir William suggested a tunnel of about 1,000 ft. to reduce the extreme summit of the Cote des Neiges hill. Only at one point had any actual expansion in this direction taken place, and this was largely due to the C.P.R. Mile End station and the Tramways Co.'s extensions to it. This was along the extensions of St. Lawrence, Main and St. Denis Streets, and later of Park Ave. This question of city expansion was one consideration which led to the conception and inception of the Montreal tunnel, but it was not by any means the only, or the principal one.

Topography.—To most Canadians the mention of the St. Lawrence suggests a river running east and west. It carries east and west commerce, and Sault Ste. Marie is pretty nearly due west of Montreal, and Port Arthur only three degrees farther north; but the St. Lawrence proper, from Lake Ontario to the sea, flows northeast, and at Montreal it runs almost due north and south. It is the Ottawa which is the east and west river, and it is the Ottawa valley which has been in the past the great highway of commerce, and which has resumed this place as the route of the two transcontinental roads. The result is that the direct route from the heart of Montreal to the west, lies directly through the mountain, and almost at right angles to the river and the great thoroughfares of St. Catherine, St. James and Notre Dame Streets, which parallel it. As grade separation was an essential feature of any terminal scheme, this was a very important consideration.

Three railways had already entered Montreal from the west. The Grand Trunk entered it when the problem was a comparatively simple one. The Victoria bridge was located at what was considered the best point for a bridge, as was the St. Anne's bridge over the Ottawa. The intermediate line was built as directly as possible between them, and one of the pioneer roads of Canada, the Lachine Portage Ry., was used as an approach to a dead end station in the outskirts of the city at that time. The main line did not touch Montreal as it then existed.

Thirty years later, the Northern Colonization Ry. was built from Ottawa, and it climbed over the northern toe of the mountain as already described, and entered the extreme northern end of the city, and, after absorption by the C.P.R., the Place Viger station. Ten years later still came the Ontario & Quebec Ry., which paralleled the Grand Trunk from Vaudreuil to Dorval, and then rose over the terrace and followed along its edge to the present Windsor St. station. What the governing ideas were in selecting this location I can only guess, having never met the designer, but a desire to eliminate property damages and grade crossings as far as possible is evident, and the solution has been accomplished in a very clever way. It is on the whole a very satisfactory entry, but the C.P.R. is under the disadvantage, with the double approach, of having to keep up two separate terminals and a great number of passengers have to travel across town from one to the other, in coming, for example, from Quebec to Toronto. It may almost be said that there are three terminals, for the Mile End station is getting to be very popular with short distance passengers to and from the north and west. The Windsor St. approach is very interesting, not only as a very good piece of work, but as showing the development of railway ideals, and the demands of the public in respect of abolition of crossings and concealment and suppression of smoke and noise.

Advent of C.N.R.—Nearly 30 years after the C.P.R. comes the Canadian Northern. Thirty years makes a great difference in a problem of this kind. Land values have grown prodigiously in the meantime, due to the ever increasing congestion. And the education of the public, assisted by a railway commission anxious to please it, has gone on apace. Grade separation has become absolutely essential, and the absolute abolition of smoke and noise almost so. At the same time, and from the railway point of view, passenger trains have become longer and heavier, and harder to haul, so that grades must be flattened to the utmost, especially in regard to starting and stopping. Maintenance of way and operating expenses have been increasing in a much faster ratio than the corresponding passenger rates and receipts. Only the increasing volume of traffic, offset the growing discrepancy, and served to stave off the bankruptcy of the railways.

The passenger business alone was not the only thing to be considered. The Grand Trunk, during its 60 years of occupancy, and the C.P.R. during its shorter term of existence, had surrounded and honeycombed Montreal with a network of industrial spurs, sidings, and yards, in every direction. The Canadian Northern had only one small yard in the extreme north end, and its connection on the same terms as the other lines with the Harbor Commissioners' tracks for overseas business. But business to and from the local industries, the wholesale houses, cold storage plants, etc., etc., has to be hauled from 3 to 5 miles by motor trucks to Moreau St. The handicap is altogether too great. In the district bounded by McGill St., the Lachine Canal, Windsor St. produced, and Lagauchetiere St. alone, there are something like 150 of these smaller industries and plants, and a great many more within a mile radius of the Haymarket Square. Passenger business may perhaps be described as the spiritual and intellectual function of the railway body corporate, but freight is the wholesome and nourishing food which enables it to do its work and carry on its functions. The passenger service is the side which appeals to the ordinary layman passenger, just as a man's face and bearing does to a new acquaintance, but he cannot keep up the prepossessing appearance unless he has his stomach full, and some little money in his pocket.

We have here a number of essentials to be provided for and a still greater number of desiderata, also many things to avoid. The most important necessity of all at the moment perhaps was the finding of the necessary capital. Railway terminals are expensive things at the best, and this was an era of extravagance in this respect. The Pennsylvania had spent many millions on its New York entry. The New York Central was following suit with a magnificent scheme, better balanced financially, but still enormously expensive. Kansas City was building a joint $45,000,000 terminal, and St. Paul was considering a scheme which involved encroachment on the rights of its very respectable and oldest citizen, the Mississippi River—almost as old and respectable as the Montreal mountain itself, although somewhat dirtier. But these were all in connection with roads of long standing and financial strength. They were improvements and consolidations rather than new schemes. The Canadian Northern, while it had been earning at a great rate, was also extending and building equally fast, and had largely discounted its future in its borrowings. Even in a growing northwest, it takes some months before a new piece of road can earn its own living, and some of the C.N.R. construction was of a nature and through such country as could not be expected to yield any adequate income except as part of the completed system.

The most obvious route was to parallel the two older roads and it was very seriously proposed, but the writer for one never took to the proposition. It was neither the inexpensive route of the older Grand Trunk, nor could the very neat grade separations which the C.P.R. effected 30 years ago be repeated and duplicated. The C.P.R. line had been badly bent in order to effect its entry. Everything pointed to the north, instead of the south shore of the Ottawa, as being the Canadian Northern's proper route, and in this case the bend would become a right angle elbow. The right of way would be absolute destruction for 2 miles or more, and grade separation could be effected only by a continuous track elevation for the same distance. It would have been plagiarism of the worst and most expensive type. It was proposed to join with the Grand Trunk, but this would merely have mitigated some of the evils of parallelism, not removed them, and the Canadian Northern would have lost its identity and its independence at a most important point, and neither of these propositions would have been any solution of the freight problem.

The tunnel was the obvious solution of the whole question, and it was adopted by the writer at a very early stage, but how was the money to be found? Here came in the question of expansion, of a greater Montreal. The piercing of the mountain, the inauguration of a fast and frequent electric service through it, would vastly enhance the value of the inaccessible lands beyond. Thousands of acres, sloping gently towards the Back River, were available, if they were once brought within easy reach of the business and shopping district. As soon as the programme was announced, real estate men would quickly absorb all the available land, subdivide it and sell at enormous profit. Why should not a syndicate be formed which would take this part of the business out of the hands of the real estate men, buy up the land and out of the prospective profits finance the construction of the tunnel? The idea once suggested took root, and some of the great financiers of the world became directly interested in it, and the idea of the tunnel entrance became an established one.

But this merely fixed the principle of the tunnel, not the line of it, and there were several lines suggested other than that adopted. A line just south of Park Ave. was strongly advocated, the reason given being that it would be closer to the surface and much of it could be built by the cut-and-cover method. It was pointed out in rebuttal that this would disorganize all the underground economy of the district, sewers, water pipes, and gas, and that the streets would be impassable and the abutting properly uninhabitable during the whole time of construction, unless the enormously costly methods of of the New York subways were adopted. So far from being an extravagance, the bold line under the highest part of the mountain was the cheapest, in that it avoided all property damage, except for about 2,000 ft. on the city end.

This argument prevailed finally and the bolder line was adopted, but there was still a good deal of latitude in the choice of line. At the west end a long strip of property was offered, reaching nearly to the Back River. It so happened that on this property was the best point at which to cross the C.P.R.'s Atlantic and North Western line, so this end was promptly and satisfactorily settled. The east end was the subject of longer debate and some warmth of argument. Most English-speaking people think of Montreal as extending from the mountain to Dorchester St., and from Park Ave. to the confines of Westmount, with an addition for business purposes extending east and south for half a mile from the Place d'Armes, and of St. Catherine St. as being the main and only important artery. This is only a small part of Montreal in reality, but the conviction in the Anglo-Saxon mind that this is Montreal, the whole of Montreal, and nothing but Montreal, is almost as fixed and ineradicable as the Englishman's idea that the whole world is centered about his own tight little island. As a result of this obsession, it was difficult to get any site off St. Catherine St. even seriously considered. A line near University Ave. was actually adopted, and abandoned only when it was shown that this was of no use except for purely passenger business, that there was no chance for extension eastward, and that it must for all time to come remain a dead end branch 6 miles long, and worse in this respect than either the C.P.R. or the G.T.R.

Finally, the present line was adopted mainly for the reasons that it gave a continuous line from the mountain to the water front, with opportunity to connect with the Harbor Commissioners' tracks and through them with the system extending to Quebec and Chicoutimi; that in doing this it passed through some of the best freight producing districts in Montreal, and that it did all this with a minimum of property damage and with an absolute avoidance of grade crossings or even distortion of street grades. There is, further, an avowed intention on the part of the Harbor Commission to build a dam across the river to St. Helen's Island and a bridge from it to the east shore, which will furnish a route for such roadways and railways as care to avail themselves of it. It is more than probable that the Quebec, Montreal & Southern and the Intercolonial will avail themselves of the chance, for the Grand Trunk's great bridge is already congested and overcrowded, but this is a matter for the future.

The choice of a station site on this road was another matter of debate, which it is somewhat irrelevant to go into now. The choice, for the present at any rate is on Lagauchetiere St. within easy reach of Dorchester St., but not so far below the surface as the latter.

Grades Through Tunnel.—Closely allied to the question of alignment and in some respects even more important is that of grades. I have already alluded to the increasing length and weight of passenger trains. The C.N.R.'s standard transcontinental train averages 11 cars, and with this its Pacific type locomotives get over the 1% grades of the Lake Superior Division with reasonable ease. On the other hand, if the grade is flattened too much, on a long tunnel and approach such as this, trouble with drainage is apt to occur, especially in winter. The grade through the tunnel is 6/10 of 1%, or 32 ft. per mile, and is continuous from end to end; the west portal being thus 100 ft. higher than the east. From the west portal the same rate of grade carries us down through the Model City for nearly the same distance. The long cutting on the west approach, was introduced with a purpose, viz.: to allow the civic expansion to go on overhead without too much distortion of street grades.

In consideration of the electrical operation, the headroom required under the bridges was reduced from the regulation 22½ ft. to 16½ ft., and the problem of grade separation rendered so much the easier of accomplishment. Near Cartierville the Montreal Park & Island Ry., and a main road alongside it, have been carried underneath. Absolute grade separation is thus secured, not only through the city itself and its transmontane annex, but for the entire length of the electric zone, nearly 9 miles, and Cartierville, a promising suburban settlement on the bank of the Riviere des Prairies, is now brought within 18 or 20 minutes of the heart of the city.

The tunnel itself is a very interesting one and ranks among the great tunnels of the world, being 3.25 miles long. Only the three great Alpine tunnels, the Mount Cenis, the St. Gothard, and the Simplon, completely eclipse it in length, and there is only one in Canada which is longer, the C.P.R. Rogers Pass tunnel. It was predicted beforehand that the difficulties would be comparatively few, and so it turned out. Very little water was met with, and this where it was expected, near the west portal, at the contact between the limestone and the older rocks on which it rests unconformably. The core of the mountain was almost exclusively Essexite, a basaltic volcanic rock, somewhat hard to drill, but otherwise quite unobjectionable.

It was at first thought that most of it would not require lining, and had it been a steam operated road in the open country, it is quite probable that very little lining would have been put in, but its nearness to the terminal, and the adoption of the trolley system, which meant support from the roof, made even a small fall a very serious matter, as it would both delay and endanger the traffic. Some little sea[illegible] [illegible]gration showed itself after exposure to the air, and in the end it was all lined with a thin sheeting of concrete, except about 1,000 ft. This applies to the rock section.

For something over half a mile at the city, or east, end, the roof ran into clay, although the bottom and most of the wall remained in limestone. This clay was known beforehand to exist, and it is of a very plastic and semifluid formation and contains numerous shells such as now exist in northern seas. On account of its semi-fluid nature, and because this section led under streets and close to the foundations of buildings, it was decided to take this out under a shield protection, the shield being followed up with an arch of concrete blocks pre-cast in voussoir shape.

Practically no leakage, even of water, was ever visible during the progress of the work, and yet considerable settlement of the street overhead took place. Probably the moisture evaporated and escaped as invisible vapor. A great many of the houses had been set down on this soft clay and had suffered from settlement before the work was started; the further settlement was therefore of less consequence than it would otherwise have been. Through this section the individual tracks are carried in separate tunnels with a thin wall between them. The same is true of a few hundred feet at the West Portal, but the body of the tube is a single opening.

The heading was a "bottom" one 8 x 12 ft. and was put through with very good speed. For a time, in fact, the American record for hard rock tunnelling was broken by an average advance of 26 ft. a day for a whole month. As soon as a sufficient advance had been made, the enlargement to full section was commenced, the arch being taken out first, and the two "benches" afterwards.

As the east end is in the city and there was no means of getting rid of large quantities of material except by teaming for several miles, this work had to be done from the west end, and for this reason the heading was driven faster from this end, and this meant working down hill. Under these circumstances the small flow of water was particularly fortunate, as the amount of pumping was small.

Shafts.—In order to expedite the work, a shaft was sunk 250 ft. one mile from the west end. This made it possible to follow up with the enlargement on the westerly mile without interference from the heading from the shaft, but as a matter of fact the rapid progress of the heading was to a large extent wasted, because the war intervened, and work on the enlargement was impeded by the difficulty in finding the necessary capital to carry it on. The shaft was, however, designed to carry an elevator in the future to a substation at its foot, and with this in view, was sunk to one side of the center line of the tunnel. This, as may be imagined, greatly increased the difficulty of alignment of the tunnel. To offset a line on the surface, to two plumb lines, only some 12 ft. apart and 250 ft. long, and then offset this line again at the bottom of the shaft, was an operation requiring care and patience, but it was accomplished without appreciable error by H. T. Fisher and his staff. A second shaft was sunk, some 70 ft. just to the north of Sherbrooke St., and at the bottom of this the shield was put together. A third shaft was projected at Pine Ave., but considerable opposition was met with from the wealthy residents of the neighborhood, and it was abandoned, and undoubtedly the advantage from it would merely have expedited the driving of the heading, not of the completed tunnel. A fourth shaft was sunk on Dorchester St., and it was from this that a large quantity of material was removed, because there happened to be a very large and almost vacant piece of property at this point, on which material could be wasted for the time being, until the tunnel became available for hauling it away.

Anecdotes.—Mr. Brown, in his enthusiastic belief in and support of everything connected with the tunnel working, got into some rather amusing situations which he relates himself with considerable humor. On one occasion he was dining in a house almost over the line of the tunnel, and his host took occasion to remonstrate against the heavy blasting which sometimes shook the house and made his women folk nervous. Brown assured him that this had been stopped altogether and only the lightest of charges were being used, and especially at night. Just then a tremendous shot was fired, and all the front windows were smashed. It was a very embarrassing moment, and Brown had some difficulty in preserving his dignity and his host's respect.

On another occasion a discussion arose with reference to the effect of the vibration, occasioned by moving trains on some of the delicate instruments in McGill University, which is almost immediately over the line of the tunnel; the seismograph, for instance, which is intended expressly for recording terrestrial vibrations. Brown stoutly maintained that there would be no effect whatever, and that in New York a similar instrument near the subway had taken less notice of the blasting and the subsequent train running, than it had of the San Francisco earthquake 3,000 miles away. He suggested that the instrument be set up in a basement on McGill College Ave. while a blast was being fired, and they would see for themselves how absurdly small the effect was. The suggestion was acted on, the instrument set up, the blast was fired, and the seismograph went out of business altogether.

Reasons for Electrification.—As mentioned previously, the tunnel was planned from the beginning for electric traction. No effort was made to avoid the inevitable in this respect. It was felt that while very much cheaper in initial cost, a steam service through such a long tunnel would not be popular with the public; fans and artificial ventilation would have to be installed, and that even outside the tunnel, on the city end, there would be a strong opposition to steam operation over the streets, and justly so, for Montreal is already more saturated with coal smoke than even Toronto.

Some will remember the fatal disaster in the St. Clair tunnel, when it was operated by steam locomotives, although this is not much more than one-third the length of the Montreal one. Some minor mishap necessitated a stop at the lowest point in the tunnel, and some of the train hands were asphyxiated by the waste gases from the locomotive before help could be got to them. Even on a passenger train, although the trip lasted a very few minutes, there was a certain sense of suffocation and a feeling of relief when the trip was over. This accident precipitated the inevitable change to electric traction, and in the case of the Pennsylvania and Detroit tunnels, electricity was installed from the very first.

In the Montreal tunnel, in actual experience, the air is just as fresh as it is outside, and there is quite a marked natural circulation through it. The air at the city end is nearly always warmer than that at the west, or country, end, and rises from the terminal excavation, causing a strong draught of cool air from west to east. With the west end warmed up by a westerly sun, while the east is in shadow, the current will very probably be reversed, but the normal conditions seem to be as above.

The electrification work, which is a very interesting study in itself, was under the very able charge of W. C. Lancaster. A study was made for developing power at St. Ursule falls, on the Canadian Northern line, some 60 miles east of Montreal, and transmitting to Montreal, but the power was not very reliable, and to make it so meant a lot of interference with vested rights and privileges, which threatened to raise the capital cost and resultant charges to a point which meant that it would cost more per h.p. than it could be obtained for from the Montreal Light, Heat & Power Co., and an arrangement was made with that company to supply the necessary power.

The system is a direct current of 2,400 volts, much higher than we have been accustomed to up to the present. The locomotives take the current by a pantagraph from a trolley wire, and weigh 80 tons. The third rail system was considered, but on account of the heavy snowfall about Montreal, and occasional accumulations of ice, it was not considered desirable. In actual test these locomotives haul a 7 or 8-car train against the adverse 6/10% grade through the tunnel in 7 minutes, or practically 30 miles an hour.

The electric zone extends at present only to Cartierville, which on account of its being a convenient point at which to establish a divisional yard with locomotive house and shops, was considered the best point at which to make the change. It is altogether probable that as the intermediate country gets settled up with suburban residences, a movement which has already commenced, it will be extended to St. Eustache, a very prosperous town with beautiful surroundings, and we hope eventually to Ottawa. Only the heavy cost of installation prevented this being done in the first place. The route to Ottawa, lying as it does along the banks of the river, and generally within sight of it and of the Laurentian Hills beyond, is quite the most attractive of the four existing ones, and within a mile of being the shortest. It has already made a good start in popularity, and with the additional attraction of electric traction, it should pretty nearly monopolize this business.

Cash Payment for Railway Transportation Charges Ordered.

The Canadian Railway War Board's executive committee issued circular 86, Nov. 20, as follows:—Effective Jan. 1, 1919, the collection of transportation charges, including demurrage and storage charges, by railways operating in Canada, for services rendered, shall be on a cash basis, and, effective as of that date, credit accommodations then in existence which may be in conflict with the following regulations shall be cancelled.

1. Tickets shall be sold only for cash in advance of service. Baggage charges are subject to the same rule as tickets, except c.o.d. baggage, and storage charges, which must be paid in cash before delivery.

2. In cases where the enforcement of this rule with respect to freight, will retard prompt forwarding or delivery of the freight, or the prompt release of equipment or station facilities, carriers will be permitted to extend credit for not exceeding 96 hours after receipt for shipment of a consignment if it be prepaid, or after delivery at destination if it be a collect consignment, provided the consignor, if it be a prepaid consignment, or the consignee, if it be collect, file a surety bond, either individual or corporate, in an amount satisfactory to the carrier's treasurer or other properly designated officer. The form of such bond shall be as per form attached, conditioned upon and providing for payment of all charges within 96 hours after forwarding, or delivery, of the freight. Upon receipt and acceptance of such bond a carrier may accept and forward prepaid consignments or may deliver collect consignments in advance of payment of all charges thereon to the amount covered by the bond. Failure to pay such charges within the time prescribed will automatically cancel such credit.

3. Treasurers or other properly designated officers of individual carriers are required to arrange and conduct all matters relating to such credits. They shall designate the amount and accept or reject the surety offered. Bonds may be required and accepted for individual consignments, or blanket bonds may be accepted from individual shippers or consignees to cover all of their consignments for a given period; the period of the credit in such cases shall, however, be limited to 96 hours on each shipment, as prescribed in the preceding paragraph.

4. In case of any question as to accuracy of charges, bills must be paid as rendered, and claims presented for alleged errors. This will not prevent adjustments by agents of obvious errors.

5. Freight consigned to "order," or to "order notify," shall be delivered only upon surrender to the carrier's agent of the original bills of lading for such freight and the payment of the freight charges thereon, as hereunder provided; provided, however, if such bill of lading be lost or delayed the freight may be delivered in advance of surrender of the bill of lading upon receipt by the carrier's agent of a certified cheque for an amount equal to 110% of the invoice, or upon receipt of a surety bond, either individual or corporate, acceptable to the carrier's treasurer or other properly designated officer, in an amount for twice the amount of the invoice.

6. Advice to the foregoing regulations shall be promptly given to all to whom credit accommodations are now given, to the end that the regulations may be put into effect at the time specified with as little inconvenience as possible.

7. Cheques, within the instructions issued by the individual railways to their agents, will be considered as payment in cash.

8. The foregoing regulations shall apply to shipments delivered to and received from consignors and consignees by cartage companies, as well as to shipments handled direct between consignor or consignee and carrier.

9. Until otherwise ordered, the foregoing regulations shall not apply to transportation service rendered Dominion Government departments, nations allied with Canada in war, the various provincial governments of Canada, the counties and municipal governments, transportation and authorized cartage companies.

The following supplement was issued Nov. 23:—For the guidance of those concerned in determining what constitutes delivery of freight at destination, as provided for in circular 86, and for the purpose of defining, when transportation charges are due, the following notice is issued:—

a. Transportation charges are due and payable when carload, or less than carload, freight is placed in storage, either on the property of the carrier or in private warehouses. If charges are not collected from the warehouse company, they should be collected from the consignee under the terms of circular 86 at, or immediately succeeding, the time of placement in storage and not after final delivery to consignee.

b. Cars consigned to bonded customers or to regular responsible customers are to be considered delivered when placed upon sidings or team tracks of so called plant facility industrial railways, either those connecting directly with the road haul carrier or those located on terminal switching lines.

c. Cars will be considered to be delivered when placed on interchange tracks with industrial railroads.

d. Under the provisions of paragraphs b and c, cars will also be considered as delivered when constructively placed as provided by demurrage rules.

e. The provisions of paragraphs b, c and d do not apply to "common carrier" industrial railways, so long as in good faith deliveries are promptly made by them to consignees, and the trunk line carriers agent is furnished with adequate information with respect to such deliveries so as to permit the prompt rendition of the freight bills.

See also "Cash Payment for Railway Transportation" on another page.

Park Incline Ry., Montreal.—At the annual meeting of the Park Incline Ry., in Montreal, Dec. 10, a resolution was passed favoring the winding up of its affairs by voluntary liquidation. The reports presented showed a steady falling off in receipts since 1913, when the profits were $2,240, permitting the payment of a 4% dividend. In 1914, the profits were $1,460, and a 2% dividend was declared; in 1915, the profits were $[illegible]87, and the dividend was passed; in 1916, the profits were $1,300, and a 2% dividend was declared. In 1917 the loss was $1,542, and the loss for 1918 was $2,261. The company applied recently to the city council for a reconsideration of the terms of the franchise, but without result. The franchise calls for a daylight service from May 1 to Oct. 31.

The Canadian Northern and Grand Trunk Railways have made an arrangement whereby tickets reading through between Toronto and Montreal may be routed via Ottawa, using the Canadian Northern between Toronto and Ottawa, and the Grand Trunk between Ottawa and Montreal. Round trip tickets may be routed both ways by Ottawa, or in one direction via Ottawa, and in the opposite direction via G.T.R. This arrangement applies for direct sale of tickets and for exchanges of coupons, both one way and round trip tickets of any line issue, after passengers have traveled part of their journey. Such exchanges are to be made at Toronto or Montreal.

Handling of Returning Troop Trains on the C.P.R.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., has issued the following circular to officers and employes:—

The soldiers of Canada will, from now on, be returning home in considerable numbers every week. These men have endured dangers and suffered hardships which entitle them to every care and attention which we can give in assisting them to reach their homes with all the dispatch and every comfort possible. Men in all branches of the service can contribute materially in their respective positions towards accomplishing what is required in this respect, and it is expected that this assistance will be rendered.

Special care should be exercised to have the cars for the troop trains properly inspected, thoroughly cleaned and ventilated, well watered, and fully supplied for heating and lighting. These features should receive special attention at divisional points en route as well as at the starting point. Locomotives ordered for troop trains should be, if possible, even more closely inspected than ordinarily, so as to guard against any breakdown and consequent delays in transit, and every effort should be made to have them turned out on time, with both locomotives and train crews, to take their trains forward without detention.

Troop trains are to be given every possible dispatch, within defined speed and other regulations, and in so far as is consistent with safety, are to be given preference over all other trains, including regular passenger trains. In the event of a troop train locomotive breakdown on the road, the locomotive which can be made most quickly available, even if taken from a regular passenger train, is to be used to handle the troop train, so that it will incur the least possible delay. Practically all troop trains will be equipped with commissary or dining cars, but in the event of anything occurring to interfere with proper arrangements in this respect, special attention should be given to any required arrangements at dining stations, advices to the men regarding such arrangements, and proper time allowance for meals.

Divisional officers should, through their respective dispatching offices, keep each other fully and properly advised of the movement of troop trains, and of anticipated times of arrival at connecting divisional points. One of the most important features in the handling of troop trains is the care required in estimating the time of their arrival at destination points, and the movement of the trains so as to reach such points at the times anticipated. Station staffs at destination points should be fully and promptly advised of the expected time of arrival of troop trains, with all particulars available as to the names of steamships from which the passengers come, and any other known details. This information should be promptly and regularly posted on station bulletin boards and corrected from time to time as may be necessary. Operators should keep in close touch with the movement of the trains so that the information posted may be up to the minute. Train enquiry clerks should be at all times fully informed in connection with the trains and their movement, and they, as well as all other station staff concerned, will be expected to deal courteously and patiently with all enquirers, giving them correctly and clearly the fullest information possible in response to their enquiries. What is particularly desired is that all officers and employes concerned shall, in so far as possible, place themselves in the position of the father, mother, wife, sister, or other relative of the returning soldier, and deal with them as they would wish to be dealt with under similar conditions. All this being accomplished, it will add substantially to the welcome the company desires to give to returned soldiers, as well as to the comfort and convenience of relatives and friends who desire to welcome them.

Officers will please arrange to have copies of this circular posted and distributed so as to come to the notice of all concerned.

Canadian Pacific Railway's Honor Roll 39.

Adams, James E.	Stationary fireman	Schreiber	Wounded
Allen, James C.	Clerk	Kingston	Wounded
Anderson, Carl	Wood machinist	Ogden Shops	Wounded
Antilla, John E.	Trainman	Revelstoke Div.	Wounded
Archer, Wm.	Assistant agent	Hillcrest	Killed in action
Barnby, Jesse D.	Porter	Calgary	Killed in action
Barton, George	Steam fitter	Glen Yard	Died of wounds
Batchelor, Chas. H	Yardman	Vancouver	Wounded
Baxter, Geo. L.	Brakeman	Lethbridge	Presumed dead
Beaton, Alex.	Operator	Wapella	Killed in action
Beattie, John J.	Rodman	Sudbury	Wounded
Bennett, Thos.	Carpenter	West Toronto	Wounded
Bolton, Wilbery J.	Clerk	Winnipeg	Wounded
Borg, Paul	Car cleaner	Toronto	Wounded
Bowes, Victor A.	Clerk	Calgary	Wounded
Brae, Fredk. D.	Clerk	Victoria	Wounded
Brereton, Thos.	Car repairer	Glen Yard	Wounded
Brophy, Alex.	Air brake cleaner	Winnipeg	Wounded
Brown, Chesley	Clerk	Toronto	Wounded
Brown, James	Laborer	London	Wounded
Bucke, Philip P. F.	Clerk	Brandon	Wounded
Bulmer, Henry W.	Porter	Calgary	Wounded
Cameron, Wm.	Fireman	Outlook	Wounded
Carter, Emerson C.	Chef	Calgary	Gassed
Charlton, Geo. S.	Brakeman	Medicine Hat	Wounded
Christie, Thos. C.	Trainman	Fort William	Wounded
Churchman, Alfred H.	Storeman	Winnipeg	Wounded
Cole, Jno.	Clerk	Montreal	Killed in action
Cope, Edward W.	Brakeman	Quebec District	Wounded
Cox, Leonard	Fitter's helper	Fort William	Died of wounds
Craig, Lyle A.	Clerk	Winnipeg	Wounded
Croker, Wm. T.	Constable	Montreal	Died of wounds
Cronk, Homer R.	Assistant agent	Napinka	Died of wounds
Cruikshank, Robert	Car repairer	Brandon	Wounded
Curry, Sydney	Fitter's helper	Winnipeg	Killed in action
Cushman, Russell	Dist. freight agent	Saskatoon	Killed in action
Dawson, George	Electrician	Regina	Gassed
Dean, Wm. R.	Clerk	North Toronto	Killed in action
Dick, C. G.	Ditchrider	Brooks	Wounded
Donaghy, David S.	Clerk	Vancouver	Wounded
Donald, Terence F.	Apprentice	Angus	Wounded
Donald, Wm.	Trainman	Brandon	Wounded
Doyle, Terrance F.	Yardman	Winnipeg	Killed in action
Drummond-Hay, L. V.	Clerk	Winnipeg	Killed in action
Dryden, Vaughan T.	Stenographer	Calgary	Wounded
Dutton, William	Cook	Vancouver	Wounded
Duval, Edward W.	Superintendent	Saskatoon	Killed in action
Ewart, Douglas M.	Resident engineer	West Toronto	Killed in action
Fletcher, Thos.	Blacksmith	McAdam	Killed in action
Fraser, Chas. R.	Clerk	Calgary	Gassed
Freeman, George	Operator	Halifax	Wounded
French, Jas.	Car checker	Guelph	Wounded
Gardiner, Jas. H.	carpenter	Brownville Div.	Wounded
Gougeou, Philemon J.	Conductor	Cranbrook	Wounded
Graham, James	Wiper	Wilkie	Wounded
Gray, Henry H.	Fireman	Fort William	Killed in action
Gray, Norman	Wiper	Kenora	Gassed
Greenless, Malcolm	Clerk	Vancouver	Killed in action
Griffin, Thos. H.	Assistant agent	Qu'Appelle	Wounded
Hambleton, Albert	Conductor	Moose Jaw	Wounded
Harris, Karl M. W.	Apprentice instructor	Ogden	Wounded
Harrison, Mark	Assistant agent	Blairmore	Died of wounds
Henderson, Wm. J.	Storeman	Brandon	Presumed dead
Hewis, Harry	Fireman	Winnipeg	Killed in action
Hicks, Peter	Sectionman	Bothwell	Wounded
Hicks, Wm.	Car repairer	Moose Jaw	Wounded
Hill, Sam	Clerk	Victoria	Wounded
Hill, W. H.	Fireman	Winnipeg	Killed in action
Holloway, Thomas J.	Fireman	Fort William	Wounded
Holmes, Chas.	Spring maker	Angus	Wounded
Horton, Thomas H.	Storekeeper	Regina	Wounded
Hume, Edward	Laborer	Calgary	Wounded
Hunter, Harold E.	Clerk	Guelph	Wounded
Iliff, Thos. C.	Fireman	Kenora	Died of wounds
Irving, James J.	Constable	Fort William	Died of wounds
Jalbert, Louis	Fitter's helper	Sudbury	Wounded
Jebson, Fred	Engineer	Calgary	Wounded
Johns, Edward	Fireman	Swift Current	Wounded
Kendall, John J.	Fireman	MacLeod	Wounded
King, Jas. C.	Clerk	Kenora	Wounded
Laur, Lemen J.	Trainman	London Div.	Killed in action
Le Gros, Chas. A.	Clerk	Winnipeg	Killed in action
Linn, David	Brakeman	Medicine Hat	Wounded
Lowes, Thomas M.	Clerk	Windsor	Wounded
Luttrell, Robert	Machinist	Angus	Wounded
McBurney, Hy.	Car inspector	St. John	Wounded
McDonald, Alex.	Wreck crane operator	MacTier	Wounded
MacDonald, Chas. R.	Fireman	Cranbrook	Wounded
MacKay, Archie K.	Engineer	Kenora	Wounded
McLeod, Neil	Operator	Toronto	Wounded
McNally, John	Fireman	Sutherland	Killed in action
McQuarrie, Hugh S.	Fireman	Minnedosa	Wounded
Maisey, Walter	Car repairer	Ogden	Gassed
Marshall, Robert	Clerk	Vancouver	Wounded
Maxwell, Leonard G.	Operator	Bruce Division	Wounded
Milligan, W. C. H.	Fitter	North Bay	Wounded
Moore, James	Waiter	B.C. Coast Service	Presumed dead
Moore, Jas. Wm.	Silver cleaner	Vancouver	Wounded
Murray, Joseph	Foreman	West Toronto	Wounded

Murray, Wm.	Trucker	Estevan	Killed in action
Newby, Leonard	Clerk	Calgary	Wounded
Nicholson, Robert	Waiter	Montreal	Wounded
O'Brien, Edward G.	Car service agent	Montreal	Wounded
Page, S. J.	Cook	Winnipeg	Wounded
Partington, Albert W.	Stationary fireman	Toronto	Wounded
Pierce, Edward G.	Operator	Ontario District	Gassed
Pringle, Jos. N.	Checker	Toronto Freight	Wounded
Pulford, Fredk. M.	Clerk	Weyburn	Killed in action
Rawn, Fredk. W.	Clerk	Toronto	Wounded
Rees, Herbert J.	Fireman	Fort William	Killed in action
Rennie, Frank B.	Stenographer	Regina	Wounded
Richmond, Robert A.	Clerk	Moose Jaw	Killed in action
Ritchie, Robert	Carpenter	Winnipeg	Killed in action
Robertson, Walter B.	Storeman	Winnipeg	Wounded and missing
Robison, Norman	Wiper	Medicine Hat	Died of wounds
Ross, Alex. J.	Trainman	London	Concussion
Ross, Wm.	Checker	Calgary	Wounded
Rowlette, Archibald G.	Visual tester	Winnipeg	Wounded
Rye, John	Boilermaker	Angus	Wounded
Saunders, Frank	Car repairer	North Bay	Wounded
Smith, Arthur	Messenger	Brandon	Killed in action
Smith, Geo. H.	Fireman	Brandon	Wounded
Smith, Wm.	Boilermaker	Winnipeg	Killed in action
Sparling, Harry	Assistant agent	Elm Creek	Died of wounds
Stock, Sidney W.	Clerk	Calgary	Wounded
Swindells, Albert	Porter	Regina	Wounded
Todd, James W.	Apprentice	Winnipeg	Gassed
Travis, Ernest W.	Porter	Ottawa	Wounded
Trodd, Reuben R.	Machinist	Angus	Gassed
Turton, Samuel	Laborer	West Toronto	Wounded
Veasey, Ernest G.	Section foreman	British Columbia Dist	Wounded
Vidal, Cyril	Clerk	North Bay	Killed in action
Waldi, Adam	Storeman	Nelson	Killed in action
Wallace, George	Fireman	Chapleau	Wounded
Watt, Victor D.	Trainman	Minnedosa	Wounded
Waugh, Henry	Clerk	Montreal	Wounded
Websdale, Jas. F.	Brakeman	Medicine Hat	Died of wounds
Wensley, Frank	Call boy	Moose Jaw	Wounded
Wight, John H.	Freight clerk	Saskatoon	Died of wounds
Williams, John	Apprentice	Winnipeg	Killed in action
Wood, Geo. F.	Sleeping car cond'r	Moose Jaw	Wounded
Woodward, Geo.	Assistant foreman	Calgary	Wounded
Wren, Arthur	Fireman	Fort William	Presumed dead
Zetterland, John	Conductor	Brandon	Wounded

Shown on honor lists to date: killed, 775; wounded 1,9[illegible]. Total [illegible].

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

J. Abrams, Wharf Freight Agent, C.P.R., Vancouver, B.C., born at Manchester, Eng., Jan. 24, 1870.

W. U. Appleton, Superintendent of Motive Power, Canadian Government Railways, Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, Brandon Division, Manitoba District, C.P.R., Brandon, born at Kingston, Ont., Jan. 27, 1865.

J. A. Audrain, Trainmaster, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, Sask., born at St. John's, Jersey, Channel Islands, Jan. 23, 1883.

L. E. Ayer, General Agent, Canadian Northern Ry., St. Louis, Mo., born at Henderson, Ia., Jan. 11, 1877.

F. X. Belanger ex-General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., now Traffic Manager, Fraser Companies, Ltd., Edmundston, N.B., born at Chlorydormes, Que., Jan. 20, 1876.

G. McL. Brown., European Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 20, 1866.

F. J. Buller, Cashier and Paymaster, Eastern Lines, Canadian Northern Ry., born at Lindsay, Ont., Jan. 30, 1874.

J. E. Dalrymple, Vice President, G.T.R.. G.T.P.R., and Central Vermont Ry., Montreal, born there Jan. 1, 1869.

A. Davidson, Commercial Agent, Grand Trunk Pacific Ry., and G.T.P. Coast Steamship Co., Vancouver, B.C., born at St. Henri, Montreal, Jan. 29, 1885.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, Ottawa, Ont., born at Quebec, Que., Jan. 27, 1861.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light and Power Co., Quebec, Que,, born at Cap Rouge, Que., Jan. 1, 1863.

J. E. Giles, Locomotive Foreman, Canadian Northern Ry., Lucerne, B.C., born at Toronto, Jan. 18, 1882.

Gordon Grant, Chief Engineer, Quebec and Saguenay Ry., and Consulting Engineer, Railways and Canals Department, Ottawa, born at Dufftown, Scotland, Jan. 2, 1861.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line New York, born at Boston, Mass., Jan. 13, 1875.

C. Hood, ex-Local Freight Agent, C.P.R., Saskatoon, Sask., now of Winnipeg, born at Edinburgh, Scotland, Jan. 20, 1864.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., born at Bathurst, N.B., Jan. 3, 1879.

Carl Howe, Traffic Manager, Michigan Central Rd., Chicago, Ill., born at Berrien Springs, Mich., Jan. 11, 1870.

H. J. Humphrey, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at Berrys Mills, N.B., Jan. 26, 1879.

W. C. Hunter, ex-Manager New Brunswick Coal and Ry. Co., now of Montreal, born at St. John, N.B., Jan. 4, 1865.

H. G. Kelley, President, G.T.R. and G.T.P.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

W. J. Lynch, General Manager, Quebec Ry., Light, Heat and Power Co., Quebec, Que., born there, Jan. 17, 1882.

C. R. Mackenzie, General Manager's Assistant, Western Lines, Canadian Government Railways, Winnipeg, born at Toronto, Jan. 10, 1883.

John Macrae, Locomotive Foreman, C.P.R., Swift Current, Sask., born at Springburn, Glasgow, Scotland, Jan. 30, 1879.

J. A. Macdonald, Manitoba Public Utilities Commissioner, Winnipeg, born at Gananoque, Ont., Jan. 6, [illegible].

G. C. Martin, General Traffic Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Creemore, Ont., Jan. 2, 1866.

H. Mitchinson, Safety Engineer, Western Lines, Canadian Government Railways, Winnipeg, born at Gateshead on Tyne, Eng., Jan. 18, 1882.

William Phillips, Canadian Representative, Cunard Steamship Co., Montreal, born at Toronto, Jan. 31, 1876.

W. Pratt, General Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 2[illegible], 1866.

Ralph M. Reade, Superintendent, City Division and Quebec County Railways, Quebec Railway, Light & Power Co., Quebec, born at Llanelly, Wales, Jan. 1, 1868.

L. J. Rouleau, Commercial Agent, G.T.R., Quebec, Que., born at Montreal, Jan. 6, 1879.

C. Senay, General Agent, C.P.R., Quebec, Que., born at St. Cesaire, Que., Jan. 31, 1873.

A. F. Stewart, Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, born at West Bay, N.S., Jan. [illegible], 1864.

J. G. Sullivan, ex-Chief Engineer, Western Lines, now Consulting Engineer, C.P.R., Winnipeg, born at Bushnells Basin, N.Y., Jan. 11, 1863.

Ross Thompson, ex-Chief Engineer and Managing Director, St. John and Quebec Ry., Fredericton, N.B., now of Montreal, born at Newry, Ireland, Jan. 1, 1865.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., born at St. Thomas, Ont., Jan. 27, 1848.

A. Wilcox, General Superintendent, Central District, Canadian Northern Ry., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

A Great Northern Ry. Construction Suit.—Judgment was given in the Court of Appeals, Montreal, Nov. 21, in an action brought by John Hyde as liquidator of the Great Northern Ry. Construction Co. against J. G. Scott, for the return of bonds aggregating a par value of $6,000, or in default the sum of $4,418.54, the amount realized by the sale of the bonds. The bonds in question formed part of $1,000,000 of bonds distributed by the company among its shareholders. The allegation was that the construction company sublet its contract for the construction of the Great Northern Ry. (Canada) to Ross, Barry and McRae, that it received cash, bonds and stock from the railway company and distributed among its shareholders $1,000,000 of the bonds, prior to the completion of the contract let to Ross, Barry and McRae. The construction company subsequently went into liquidation and the sub-contractors had not been settled with. At the original hearing of the action the court decided that the liquidator had failed to establish his right to recover, but the Court of Appeal, with a dissentient, held that the distribution was illegal, and the bonds, or the sum which Mr. Scott admitted he received for them, should be returned. Judgment was entered accordingly.

Engineering Institute of Canada, Calgary Branch.—It was reported at the annual meeting, Dec. 8, that [illegible] of the 76 members and associates on the roll, [illegible] are on active service with the Canadian forces. Following are the officers elected for the current year:—Chairman, G. W. Craig; Secretary-Treasurer, J. M. Arnold; Assistant Secretary, W. H. Mattice; Executive Committee, J. W. Pearce, A. S. Dawson, F. H. Peters, B. L. Thorne, A. S. Chapman.

Establishment of Per Diem Bureau for Canadian and United States Traffic.

The Canadian Railway War Board has issued the following circular:—With a view to simplifying the handling of car hire accounts as between United States railways operating under federal control and other lines, it has been arranged to establish a per diem bureau which will act as a clearing house in the handling of accounts between the various systems of railways as above mentioned. Draft of the general regulations which have been formulated to govern the working of the revised arrangement is enclosed herewith. It is anticipated that amongst the benefits to be derived from the new system will be the avoidance of long outstanding claims, such as have existed heretofore, and reduction in the work in the individual car accounting offices. As soon as further details of the new system have been decided upon it is proposed to have a meeting of the car accounting officers of member lines here, in order that the matter may be fully explained to all concerned, and to dispose of any questions of a local nature that may arise.

Rules for setlement of per diem, including reclaims and passenger car hire, between federal, non-federal, Mexican and Canadian roads (other than industrial roads).

On all settlements between federal, non-federal, Mexican and Canadian roads (other than industrial roads), the Code of Per Diem Rules shall govern, except as hereinafter modified.

Each non-federal road shall be assigned to a federal road, with which it shall make settlement for per diem, reclaims and passenger car hire as provided for in these rules.*

Settlement for freight and passenger equipment cars between federal and non-federal roads. Freight cars:

a. Each non-federal road shall report to the federal road to which it is assigned all per diem earned by railway owned cars on its line (with the record of receipt and delivery of such cars), and to which it shall pay all per diem due.

b. Each federal road shall be responsible for the payment of per diem on cars owned by the non-federal road, or roads assigned to it, while they are away from home. The non-federal road shall submit monthly statement to the federal road to which it is assigned, showing all per diem earned on its cars while they are away from home, with record of interchange with the home road.

c. A federal road switching cars for a non-federal road may reclaim an amount equal to the actual time (with a minimum of 5 days on any one car **), which shall be paid by the non-federal road to the federal road to which it is assigned.

d. A non-federal road switching cars for a federal road may reclaim an amount equal to the actual time (with a minimum of 5 days on any one car **) which shall be paid by the federal road to which the non-federal road is assigned.

e. Where a non-federal road, under its contract with the U.S. Railroad Administration, is allowed a special per diem reclaim on cars delivered to it, such reclaim shall be paid by the federal road to which it is assigned and shall not be in addition to any switching reclaim herein established.

f. After the responsibility has been established that a reclaim is due to or from a non-federal road from or to a federal road under per diem rule 14, or on account of special conditions, settlement shall be made with the federal road to which the non-federal road is assigned.

g. When cars are handled under per diem rule 5, or held under per diem rule 14, by one non-federal road, for another non-federal road, reclaim settlement shall be made direct by such non-federal roads.

h. When per diem earnings of cars of non-federal ownership cease or are suspended, as provided by per diem rules 7 and 8, notice in accordance with these rules shall be transmitted to the federal road responsible for settlement with owner and to the owner of the car ***.

i. When per diem earnings of any car on a non-federal road cease, or are suspended, as provided by per diem rules 7 and 8, notice in accordance with these rules shall be transmitted to the owner and to the federal road to which the reporting non-federal road is assigned ***.

*Each non-federal road (other than an industrial road) shall insert in its registration in the Official Railway Equipment Register the name of the federal road to which it is assigned.

**A car received loaded and delivered loaded in switching service shall be considered as two cars.

***Specific instructions as to the names of officers of the respective roads to whom these reports are to be forwarded should be inserted in each carrier's registration in The Official Railway Equipment Register.

Passenger cars:

j. Each non-federal road shall report and pay to the federal road to which it is assigned the mileage and per diem earned by each railway passenger equipment car on its line.

k. Each federal road shall be responsible for the payment of mileage and per diem on passenger equipment cars owned by the non-federal road or roads assigned to it while they are away from home. The non-federal road shall submit monthly statement to the federal road to which it is assigned, showing all mileage and per diem earnings on its passenger equipment cars while away from home.

l. Each federal road shall make monthly reports to car owner, showing the wheelage of non-federal roads passenger equipment cars on its line. Each non-federal road shall make wheelage reports to car owner for all foreign passenger equipment cars on its line.

Settlement for freight and passenger equipment cars between Canadian and United States roads:

A bureau shall be established by the U.S. Railroad Administration, for the purpose of maintaining a record of the interchange of all railway cars and for the settlement of per diem, reclaims and passenger car hire, between U.S. and Canadian roads.

Freight cars:

m. Each Canadian road shall report monthly to the bureau all per diem earned by railway cars (other than Canadian roads' cars) on its line, showing the name of road delivered to and date of such delivery.

n. The bureau shall report monthly to each Canadian road all per diem earned by its cars while on roads in the U.S. and Mexico.

o. Reclaims under per diem rules 5 and 14, and special conditions due from U.S. and Mexican roads to Canadian roads shall be reported by the federal roads to the bureau, in such detail as may be required by the bureau. These reclaims shall be included in the bureau's reports to the proper Canadian roads.

p. Reclaims under per diem rules 5 and 14, and special conditions due from Canadian roads to U.S. and Mexican roads shall be included on Canadian roads' per diem reports to the bureau, in such detail as may be required by the bureau. Each federal road shall report to the bureau reclaims due from Canadian roads in such detail as may be required by the bureau.

q. Each federal road shall notify the bureau and the car owner respecting cessation or suspension of per diem under per diem rules 7 and 8 on Canadian roads' cars on its road, or on non-federal roads assigned to it, and obtain acknowledgment of receipt thereof from the bureau.

r. Each Canadian road shall notify the bureau and the car owner of the cessation or suspension of per diem, as provided by per diem rules 7 and 8, on U.S. and Mexican roads' cars while on its line.

Passenger cars:

s. Each Canadian road shall report monthly to the bureau all mileage and per diem earned by railroad passenger equipment cars (other than Canadian roads' cars) on its line, showing the name of road delivered to and date of such delivery.

t. The bureau shall report monthly to each Canadian road all mileage and per diem earned by its passenger equipment cars while on roads in the U.S. and Mexico.

u. Each federal road handling passenger equipment cars of Canadian roads shall submit monthly statement to the bureau, showing mileage and per diem earnings of such cars on its rails and the rails of non-federal roads assigned to it.

v. Each federal and non-federal road shall make monthly reports to the car owners, showing by car number the wheelage of Canadian roads' passenger equipment cars on its line.

Settlement between United States and Mexican roads' freight and passenger cars:

w. The U.S. Railroad Administration shall establish a bureau for the purpose of maintaining a record of the interchange of all railway cars between U.S. and Mexican roads. The bureau shall arrange to secure such reports as it deems necesasry for this purpose.

U.S. Sleeping Car Charges.—The additional passage charge of 16 2/3% of the normal one-way fare required from passengers travelling in standard sleeping cars and parlor cars, and 8 1/3% of the normal one-way fare required from passengers travelling in tourist sleeping cars, which has been in force for some months in the United States, was abolished by the Railroad Administration Dec. 1.

Discrimination in Car Distribution Punished.—I. K. Dye, formerly General Manager, Coal & Coke Rd., Baltimore, Md., who was convicted recently for discrimination in the distribution of coal cars to mines in which he owned no stock, in favor of mines in which he was financially interested, has been fined $1,000 and sentenced to 6 months imprisonment.

Canadian Avro Co., Ltd., has been incorporated under the Dominion Companies Act, with $2,500,000 authorized capital and office at St. John, N.B., to build, own and operate aeroplanes, balloons, dirigible airships, hydroplanes, etc.

The Railway Terminals etc., at St. John, N. B.

By C. C. Kirby, Division Engineer, C.P.R.

The St. John, N.B., railway terminals present an interesting problem in regard to their future extension to meet the development of the port. The present terminal layouts are the result of slow growth from small beginnings, and, consequently, the growth has been along the line of least resistance and low cost, rather than with the fulfillment of a prearranged plan. In this respect St. John is probably no different from most other old cities. The high ground surrounding the harbor on four out of its five sides presents considerable difficulty toward obtaining ideal layouts, or even barely possible working conditions.

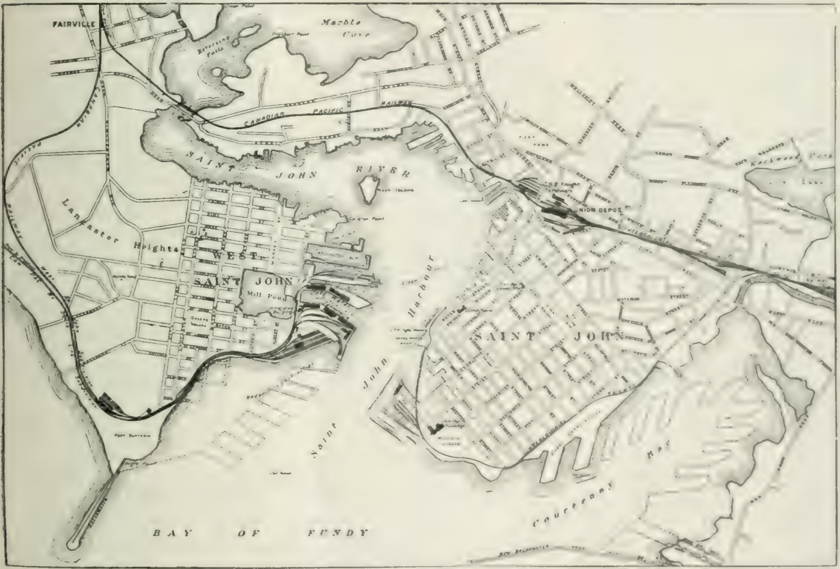
The city is served by 2 main lines of single track railway. The C.P.R. enters from the west and the Canadian Government Rys. from the east. The distance from Montreal to St. John via C.P.R. is 477 miles; by Canadian Government Rys. via Intercolonial and National Transcontinental 702 miles. The distance from Winnipeg to St. John by C.P.R. is 1,884 miles and by Canadian Government Rys. 1,906 miles. The terminals consist of the West St. John facilities, owned by the C.P.R., and the city facilities, owned by the Canadian Government Rys. The distance between West St. John and Long Wharf is 5.6 miles.

The C.P.R. terminals include a small yard of about 100 cars working capacity at Fairville, at which point all West St. John export freight leaves the main line and follows a short branch line into Bay Shore yard. Bay Shore is the terminal for freight trains from the west. It has a working capacity of about 800 cars and is equipped with a 12 stall locomotive house and the usual locomotive terminal facilities of coal plant, ashpit, water tank, etc. It is a turn-around point only for freight locomotives running between St. John and McAdam, the latter being the maintaining station. From Bay Shore yard cars are handled to the West St. John docks by yard locomotive service. There are three main line tracks connecting the two yards, operated under the control of a general yardmaster in charge of both yards. The distance between the two yard offices is 1.71 miles. At West St. John, the working yard capacity is about 1,000 cars, including cars actually set up along sheds and wharves.

There are 10 ocean wharves, known as berths 1 to 7 inclusive and 14, 15 and 16. In addition, there are a few wharves served by the railway which are exclusively used for local or coast traffic. At St. John, both railways do the work themselves of delivering and receiving freight into and out of the wharf sheds. There is no harbor commission or terminal railway company operating here as at other ports. The ownership of the wharves and sheds lies between the railways, the city and the Dominion Government. On the west side the city owns sheds 1 to 6, the government owns no. 6 extension and sheds 7, 14, 15 and 16. The C.P.R. owns the grain elevators and about one half of the conveyor galleries and the Dominion Government owns the other half. The railway tracks are owned by the C.P.R., except alongside of certain of the government owned sheds, where the government owns the tracks also. The city owns and maintains the trestle supports upon which the tracks are carried alongside of the city sheds. On the city side of the harbor the Canadian Government Rys. own the ocean terminal sheds at Long Wharf and the grain elevator and conveyor at Reed's Point, but the city owns the shed at the latter point.

The Canadian Government Rys. terminals lie wholly on the city side of the present harbor and comprise 2 ocean berths at Long Wharf, a passenger station and local yard at Mill St., a passenger car yard at Gilbert's Lane, and locomotive terminal at Island Yard, also a belt line railway running around the city proper along the harbor front. The belt line serves a number of industries and small wharves used for coast traffic as well as the new grain elevator at Reed's Point.

The layout of St. John Harbor can best be described as similar to the letter Y, the city proper lying in the crotch of the St. John River estuary and Courtenay Bay. The West St. John ocean terminals lie on the western side of the stem of the Y and the Canadian Government Rys. ocean terminals are proposed to be built in future



Canadian Pacific Railway and Canadian Government Railways Terminals at West St. John and St. John, N.B.

[illegible] the sides of the eastern arm. The [illegible] Canadian Government Rys. ocean [illegible] the head of the western arm on the [illegible] side. The Canadian [illegible] Rys. passenger and freight [illegible] across the city at the [illegible] of the Y and connect [illegible] C.P.R. at the union station near [illegible].

The fact of there being so many distinct [illegible] involved in the operation and maintenance of the railway tracks, [illegible] sheds, grain elevators and conveyors is to some extent a handicap to the proper development of the port, as any continuity of policy is impossible under such conditions. Beside the city and the C.P.R., the Dominion Government is represented by three different departments, Railways, Public Works and Marine and Fisheries. The creation of a harbor commission is under consideration for the carrying out of certain functions, but the complete ownership and control of all facilities by it has not so far been publicly suggested. That such an arrangement would be in the best interest of the port, there can be very little doubt, particularly in view of the necessity for the spending of large sums of money in development work in the near future.

At present there are two schemes of development suggested and partially embarked upon. The Courtenay Bay scheme on the east side, and West St. John on the west side. Which of these two schemes will be carried to completion first has not apparently been decided upon, but as both of them involve radical changes in the railway terminals, the consideration of them is of great interest from the railway viewpoint. The ideal scheme of development is of course one which can be carried out in part from time to time as the increase in traffic warrants. Unfortunately these conditions do not apply very well in St. John. In both schemes any further development for even one or two berths will involve a very large expenditure on other work than the actual berths themselves, such as reclamation, channel dredging, and railway development. The latter item itself is so considerable that the railway interests called upon to make the investment should be entitled to be assured of the full completion of the scheme when once embarked upon. For this reason it would appear proper to complete one scheme before becoming very deeply involved in the other.

The West St. John scheme, as outlined and agreed upon by the city, the C.P.R. and the Dominion Government, in an agreement entered into in 1911, includes the further construction of 4 piers and a retaining wall from the last one to the base of the Negro Point breakwater, giving 8 more berths than there are at present. The area between the site of the piers and the shore is to be filled in and used for railway purposes to serve the piers. The construction of the piers and retaining wall is an obligation upon the Dominion Government, as is also the filling in of the area behind the piers for 400 ft. from the end wall of the basins. The filling in of the remaining area is an obligation [illegible] C.P.R. So far 2 berths have been constructed by a piecemeal process of construction of one berth at a time, and these berths have been reached by the railway company extending out from its original location. The tracks to these berths approach in a fan shape from [illegible]. These tracks fan out from the base of a very heavy grade down from Bay Shore yard and sharp curvature. Unfortunately any further extension of these tracks by fanning out to reach more of the new piers will not be possible on account of the grade and curvature. The construction of the next pier will therefore necessitate a radical rearrangement of trackage. This rearrangement cannot be carried out without the reclamation of area between the new piers and the shore and the construction of the retaining walls to protect the filling. When this has been done the railway yard will require to be built at right angles to its present direction and a new entrance to it to be built at wharf level around Fort Dufferin point. This entrance could not be reached from the present Bay Shore yard, as the latter lies 66 ft. above dock level and too close at hand to make grades. Bay Shore yard would therefore have to be abandoned as the terminal yard and a new terminal constructed at some point farther back. A site for such a terminal could be found just west of the Fairville yard, but this would mean the retention of a long 1% up-grade against traffic from the west. A line diversion from South Bay towards Duck Cove, with a terminal yard on the flats in that vicinity, would appear to be the best arrangement. The present capacity of West St. John docks is approximately 250 cars of export freight a day. The final scheme would give a capacity of about 500 carloads per day, exported, or 100% increase.

In discussing railway terminals the operation of grain elevators at St. John cannot be overlooked. The port is now well equipped with elevator capacity, but only certain of the berths are equipped with conveyors to deliver grain. During the past season about 16,000,000 bush. of grain were shipped from West St. John through the conveyors and 3,500,000 bush. of oats were handled through the elevators and loaded into bags and shipped through the sheds. The elevators at West St. John are owned by the C.P.R. and consist of one timber structure built originally in 1892 and extended in 1898, having a present capacity of about 600,000 bush., and one concrete structure built in 1912 of 1,000,000 bush. capacity. There are 5,280 lin. ft. of grain conveyor galleries in use to deliver grain at 6 berths. The longest run for grain is 2,950 ft. when delivered to no. 6 shed from the new elevator. The old timber elevator is operated with rope transmission drives, driven by a 450 h.p. steam engine, and the conveyor belts in galleries to berths 1, 2, 3 and 4 are similarly driven. The new concrete elevator is operated by electricity, generated from a steam turbine plant in a power house close by. The generating units are two 600 h.p. turbines and boiler plant of four 125 h.p. boilers. Only one half the capacity of generating plant and boilers is generally used, the other half being held as spare. The condensing water for the turbines is obtained by pumping sea water from a nearby basin with an electrically driven 8 in. centrifugal pump. The 2 elevators are operated in conjunction with one another and are connected together with two 36 in. belts. The operation of both houses is under one general foreman, and grain can be delivered from the new house at any one of the 6 grain berths, and from the old house it can be delivered at 4 of the berths. An extension of the grain conveyor galleries to the new berths 14 and 15 is under consideration by the Dominion Government. On the city side of the harbor a new 500,000 bush. concrete elevator has recently been erected by the Canadian Government Rys., but has not yet been put into use.

The conveyor systems make the cost of handling grain at St. John very high in comparison with some other ports. Since the war began the operation of bagging oats has been extensively carried on at West St. John. This is done by elevating the grain into bins and then delivering it through a spout to machines which feed it into bags, the bags are then sewn up by hand and loaded into cars and switched around to the wharf sheds.

The design of wharf sheds has a very important bearing on railway terminal layouts. At St. John, practically all of the sheds are reached from tracks laid parallel with them. This works out very well where the sheds are sufficiently long to enable enough cars to be set up alongside to keep the unloading gangs employed from one meal hour to another. Unfortunately at all of the older sheds this is not the case and time is lost by having to switch the cars during working hours. In most cases it takes as much as 45 minutes to pull and set up a shed, and unless there happens to be work at some other convenient shed to which the unloading gangs can be sent for that period, the men will stand idle, sometimes 60 to 90 men. An alternative layout for short sheds is to place the tracks at right angles to the shed, with trucking platforms between every third or fourth track. This increases the trucking distance, but with the use of electric trucks it forms a good layout. This method is not in use at West St. John, but is contemplated as a possible future improvement at certain sheds.

The design of shed floor is also another important factor to the terminal railway. At St. John many of the floors are limited to floor loads of 300 lb. a sq. ft., owing to being constructed on joists and beams. This is a considerable handicap in handling freight, as the capacity of the shed is much reduced and therefore additional switching is necessary. At West St. John, shed 15 is considered to be the best from the point of view of railway working conditions. It is 80 ft. wide and 700 ft. long, with 3 tracks behind this shed, each holding 17 cars along the face of the shed. Only 2 tracks are used for unloading purposes at the same time. It is never found desirable to truck through more than one empty car. The third track is used for holding the next set up of cars for the face of the shed. Shed 16 is 90 x 750 ft. Although this is an excellent shed in most respects, it has the disadvantage of a limit of 300 lb. per sq. ft. in floor loading capacity. All of the modern sheds are equipped with continuous sliding doors on both sides.

The use of electric trucks for handling freight from cars to shed has been extensively adopted at West St. John. Last winter 26 trucks were in service. It has been found in practice there that an electric truck is economical for use as compared with hand trucking where the trucking distance is over 75 ft. Two sets of trucks are generally necessary, owing to the time required to charge them, which is about 6 to 8 hours. A truck will operate for about 12 hours with one charge. A double set of trucks is, of course, only required when working day and night shifts. An electric truck has approximately three times the capacity of a hand truck. It has also a number of uses, such as hauling heavy shipments across the floor of the shed when loaded on dollies.

At St. John only single deck sheds have so far been used for handling freight. The use of double deck sheds would appear to be desirable, although the extreme range of tide presents some difficulties.

With export freight loaded into the upper floor and import freight into the lower floor it should be quite feasible to handle freight without the use of hand cranes and using only the ships' derricks. The freight loaded into the upper floor from cars would be required to be raised by elevators and electrically trucked.

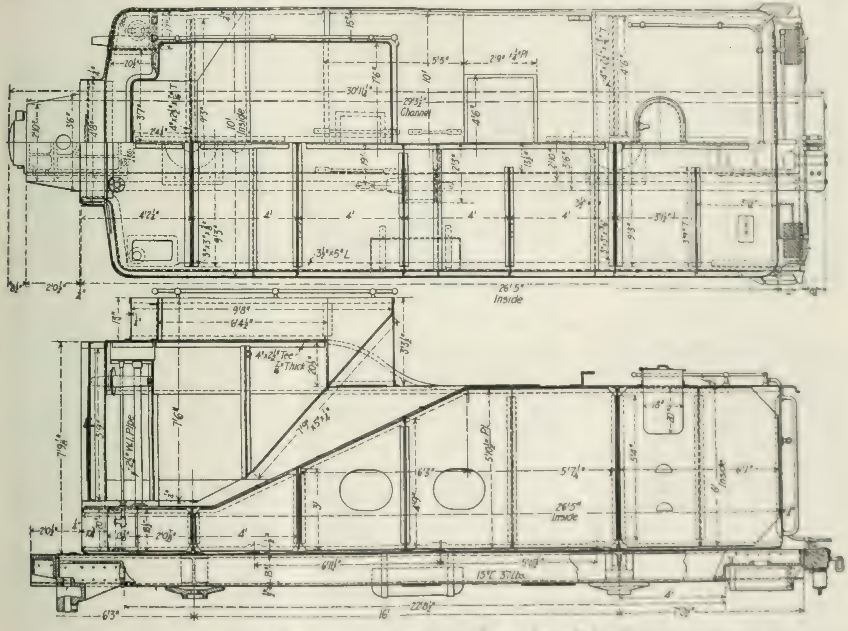
As a rough estimate of unloading export freight from cars, it is found at St. John that one car per hour is an average rate with general commodities and an average trucking distance of not more than about 75 ft. One gang of truckers, of 6 men and a checker, works each car.

One of the most recent improvements in railway facilities at West St. John is the erection of a 20,000 gall. conical bottom steel water tank. The water supply is received at about 60 lb. pressure from the city main and is regulated by an altitude governing valve on the intake main. The tank is provided with a 10 in. spout and also a 10 in. connection to a water standpipe. The tank is heated by a steam coil supplied from the elevator power house close by. The steam coil and water pipes are enclosed in a 6 ft. diameter steel cylinder underneath the bottom of the tank. This cylinder has not yet been provided with a frost-proof casing outside, as is the usual practice, and it is not the intention to use one as there is a better chance to keep the steel work properly painted without a casing. No trouble from frost has yet been experienced.

The foregoing paper was read before the Engineering Institute recently.

In connection with this article, the map of St. John harbor, published in Canadian Railway and Marine World for December, pg. 568, will be found of interest.

Canadian Pacific Railway Locomotive Tenders.



Canadian Pacific Railway Locomotive Tender. Plan and longitudinal section.

The C.P.R.'s standard locomotive tender, which for several years has been remarkable for a number of original ideas incorporated in its design, has recently undergone a number of modifications designed to promote both its utility and the safety of the engine and train crews working in connection therewith. As formerly constructed, the tender had a slope sheet at the usual angle which necessitated the use of a supplementary hinged sheet covering the upper half and arranged so as to permit of its being lifted by means of an air cylinder inside the water compartment when it was desired to throw the coal from the back part of the coal space forward to the shovel sheet. This form of coal passer has likewise been a standard feature of C.P.R. tenders for a number of years.

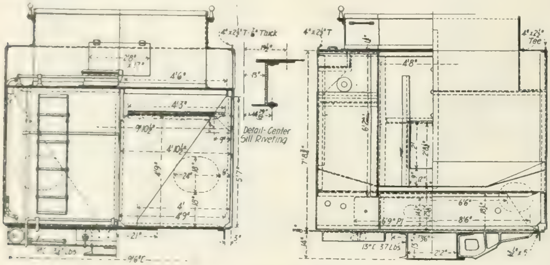
Without other modification to the tank portion of the tender, a new form of coal container has been applied, same having slope and bottom sheets independent of the tank with the former placed at an angle about 30 degrees steeper than formerly, the result being that coal automatically delivers itself at the shovel sheet and the coal passing arrangement has been dispensed with. This, of course, serves to diminish somewhat the coal carrying capacity of the tender, but the advantages gained through the elimination of the coal passer and the fact that quantities of fuel no longer remain dead in the coal space for indefinite periods of time are felt to be a full compensation for this seeming disadvantage.

The tanks of C.P.R. tenders are constructed with the idea of making them carry their own load without the assistance of a heavily constructed underframe. This is accomplished by dividing the water space longitudinally on the center line, and transversely over the [illegible], as well as at intermediate points, where it was originally designed to support the load of coal on the slope sheet, with plate diaphragms. These not only make of the tank a self supporting structure, but serve at the same time to reduce the surging of the contents and make the tender ride more smoothly. [illegible] diaphragms are large triangular gusset plates [illegible] the transverse diaphragms in their function of stiffening the structure. The [illegible]

[illegible] the diaphragms are cut off to simplify attachment and to permit of equalization of the contents in the several [illegible] of the tank, in addition [illegible] a series of 12 by 18 [illegible] in. above the bottom, which, in addition to serving the above purpose, also facilitate interior [illegible] and repairs. The well of the tank is placed just back of the rear [illegible] diaphragm and underneath the well the longitudinal diaphragm is so cut [illegible] as to serve the purpose of a ladder for entering the tank. This form of tank structure requires the minimum in the way of underframe construction, the latter consisting merely of a pair of 13 in. channels terminating in draft housings at either end and fitted with the [illegible] castings in the form of center-plates, bolster arms and filling pieces.

The tender is designed for application to locomotives having the vestibuled cab, a further standard feature of C.P.R. locomotive equipment. The coal gate is but 32½ x 24 in. in size, being cut into the otherwise solid plate front end of the coal hopper ,and is closed by means of a vertically operating steel plate slide. Through this relatively small gate, access to practically all portions of the shovel sheet is possible from the fireman's position of the firing deck.

This design of tender has been strongly commended because of the safety features incorporated in its construction. Prominent among these is the arrangement of the coal bunker, whereby it is not necessary for trainmen to climb over the coal pile in getting to the rear of the tender. This is accomplished by bringing in the top of the bunker a distance of 15 in. on either side, forming a runway of that width. A hand rail affords security to those having occasion to pass from front to rear or vice versa by [illegible]. Vertical hand rails are provided at the rear cornes immediately above corner steps, a further safety measure which is of especial value in switching. The frame extends beyond the end of the tank a sufficient distance to afford a platform on which to stand, there being a corrugated step plate near either end and a longitudinal hand rail across the back end of the tank at suitable height. Access to the top of the tank from the rear platform is had by means of [illegible] left-hand corner for that purpose ,and around the [illegible] the tank, at the rear, is still another hand rail for the safety of men having to climb over the back of the tender.—Railway Review.



Canadian Pacific Railway Locomotive Tender. Cross sections.

Programme for a Season's Track Work.

By M. Donahoe, Roadmaster, C. & A. Rd.

Spring.—No track should be tamped until the frost is all out of the ballast below the ties, other than in spots where the track is settled or frost heaved too much out of cross level or surface to safely carry and maintain gauge on frost shims between the rail and ties. Smoothing, lining track, removing frost shims, and tamping ties solid to the rail should be the track force's first spring work after the frost is out below the ties, gauging and tightening bolts to have been cared for during the winter months, other than it should be a fixed rule that wherever track is worked in the way of smoothing up, surfacing, renewing ties, etc., the bolts should be always tightened and protruding spikes driven to the rail.

Next in order for the foreman on outlying sections is to remove any and all obstructions to waterways through culverts and surface ditches parallel to track, to care for spring rains and freshets. Foremen in yards and yard sections have, in addition to their routine work, a considerable renewal of crossing plank in street and highway crossings, after being often times taken up and reset on account of being heaved up with winter's frost, snow and ice.

Next in order is tie renewals. Considerable can be said on the manner of handling and placing ties, without a waste of words. Many track foremen only consider digging out the old tie and placing a convenient new tie, spiking and tamping it to the rail. To be brief, if the season's ties are not received earlier than during winter months, they should be distributed along the track, as needed for renewals, except in cuts and high fills where they would obstruct waterways and roll down the slope of high hills. At such points they should be heaped at ends of such cuts and fills, thereby saving approximately a cent a tie to pile and two cents to truck and distribute for renewals later on. In spotting in ties in all kinds of ballast, the ballast bed should not be picked down or lowered any more than is absolutely necessary to fit the thickness of new tie to the surface of rail. In removing old tie, spring up the track rails one inch, or as much as can be raised by not permitting the kind of ballast at hand to run under the ties and hump the track. Ballast can best be trenched out one inch below bottom of old tie to be removed. Spring up rail one inch, drive old tie in trench and easily pull out.

The new tie should be chosen as to thickness and width for the space to be applied, using large or broad end ties under joints, a broad or narrow tie between the narrow and broad ties remaining in track as the case may be, also consider thickness of new tie with depth of trench remaining from old tie removed, proper spacing of ties to be reasonably maintained at all times. On curves requiring super-elevation for high speed trains, also carrying slow speed drag trains, the broad end of ties should be generally placed under inner rail of curve which has to carry the greater tonnage of the two rails. To save time of lining end of ties to rail, generally done by a mark on shovel handle or spike maul handle, a chalk line should be made on surface side of tie in advance of placing them in track.

When old ties for renewals are not marked for the foreman, the supervisor or roadmaster should make frequent inspections to know that each and every foreman is using good judgment in taking out old ties by considering the importance of the track in carrying tonnage and speed of trains as well as the condition and distribution of old ties under each rail, remembering that ordinarily on tangent track where there are two good sound ties, a poor tie will often do service between for a year or longer. It is good practice to accomplish all, or the greater percentage, of tie renewals during the spring work or early portion of the working season, except in track to be surfaced out of a face where the labor cost of tie renewal is a smaller item.

Summer.—Beginning summer maintenance, track surfacing should be well under way and nearly completed during the summer season. Broken stone and slag ballast track, to maintain good riding high speed track, should be surfaced two or more inches each third year to prevent track from becoming center bound. Provide a cushion of additional ballast under the ties and fork the ballast shoulder below bottom of ties to provide good drainage from ends of ties, preventing vegetation and maintaining a stone ballast cross section with as little ballast shoulder at ends of ties as will hold the track to line and prevent joint ties from skewing by rail creeping on one-way traffic, with the assistance of anti-rail creepers. This, of course, requires an additional application of new ballast.

On six mile sections a sufficient section force should be provided for during the working season to enable the foreman to surface two miles of track per year, which would surface the entire section every third year and would reduce the practice of trenching and spotting in ties in stone and slag ballast track each year. During the late spring and early summer season vegetation gets a good start, requiring a swath to be mowed on the dirt shoulder and outside the ballast line, and in some cases weeding out the ballast.

Mowing the right of way should be done systematically at a certain period according to localities. Some roads have to mow their right of way twice during a season. Right of way should be burnt off clean as soon as dry enough after being mowed, to prevent growth of weeds, rank vegetation, and damage by fire to adjoining property.

In localities where winter weather is

too severe to lay rail, it can best be done in the spring and summer seasons providing it is cared for by being surfaced and tie spaced, or else anchored before winter.

Autumn.—Some surfacing may be left over to be completed in the early autumn. On roads with small forces it is necessary that summer work begin early and end late in the fall. Next in order of autumn work is ditching, widening banks, building up dirt shoulder, etc. All surface ditches should be cleaned out, shaped up and deepened as may be necessary. Particular attention should be given to ditching and draining of ballast in cuts holding water where trouble is experienced from frost heaving track during winter months. Also provide good drainage about interlocking plants, switches, railroad crossings, street crossings, water cranes, etc. Sufficient ballast should be removed from between the ties to a depth of four or more inches, about all switches, spring rail frogs, guard rails, and all movable parts of track equipment, to have good working clearance for removal of frost, snow and ice as well as surface drainage. In busy yards there should be, if possible, a system of drainage from all switches to a catch basin where surface drainage cannot be very well maintained. It is also good practice to arrange the work so as to smooth up and line all outlying main track to the best possible condition just before the beginning of winter so as not to be compelled to do shimming and spike lining early in the winter, or after the first frost goes into the ballast, hindering tamping.

Winter.—Track work on outlying sections should consist generally of renewing bolts, spikes, gauging, and repairing and rebuilding of right of way fences, cutting and burning hedge, as weather conditions permit. Roads having much shimming to do during the winter, should provide track forces with shop made shims, ranging in thickness from ¼ to 1½ in. or more, spike bored to fit the different rail base sections. Where high shimming is necessary, say from ¾ to 1½ in. thick, the shim should be about 12 in. long, and shims from ½ to 3 in., which should be the limit in thickness of frost shims, other than for unusual conditions, should be 18 in. long, with holes bored for boat spikes, as well as rail spikes.

During winter months every road has an accumulation of cinders that should be distributed and unloaded on branch lines for ballast, building up shoulder, etc. In yards when the forces are not engaged at removing snow and ice, such work can be done as changing rail, adzing ties and turning in rail, applying tie plates and rail braces, renewing frogs and switches, changing angle bars, bolting, spiking, cleaning up at intervals when the ground is clear of snow or thawing, resetting crossing plank, flanging, and numerous other works.

In localities where the winter weather is reasonably mild, where there is not much snow or ice, new rail can be laid more economically during the winter by having a better class of well organized labor to do the work, thus giving an early start in the spring to surface and care for the new rail. It also helps to retain the track forces through the winter, and if careful attention is given to proper expansion and shimming over low ties, the rail can be laid and cared for as well as if done during the summer. Where rail creeps, apply anchors.

In localities where there is much snow during the winter, a good equipment and organization should be kept at suitable points and in first class condition for use. In addition to snow ploughs, flangers, etc., camp and commissary cars should be provided for the laborers. Section foremen and engineers should keep the dispatcher advised of local conditions along the line as to length and depth of drift accumulating so that the worst places can be given attention first.

After a heavy fall of snow commences to thaw, where practicable a trench should be cut through the snow in the ditches to provide easy outlet for the melting snow water, and not having it running at random on and across the track, but following the ditches. In yards where the snow fall is heavy, it is often necessary, and a good practice, to load the snow on flat cars and dispose of it at the nearest suitable place. In large terminals the melting of snow and ice from about switches and interlocking plants is gradually gaining favor and is a very good manner of removing sleet and snow from about switch points and interlocking movements. Yard forces have considerable lowering or opening up of small trenches to do to provide drainage from switches during the winter months, even though such trenching is done before winter.

Labor.—In accordance with the retrenchment policy in vogue on the average railway for some time past, such retrenchments consist almost entirely of uses of material and labor. It might be advantageous to establish some unit to measure the performance of section gangs, by having a system of performing certain work at a given period. Assuming the track conditions in general to be about the same, as should be, and if they are not they should be made so by the assistance of floating gangs, put it up to the section foreman to keep up his track systematically to the general average.

To secure the most efficient organization the maintenance forces should be nearly uniform throughout the year. This, of course, is not entirely practicable on all roads, or on parts of some roads, on account of winter weather conditions, but many of the more pronounced fluctuations in the forces as practiced on some railroads can be eliminated.

In the employment of men during the early spring, when the better or more choice of good track labor can be procured, the foreman should always endeavor to secure the most efficient and intelligent men possible. Generally, the native is the best laborer if he can be depended upon to remain through the harvest season, otherwise foreign labor had better be procured when the pick of such labor can be had during the early season. The employes who do not measure up to this standard should be eliminated from the service if a better class can be secured for the wages paid. One or more inefficient and incompetent men in a gang will often times influence the entire organization of that gang and possibly extend the detrimental influence to neighboring gangs.

The C.P.R. President's New Year's Greeting.—E. W. Beatty, K.C., President, C.P.R., sent the following message to officers and employes Dec. 31:—"I extend greetings and best wishes for the coming new year [illegible] in the history of Canada [illegible] Canada's problems."

The Canadian Railway War Board's Work.

Accident Reports.—The board has called the railways' attention to the Board of Railway Commissioners' general order 244, relative to reporting of certain classes of accidents to that board. Clause 4 of the order stipulates that railway employes affected shall be provided with a copy of paragraph 2 of the order, reading as follows:—

"2. That in the case of derailments, collisions, failure of locomotive boiler or any of its appurtenances, and highway crossing accidents attended by personal injury, and in the case of any damage to any bridge, culvert, viaduct, or tunnel so as to render the same impassable or unfit for immediate use, the conductors or other employes of every such company shall, at the expense of the company and at the same time they report to the company, send to the board, addressed to its Chief Operating Officer, a telegram containing the following information:—Date and place; name of railway; number and description of train or trains, locomotive or locomotives concerned; number of passengers, employes or others killed and injured; a short and concise statement of the apparent cause of the accident; name and title of person sending report."

Complaints have reached the Canadian Railway War Board that the instructions embodied in clause 4 of the order have not been complied with in some instances, and it is directed hereby that all railways subject to instructions from the Board of Railway Commissioners take the necessary action towards notifying their employes without delay.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John, N.B., Facilities.—Lord Shaughnessy, Chairman of the Board; E. W. Beatty, President, and A. D. MacTier, Vice President, C.P.R., visited St. John, N.B., Dec. 6 and 7 and looked over the facilities at the port. A deputation representing the city council and the board of trade waited on them, and discussed a number of matters. President Beatty expects to make a longer visit to St. John in the near future, when matters at issue between the city and the company will be taken up.

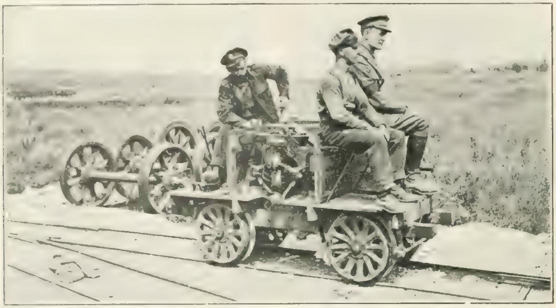
Leaside-North Toronto.—We are officially advised that the company laid, during 1918, two miles of second track on the line between Leaside and North Toronto. This piece of work was described in detail in Canadian Railway and Marine World for Sept., 1918, pg. 418.

Water Service at Regina.—A press report states that a second water tank is being built at Regina, Sask., alongside the existing tank, which will bring the water storage capacity at that point up to [illegible] gall. The pipe supply line between Pilot Butte and Regina is being put into first class condition. It is expected that this additional storage capacity will enable the company to supply all its requirements.

New Slip at Pier A, Vancouver.—A press report states that [illegible] an additional slip at Pier A, Vancouver, B.C., which is expected to cost [illegible], will be started in the near future. The present facilities [illegible] (Nov., 1918, pg. [illegible].)

Canadian Transportation Men, Engineers, Etc. in the War.

Canadian Engineers. The Canadian Sapper, the Canadian Engineers official magazine, published at Seaford, Sussex, Eng., had an article recently by Lt.-Col. T. V. Anderson, commanding the Canadian Engineers training depot there, from which the following extracts are taken: When in Canada the call for men first came in 1914, none came forward more readily than those suitable for the Canadian Engineers. At first, it was only proposed to send two field companies and one signal company with the 1st Canadian Division, but shortly before sailing a third field company was added. After a memorable voyage, the convoy reached Plymouth, and the troops went under canvas on Salisbury Plain towards the end of October. A very wet winter set in shortly afterwards, the camp became a regular sea of mud, and it was considered desirable to get the troops into huts as quickly as possible. The three field companies were, in consequence, employed for most of their period in England, on the construction of hutments in the vicinity, and were thus compelled to forego, until reaching the front, much of the technical training which they should have had.



The Mechanical Bug, on the British Western Front.
A "locomotive" made by Canadian Tramways Corps officers, aided by a corporal. The engine was from a motor cycle, the fly wheel from a once famous sugar refinery, and the belt from a mine-head, afterwards smashed by artillery fire. Canadian official photograph. Copyright reserved.

Canada had never before sent engineer units on active service, and, while the volunteers in their ranks were as fine a body of men as one could wish for, the majority—and this applied also to a number of the officers—had little conception of the services actually required of engineers in the field. If there were many within the C.E. units themselves not conversant with these requirements, there were few indeed of other branches of the service who had any appreciation of them whatever. So it fell to the lot of these pioneers of the Canadian Engineers not only to learn their own work under service conditions, but also to learn how this should be properly applied to the assistance of other arms in the field. That their methods of work should have been followed by the units which came later, speaks highly for the adaptability of these first companies.

When the engineers of the 1st Canadian Division proceeded to France in Feb., 1915, they left behind them only their base details, a mere handful of men, available as first reinforcements. Shortly afterwards, however, the C.E.T.D. a very small concern at first—was organized at Shorncliffe, with a nucleus of officers and men sent from Canada. With the 2nd Canadian Division came another signal company and three more field companies, formed in Canada and trained in England, which proceeded to France in Sept., 1915. Towards the end of the year the first two army troops companies, closely followed by the first two tunnelling companies, arrived also from Canada, and about this time the third tunnelling company was raised in France, the personnel being selected from the Canadian infantry units in the field. For a few months, towards the end of 1915, the Canadian field troop worked with the Canadian Corps. Its personnel was, however, entirely Royal Engineers. Now followed, in fairly quick succession, the formation of the engincer units required by the later divisions, together with more army troops companies. Thus we see how the Canadian Engineers in the field have grown from small to quite large numbers; and it has, of course, been necessary for the training depot to be increased in proportion.

In connection with the foregoing, we have received the following additional information. The Canadian Engineers in France were reorganized a few months ago, and the units were reinforced to battalion strength, with a corresponding step up in rank for all concerned. There are now three battalions of engineers, with a strength of 1,000 each, to a division, instead of three companies with a strength of 216 each as formerly.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to Sept. 30, contributed $94,868.56 to the Canadian Red Cross Society and the Canadian Patriotic Fund.

PERSONAL NOTES.

Major C. A. Bell, of Toronto, formerly a mining engineer, who lost both legs at the opening of the battle of Amiens, has been awarded a bar to his military cross. He joined the Canadian Expeditionary Force, as a sapper in the Canadian Engineers, and obtained his majority recently. The official record of the act for which he received the bar to his cross is as follows:—"For conspicuous gallantry and devotion to duty during an attack. In spite of heavy shelling, he took his company across 'no man's land' and built a track into the enemy's territory. He was badly wounded in both legs and head, but the track, about two miles long, was ready for guns and transport in a wonderfully short time, and the success of the undertaking was due to his energy and fine example. M. C. gazetted Jan. 1, 1917."

Portion of Badly Shelled Track on the British Western Front in France.

Gunner H. Brown, son of M. H. Brown, District Freight Agent, Ontario District, C.P.R., Toronto, is among the war prisoners released recently from Germany in accordance with the armistice terms. He enlisted in Sept., 1915, in the 34th Battery, and was taken prisoner at the battle of Zillebeke, June 2, 1916.

C. E. Goodman, formerly travelling

business representative, Canadian Railway and Marine World, who enlisted with the 1st Tank Battalion, C.E.F., and went overseas June 3, 1918, has sent us copies of the Tank Tatler, the battalion's newspaper. The October number details the origin of the tank battalions and the organization of the First, with its history.

Lt.-Col. A. M. Gordon, one of the Canadian army chaplains, who has been awarded the D.S.O. for gallant services, and who was Assistant Pastor of St. Andrews Presbyterian Church, Ottawa, before going overseas, is a brother of W. G. Gordon, Transportation Engineer, Canadian Electric Co., Toronto.

Lt.-Col. H. T. Hughes, C.M.G., R.C.E., was born in London, Eng., May 1, 1873; was articled to Alexander & Gibson, London, Ont., in 1893, was Assistant Engineer, C.P.R., 6½ years, and Assistant Engineer, Quebec & Lake St. John Ry. and Great Northern Ry. of Canada, 4 years. Admitted A.M. Canadian Society of Civil Engineers, 1899. Served in 8th Royal Rifles, Quebec, and 10th Q.O.C.H., Quebec, as Lieutenant. Received commission in R.C.E. in 1914, and served with the corps in Toronto, Halifax, Victoria, and Kingston. Camp engineer at Valcartier in 1914. Organized personnel for the C.E.T.D. and acted as O.C., C.E.T.D., England, until appointed C.R.E., 2nd Division. Proceeded to France, September, 1915. Appointed C.R.E., Corps Troops, May, 1917. Appointed Companion of the Order of St. Michael and St. George, June 3, 1916. Mentioned in dispatches, June 13, 1916, and Jan. 1, 1917.

Corporal A. Jackson, Canadian Railway Troops, has been awarded the Military Medal for conspicuous gallantry and devotion to duty while engaged on light railway patrol. Though slightly wounded, he, with a sapper, went to the assistance of a battery near his railway line, which had had its camouflage wood and sandbags ignited by heavy enemy shell fire, and after fighting the flames for half an hour under continuous shell fire, they smothered the fire. They then repaired the line, which had been damaged by shell fire, and re-railed the train. His fine devotion to duty saved the light railway train and much battery ammunition.

Brigadier-General W. Bethune Lindsay, C.M.G., D.S.O., R.C.E., was born at Strathroy, Ont., Nov. 3, 1880. Entered R.M.C., Kingston, Ont., 1897. Graduated 1900. Upon graduation, was appointed Assistant Engineer, Marine and Fisheries Department, Ottawa, from 1900 to 1904. Upon the organization of the R.C.E. in 1904, was gazetted Lieutenant, R.C.E., July 1, 1904; was Divisional Engineer, Military Districts 3 and 4, July, 1904, to Aug., 1905. From that time on he acted as Command Engineer or C.R.C.E. in most of the Canadian military districts. In 1914 he was C.R.C.E., district 10, and on the outbreak of war volunteered for service. Appointed O.C., Divisional Engineers, Valcartier, Aug., 1914, which was afterwards taken over by Brigadier-Gen. Armstrong. He then took command of the 2nd Field Company; was promoted Lieut.-Col. and C.R.E., 1st Canadian Division, Sept. 13, 1915; promoted Brigadier-General and Chief Engineer, Canadian Army Corps, Mar., 1916. Mentioned in dispatches Jan. 1 and 2, 1916; Jan. 1, 1917, and Jan. 1, 1918. Appointed C.M.G. June 2, 1916, and D.S.O. Jan. 1, 1918.

Col. C. Weldon McLean, D.S.O., with two bars, son of Brig.-Gen. H. H. McLean, M.P., K.C., formerly President, St. John, N.B., Railway, has been elected to the British House of Commons, for Brigg, Lancashire, as a supporter of the Unionist Government.

Lieut. J. G. Troup, of the Gordon Highlanders, and formerly in the Superintendent's office, C.P.R., Winnipeg, was among the Canadians decorated with the Military Cross, at Buckingham Palace, London, Eng., recently. He enlisted as a private in the 27th Battalion, and rose to the rank of sergeant, and on Sept. 23, 1915, was gazetted Second Lieutenant in the Gordon Highlanders, Imperial Army. He was wounded in Nov., 1916, and promoted to Lieutenant in Oct., 1917, and a month later was awarded the Military Cross, after which he was invalided to England.

Canadian Northern Railway Construction, Betterments, Etc.

St. Charles River Bridge.—Work on the cofferdams of the new Ste. Anne railway bridge on the St. Charles River at Quebec, is reported to be in progress, and it was expected everything would be in readiness to start the masonry work by Jan. 1. This is part of the work being carried out by Quinlan & Robertson for the Public Works Department. The bridge is used by the C.N.R.

Mount Royal Tunnel & Terminal Ry.—The Board of Railway Commissioners, Dec. 4, reserved its decision on the company's application for approval of transfer tracks and connections between its tracks and those of the Jacques Cartier Union Ry., a G.T.R. subsidiary.

Ottawa-Toronto Line.—Tenders were received to Dec. 14, for the removal of the present substructure of the bridge at the Trent River crossing at Glen Rose, mileage 43.5 on the Maynooth Subdivision, about 13 miles north of Trenton, Ont., and the construction in place thereof of 7 concrete piers. We were officially advised Dec. 18, that the contract will not be awarded for the present, it having been decided to carry the work over to the summer.

Ottawa-Port Arthur Line.—We are officially advised that a contract is about to be let for the erection of a steel bridge at mileage 147.4 on the Pembroke Subdivision, where the Little Madawaska River enters Trout Lake, 10 miles east of Brent, the divisional point in Algonquin Park. The two abutments are 15 ft. and 17 ft. high, respectively, and rest on a very hard, compact sand and gravel formation about 6 ft. below the river bed. The superstructure will consist of a 68 ft. through plate girder span. The existing structure is a 6 span pile trestle bridge. The new bridge is being built in line with the company's policy of replacing wooden structures with more permanent work, but its construction is being hastened owing to the fact the lumber companies wish to drive logs down the river in the spring, and the railway wants to give them a proper clearance for their drive.

Cherry St. Yards, Toronto.—We are officially advised that a contract, covering the grading for 3 additional team tracks of 500 ft. length, at the Cherry St. yards, Toronto, has been let to Verrochio and Costalloni, Toronto.

Fort William, Ont.—Construction is reported to be in progress on a platform for loading and unloading cattle, on property recently acquired off Vickers St., between Bethune and Cameron Streets.

Union Station for Port Arthur.—The Port Arthur, Board of Trade has been collecting information in connection with a project for the erection of a union station in that city, and is reported to have sent a memorandum on the subject to President D. B. Hanna. A deputation from the board of trade expects to arrange for an interview with the directors at Toronto on an early date.

Elrose Jct.-Alsask Branch Line.—Track has been laid this year westerly from Eston, the formal terminus of a branch 84.4 miles long from Elrose Jct., for about 40 miles, and in the new time table which came in operation at the end of October provision was made for operating a train service on 20 miles of the new mileage. The stations are as follows: Snipe Lake, mileage 90.9; Madison, mileage 97.6; Glidden, mileage 104. Track laying is reported to have been completed to mileage 121. We were officially advised at the end of June (see Canadian Railway and Marine World, July, pg. 293), that it was intended to extend this line during this year from Easton 43 miles to Alsask, where the Saskatoon-Calgary lines cross the Saskatchewan-Alberta boundary.

Hanna-Medicine Hat Extension.—Grading is reported to have been completed on this line for about 40 miles, to within a few miles of the Red Deer River. The construction programme for 1918 as detailed in Canadian Railway and Marine World for July, pg. 293, set out that some grading had then been completed out of Hanna, and that an additional 47 miles would be done during 1918, carrying the work up to the Red Deer River. The contractor for the grading is W. A. Dunton, Winnipeg. An unconfirmed report says that tracklaying is expected to be gone on with during the winter.

Oliver-St. Paul de Metis Line.—Ballasting is reported to have been completed to mileage 22 from Oliver, and ballast is reported to have been distributed on the remaining 22 miles of right of way, on which track has been laid. The bridge at Waskatenow Creek is reported to have been completed and a water tank built. Beyond mileage 44, bridging and other work is reported to be in progress to mileage 100, to which point the grading had been practically completed prior to 1918.

President D. B. Hanna's Message to Canadian National Railways' Employes.

D. B. Hanna, President, Canadian National Railways, issued the following circular Dec. 24: "As a first official greeting to all employes of the Canadian National Railways, this Christmas message is to wish for you and yours the realization of peace and good will. With the new year close at hand, which we enter under such changed conditions, it is opportune to ask your co-operation in making a success of government owned railways in the wider field which the combined system now covers. Our duties to this end should be regarded as a public trust. Our aim must be efficient transportation service which [illegible] can only be achieved through the loyal support of all employes. At this time we are getting back some of those who have so well represented Canada on Flanders fields. Those who return to our service are welcome. It should hardly be necessary to say to our employes that when travelling on our cars returned soldiers should be treated with all consideration and respect, and that their journey should be made as comfortable as possible for them; also that information as to returning soldiers should be handled with special care and thought of the great importance of such information to those personally concerned."

Government Control of United States Railways.

President Wilson, in addressing the U.S. Congress at Washington, Dec. 2, said, among other things:—

"The question which causes me the greatest concern is the question of the policy to be adopted towards the railways. I frankly turn to you for counsel upon it. I have no confident judgment of my own. I do not see how any thoughtful man can have who knows anything of the complexity of the problem. It is a problem which must be studied, studied immediately, and studied without bias or prejudice. Nothing can be gained by becoming partisans of any particular plan of settlement.

It was necessary that the administration of the railways should be taken over by the government so long as the war lasted. It would have been impossible otherwise to establish and carry through under a single direction the necessary priorities of shipment. It would have been impossible otherwise to combine maximum production at the factories and mines and farms, with the maximum possible car supply to take the products to the ports and markets; impossible to route troop shipments and freight shipments without regard to the advantage or disadvantage of the roads employed; impossible to subordinate, when necessary, all questions of convenience to the public necessity; impossible to give the necessary financial support to the roads from the public treasury. But all these necessities have now been served, and the question is, what is best for the railroads and for the public in the future.

"Exceptional circumstances and exceptional methods of administration were not needed to convince us that the railways were not equal to the immense tasks of transportation imposed upon them by the rapid and continuous development of the industries of the country. We knew that already. And we knew that they were unequal to it partly because their full co-operation was rendered impossible by law and their competition made obligatory, so that it has been impossible to assign to them severally the traffic which could best be carried by their respective lines in the interest of expedition and national economy.

"We may hope, I believe, for the formal conclusion of the war by treaty by the time spring has come. The 21 months to which the present control of the railways is limited after formal declaration of peace shall have been made will run at the farthest, I take it for granted, only to Jan., 1921. The full equipment of the railways which the federal administration had planned could not be completed within any such period. The present law does not permit the use of the revenues of the several roads for the execution of such plans, except by formal contract with their directors, some of whom will consent while some will not, and therefore does not afford sufficient authority to undertake improvements upon the scale upon which it would be necessary to undertake them. Every approach to this difficult subject-matter of decision brings us face to face, therefore, with this unanswered question: What is it right that we should do with the railroads, in the interest of the public and in fairness to their owners?

"Let me say at once that I have no answer ready. The only thing that is perfectly clear to me is that it is not fair either to the public or to the owners of the railways to leave the question unanswered and that it will presently become my duty to relinquish control of the roads, even before the expiration of the statutory period, unless there should appear some clear prospect in the meantime of a legislative solution. Their release would at least produce one element of a solution, namely, certainty and a quick stimulation of private initiative.

"I believe that it will be serviceable for me to set forth as explicitly as possible the alternative courses that lie open to our choice. We can simply release the roads and go back to the old conditions of private management, unrestricted competition, and multiform regulation by both state and federal authorities; or we can go to the opposite extreme and establish complete government control, accompanied, if necessary, by actual government ownership; or we can adopt an intermediate course of modified private control, under a more unified and affirmative public regulation and under such alterations of the law as will permit wasteful competition to be avoided and a considerable degree of unification of administration to be effected, as, for example, by regional corporations under which the railways of definable areas would be in effect combined in single systems.

"The one conclusion that I am ready to state with confidence is that it would be a disservice alike to the country and to the owners of the railways to return to the old conditions unmodified. Those are conditions of restraint without development. There is nothing affirmative or helpful about them. What the country chiefly needs is that all its means of transportation should be developed, its railways, its waterways, its highways, and its countryside roads. Some new element of policy, therefore, is absolutely necessary—necessary for the service of the public, necessary for the release of credit to those who are administering the railways, necessary for the protection of their security holders. The old policy may be changed much or little, but surely it cannot wisely be left as it was. I hope that the Congress will have a complete and impartial study of the whole problem instituted at once and prosecuted as rapidly as possible. I stand ready and anxious to release the roads from the present control and I must do so at a very early date if by waiting until the statutory limit of time is reached I shall be merely prolonging the period of doubt and uncertainty which is hurtful to every interest concerned."

Director General McAdoo Favors Continued Government Control.

Shortly after President Wilson had addressed Congress, as quoted above, W. G. McAdoo, Director General of U.S. Railroads, wrote the chairman of the Senate Committee on Interstate Commerce, and the chairman of the House of Representatives Committee on Interstate and Foreign Commerce, maintaining that it would be impossible to obtain legislation during the present session of Congress providing a permanent solution of the railway problem, and that it would be impracticable and opposed to public interest to attempt private operation of the roads under the present laws. In speaking of the carrying out of necessary improvements in the national railway system, Mr. McAdoo said: "The period of two years is entirely too short a time within which to plan and carry out the comprehensive improvements which ought to be made to meet the country's requirements under peace conditions. Many of the improvements could hardly be completed and put into operation inside of the two-year period and under such circumstances and facing a change to private management at the end of two years it would be unwise in the highest degree to make the improvements and impossible to secure the hearty co-operation of the railway corporations." He emphasized the alleged inadequacy of present legislation with respect to the division of authority over railway corporations between state and federal commissions as an important argument against the return of the roads to private control in the near future.

The Railway Companies Case.

At a meeting of the Railway Executives' Advisory Committee in New York Dec. 4, resolutions were passed advocating restoration of the railways to private corporations, opposition to government ownership, acceptance of the principle of "reasonable, responsible and adequate governmental regulation," adherence during the remaining period of federal control to a policy of preparing the carriers for the readjustment, and provision by Congress of a system of governmental regulation, which, while safeguarding the public, will be uniform, businesslike and empowered to deal equitably with wage and labor conditions. Representatives were present from practically all of the big trunk lines of the country.

At the close of the meeting T. De Witt Cuyler, chairman of the committee, issued a statement which, in part, follows: "Today's meeting showed that the railway companies want a readjustment which will give the best possible system of transportation to the country. They neither expect nor wish to escape adequate responsible public regulation. They want a relation between rates, wages and dividends which will stimulate business, adequately reward labor and attract the volume of new capital needed for expansion. They want, therefore, regulation which is helpful and constructive, as well as corrective."

On Dec. 12, the railway executives representing 125 roads and 92% of the mileage of the country, gave out a formal statement in which they declared that Director-General McAdoo's suggestion that the government retain control of the railroads until Jan., 1924, "would simply lead to delay and confusion, demoralization of the organization of the roads both on their corporate and operating side and defer indefinitely a satisfactory settlement" of the railway problem. The executive, the statement said, have reached the conclusion that "there is sufficient time under the term of the present act, to fully consider the railway situation in all its aspects and arrive at a plan that would be just to the country."

Travellers' Aid Work at Railway Stations.—In connection with the holding of a tag day in Montreal, Dec. 14, in aid of the Travellers' Aid Committee's work, A. D. MacTier, Vice President, C.P.R., writing to Mrs. E. E. Latter, representing the committee in that city, expressed his appreciation, after several years observation of the work done, of all that the women who were on duty to receive and advise travellers at the stations were doing, and expressed the hope that the work would be extended.

Canadian Northern Railway Directors' Inspection of Canadian Government Railways.

As stated in Canadian Railway and Marine World for December, D. B. Hanna, President, left Toronto, Nov. 26, for a trip over the C.G.R. in Quebec, the Maritime Provinces and Eastern Ontario, accompanied by most of the other directors, viz.: A. J. Mitchell, Vice President; Major Graham A. Bell, C.M.G., acting Deputy Minister of Railways and Canals; Robt. Hobson, Hamilton, Ont., and R. T. Riley, Winnipeg. Other directors joined them en route, viz.: A. P. Barnhill, K.C., of St. John, N.B., at Ottawa; Sir Hormisdas Laporte, at Montreal, and Thos. Cantley, of New Glasgow, N.S., farther down the line. The party also comprised M. H. MacLeod, Vice President, Operation, Maintenance and Construction; and R. P. Ormsby, Secretary, C.N.R. S. J. Hungerford, Assistant Vice President, accompanied the party to Quebec, and F. P. Brady, General Manager, Eastern Lines, joined them at Montreal. Division and other local officials joined the party en route, travelling through their respective jurisdictions.

The party travelled by a special train of official cars and a baggage car. From Toronto they went to Ottawa by C.N.R., thence to Montreal by G.T.R., leaving there Nov. 27 at 2.30 p.m. for Montreal, where they were entertained to dinner at the St. James Club. They left Montreal that night by I.R.C. and on arriving at Chaudiere the train was stopped for some time. Early on the morning of Sept. 28 they went over the Quebec bridge and the N.T.R., to Quebec, arriving there at 11 a.m. They left Quebec that afternoon, reaching Riviere du Loup at 11 p.m., where they stayed the balance of the night, leaving there Sept. 29 at 10 a.m., and going on to Chatham, where they spent the night. Chatham was left on the morning of Sept. 30 and Moncton reached at noon, where they spent the balance of that day and Sunday, Dec. 1, until 7.45 p.m., when they left for Cape Tormentine. On Dec. 2 they left Cape Tormentine by the car ferry steamship Prince Edward Island, arriving at Borden, P.E.I., at 8.30 a.m., and visiting Summerside and Charlottetown, leaving the latter place at 4 p.m. and arriving back at Cape Tormentine at 7.45 p.m., leaving at once for New Glasgow, which was reached Dec. 3 at 4 a.m. They left New Glasgow the same day at 2 p.m., stopped over at Mulgrave and Point Tupper, and reached North Sydney at 8.45 p.m., staying there all night. On Dec. 4 they visited Sydney Mines and Sydney, leaving the latter place at 7.30 p.m., and arriving at Halifax, Dec. 5, at 7.25 a.m. They left Halifax the same day at 10 p.m., arrived at St. John, N.B., Dec. 6, at 6.25 a.m. and left there at midnight for Fredericton, which was left on Dec. 7 at 11.25 a.m., Montreal being reached Dec. 8 at 7.30 a.m., and the party stayed there that night and the following day, looking over the tunnel, terminals and other property. Montreal was left Dec. 9 at midnight via C.N.R. for Ottawa, where Dec. 10 was spent until 4 p.m., when they left for Toronto, arriving there during the night.

The party spent some time at the Quebec bridge, making an inspection of the structure, and the yards on both sides of the river, and immediately on reaching Quebec Mr. Hanna had a conference with the mayor. Among the questions discussed were the running of I.R.C. trains over the bridge into Quebec, and the opening of the National Transcontinental Ry. St. Malo shops, and the mayor stated that he was preparing a memorandum on the needs of Quebec in connection with the N.T.R. and the terms of the contract entered into between the Dominion Government and the city. Subsequently the party inspected the Louise docks, the C.P.R. terminal facilities at the Palais station, the Canadian Northern Ry. and Quebec & Lake St. John Ry. terminals, and the site of the proposed new union station. The Quebec Harbor Commissioners entertained the party at luncheon at the Chateau Frontenac.

The memorandum referred to by the mayor, and which was forwarded to Mr. Hanna subsequently, asked that the obligations of the contract of August, 1910, under which the city gave $2,000,000 of river frontage to the Dominion Government, be fulfilled. These obligations are that the principal workshops of the system be located in the city. The St. Malo shops were erected at a cost of $2,000,000 and are capable of employing 1,500 men. They have not been put in operation, and the rolling stock is being hauled 1,350 miles to Winnipeg for repairs. The contract also calls for the expenditure of $2,000,000 on the St. Lawrence waterfront in Champlain Ward, including deep water dock frontage, storehouses and other terminals, towards providing which nothing has been done. The city would also like to have carried out the obligation to take a share of the grain trade of the west to the port; the provision of new rolling stock on the line to Winnipeg; the establishment of direct ocean passenger and mail traffic to and from Quebec; the establishment of passenger traffic over Quebec bridge and the consideration of the Champlain market property question.

At Moncton, N.B., after an inspection of the Canadian Government Railways general offices, representatives of the city council and board of trade were received by the directorate in the general offices. A number of points were brought up for consideration, among them being the question of the removal of the general offices and various officials from Moncton; the rumored cutting down of the shop staffs, the question of a second track between Moncton and Halifax, and the rumored direction of traffic to St. John, via McGivney Jct. Mr. Hanna, in reply, pointed out that the directors were making their first official trip over the eastern lines to see things for themselves, and to hear all that could be said at the various centers, so that they might be able to formulate a policy. There was not the slightest intention of removing any of the shops from Moncton, but as to what office changes, or what departments if any, would be moved, he could not say, but nothing would be done without full consideration. It is the directors' intention to manage the system entirely free from any political influence whatever. In connection with the management of such a vast system as the Canadian National Railways, it is necessary to have central offices somewhere, and these [illegible] Toronto.

Thos. Cantley, one of the directors, and President of the Nova Scotia Steel & Coal Co., said that in his opinion the building of certain portions of the National Transcontinental Ry. was an act of [illegible] folly that was almost criminal. If the money that had been expended on the eastern portion of that line had been expended on double tracking the I.R.C., there would be no need of resolutions calling for that work now. Sir Hormisdas Laporte, R. Hobson, A. P. Barnhill, K.C., R. T. Riley, G. A. Bell and A. J. Mitchell, other directors, also spoke, as well as F. P. Brady, General Manager, Eastern Lines.

At Cape Tormentine, N.B., and at Port Borden, P.E.I., the directors looked over the car ferry terminals, and subsequently inspected the work in progress in laying a third track on certain of the lines on the island, to provide for the operation of standard gauge rolling stock. Civic and other deputations were received at Charlottetown, and representations made as to the people's needs in regard to railway accommodation.

After having inspected the lines and terminals on Cape Breton Island together with the car ferry terminals on both sides of the Strait of Canso, which separates the island from the mainland of Nova Scotia, the party reached Halifax, Dec. 5, and had a conference with the city council and board of trade. Mr. [illegible] brought up the question of differential rates; the mayor raised the question of the Y on the track on Kempt Road, Fairview, and the matter of the building of a new passenger station at the ocean terminals; H. R. Silver dealt with the matter of adequate facilities for the storage of products, and A. H. Whitman raised the question of warehousing. Mr. Hanna, in reply, stated that the Fairview crossing was a question of engineering and would receive attention. The other matters would also receive full consideration; but there was so much to do in connection with the whole system that it was not always possible to deal with the interests of any one section just as the people of that particular section might desire. A resolution in favor of double tracking passed by the board of trade was put in by G. F. Pearson, and matters connected with an elevator system were raised by A. H. Whitman. After luncheon, the directors made a thorough inspection of the ocean terminals, and the work in progress there, and then visited Dartmouth.

At St. John, N.B., the party visited the St. John Drydock & Shipbuilding Co.'s works at Courtenay Bay, and the site of the proposed drydock, and discussed the railway facilities required in connection with the same. Then they had a conference with the mayor, the city commissioners, the board of trade and other representative men. A memorandum was presented by the board of trade, containing among other matters, the necessity for a general development of the harbor in order that the ocean carrying trade [illegible], and it was suggested that this could be done by the appointment of a Dominion Harbor Commission. Closer connection with the National Transcontinental Ry. by a route via McGivney Jct. was suggested, also a more extended system of government railway terminals at the west side of the port, a new railway passenger station, increased warehouses for freight, [illegible] trackage extensions, and an improved passenger [illegible]. Mr. Hanna replied in general terms, pointing out that the directors were making a [illegible] eral inspection of the whole system, in order to gather information before adopting any policy or plans. The directors had to consider what was essential for the operation of the entire system, and for the development of the trade of the Dominion. Subsequently the party looked over the new elevator, and visited the railway properties in the city. After luncheon with the mayor at the Union Club, they left for Fredericton.

At Fredericton, on Dec. 7, the directors received a civic and trade delegation, which discussed the question of a union station for the city, a new railway bridge across the river in the city, the suggested McGivney Jct. connection with the National Transcontinental Ry., and the provision of a connection between the St. John & Quebec Ry. west of Fredericton with the railways in Maine. The party left Fredericton about noon for Montreal via McGivney Jct. and the National Transcontinental Ry. to Levis.

The provision of a direct connection between the National Transcontinental Ry. and St. John, N.B., has been agitated ever since the project for building the line was made public. After considerable discussion, plans were made in 1909 for building the St. John & Quebec Ry. from Grand Falls to St. John, but the building of the northern section from Centerville to Grand Falls is at present in abeyance, and the section south of Gagetown has been diverted to a connection with the C.P.R. at Westfield. In this way the purpose of building the St. John & Quebec Ry. has been defeated, as it has no connection with the National Transcontinental Ry., and does not enter St. John. The most recent proposal is to provide such a route via McGivney Jct., which is at mileage 79 on the old Canada Eastern Ry., running between Newcastle and Fredericton, and at mileage 96 from Moncton on the National Transcontinental Ry. The proposition is that export freight be diverted from the N.T.R. at McGivney Jct., taken over the old Canada Eastern line into Fredericton, thence over the St. John & Quebec Ry. and the C.P.R. into St. John.

Steel Rails for Canadian Railways.

We are officially advised that up to Dec. 10, the Dominion Iron & Steel Co., Sydney, N.S., had rolled 113,661 tons of steel rails out of the 225,000 tons first ordered by the Dominion Government, and that 102,723 tons had been shipped to railways as follows:—

	First quality	Second quality
Canadian Cement Co.	[illegible]	...
Canadian Government Railways	[illegible]	[illegible]
Canadian Northern Ry.	[illegible]	2,519
Canadian Pacific Ry.	[illegible]	[illegible]
Grand Trunk Ry.	17,276	2,108
Toronto, Hamilton & Buffalo Ry.	663	33
Total	91,463	11,260

C.P.R. Tie Reserve.—A deal has been concluded whereby the C.P.R. adds more than 17 square miles of timber to its tie reserve, between the town of Yahk and the International Boundary, in British Columbia. The company already owned 86 square miles of this timber, but in order to develop it to advantage, it was necessary to acquire an additional acreage, which was held by the King Lumber Co., of Cranbrook, of which Hon. J. H. King, Minister of Public Works for British Columbia, is the President. It is estimated that the timber in the tie reserve [illegible]

The St. John & Quebec Railway Situation.

The Premier of New Brunswick on his return to Fredericton, N.B., recently from a conference of the premiers of the different provinces with the Dominion Government, gave out a statement as to what had transpired. Among the important questions discussed in which the province is interested was the future of the St. John & Quebec Ry., or as it is more commonly called in New Brunswick, the St. John Valley Ry. The premier stated that the New Brunswick Government's request was that the Dominion Government, in formulating its railway policy for the future, should take over this line from the province and incorporate the ownership, as well as the operation, with the Canadian National Railways. As explained in documents handed to the Dominion Government, and in a letter published over the signature of E. S. Carter, Secretary St. John & Quebec Ry., the position is as follows:—

The present project for the construction of a railway down the St. John River Valley, from Grand Falls to St. John, was promoted in 1909 by the business men of the various towns. The people wanted a direct connection with the National Transcontinental Ry. at Grand Falls, so that traffic from the west could be taken to St. John. The negotiations with the Dominion Government resulted in the making of an agreement under which the province was to guarantee the bonds of a constructing company for $25,000 a mile and the Dominion Government was to operate the line for 60% of the receipts. The necessary legislation was passed and the St. John & Quebec Ry. Co. was formed by A. E. Gould and his associates to build the line, their project including some lines in addition to those for which the government guaranteed bonds. The plans for the line as surveyed and approved by the Dominion Government provided for the construction of two large bridges across the St. John's and the Kennebecasis Rivers, for which the Dominion Government voted substantial subsidies, in addition to a subsidy at the usual rate for the railway mileage. Upon the faith of that contract the New Brunswick Government guaranteed the company's bonds, and upon the strength of that guarantee $4,250,000 was borrowed for construction purposes. In 1912 the Dominion Government cancelled the subsidy voted for the construction of the line for the mileage between Grand Falls and Andover, and subsequently the bridge proposals were held up.

The constructed line runs from Centerville through Fredericton to Gagetown, and the extension from Gagetown to a connection with the C.P.R. at Westfield is under construction. This construction has all been carried out on the National Transcontinental Ry. standard by the New Brunswick Government, upon the Gould company's failure to carry out its contract. There remains in a trust company's hands the proportion of the money borrowed on the strength of the guaranteed bonds, for the construction of the Centerville-Grand Falls section of the line, and the balance of the portion available for the Gagetown-Westfield line. The province is paying about $170,000 interest, in addition to providing funds to carry on construction. It is contended that this liability was undertaken upon the strength of the Dominion being a partner in the concern, and of the National Transcontinental Ry. connection, which would have meant traffic for the line. Seeing that this connection is not being provided, and considering the heavy cost of construction (undertaken in view of the promise of that connection), the province contends that the Dominion Government ought to take over the line and relieve the province of all liability. Another argument put forward is, that the Dominion Government, in taking over the Canadian Northern Ry. and allied lines, has relieved several provincial governments of liability under their guarantees.

Steam Railway Track Laid in 1918.

A table of new track laid in 1918 by steam railways throughout Canada, made up from official replies to Canadian Railway and Marine World's annual circular, is given below. The total is 121.32 miles of new track, against 230.16 miles of new track laid in 1917. The new mileage was laid by five railways, the largest being by the Canadian Northern Ry., viz., 45.14 miles. With the exception of 4.18 miles of track laid on the Grand Trunk Pacific Ry. to secure an entrance into Saskatoon over the C.P.R., the whole of the track laid during the year was on lines owned by the Dominion Government, the New Brunswick Government, and the British Columbia Government. The distribution of the track laid by provinces was: British Columbia, 50 miles; New Brunswick, 32; Saskatchewan, 27.15; Quebec, 10; Alberta, 2.17.

	Miles.	Miles.
Canadian Northern Ry.		
Moose Jaw terminals to Grand Trunk Pacific Ry., Sask.	1.31	
Glidden to mileage 122.88, Sask.	21.66	
Hanna towards Medicine Hat, Alta.	2.17	
Glen Lake to mileage 30, Malahat district Vancouver Island, B.C.	20.00	
		45.14
Grand Trunk Pacific Ry.		
Duro to Enger, Sask.	3.23	
Harfeld to Yorath, Sask.	0.95	
		4.18
Pacific Great Eastern Ry.		
From 12 miles north of Clinton, B.C., for 30 miles north		30.00
Quebec & Saguenay Ry.		
Mileage 15 from Cap Tormentine to Baie St. Paul, mileage 25		10.00
St. John & Quebec Ry.		
Queenstown to Westfield, N.B.		32.00
Total		121.32

During 1917, the Essex Terminal Ry. laid 10 miles of track, connecting the quarries yard at Windsor with the steel works at Ojibway, of which we were not advised in time for inclusion in the table for that year.

The C.P.R. reconstructed 2 miles of track between Leaside Jct. and North Toronto, during 1918.

Workmen's Compensation Board of New Brunswick.—The Lieutenant-Governor has approved of regulations made by the Workmen's Compensation Board for the province. The first regulation distributes into seven classes the various industries affected by the act. Transportation interests come under the following classes:—Class 3—steel shipbuilding and repairing; car shops. Class 5—wooden ships. Class 6—excavation, construction and operation of electric railways; electric power lines and appliances; construction of telegraphs and telephones. Class 7—stevedoring; pile driving, and subaqueous construction; operation of steam railways and navigation.

Immediately on the signing of the armistice between the allied powers and Germany, there was considerable congestion of telegraphic business, and all cable business from the general public was refused for some time. After a few days the business became practically normal, and public messages were again handled.

Transportation Appointments Throughout Canada.

Canadian National Railways, Canadian Government Rys., Canadian Northern Ry.

LORNE W. MITCHELL, Treasurer, Canadian Northern Ry. and allied transportation companies, has resigned, on being appointed Head Auditor, T. Eaton Co., Ltd., Toronto.

EUGENE ERNEST FAIRWEATHER, M.A., LL.B., heretofore Departmental Solicitor, Railways and Canals Department, Ottawa, has been appointed Assistant Counsel, Canadian National Rys. Office, Ottawa.

H. F. ALWARD, heretofore General Solicitor and General Claims Agent, Canadian Government Rys., Moncton, N.B., has been appointed General Solicitor, Canadian National Rys. Office, Montreal.

ARCHIBALD J. REID, K.C., and REGINALD H. M. TEMPLE, heretofore Assistant Solicitors, Canadian Northern Ry., Toronto, have been appointed General Solicitors, Canadian National Rys. Office, Toronto.

LOUIS LAVOIE, heretofore Purchasing Agent, C. G. Rys., Railway Department, Ottawa, who has been appointed Assistant General Purchasing Agent, Canadian National Rys., will remove from Ottawa to Toronto, Jan. 1, with 10 other members of the staff.

GEO. H. SHAW, General Traffic Manager, Canadian Northern Ry., Toronto, having resigned, and D. A. STORY, Freight Traffic Manager, Canadian Government Rys., Moncton, N.B., having retired, GEO. STEPHEN, heretofore Freight Traffic Manager, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Freight Traffic Manager, Canadian National Rys., Toronto, and H. H. MELANSON, heretofore Passenger Traffic Manager, Canadian Government Rys., Moncton, N.B., has been appointed Passenger Traffic Manager, Canadian National Rys. Office, Toronto.

A. T. WELDON, heretofore General Freight Agent, C.G.R., Moncton, N.B., has been appointed Assistant Freight Traffic Manager, Canadian National Rys., Matapedia, Que., and Edmundston, N.B., and east thereof. Office, Moncton, N.B.

GUY TOMBS, heretofore Assistant Freight Traffic Manager, Canadian Northern Ry., Montreal, has been appointed Assistant Freight Traffic Manager, Canadian National Rys. lines west of Matapedia, Que., and Edmundston, N.B., to, but not including, Port Arthur and Armstrong, Ont. Office, Montreal.

W. G. MANDERS, heretofore General Freight Agent, Western Lines, Canadian Northern Ry., has been appointed Assistant Freight Traffic Manager, Canadian National Rys. lines, Port Arthur and Armstrong, Ont., Duluth, Minn., and west thereof. Office, Winnipeg.

J. M. HORN, heretofore Assistant General Freight Agent, Western Lines, Canadian Northern Ry., has been appointed General Freight Agent, Canadian National Rys., lines Port Arthur and Armstrong, Ont., Duluth, Minn., and west thereof. Office, Winnipeg.

J. M. MACRAE has been appointed Assistant General Freight Agent, Canadian National Rys., lines Port Arthur and Armstrong, Ont., Duluth, Minn., and west thereof. Office, Winnipeg.

A. BROSTEDT, heretofore District Freight and Passenger Agent, Canadian Northern Ry., Vancouver, B.C., has been appointed Assistant General Freight and Passenger Agent, British Columbia Lines, Canadian National Rys. Office, Vancouver, B.C.

R. L. FAIRBAIRN, heretofore General Passenger Agent, Eastern Lines, Canadian Northern Ry., Toronto, has been appointed General Passenger Agent, Canadian National Rys., lines in Quebec and westerly to Port Arthur and Armstrong, Ont. Office, Toronto.

R. CREELMAN, heretofore General Passenger Agent, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Assistant Passenger Traffic Manager, Canadian National Rys., Port Arthur and Armstrong, Ont., Duluth, Minn., and west thereof. Office, Winnipeg.

OSBORNE SCOTT, heretofore Assistant General Passenger Agent, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed General Passenger Agent, Canadian National Rys., lines Port Arthur and Armstrong, Ont., Duluth, Minn., and west thereof. Office, Winnipeg.

W. L. STITT has been appointed Inspector of Sleeping, Dining and Parlor Cars, Eastern Lines, Canadian National Rys. Office, Toronto.

F. L. CLARKE, who has recently been discharged from military service, has resumed his position as Inspector, Sleeping and Dining Car and News Service, Canadian National Rys., Winnipeg.

W. A. KINGSLAND, heretofore General Superintendent, Quebec Lines, Canadian Northern Ry., has been appointed Assistant General Manager, Canadian Northern Ry., lines east of Port Arthur, Ont., and C.G.R., lines west of O'Brien, Que. Office, Montreal.

L. S. BROWN, heretofore General Superintendent, Eastern Lines, C.G.R., Moncton, has been appointed General Superintendent, Maritime Division, Canadian National Rys., which consist of and including Mont Joli, Que., and Halifax

J. E. Morazain,
General Superintendent, Quebec Division, Eastern Lines, Canadian National Railways.

R. L. Fairbairn,
General Passenger Agent, Quebec Lines and west to Port Arthur, Ont., Canadian National Railways.

J. P. Driscoll,
General Superintendent, [illegible], Canadian National Railways.

and Southwestern Ry. Office, Moncton, N.B.

JAS. BAIN, heretofore General Superintendent, Halifax & Southwestern Ry., has been appointed Superintendent, H. & S.W.R., reporting to L. S. Brown, General Superintendent, Canadian National Rys., Moncton. Office, Bridgewater, N.S.

J. E. MORAZAIN, heretofore Superintendent, Montreal-Mont Joli District, C.G.R., Levis, Que., has been appointed General Superintendent, Quebec Division, Canadian National Rys., embracing C.G.R. lines between Mont Joli and Montreal, Pacific Jct. and O'Brien, Que., including O'Brien, and all Canadian Northern lines east of Ottawa, north of the St. Lawrence River. Office, Quebec, Que.

W. C. Blake,
Divisional Accountant, Canadian National Railways, Winnipeg.

W. J. ATKINSON, heretofore Assistant Superintendent, District 1, Intercolonial Division, C.G.R., Levis, Que., has been appointed Superintendent, District 5, Quebec Division, Canadian National Rys., vice E. L. Desjardins, transferred. Office, Edmundston, N.B.

W. F. SAWYER, heretofore agent and station master, C.G.R., Levis, Que., has been appointed Assistant Superintendent, District 5, Quebec Division, Canadian National Rys., vice F. Griffin, transferred. Office, Edmundston, N.B.

E. L. DESJARDINS, heretofore Superintendent, District 5, Intercolonial Division, C.G.R., Edmundston, N.B., has been appointed Superintendent, District 1, Quebec Division, Canadian National Rys., vice J. E. Morazain, promoted. Office, Levis, Que.

F. GRIFFIN, heretofore Assistant Superintendent, District 5, Intercolonial Division, C.G.R., Edmundston, N.B., has been appointed Assistant Superintendent, District 1, Quebec Division, Canadian National Rys., vice W. J. Atkinson, transferred. Office, Levis, Que.

J. GRAHAM, heretofore Superintendent, Locomotive Shops, Canadian Government Railways, Moncton, N.B., has been appointed Superintendent, Motive Power and Car Shops, Canadian National Railways, Moncton, N.B.

F. W. HARTSHORN has been appointed Assistant Superintendent, Montreal Division, Quebec District, Canadian National Rys. Office, Joliette, Que.

Following are the officials of the Maintenance of Way Department, with their territory:—

Bridge and Building Department—Toronto Division—O. KERR, Bridge and Building Supervisor, Rosedale, Toronto.

Ottawa Division and Brent Terminal to milepost 1, North Bay Subdivision—P. McGINTY, Bridge and Building Supervisor, Ottawa, Ont.

Nipissing Division, excluding Brent Terminal, but including Foleyet Terminal to milepost 1, Oba Subdivision—F. McKAY, Bridge and Building Supervisor, Capreol, Ont.

A. Wilcox,
General Superintendent, Central District, Canadian Northern Ry., and Canadian Government Railways west of O'Brien, Que.

Superior Division—W. J. COUGHLIN, Bridge and Building Supervisor, Hornepayne, Ont.

Track Department—Toronto Division—Muskoka Subdivision, from mileage 4.5 to north end Bowes St. bridge, Parry Sound, Duncan cutoff to C.P.R. connection and Orillia Subdivision—E. MYERS, Roadmaster, Rosedale, Toronto.

Trenton Subdivision, to mileage 103 and Toronto Terminals, including Leaside—W. M. JACKLIN, Roadmaster, Rosedale, Toronto.

Maynooth and Irondale Subdivisions—D. McDONALD, Roadmaster, Trenton, Ont.

Ottawa Division—Picton Subdivision—Trenton Terminals to mileage 103 on Trenton Subdivision and to heels of east and west frogs of Y; Tweed and Rideau Subdivisions, from Trenton to west switch of crossover at Harrowsmith—G. ROSEBUSH, Roadmaster, Trenton, Ont.

Brockville and Rideau Subdivisions, from east switch of crossover at Harrowsmith to Hurdman, including Ottawa Terminals, to milepost 1, Pembroke Subdivision—O. OGDEN, Roadmaster, Ottawa.

Pembroke Subdivision, from milepost 1 westerly, and Brent Terminal to milepost 1 on North Bay Subdivision—W. H. HENDERSON, Roadmaster, Pembroke, Ont.

Nipissing Division—North Bay Subdivision, from milepost 1 westerly, and Capreol Terminals to south and west yard limit boards—T. BROWN, Roadmaster, Capreol, Ont.

Sudbury Subdivision, from Bowes St., Parry Sound, to south yard limit board, Capreol, and Sudbury and Parry Sound Terminals—E. HAYSTEAD, Roadmaster, Capreol, Ont.

Ruel Subdivision, from west yard limit board, Capreol, westerly and Foleyet Terminals to milepost 1, Oba Subdivision—P. VICKS, Roadmaster, Capreol, Ont.

Superior Division—Oba Subdivision, from milepost 1 westerly and Hornepayne Terminal to milepost 1, Long Lake Subdivision—R. FURGUSON, Roadmaster, Hornepayne, Ont.

A. T. Weldon,
Assistant Freight Traffic Manager, Canadian National Railways.

Long Lake Subdivision, from milepost 1 to east yard limit board, Jellicoe—J. McMAHON, Roadmaster, Hornepayne, Ont.

Nipigon Subdivision, westerly to mileage 141.6, and Jellicoe Terminal to east yard limit board—G. S. WARNER, Roadmaster, Jellicoe, Ont.

C. MARTIN, heretofore Roadmaster, Canadian Northern Ry., Yarker, Ont., has been transferred to Bancroft, Ont., as sec-

The grouping of the Ontario District Subdivisions has been rearranged as follows:—

Toronto Division (449.6 miles)—C. L. HARRIS, Superintendent, Rosedale; L. W. BULLER, Assistant Superintendent, Rosedale: Muskoka, Maynooth, Orillia, Trenton, Irondale Subdivisions, and Toronto Terminals.

Ottawa Division (451.6 miles)—W. R. KELLY, Superintendent, Ottawa; P. H. FOX, Assistant Superintendent, Trenton: Pembroke, Tweed, Brockville, Rideau, Picton, Kingston Subdivisions, and Trenton and Ottawa Terminals.

Nipissing Division (442.8 miles)—G. A.

Agent, Toronto, has been transferred to HOAG, Superintendent, Capreol; A. H. CAVANAGH, Assistant Superintendent, Capreol: North Bay, Sudbury, Ruel Subdivisions, and Sudbury, Parry Sound, Brent and Foleyet Terminals.

Superior Division (446.5 miles)—G. N. GOAD, Superintendent, Hornepayne: Oba, Nipigon, and Long Lake Subdivisions.

W. F. HEFLIN has been appointed Chief Dispatcher, Canadian National Rys., Capreol, Ont., vice J. B. Smith, assigned to other duties.

J. R. CAMERON, Assistant General Manager, Western Lines, Canadian Northern Ry., has had his jurisdiction extended to include all Canadian Government Railways lines west of O'Brien, Que. Office, Winnipeg.

A. WILCOX, General Superintendent, Central District, Canadian Northern Ry., has had his jurisdiction extended to include all Canadian Government Railways lines west of O'Brien, Que. Office, Winnipeg.

A. T. FRASER, heretofore Division Engineer, Canadian Northern Ry., Edmonton, Alta., has been appointed Chief Engineer, Western Lines, Canadian National Rys. Office, Winnipeg.

B. T. CHAPPELL, heretofore Superintendent, Pacific District, Western Lines, Canadian Northern Ry., Vancouver, is reported to have been appointed General Superintendent, Prairie District, Western Lines, Canadian National Rys., with office at Saskatoon, Sask.

H. R. ARTHUR, heretofore Inspector of Transportation, Vancouver, has been appointed acting Superintendent, Pacific District, Western Lines, Canadian National Rys., in place of B. T. Chappell, Superintendent, Vancouver, who is reported to have been promoted to the Prairie District. Office, Kamloops Jct., B.C.

G. E. SMART, heretofore Superintendent of Car Department, C.G.R., Moncton, N.B., has been appointed General Master Car Builder, Canadian National Rys., with jurisdiction over all lines. Office, Toronto.

W. U. APPLETON, heretofore Superintendent of Car Department, C.G.R., Moncton, N.B., has been appointed Mechanical Superintendent, with jurisdiction over Motive Power and Car Departments, Eastern Lines, Canadian National Rys. Office, Moncton, N.B.

C. E. McCOY, heretofore Assistant Superintendent, Car Department, C.G.R., Moncton, N.B., has been appointed Master Car Builder, Eastern Lines, Canadian National Rys. Office, Moncton, N.B.

T. MADDEN, heretofore General Foreman, Car Shops, C.G.R., Moncton, N.B., has been appointed Assistant Superintendent of Shops, Car Department, Eastern Lines, Canadian National Rys. Office, Moncton, N.B.

H. W. SHARPE has been appointed Master Mechanic, Quebec District, Eastern Lines, Canadian National Rys. Office, Quebec, Que.

E. G. THEOBOLD, heretofore Car Foreman, Canadian Northern Ry., Joliette, Que., has been appointed District Car Foreman, Quebec District, Canadian National Rys. Office, Quebec, Que.

T. C. HUDSON, heretofore Master Mechanic, Quebec District, Canadian Northern Ry., Joliette, Que., has been appointed General Master Mechanic, Eastern Lines, Canadian National Rys. Office, Montreal.

HUGH CAMERON, Mechanical Engineer, Canadian Northern Ry., Toronto, has resigned to enter the Robinson Con-

F. BARNARD has been appointed A-nector Co.'s service at Montreal.

A. H. EAGER, heretofore Assistant Superintendent of Rolling Stock, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Mechanical Superintendent in charge of Locomotive and Car Departments, Western Lines, Canadian National Rys. Office, Winnipeg.

A. McCOWAN, heretofore Supervisor of Car Work, Canadian Northern Ry., Winnipeg, is reported to have been appointed Master Car Builder, Western Lines, Canadian National Rys., at Winnipeg.

W. C. BLAKE, heretofore chief clerk to General Auditor, Canadian Northern Ry., Winnipeg, has been appointed Divisional Accountant, Canadian National Rys. Office, Winnipeg.

Major F. L. C. Bond,
Chief Engineer, Grand Trunk Railway.

A. E. MACDONALD has been appointed acting Superintendent, Division 1, Western District, Canadian National Rys., vice W. E. Roberts, transferred. Office, Dauphin, Man.

W. E. ROBERTS, hereotfore Superintendent, Division 1, Western District, Canadian Northern Ry., Dauphin, Man., has been appointed Superintendent, Division 3, Western District, Canadian National Railways, vice M. Helston, assigned to other duties. Office, Edmonton, Alta.

HUGH SUTHERLAND, Executive Agent, Canadian Northern Ry., Winnipeg, has resigned.

Canadian Pacific Ry.—W. N. TILLEY, K.C., Toronto, has been appointed Consulting Counsel.

W. M. THOMPSON, heretofore Superintendent of Traffic, Eastern Lines, C.P.R. Telegraphs, Montreal, has been appointed Superintendent of Telegraphs, Eastern Division, Montreal.

J. MITCHELL has been appointed Superintendent of Traffic, Eastern Lines, C.P.R. Telegraphs, Montreal, vice W. M. Thompson, promoted.

W. D. NEIL, heretofore Superintendent of Telegraphs, Eastern Division, Montreal, has been appointed Superintendent of Telegraphs, Ontario Division, vice C. D. Leggitt, transferred to the Operating Department. Office, Toronto.

L. B. H. CLARKE has been appointed Assistant Superintendent, Brownville Division, New Brunswick District. Office, McAdam, N.B.

W. WELLS, heretofore Division Master Mechanic, Farnham Division, Quebec District, Farnham, has been appointed Night General Foreman, Locomotive Shop, Angus shops, Montreal.

J. C. BROWNE, heretofore Freight [illegible] the duties of inspecting stations.

R. BARNWELL, heretofore Assistant Purchasing Agent, Winnipeg, has been appointed General Tie Agent, Western Lines, Winnipeg.

Canadian Pacific Ocean Services, Ltd.—C. E. BENJAMIN, heretofore General Passenger Agent, Trans-Pacific Lines, Montreal, has been appointed Passenger Traffic Manager, in full charge of passenger services on Atlantic and Pacific Oceans. Office, Montreal.

Grand Trunk Ry.—W. J. BEYERS, conductor, is reported to have been appointed General Yardmaster, Coteau, Que., vice C. C. McCullough, transferred.

J. S. McADAM, heretofore Chief Dispatcher, Ottawa Division, Ottawa, Ont., has been appointed Trainmaster, Districts 31 and 32, with office at Madawaska, Ont.

W. E. WEEGAR, Trainmaster, District 30, Ottawa, Ont., has had his jurisdiction extended to include Ottawa Terminals.

H. E. LANDON, dispatcher, has been appointed Chief Dispatcher, Ottawa Division, Ottawa, Ont., vice J. S. McAdam, promoted.

C. C. McCULLOUGH, heretofore General Yardmaster, Coteau, Que., has been appointed General Yardmaster, Ottawa, Ont., vice A. B. McNaughton, resigned to go to G.T.R. lines in New England.

E. S. COOPER has been appointed Trainmaster, District 4, Montreal, vice W. J. Nixon, transferred.

W. J. NIXON, heretofore Trainmaster, District 4, Montreal, has been appointed Trainmaster, District 5. Office, Brockville, Ont.

A. R. HANNAFORD, heretofore of the Engineering Department, Toronto, has been appointed Assistant Engineer, Hamilton Division, Ontario Lines, vice James Boyd, deceased. Office, Hamilton, Ont.

The Montreal Division has been extended to include territory from the west yard limit board at Turcot, Que., to the west yard limit board at Brockville, Ont. All matters pertaining to District 5 and Brockville terminal, formerly addressed to J. D. McMILLAN, Superintendent, Belleville, Ont., are addressed to J. J. CONNOLLY, Superintendent, Montreal.

Grand Trunk Ry. Lines in New England.—A. B. McNAUGHTON, General Yardmaster, G.T.R., Ottawa, Ont., has been appointed Superintendent, G.T.R. Lines in New England, under the U.S. Railroad Administration, with office at Island Pond, Vt.

Grand Trunk Pacific Ry.—F. HACKING, heretofore General Car Foreman, has been appointed Master Car Builder, and his former position has been abolished. Office, Transcona, Man.

D. CHIVERS, heretofore Car Foreman, Watrous, Sask., has been appointed Car Foreman, Biggar, Sask., vice H. F. Bell, assigned to other duties.

R. LAING, heretofore Assistant Car Foreman, Melville, Sask., has been appointed Car Foreman, Watrous, Sask., vice D. Chivers, transferred.

F. CLARK has been appointed Locomotive Foreman, Melville, Sask., vice A. J. Bell, resigned.

[illegible] Melville, Sask., vice [illegible].

[illegible], Assistant Superintendent, [illegible], Sask., has had his office [illegible] to Saskatoon, Sask.

Pere Marquette Ry.—S. J. BOYLE, [illegible] Trainmaster, Detroit, Mich., [illegible] Trainmaster, St. Thomas, Ont.

H. PLASTOW, heretofore dispatcher, has been appointed Night Chief Dispatcher, St. Thomas, Ont.

W. F. THOMPSON, heretofore yard conductor, has been appointed Night Yardmaster, St. Thomas, Ont.

Toronto Union Station.—W. VAUGHAN, Assistant to Superintendent, has been appointed acting Superintendent, during the absence on leave for three months, of J. J. BECK.

Railway Rolling Stock Orders and Deliveries.

[illegible] International Nickel Co., Copper Cliff, Ont., has received 116 specially de[illegible] service cars from Canadian Car & Foundry Co.

The National Steel Car Co. has shipped [illegible] to Canadian Government Railways, 244 box cars, and has also shipped 4 [illegible] cars and 65 coal hopper cars, in knock down shape, for the Bengal Nagpur Ry., India.

The Canadian Northern Ry. received the following additions to rolling stock, during Nov., 1918, ordered by the Dominion Government: 707 steel frame box cars, 40 tons capacity, from Canadian Car & Foundry Co., and 118 ballast cars, 50 tons capacity, from Eastern Car Co.

Canadian Government Railways received the following rolling stock during Nov., 1918: 73 coal cars, 50 tons capacity, and 9 flat cars, 40 tons capacity, from Eastern Car Co.; 20 remodelled box cars, 30 tons capacity, converted to heater cars, from Canadian Car & Foundry Co.; and 1 ballast car, 50 tons capacity, from C.G.R. Transcona shops.

The G.T.R. has received 13 Mikado locomotives from Canadian Locomotive Co., which were built under order from the Dominion Government. Following are the chief details:—

[illegible]	213,500 lb.
W[illegible]	283,000 lb.
W[illegible] engine, rigid	16 ft. 6 in.
W[illegible] engine, total	35 ft. 1 in.
W[illegible] engine and tender	68 ft.
H[illegible]	242 sq. ft.
H[illegible] tubes	3,398 sq. ft.
H[illegible] total	3,640 sq. ft.
[illegible]	63 in.
J[illegible]	11 x 20 in.
[illegible]	10 x 20 in.
Cylinders, diar. and stroke	27 x 30 in.
[illegible]	Extended wagon top, radial stay
[illegible]	180 lb.
[illegible]	[illegible] to 2 in.; 32 [illegible] in.
[illegible]	20 ft.
[illegible]	56.5 sq. ft.
[illegible] loaded	166,000 lb.
[illegible]city	9,000 U.S. gall.
[illegible]	12 tons
[illegible]	Water bottom, with vestibule connections
T[illegible] diar	34 in.
[illegible]	6 x 11 in.
[illegible]	High speed, M.C.B. heads
[illegible]	Locomotive Superheater Co.
[illegible]	Tate Flexible
[illegible]	Walschaert
[illegible]	Franklin
[illegible]	McCord
[illegible]	Simplex
[illegible]	Westinghouse ET 6

The Canadian National Railways management, at Toronto, has placed several [illegible] for rolling stock recently, has [illegible] for tenders for more, and is prepared to ask for further tenders. The [illegible] placed already, and those under [illegible]tion, will total about $20,000,000. The following orders have been given:

Canadian Car & Foundry Co., Montreal, [illegible] colonist cars; Pullman Co., Chicago, [illegible] cars. The management was [illegible] of ordering all the colonist cars [illegible] early delivery could not be given by Canadian car builders, a third of the order was given to the Pullman Co. These cars will have the following dimensions:

Length over end sills	73 ft. 6 in.
Length between truck centers	57 ft. 6 in.
Length over buffers about	82 ft. 4½ in.

They will have 16 sections each, and smoking room compartment. Special attention has been given in the designing of these cars to provide suitable accommodation for handling troops. The interior layout conforms to the latest Board of Railway Commissioners and Interstate Commerce Commission's recommendations. The exterior will be of steel, and the interior of wood. They will be equipped with 6-wheel trucks, with the latest type of clasp brake, and will be lit by electricity.

Canadian Car & Foundry Co., Montreal, 20 baggage cars, with the following general dimensions:

Length over end sills	73 ft. 6 in.
Length between truck centers	57 ft. 6 in.

The interior layout will conform to the latest Board of Railway Commissioners and Interstate Commerce Commission's recommendations. The exterior will be of steel and the interior of wood. A double board floor will be provided, with slats, for handling fish. The underframe and trucks will be the same as for the colonist cars referred to above. They will be equipped with the heaviest type of friction brake, specially designed for heavy train service.

Preston Car & Coach Co., Preston, Ont., 25 cabooses, Canadian Northern Ry. standard, and the following general dimensions:

Length over all	35 ft. 2 in.
Length over end sills	30 ft. 0 in.
Outside width	9 ft. 3 in.

The C.N.R. management has also asked for tenders for 12 sleeping cars, 6 dining cars, 150 refrigerator cars, 750 box cars, 500 stock cars, 750 coal cars, 250 ballast cars and 500 flat cars.

The C.N.R. management is also considering asking tenders for about 50 locomotives, probably 25 Pacific type, and 25 either consolidation or switching.

The Canadian National Railways Inaugurated.

The following order in council was passed at Ottawa Dec. 20:—"Whereas the Minister of Railways and Canals reports that by the order in council dated Nov. 20, 1918 (P.C. 2654), the persons, from time to time comprising the board of directors of the Canadian Northern Ry. (which controls and operates the Canadian Northern Ry. System) were appointed a board of management of the Canadian Government Railways; That, as a matter of convenience in connection with the operation of both systems under one management, the use of one name as a collective or descriptive title for both systems is highly desirable, and refers to the established use of the term Canadian Northern Ry. System as a descriptive (but not corporative) title for all lines of railway owned or controlled by the Canadian Northern Ry. Co., and also to the use of the name Canadian Government Railways, which is also merely one of description; That the use of such a title is a mere matter of description for convenience of reference and does not create a new legal corporate entity, or affect in any manner whatsoever the legal status or the rights or obligations of the individual corporations collectively so denoted.

"Therefore His Excellency the Governor General in council doth hereby order and direct the board of directors aforementioned to use as a collective or descriptive designation the name Canadian National Railways, in lieu of the names Canadian Northern Ry. System, and Canadian Government Railways, wherever such last mentioned names are or may be at present used (including, without restricting the generality of the aforegoing, all operated and traffic forms) in respect of the whole of the lines of railway and railway properties controlled or operated by the board; provided that deeds, leases, agreements, and documents of all kinds requiring execution under seal shall continue to be drawn and executed under the respective corporate names of the corporations (including the Crown), owing or entitled to the properties affected thereby, and that nothing in this order shall be taken to restrict or enlarge or otherwise affect the liability of such respective corporations for any of their respective acts or omissions, the corporate entity in each case being preserved and the rights and liabilities remaining the same as heretofore, notwithstanding the use of the collective or descriptive designation herein ordered."

D. B. Hanna, President, issued the following circular Jan. 1:—"Effective this date, the railways heretofore known as the following, viz.: Canadian Northern Ry. System, Eastern and Western Lines; Canadian Government Railways, National Transcontinental Ry., Intercolonial Ry. of Canada, Prince Edward Island Ry., will be operated under the name of the Canadian National Railways, the headquarters of which will be in Toronto. In operating and corresponding, officers of any of the above mentioned railways will in future use the name Canadian National Railways. We shall be obliged if in future the public and our connections will address their communications and reports to the proper officers of the Canadian National Railways."

A Freight Damage Suit.—The Boston & Maine Rd., and the Grand Trunk Ry. were defendants in an action brought in a Quebec court recently by J. Ratskowski to recover $2,062.27 damages to 6 bales of goods in transit from Boston, Mass., to Montreal. In the Superior Court, at the original hearing, the action was dismissed as against both companies. An appeal was taken and judgment was given in the Court of Review, Nov. 29, confirming the lower court's judgment insofar as the G.T.R. was concerned, but holding the Boston & Maine Rd. liable for the amount claimed, with costs in both courts. The railway company undertook to deliver the goods in Montreal, the court held, in the condition in which it received them. The lower court held that the plaintiff could not recover because he had not affirmatively proved that the bales were in good condition when shipped, but the railway company's receipt was to the effect that it received them "in apparent good order and condition." If the company wished to avoid its liability, it must affirmatively prove that the goods were in a damaged condition when received.

Cash Payment for Railway Transportation.

In connection with the circular ordering cash payment for railway transportation charges, published on page 5 of this issue, the Canadian Railway War Board issued the following additional circular Dec. 12, to Canadian railways:—

In order that railway employes may have as complete an understanding as possible of what is required of them in carrying out regulations calling for cash settlement of transportation charges, the following instructions (with such changes in form as may be necessary to meet local conditions) are suggested for issuance to employes concerned:—

Instructions relative to the collection of transportation charges, issued by the Canadian Railway War Board, become effective on Jan. 1, 1919, and copy of such instructions are incorporated as a part hereof, for the information and guidance of all concerned.

A sufficient supply of the instructions will be sent to all agents to enable them to transmit a copy to each credit patron at their station. Application blanks and form of bond prescribed will be furnished by agent's or vice president's (finance) office to all patrons who may be entitled to a credit of not exceeding 96 hours, as called for in paragraph 2 of the board's instructions, which should be executed and delivered to the freight agent at the point where credit is desired, the application to be recommended by the agent, and the bond and application forwarded to the vice president (finance).

Where credit is desired at more than one station, a separate bond must be taken for each station.

Upon receipt of advice from vice president (finance) that parties desiring credit have filed with him a satisfactory bond, 96 hours credit may be allowed. The 96 hour credit period begins from the time freight is received by the railway company, in the case of forwarded freight, or the time of delivery, as defined in supplement 1 to circular 86, in the case of received freight.

As the intent of the instruction is to have all business conducted on a cash basis, the 96 hour privilege should not be applied for, except in cases where settlement cannot be made otherwise.

At points where there are no banking facilities, or where firms have no accounting office, an arrangement can be made, subject to approval of vice president (finance), whereby firms' representatives may settle by giving railway agent a sight draft on such firm. These drafts, when duly authorized, can be remitted (with expense bills attached if required) to treasury department, as cash.

These instructions automatically cancel all present credit arrangements, including authorized transfers to audit office of bills for collection at midnight, Dec. 31, 1918.

Agents must without fail at once notify the vice president (finance) when any firm or individual granted credit defaults in payment of charges due, and will cancel the credit privilege in each case in accordance with the board's circular 86, rule 2.

In the event of default in payment of transportation charges within the credit period, and unless settlement is promptly made thereafter, the vice president will take immediate steps to realize upon the bond of the individual or firm which has not made settlement.

Premiums on all bonds and all expenses incident thereto, shall be borne by the applicant to whom the accommodation is granted.

Bonds given to cover credit accommodation shall not include liability for the delivery of freight consigned to "order notify" prior to surrender of original bill of lading; bonds for such bill of lading transaction must be given as provided for in the board's instructions.

The foregoing instructions and the board's instructions must be carefully studied by all concerned and receipt acknowledged to the [illegible] of agencies.

When the foregoing instructions and those on an earlier page of this issue were made public, J. E. Walsh, Manager Transportation Department, Canadian Manufacturers Association, arranged for a conference between representatives of the association and of the railways, at which the new regulations were protested against, and as a result the Canadian Railway War Board issued telegraphic instructions to the railways postponing the effective date of the regulations to March 1. The regulations will be further considered by a committee of the Canadian Manufacturers Association, and it is expected that they will be modified in certain particulars.

Electric Railway Lines Acquired by Canadian Northern Railway.

The Toronto Suburban Ry., which operates 10.26 miles of lines on streets and highways in the western portion of Toronto and in the town of Weston, and two interurban lines on private right of way, one from Weston to Woodbridge, 11 miles; and one from Lambton to Guelph, 46.3 miles, a total of 67.56 miles, and which is controlled by Sir Wm. Mackenzie and associates, is being acquired by the Canadian Northern Ry. and will be operated as part of the Canadian National Railways.

The Canadian Northern Ry. is also acquiring the Toronto Eastern Ry. Co.'s charter and other property, which are also controlled by Sir Wm. Mackenzie and associates. This line is projected to run from Toronto to Cobourg, Ont. A contract was let and construction started in 1914, grading being done from Bowmanville west to Pickering Village, 19.5 miles, and track was laid and ballasting done from Bowmanville to Whitby, 11.2 miles. No overhead or other electrical work was done and, owing to the war, all construction was stopped.

The Chatham, Wallaceburg & Lake Erie Ry., also controlled by Sir Wm. Mackenzie and associates, will not, it is said, be taken over by the Canadian Northern. Its Toronto offices, heretofore in one of the C.N.R. buildings in Toronto, have been removed to 4[illegible] Victoria St.

The Board of Railway Commissioners passed order [illegible], Nov. 19, re order [illegible], Aug. 11, 1918, which suspended until further order item [illegible] in supplement [illegible] to E. C. Airy's tariff C.R.C. [illegible], and continuing in effect item [illegible] in supplement 4 to tariff C.R.C. [illegible], covering the arrangement whereby fish in carloads is carried by express at [illegible] weight from Edmonton, Alta., to U.S. points, and after hearing the matter at Edmonton, the Express Traffic Association of Canada being represented, and on the report of the Board's Chief Traffic Officer, it ordered that order [illegible], Aug. 11, 1918, be rescinded.

Nationalization of British Railways.

Conditions of Government Control During War.—The following summary of the conditions under which the government took control of the railways on the outbreak of war, will be of interest. It was prepared by the U.S. Railroad Wage Commission and submitted to the Director General of U.S. Railroads last spring, with a recommendation that U.S. railway employes wages be increased.

The legislation under which the British Government was empowered to assume control of the railway systems of the country was in existence many years before the beginning of the war. The Civil War in the United States had shown the value of railways for military purposes; and the Franco-Prussian war proved conclusively that railways were absolutely essential to the conduct of all military operations. The lesson of this war was immediately recognized by Great Britain, and in 1871 the Regulation of the Forces Act was passed. Although minor legislation had previously been enacted as to the regulation of the railways to military needs, and although a small number of relatively unimportant laws were subsequently passed, the Regulation of the Forces Act of 1871 was the fundamental legislation which provided for government control of railways for military purposes. Sec. 16 of this act authorized the government, in any emergency in which it might be expedient that the government have control over the railroads of the United Kingdom, to empower any person or persons to take possession of any railway in the United Kingdom and of the plant belonging thereto, or of any part thereof; and it was under the provisions of this section of the act that on Aug. 4, 1914, the King, by order in council, declared that the government was to assume control of the railways in Great Britain, this control to be "exercised through an executive committee, composed of general managers of railways, which has been formed for some time, and has prepared plans with a view to facilitating the working of these provisions of the act." Since the outbreak of the war orders have been issued under this existing pre-war legislation, but no additional legislation has been necessary, and the railways have been administered for the government, but not by the government, through a railway executive committee, the organization and composition of which was provided by this pre-war legislation. This committee is made up of the general managers of 14 railways, representing about three-fourths of the entire steam railway mileage in Great Britain. The members of this committee, however, have also continued to act as general managers of their own systems, the general personnel of each railway has been retained as far as possible, and the routine of operation has proceeded along much the same lines as before the outbreak of hostilities.

The act of 1871 provided that government control should remain in force for one week at a time only, but could be prolonged from week to week so long as the emergency continued, so that in practice it has been necessary to renew each week the order by which government control was established.

In regard to the financial questions involved in the establishment of government control, sec. 16 of the Regulation of the Forces Act of 1871 contained the following provisions: "There shall be paid to any person or body of persons whose railway or plant may be taken possession of in pursuance of this section, out of moneys to be provided by parliament, such full compensation for any loss or injury they may have sustained by the exercise of the powers of the Secretary of State under this section as may be agreed upon between the said Secretary of State and the said person or body of persons, or, in case of difference, may be settled by arbitration."

Compensation to the railways.—To determine the compensation which these provisions stipulated was to be paid to the railways in case of government control, it was not necessary to resort to arbitration, the basis of compensation being fixed by a mutual agreement between the government and the railways. According to the terms of this agreement, the railways placed their organizations unreservedly at the command of the military authorities, for the transportation of troops and of military equipment and supplies, and further provided that military traffic should be given priority over all other traffic. It was agreed that he government would not pay the railways for any military traffic, as such; but the government agreed to pay each railway monthly an amount which would be sufficient to bring its net income for the period to an amount equal to the net income for the corresponding period of the calendar year 1913—that is, the government guaranteed to maintain the net income of each road at the same amount as in 1913, a year in which the net income of the railways was the greatest ever recorded—with the qualification (added later) that the amounts so paid by the government to the railways during the last five months of 1914 would be sufficient to make the net income for the whole of 1914 equal to the net income for the whole of 1913. On the other hand, if any railway earned a net income greater than that earned during the corresponding period of 1913, it was required to turn the excess over to the government. For the purpose of this agreement, "net income" meant the total revenue derived from railway and subsidiary transportation operations, less expenses of operation and taxes; that is, the net income before the deduction of interest, fixed charges, and dividends. Later this definition was modified so that the government would bear a 4% interest charge on all capital invested in new railway property since Aug., 1914. This agreement was to continue as long as the government exercised control over the railways in accordance with the provisions of the Regulation of the Forces Act of 1871.

Under the operation of this agreement the government has paid the railways from 5 to 10% of their normal pre-war revenues, whereas the amount of governmental traffic handled by the railways during the war has undoubtedly been considerably in excess of 10% of their total traffic.

Since railway control was assumed by the government there has been little increase in freight rates, but passenger rates soon began to be increased through the abolition of various forms of reduced rates, while on Jan. 1, 1917, all passenger rates were increased 50%.

The Irish Railways.—When the government took over control of the British railways, as provided by the Regulation of the Forces Act, the Irish railway systems were not included. For more than two years after the outbreak of war these systems continued to be operated and controlled by their own managements, but by the end of 1916 the employes of these systems were insisting upon war bonuses as great as those paid railway employes in Great Britain, and the Irish railways announced that they could not meet wage increases in competition with the British Government. Failing in an effort to bring about an agreement between the Irish railway managers and their employes, the government brought the Irish railways under government control on Jan. 1, 1917, on practically the same conditions as govern the British railways. A distinct railway executive committee was established, but the government agreed to maintain the net incomes of the railways at their normal levels.

The question of the nationalization of railways is a live issue in Great Britain at present. A statement made by Right Hon. Winston Churchill, at Dundee, Scotland, Dec. 5, briefly and directly, that the government proposes to nationalize the railways of the three kingdoms, taken in conjunction with a statement on the following night by Right Hon. W. H. Long, that the question is a very big one and will want a great deal of thinking out, is sufficient evidence that the matter has been under the government's consideration, as one of the means of dealing with the immense transportation interests of the country in returning to a peace basis.

The Dominion Government's Railway Policy, etc.

Sir Thomas White, Finance Minister, and acting Prime Minister, when in Toronto, Dec. 16, gave out a statement calling attention to the things accomplished by the Union Government during its first year of office. Among other things he said: "The Government has completed the purchase of the Canadian Northern Ry. and consolidated all the government owned railways, including the Intercolonial and National Transcontinental, under a board of directors of business men who will operate the roads in the national interest. For the better co-ordination and direction of the immense railway traffic arising out of the war, the Canadian Railway War Board, composed of the chief executives of the principal Canadian railways, was formed and has rendered most excellent service, avoiding serious difficulties which would otherwise have arisen.

"The Minister of Railways has, during the year, contracted for 185 locomotives, 8,500 freight cars and 100,000 tons of rails. Orders are now being placed for 200,000 additional tons of rails, and 100 colonist cars."

French Railway Reconstruction.—The Chamber of Deputies, on Dec. 31, voted the government to advance 600,000,000 francs for the re-establishment of the railways after the war; 480,000,000 francs are to be devoted to the employes and 120,000,000 to repairs and rolling stock. During the debate, the Minister of Public Works said that 27,000 American cars would be delivered soon. With regard to the railways built in France by the U.S. army, he declared that if the negotiations now going on reached a satisfactory end, the roads would be kept and improved.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

General order 255. Nov. 20.—Amending general train and interlocking rules, approved by order 7563, July 12, 1909.

General order 256. Nov. 20.—Amending pars. 1 and 2 of rule 102 of the general train and interlocking rules.

General order 257. Dec. 6.—Amending rule 33 of general train and interlocking rules, approved by order 7563, July 12, 1909.

General order 258. Nov. 25.—Amending rule 26 of the General Train and Interlocking Rules approved by order 7563, July 12, 1900, by directing that railways display a blue flag by day and a blue light by night at a height of 5 ft. above rail level on steel frame secured to rail; day signal to be 22 x 28 in., set at right angles to track and located between switch and first engine, car or train occupying track, all switches leading to regular repairs tracks to be locked wtih special locks and keys carried by foremen in charge of repair work.

27868. Nov. 19.—Authorizing British Columbia Electric Ry. to charge increased commutation fares as published in tariff C.R.C. 7, effective Dec. 1.

27869. Nov. 19.—Extending to Aug. 31, 1919, time within which gates may be erected at crossing of C.N.R. and C.P.R. at Bay Bridge Road, Belleville, Ont.

27870. Nov. 19.—Relieving G.T.R. from providing further protection at Vigar Crossing, Richmond, Que.

27871. Nov. 20.—Authorizing C.N.R. to cross road allowance between Secs. 1 and 2, Tp. 51, Range 11, west 4th meridian, Alta.

27872. Nov. 18.—Authorizing Grand Trunk Pacific Ry. to build spur for Upper Fraser Valley Lumber Co., Ltd., Cariboo District, B.C.

27873. Nov. 16.—Authorizing G.T.R. to rebuild bridge carrying highway between lots 17 and 18, Con. 28, St. Marys, Ont.

27874. Nov. 18.—Authorizing Town of Stoney Plain, Alta., to carry 5th Meridian road allowance across C.N.R. and G.T.P.R.

27875. Nov. 18.—Ordering C.N.R. to build station at Rosebud, Alta., and install a passing track, to be completed by Sept. 1, 1919.

27876. Nov. 20.—Authorizing C.N.R. to build across road allowance between Sec. 25 and 26, Tp. 53, Range 7, west principal meridian, Alta.

27877. Nov. 20.—Authorizing Bell Telephone Co. to build telephone lines in underground conduit in London, Ont.

27878. Nov. 23.—Approving Canadian Northern Ontario Ry. revised location through Indian Reserve, Commanda Tp., Nipissing District, from mileage 347.2 to 353.8 from Montreal.

27879. Nov. 22.—Authorizing Halifax & Southwestern Ry. to build two spurs for Davison Lumber & Mfgr. Co., Bridgewater, N.S.

27880. Nov. 22.—Authorizing Canadian Northern Ontario Ry. to build spur for S. L. Lambert, near Grave Yard Lake, Beamont Tp., Sudbury District.

27881. Nov. 23.—Authorizing London & Port Stanley Ry. to build branch to Military Convalescent Home, Westminster Tp., Ont.

27882. Nov. 22.—Extending to Jan. 22, 1919, time within which C.P.R. shall install electric alarm bell at crossing of King St. West, Ingersoll, Ont.

27883. Nov. 22.—Extending to Oct. 31, 1919, time limited by order 27282, June 1, during which Lake Erie & Northern Ry., pending installation of interlocking plant at Brantford, Ont., was authorized to operate over crossing there.

27884. Nov. 22.—Approving agreement between Bell Telephone Co. and St. Marys, Medina, and Kirkton Telephone Co., in Huron, Perth, Middlesex and Oxford Counties, Ont.

27885. Nov. 23.—Approving Canadian Northern Ontario Ry. revised location through Beaucage and Pedley Tps., Nipissing District.

27886. Nov. 25.—Dismissing C.P.R. application for order re heater charges on fruit cars from Minneapolis, St. Paul and Sault Ste. Marie, to Calgary, 27461; and also to Winnipeg, and suspending order 27458, pending further order.

27888. Nov. 22.—Approving agreement, Oct. 26, between Bell Telephone Co. and Hampshire Telephone Co., Simcoe County, Ont.

27889. Nov. 26.—Relieving G.T.R., in so far as northbound trains which stop at Norwich station are concerned, from providing further protection at the first crossing north of Norwich station, Ont.; and prohibiting standing of cars on siding west of main track, closer to highway than 150 ft.

27890. Nov. 26.—Extending to June 15, 1919, time within which Canadian Northern Ry. shall complete moving station building, siding, and loading platform at Looma, Alta.

27891. Nov. 25.—Authorizing C.P.R. to build siding for P. Lund & Son, Lethbridge, Alta.

27892. Nov. 26.—Authorizing G.T.R. to build siding and spur for Imperial Steel & Wire Co., Nottawasaga Tp.

27893. Nov. 27.—Approving C.P.R. clearances of canopy and extension at Gordon, Ironside & Fares siding, Winnipeg.

27894. Nov. 26.—Approving Canadian Northern Ry. drawing showing combined culvert and road crossing for watercourse at Forsters Lake, McDougall Tp., Parry Sound District, Ont.

27895. Nov. 26.—Authorizing Essex Border Utilities Commission to build sewer across G.T.R. in Walkerville Tp., Ont., and at 2 points in Ford City, Ont.

27896. Nov. 21.—Dismissing application of New York Central and Rutland Rds. for order staying enforcement of general order 199, June 24, 1917, as amended by general order 226, Apr. 4, 1918, pending decision of U.S. courts on jurisdiction of Interstate Commerce Commission to make order in similar terms.

27897. Nov. 28.—Authorizing Toronto, Hamilton & Buffalo Ry. to open for traffic its second main line between Stoney Creek and Kinnear, Ont.

27898. Nov. 28.—Authorizing G.T.R. to build spur for Ontario Government on Lot 15, Concession 6, Hunter Tp., Nipissing District.

27899. Nov. 29.—Approving Canadian Northern Ry. drawings showing abutments proposed to be erected where C.P.R. ballast pit spur crosses under C.N.R. in Lot 12, Con. 4, Scarboro Tp., Ont., at mileage 12.9 from Todmorden.

27900. Nov. 26.—Approving agreement, Nov. 8, between Bell Telephone Co. and Maidstone Tp., operating Maidstone Municipal Telephone System, Essex County, Ont., and rescinding order 12264, Nov. 11, 1910.

27901. Nov. 27.—Authorizing Village of Turcotte, Que., to make highway crossing over C.P.R. at Garneau Jct., in lieu of farm crossing as at present.

27902. Nov. 27.—Authorizing Grand Trunk Pacific Branch Lines Co. to build spur for Spicer Coal Co., in Secs. 18 and 13, Tp. 48, Range 19 and 20, west 4th meridian, Alta.

27903. Nov. 27.—Ordering Edmonton, Dunvegan & British Columbia Ry. to fence right of way through east ½ of Sec. 31, Tp. 72, Range 5, west 5th meridian, Alta., and install farm crossing for S. Wraight, Sawridge, Alta; work to be completed by Dec. 31.

27904. Nov. 28.—Authorizing Saskatchewan Highways Department to make public highway over C.P.R. north of Sec. 14, Tp. 32, Range 14, west 2nd meridian.

27905. Nov. 29.—Approving Canadian Northern Ry. drawing showing proposed reconstruction of bridge over creek on west leg of Y at Brockville, Ont.

27906. Nov. 29.—Amending order 27846, Nov. 9, re crossing of Jacques Cartier Union Ry. by Mount Royal Tunnel and Terminal Co.'s track, at mileage 5.25 from Montreal terminal.

27907. Nov. 29.—Rescinding order 25254, Aug. 11, 1916, re rates on fish from Edmonton, Alta., to U.S. points.

27908. Dec. 3.—Relieving Canadian Northern Ry. from providing further protection at Nepean Road, Bastard Tp., Ont.

27909. Dec. 2.—Approving agreement, Oct. 9, between Bell Telephone Co. and Plane Settlement Telephone Co., Hastings County, Ont.

27910. Dec. 3.—Ordering C.P.R. to build interchange and storage tracks to provide for separate access for C.N.R. and C.P.R. to elevators at Port Arthur; cost to be divided as may be agreed between the two companies, and rescinding order 27225, May 15.

27911. Dec. 3.—Ordering Canadian Northern Ontario Ry. to build at expense of the parishes of St. Placide and St. Benoit, Que., a platform at Cote Double, Que., similar to platforms provided at St. Benoit and St. Hermas, cost not to exceed $300; and rescinding orders [illegible] and [illegible], Apr. 17, 1916, and Sept. [illegible], 1918.

27912. Dec. 6.—Ordering Bell Telephone Co. to file with board and deliver to Montreal and other municipalities opposing company's application, further detailed [illegible]

[illegible]

27913. Dec. [illegible]—Authorizing C.P.R. to build [illegible] Middlesex [illegible] North Dorchester Tp., Ont.

27914. Dec. 7.—Ordering Canadian Northern Ry. [illegible]

[illegible]

27915. Dec. [illegible]—Authorizing C.P.R. to rebuild bridge [illegible] Westminster [illegible] Tp., Ont.

27916. Dec. [illegible]—Ordering Hamilton Radial Electric Ry. [illegible]

[illegible]

27917. Dec. 9.—Approving agreement, Nov. [illegible], between Bell Telephone Co. and Michigan Central & Hudson River R.R.

27918. Dec. [illegible]—Authorizing Alberta Public Works Department to make highway over C.P.R. in Sec. [illegible], Tp. [illegible], Range [illegible], west [illegible] meridian.

27919. Dec. 9.—Authorizing Niagara, St. Catharines & Toronto Ry. to build spur for McKinnon Columbus Chain Co., St. Catharines, Ont.

27920. Dec. 10.—Approving agreement, Nov. 11, between Bell Telephone Co. and the [illegible] Telephone Co., Lennox, Addington and Hastings Counties, Ont.

27921. Dec. 11.—Ordering Pere Marquette Ry. to construct new culvert on north ½ of lot 15, Con. 4, Orford Tp., Ont.

27922. Dec. 11.—Relieving G.T.R. from providing further protection at highway crossing near Henfryn station, Ont.

27923. Dec. 12.—[illegible] from Collingwood, Ont., to Vancouver wharf, B.C., by G.T.R. and C.P.R. all rail route from Dec. 3, 1917, to Oct. 31, 1918, on carload shipments of [illegible] rate shown in Special [illegible] Freight Tariff G.T.R. C.R.C. E-3677, as applicable from Toronto and Hamilton, Ont.

27924. Dec. 12.—Dismissing, on grounds of no jurisdiction, application of Kitchener, Guelph, Waterloo and [illegible], Ont., for order [illegible] rates per cord or per carload instead of by weight on firewood from Algonquin Park to municipalities and institutions at cost.

27925. Dec. 19.—Relieving Grand Trunk Pacific Ry. from providing further protection at highway crossing near Pope, Man.

27926. Dec. 9.—Extending to June 15, 1919, time within which the Canadian Northern Ry. is required to erect a third class station at Durban, Man.

27927. Dec. 12.—Approving clearance of C.P.R. coal tipple and works over tracks for [illegible] Collieries, Ltd., on C.P.R. Mountain Park Coal Branch, Alta.

27928. Dec. 12.—Approving C.P.R. protection by gates at Douglas Ave., St. John, N.B.; Bridge and Grand Sts., Quebec; St. Hubert St., Montreal; Moore St., Carleton Place; Church St., Peterborough; Waterloo and Adelaide Sts., London; King, Adelaide and William Sts., Chatham, Ont.; and ordering gates to be provided at [illegible] St., Ingersoll, Ont.

27929. Dec. 12.—Ordering C.P.R. to maintain watchman at Powell St. crossing, Vancouver, B.C., between 7 a.m. and 12 p.m., until further order.

27930. Dec. 13.—Relieving C.P.R. from providing further protection at crossing near Guelph Jct., Ont., [illegible] to be removed by May 1, 1919.

27931. Dec. 16.—Extending to May [illegible], 1919, time within which Niagara, St. Catharines & Toronto Ry. shall install interlocking plant at G.T.R. crossing, as required by order [illegible], July [illegible].

27932. Dec. 17.—Approving of Pere Marquette Ry. bylaw authorizing [illegible] M. [illegible], General Freight Agent, and W. F. [illegible], General Passenger Agent, to prepare and issue tariffs of tolls.

27933. Dec. 13.—Authorizing C.P.R. to build spur for Credit River [illegible] Ltd., [illegible] Toronto Tp., Ont.

27934. Dec. 16.—Authorizing C.P.R. to build spur for [illegible] Paper Box Co., York Tp., Ont.

[illegible]

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—An Edmonton, Alta., press report states that work is to be started at once upon an [illegible] extension from near the present end of steel at mileage 275.40, to the Clearwater River for the development of [illegible] fields in the vicinity. The completion of the line to McMurray, about 15 miles, will, it is said, be considered by the Alberta Government in connection with the railway programme for 1919. (Nov., 1918, pg. 488.)

Calgary & Fernie Ry.—The Dominion Parliament is being asked to extend the time within which the company may build its projected railway, authorized in 1906, from Calgary, Alta., to Fernie, B.C. Hough, Campbell and Ferguson, Winnipeg, are solicitors for applicants. (Sept., 1917, pg. 350.)

Calgary & South Western Ry.—A general meeting of shareholders was called to be held at Calgary, Alta., Dec. 16, to elect directors, complete the organization of the company, and to consider and, if thought advisable, to authorize the directors to enter into a contract with the Great West Construction Co., for the building of the projected railway from Calgary to the Fish Creek coal fields, 70 miles. (April, 1918, pg. 146.)

Essex Terminal Ry.—We are officially advised that during 1918 the company laid 2 miles of sidings in Quarrie's yard, Windsor, Ont. The grading was done by the Quick Contracting Co., Windsor, and the tracklaying, etc., by the company's own forces. The Quarrie yard is connected with the steel plant at Ojibway, Ont., by a line 10 miles long, on which track was laid in 1917, but which was not reported in time for use in our table showing track laid in that year. (Sept., 1918, pg. 390.)

Grand Trunk Pacific Ry.—Steps are being taken in the Swift Current district, Sask., to bring pressure to bear on the company to start construction during this year on the projected branch from Watrous southwesterly to Swift Current. The branch would serve the Lenian and Stewart Valley settlements and the country north of Waldeck. The surveys for the branch have been made and the Saskatchewan Government has authorized the guarantee of bonds in aid of construction, as well as for terminals in Swift Current.

The G.T.P. Branch Lines Co. has applied to the Commissioner of Irrigation at Calgary, Alta., to divert water from Archydal Coulee, and the right to construct the necessary works to enable the water to be used in the company's tanks, buildings and engines at Archydal, on the Moose Jaw Northwesterly Branch.

Grand Trunk Ry.—The Lachine, Jacques Cartier & Maisonneuve Ry. Co., a G.T.R. subsidiary, is applying to the Dominion Parliament for an extension of time for the building of its railway round Montreal from Lachine to Maisonneuve.

We are officially advised that during 1918, the company laid 0.62 of a mile of track in extension of its yard at Campbellford, Ont. (Dec., 1918, pg. 540.)

Hudson Bay Ry.—H. T. Munn, who arrived in Ottawa recently, after two years prospecting [illegible] on Southampton Island and Baffin's Land, is reported to have stated that, as far as grain is concerned, his experience makes it obvious that the Hudson Bay route is impracticable. With the straits open only for a short time in the year, it would be impossible to get out more than a few shipments. The fishing industry has great possibilities, and the Hudson Bay Ry. should be a food line for central Canada. There is nothing of great mineral value in the Arctic regions, so far as he had visited them, but there are Arctic products which would justify exploitation, such as furs, blubber, oil and ivory. (Oct., 1918, pg. 438.)

Medicine Hat, Alta.—Some years ago the city of Medicine Hat, Alta., built a spur line of about 4 miles from the C.P.R. to give access to an industrial area which was being developed. At the end of 1911 a proposition was made to the city council by the Ansley Coal Co., that if the city would construct an extension of the spur line to the city boundary nearest to the company's mine, the company would build a spur from the mine to connect with the city line. After some negotiations, the proposition was agreed to, the company got plans approved by the Board of Railway Commissioners showing a line about three miles long connecting with the proposed extension of the city spur line. The Medicine Hat ratepayers passed a bylaw in Dec., 1912, authorizing the issue of $20,000 of debentures to defray the cost of the extension of its spur line to the city boundary. The city line was extended to the municipal boundary, but nothing was done in the way of construction on the mine spur. The last information we received about it was in July, 1913, when R. O. Sweezy, General Manager, Montreal Engineering Works, was quoted as stating that the Ansley coal carrying spur line would probably be electrified in the then near future, and operated in connection with an electric railway which his company proposed to build in Medicine Hat.

Nothing further was heard of the project until recent advices as to the development of the Swan and Smith property, which, we are advised, has been renamed the Ajax mine. The company's spur line, under construction, was described in Canadian Railway and Marine World, September, pg. 390, and we have since been advised that owing to the impossibility of obtaining labor, the work of completing the spur line has been delayed. The grading is finished for 3.5 miles from the mine, and connected with the city spur, and the old spur is being regraded on a revised location, which eliminates 129 degrees of curvature in half a mile. We were advised, Nov. 25, that track laying was in progress.

We are also advised that the new opening to the mine is completed, bricked up and enclosed, and that the poles for the power line from the city to the mine are erected and ready for the delivery of power for the operation of two coal cutting machines. The estimated immediate output of the mine is 300 tons a day, but this will be increased to 1,000 tons a day. The estimated quantity of coal in the Swan and Smith holdings in this district is 15,000,000 tons, of which it is expected to mine 90%. The market for the product is in the three prairie provinces.

Medicine Hat ratepayers voted recently in favor of a bylaw granting aid to the company to build the spur line. The bylaw provides that the city guarantees that the C.P.R. will supply the rails for the spur on a rental basis; that the company will be enabled to run its cars across certain streets over which the spur line passes within the city limits; for the leasing of a locomotive and passenger car to carry the mine employes to and from their work, and to supply power at 1½c per kilowatt hour. C. Le B. Miles is the engineer in charge of construction. (Sept., pg. 390.)

Since the foregoing was put in type, we were advised, on Dec. 19, that track had been laid to the mine, that electric wires were up and that two machines were cutting coal in a stratum that will be from 6 to 8 ft. deep a little further in.

Pacific Great Eastern Ry.—We are officially advised that track has been laid from the old end of track, 12 miles north of Clinton, B.C., for 30 miles, and that work is in progress for 12 miles further north. The contract is being carried out for the British Columbia Government by the Northern Construction Co., Vancouver. (Dec., 1918, pg. 541.)

Quebec & Saguenay Ry.—A press report of Dec. 10, stated that the bridge at Baie St. Paul over the Riviere de Gouffre was expected to be completed by the end of December. The bridge is a fixed steel span, 165 ft. long, with accommodation for foot passengers, carried on two piers and abutments.

We are officially advised that grading has been completed from Baie St. Paul to Murray Bay, 25 miles, and is ready for tracklaying. This work will be gone on with early in the spring.

It is reported that it is expected to be able to put on a temporary passenger train service as far as Murray Bay in June, and a complete permanent freight and passenger traffic to Murray Bay in the autumn. (Nov., 1918, pg. 488.)

Quebec Central Ry.—We are officially advised that the company has under contemplation as projects to be carried out in the future an extension of its line from Scotts to the south end of Quebec bridge, 19 miles, and the building of a line from Las Frontier, on its Chaudiere Division, to St. Pamphille, Montmagny County, Que., 25 miles.

St. John & Quebec Ry.—We are officially advised that track has been laid on the extension of this line from Gagetown to the C.P.R. at Westfield, N.B., between Westfield and Queenstown, 30 miles. Ballasting has not been started. The total length of the extension is 37.8 miles, of which 7.8 miles is yet to be completed. The Nova Scotia Construction Co., Halifax, N.S., is the general contractor, and C. O. Foss is Chief Engineer. The line is owned by the Province of New Brunswick. (Dec., 1918, pg. 541.)

Toronto, Hamilton & Buffalo Ry.—G. A. Mountain, Chief Engineer, Board of Railway Commissioners, met representatives of the G.T.R. and the city of Hamilton, Dec. 19, to discuss some of the T.H. & B. R. yard plans, and their relationship to the development plans outlined by the city. A press report states that an attempt will be made to come to an agreement early in the year, rather than that an order be made by the board directing the T.H. & B. Ry. to separate grades.

Toronto Terminals Ry.—J. R. Ambrose, Chief Engineer, is reported as having said recently that the new union station building in Toronto will be ready in the spring, and that, failing the elevation of tracks along the esplanade, as originally planned, temporary tracks will be laid on the present levels. Temporary wooden buildings will be required with access to the tracks from overhead bridges. (July, 1918, pg. 285.)

Minimum Weight on Canned Goods in Carloads.

Sir Henry Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following judgment Dec. 6:—

Complaints have been made as to the increase in the minimum weight applicable to canned goods, in carloads, moving at commodity rates. These complaints have been forwarded from points in New Brunswick, Nova Scotia, Prince Edward Island, and Ontario. The question has been taken up actively by this board with the Canadian Railway War Board, which in the first instance commenced the campaign for heavier loadings. Owing to car shortages and the great expense in railway operation, it was apparent to everybody that, to the full extent that minima could be increased, and a more intensified use made of the equipment available for public business, without at the same time throwing burdens upon the traffic carried, increases ought to be made; and these increases, speaking generally and apart from the question of flour, which was specifically dealt with by the board, were arrived at by conferences with interested shippers. No action whatever was taken by the board in connection with canned goods.

The Canadian Railway War Board, on Nov. 21, 1918, wrote: "We have had a thorough investigation made into the circumstances and are unable to find that proper grounds for this complaint exist. The communications which reached you from a few of the dealers in canned goods appear to have been inspired by the Dominion Canners, Ltd., which, for reasons of its own, seems to have undertaken a campaign to nullify the efforts which have been made by the railways and a large proportion of their patrons to increase the railway efficiency by reducing to the minimum the amount of wasted effort involved in hauling an unnecessarily high proportion of tare weight of equipment. Enclosed, for your information, is copy of a circular letter received here as having been addressed by the Dominion Canners, Ltd., to its customers. Further comment in connection with this communication appears to be unnecessary. Prior to the receipt of the enclosed communication, no complaint was registered, so far as we can ascertain, by any of the local dealers who subsequently wrote you. It is the consensus of opinion of those who are well acquainted with the canned goods business in the Maritime Provinces that in the vast majority of instances there is no difficulty in maintaining the 40,000 lb. minimum, and that the dealers, if permitted to do so by the larger shippers such as the Dominion Canners, Ltd., will readily adapt their handling arrangements to the 40,000 lb. minimum. It will be remembered that consignees, if they find it absolutely necessary to depart from the present commodity minimum, are permitted to ship 24,000 lb. at the regular 5th class rate. In the west the minimum on canned goods is 60,000 to 70,000 lb. and cars have been so loaded for many years. It will be remembered, also, that the minimum made effective by the U.S. Food Administration is 60,000 lb., and these regulations have been in effect in that country for some months."

The copy of the letter claimed to have been written by the Dominion Canners, Ltd., on June 20, 1918, and referred to in the Canadian Railway War Board's letter, is as follows: "We understand that the Canadian Railway War Board has asked the Board of Railway Commissioners for authority to increase the minimum weight on canned goods from 24,000 to 60,000 lb. We are advising you of this because we know this will have a serious effect on your business, as in many instances it is not possible for you to make up carloads of 60,000 lb., and the tendency will be to throw this business into the large centers and force the dealers in your districts to pay the excess freight between carload and less carload on their purchases. If this ruling will injuriously affect you at all, we suggest that, without using our name, you take this matter up with your member of the Dominion house; also send your protest to the Canada Food Board, as well as the Canadian Railway War Board."

The Dominion Canners, Ltd., is very largely interested in the question. The great bulk of the movement is originated by it, and it is naturally interested in obtaining as favorable transportation terms for its products as possible.

The letter of the Canadian Railway War Board and copy of the circular letter of June 20, 1918, were forwarded to the Dominion Canners, Ltd., for its answer and comments, and the board has received the following reply: "The understanding was that when these minimum weights were increased from 30,000 to 40,000 lb., that it was for a war measure only and for the duration of the war only. Furthermore, you have a letter from the Canadian Manufacturers Association regarding this same subject, having it fully understood that the increase was put into effect with the understanding between the railways and the shippers that same would expire at the end of the war. Under these circumstances we do not feel it necessary to enter into full details regarding this increased minimum, as we can stand the inconvenience and extra expense until peace is actually declared. At this time we expect that the minimum will be automatically reduced again to 30,000 lb. If, however, the railways do not intend to do this, then we wish to seriously object to continuation of 40,000 lb. as minimum for canned goods to points covered by commodity rates to Eastern Canada after peace has been declared."

Canned goods, of course, can be sent at the appropriate class rate in as small quantities as may be desired, and the minimum regulation applies merely to the lower commodity rate. The old minimum was 30,000 lb. The present minimum is 40,000 lb. The Canadian Railway War Board at one time endeavored to have the minimum raised to 60,000 lb., which would have resulted in loading to capacity of the older box cars and a loading to 75% capacity of the newer cars, which usually have a capacity of 80,000 lb., while others now go as high as 100,000 lb. The minimum of 60,000 lb. would have meant that 75% of the loading capacity of the car would have been utilized; the former minimum of 30,000 lb. meant the utilization of but 50% of the older type of car and 38% of the 80,000 lb. car equipment.

In view of the letter of the Dominion Canners, Ltd., which represent, as stated, the chief trade interest in the question, no action should be taken on the present application, but the matter will be left open for future consideration on any complaint which that company, or others interested, may desire to make subsequent to the declaration of peace.

Change in General Train and Interlocking Rules.

The Board of Railway Commissioners has passed the following orders:—

General order [illegible], Dec. 6, 1918. Re application of Canadian Northern Ry. for an order to amend rule [illegible] of General Train and Interlocking Rules approved by order [illegible], July 12, 1909. Upon reading what is filed in support of the application, urging the advantages of standardization for safe and efficient operation of railways; and upon the report and recommendation of the board's Chief Operating Officer, it is ordered that the said rule [illegible] be struck out and the following substituted therefor:—

"[illegible]. Watchmen stationed at public road crossings must, by day, display a standard metal disc, and by night, a [illegible] light, to warn pedestrians and persons in vehicles that a train is approaching. Red signals must be used by them only when necessary to stop trains."

General order [illegible], Nov. [illegible], 1918. Re rule 26 of the General Train and Interlocking Rules approved by order [illegible], July 12, 1909, providing that a blue flag by day and a blue light at night, be displayed at one or both ends of an engine, car, or train for the protection of workmen engaged in, under, or around cars on regular repair tracks; and to the question of requiring additional protection of workmen so engaged as contemplated by circular 150, Jan. 29, 1917, and supplement 1 thereto, Nov. 2, 1917, as well as supplement 2, Mar. 17, 1913, to circular 98, copies of said circular and supplements having been served upon the railway companies with the request that they show cause why the recommendations embodied in such circular and supplements should not be adopted and put in practice on their respective railways. Upon reading the answers filed on behalf of the companies, the reports of the board's inspectors, and the recommendation of its Chief Operating Officer, it is ordered as follows:

1. That all railway companies within the legislative authority of the Parliament of Canada, operating by steam, are hereby directed to display the blue flag by day and the blue light by night, required by rule 26 of General Train and Interlocking Rules, at a height of 5 ft. above rail level, on a steel frame secured to the rail; the day signal (flag) to be 22 x 28 in. in size, set at right angles to the track, and located between the switch and the first engine, car, or train occupying the track.

2. That all switches leading to regular repair tracks of every such railway company, be locked with special locks and keys carried by the foreman in charge of the repair work, or other responsible party, whose duty it shall be to see that employes and workmen, so engaged, are warned, and are clear from cars or engines before any switching movement is made on such track, and also that the switches are relocked after the switching movement is completed.

Railway Lands Patented.—Letters patent were issued during Nov., 1918, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Calgary & Edmonton Ry.	[illegible]
Canadian Pacific Ry.	[illegible]
[illegible] & [illegible] Ry.	[illegible]
Qu'Appelle, Long Lake & Saskatchewan Rd. and Steamboat Co.	[illegible]
Total	[illegible]

Canadian Government Railway Construction, Betterments, Etc.

A stores building being erected at Campbellton, N.B., consists of one story, 80 ft. 10 in. long, by 31 ft. wide, with an average height of 12½ ft., on a concrete basement. The basement is divided in two, one section, 35 ft. 5 in. x 29 ft., being for oil tanks, and the second, 46½ ft. x 29 ft., for miscellaneous stores. The basement has a clear inside height of 7 ft. On the west side of the building is a platform, 47 x 30 ft., at car floor height, for storing heavy castings, etc., and along the front of the building is a trucking platform 8 ft. wide at car floor height. The main building and platforms are of wood, semi-mill construction; the basement walls and floor are of concrete. A lavatory and rest room is provided in the main building for employes. Access to the stores basement is by a ramp at the east end of the building, and the oil basement is provided with a hatchway of sufficient size to allow oil tanks to be lowered through. The heavy castings platform is provided with bins 4 x 5 ft. for storing the castings. These bins are made in double rows of 6 bins, with a 5 ft. trucking space between each row. The bins are roofed over with a light roofing to protect the contents from the weather. As the contents will consist mainly of rough castings, it will only be necessary to protect them from heavy snowfalls.

The oil storage system consists of the following tanks and pumps:—two 1,000 gall. tanks for locomotive oil; 1,000 gall. tank for cleaning oil; 482 gall. tank for valve oil; 482 gall. tank for superheater oil; 482 gall. tank for passenger car oil; 482 gall. tank for mineral seal oil; 482 gall. tank for l.t. burner oil; 482 gall. tank for freight car oil; 100 gall. tank for gasoline. The tanks are equipped with storage indicators, which will show at a glance the quantities of oil on hand. The gasoline tank will have a graduated dip stick to show the quantity on hand at any time. In front of each pump is a fill box, by which it will be possible to fill each tank from barrels. The 1,000 gall. tanks are also provided with car fills, so that each tank may be filled directly from tank cars if required.

Ten standard gallon pumps are provided, complete with meters, which will tally the number of gallons passing through, from 1 to 10,000, and then repeat, which makes it possible to keep a constant check on the quantity of oil issued. The pumps are also provided with locks, quick acting nozzles, and discharge registers. The pumps are all placed in one section of the stores building and railed off with tube railing. For cleanliness and safety, the walls and floors in the pump section are tiled, so that the floor can be kept free of oil drippings, which, with wood or plain concrete flooring, would soak in and increase the fire hazard.

The contractor for the building is A. Landry, St. Octave, Que.

St. John, N.B., Wharves, Etc.—Commissioner Bullock was reported to have received recently from the C.G.R. engineering department, a proposition in regard to replacing the tracks on the repaired sections of McLeod and Pettingill wharves. The work on the wharves was reported to be 75% completed.

Campbellton Freight Offices.—A press report states that the house at Campbellton, N.B., at one time occupied by the late Evan Price, a former Superintendent, will be removed to a site adjoining the freight sheds, and be converted into offices for the freight staff. (Nov., pg. 493.)

Cut-off Near Campbellton, N.B.—We are officially advised that there is under construction a cut-off, extending from mileage 4.7, on the Campbellton Subdivision, to mileage 7.4 on the St. Leonard Subdivision, 2.7 miles. This piece of line will enable traffic to be carried on between the Intercolonial Ry. and the International Ry. of New Brunswick more efficiently, and will render it possible to remove the tracks of about seven miles of the latter line. The contractor is R. B. Stewart, Tide Head, N.B. When the contract was let in Sept., 1918, it was expected to have the work finished by Dec. 31, but we are advised that track has not yet been laid.

Prince Edward Island Ry.—A steamship with a cargo of steel rails for widening the gauge on the P.E.I.R. went ashore in New York harbor at the end of November, which is expected to result in delaying the work considerably.

Obscuring Headlights on Locomotives Backing at Night.

In the uniform code of train rules the diagram depicting the signal indications under rules 19 and 19D shows the headlight burning when locomotive is backing up at night. In order that confusion may be avoided, and uniform practice obtain, it has been decided, after consultation between the Board of Railway Commissioners for Canada and the Canadian Railway War Board, that that portion of the explanatory notes referring to rules 19 and 19D, relative to the above mentioned diagram, shall be amended by adding thereto the sentence "Headlights must be obscured," thus making the amended notes to read, respectively, as follows:—

"Engine running backward by night as an extra train, without cars, or at the rear of the train pushing cars.

"White flags at AA and white lights at BB (see rule 21).

"Lights at CC as markers, showing green at side, and in direction engine is moving, and red in opposite direction (see rule 19).

"Headlights must be obscured.

"Engine running backward by night without cars, or at rear of train pushing cars, and displaying signals for a following section.

"Green flags at AA and green lights at BB (see rule 20).

"Lights at CC as markers, showing green at side and in direction engine is moving, and red in opposite direction (see rule 19).

"Headlights must be obscured."

The foregoing will continue in effect until such time as a revision of the diagram is made, or the present rule book is reprinted.

Coal Lands for C.P.R.—Pittsburg, Pa., press dispatch, Dec. 24.—Canadian Pacific Ry. officials are said to have been given an option on the J. V. Thompson coal lands. The reported price is $8,000,000, and if the deal goes through there will be a payment of 42c on the dollar for the unsecured creditors. This is the land which the J. J. Hill interests originally optioned.

C.P.R. Station Gardens.—The first prize in the war garden competition for 1918, on the C.P.R. Western Lines, was awarded to the Regina Division, with 202 gardens; the Portage Division coming second with 111 gardens. It is reported that a total of 284 acres was brought under cultivation in the 15 divisions of the Western Lines during the year.

Freight and Passenger Traffic Notes.

The C.P.R. is carrying on a special advertising campaign in Manitoba, Saskatchewan and Alberta, to promote winter traffic to the Pacific coast.

The C.P.R. has placed in operation additional mixed trains, running three days weeks between Lethbridge and Cardston, and between Lethbridge and Coutts, Alta.

Travel restrictions on railways imposed by the Alberta Board of Health, in connection with the influenza epidemic, were practically all raised Dec. 5, and the railways restored the former train services where there had been reductions.

It was announced in Washington, D.C., Dec. 11, that no further restrictions on the private use of railways would be instituted, and that the U.S. Railroad Administration would give the public the best service of which the railways were capable.

The daily, except Sunday, trains, nos. 601 and 602, heretofore operated between Toronto and Tweed, were cut off between Havelock and Tweed, Dec. 1. The train from Toronto to Havelock, with the corresponding Havelock-Toronto trains, are being continued.

The C.P.R. trains on the Waldo Subdivision are being operated Mondays and Fridays, instead of Mondays and Thursdays as heretofore. These trains operate from Caithness, through Waldo to the end of track, 10.8 miles, in the Crowsnest Pass district.

The Winnipeg City Council's works committee is reported to have recommended the council not to extend the hours during which railways may switch across public streets, a privilege desired principally by the Midland Ry. of Manitoba (Great Northern Ry., U.S.).

The C.P.R. train 31, operated between Brownville Jct., Me., and Sherbrooke, Que., and the corresponding train from Sherbrooke to Brownville Jct., daily except Sundays, have been discontinued between Sherbrooke and Megantic, but are being continued between Megantic and Brownville Jct.

Director General McAdoo, of the United States Railroad Administration, is reported to have stated in Washington, D.C., Dec. 10, that steps were being taken to restore a normal passenger service on U.S. railways, and that a first step would be taken within a few weeks to add a number of trains to existing schedules.

J. A. Everell, Superintendent Montmorency Division, Quebec Ry., Light & Power Co., is reported to have said that the company was preparing for an extensive advertising programme in Canada and the United States for tourist business during next summer, and that the timetable for the summer would provide for the more frequent running of trains, both steam and electric, than in previous years.

Railway Supplies Wanted in France.—Sir John Willison, President Canadian Reconstruction Association, stated recently that among the tremendous quantities of materials required for the French State railways are: wheels for locomotives, freight and passenger cars, straight and bent axles, iron fittings, spare parts for freight and passenger cars, cast iron and cast steel lubricating boxes, locomotive steam cylinders, rails, bars, spikes, cut and wire nails.

Mainly About Railway People Throughout Canada.

Andrew Aitken, who resumed his duties recently as Assistant Superintendent, Toronto Terminals, C.P.R., was born at Decewsville, Ont., Oct. 12, 1872, and entered railway service in July, 1890, since when he has been, to July, 1896, freight checker, baggage master, switch tender, and draw bridge tender, G.T.R., Merritton, Ont.; July, 1896, to Aug., 1897, brakeman, G.T.R., Niagara Falls, Ont.; Jan. to Mar. 8, 1898, yard helper, yard foreman and yardmaster, C.P.R., Vancouver, B.C.; Mar. 8, 1898, to Nov. 13, 1912, General Yardmaster, C.P.R., Vancouver, B.C.; July 22, 1913, to July 1, 1914, Yardmaster, C.P.R., North Toronto, Ont.; July 1, 1914, to May 1, 1917, General Yardmaster, C.P.R., Toronto; May 1 to Oct. 15, 1917, Traffic Manager, during construction of aviation camps at Armour Heights at Leaside, Toronto; Oct. 15 to Nov. 29, 1917, General Yardmaster, C.P.R., Toronto; Nov. 29, to Dec. 13, 1917, Assistant Superintendent, Toronto Terminals, C.P.R.; Dec. 13, 1917, to Nov., 1918, Traffic Manager for Reconstruction Committee formed to handle matters at Halifax, N.S., following the disastrous explosion in the harbor in Dec., 1917.

Walter U. Appleton, who has been appointed Mechanical Superintendent, Eastern Lines, Canadian National Rys., Moncton, N.B., was born there, Jan. 29, 1878, and entered railway service, Oct. 12, 1890, since when he has been, to Sept., 1895, junior clerk, Intercolonial Ry., Moncton, N.B.; Sept., 1895, to May, 1899, machinist apprentice, same road; 1900, clerk; 1901 to 1903, machinist; 1903 to 1909, chief clerk to Superintendent of Motive Power; 1909 to 1913, Assistant to Superintendent of Motive Power; 1913 to Feb., 1918, General Master Mechanic; Feb. to Dec., 1918, Superintendent of Motive Power, Canadian Government Rys., all at Moncton.

J. T. Arundel, who retired recently as General Superintendent, Ontario District, C.P.R., was entertained to dinner at Toronto, by a number of his former colleagues, and presented with a five piece silver tea service, from the Ontario District officials.

James Bain, who has been appointed Superintendent, Halifax & Southwestern Ry. (Canadian National Rys.), Bridgewater, N.S., was born at Pictou, N.S., May 24, 1860, and entered transportation service in May, 1875, since when he has been, to Mar., 1876, in operator and dispatcher's office, Intercolonial Ry., Truro, N.S.; Mar., 1876, to June, 1879, operator and ticket agent, I.R.C., Stellarton, N.S.; June, 1879, to Nov., 1881, in operator and dispatcher's office, I.R.C., Truro, N.S.; Nov., 1881, to June, 1882, chief operator, Western Union staff, Direct U.S. Cable Co., Tor Bay, N.S.; June, 1882, to Apr., 1886, dispatcher, I.R.C., New Glasgow and Truro, N.S., and Moncton, N.B.; Apr. to Oct., 1886, dispatcher, Missouri Pacific Ry., St. Louis, Mo.; Oct., 1886, to May, 1892, chief dispatcher, Quebec & Lake St. John Ry., Quebec, Que.; May, 1892, to Nov., 1899, Manager's Assistant, same road, Quebec, Que.; Nov., 1899, to Dec., 1907, Superintendent, Q. & L. St. J. R., Lower Laurentian Ry., and construction of Great Northern Ry. of Canada, Quebec, Que.; Dec., 1907, to May, 1913, Superintendent, Halifax & Southwestern Ry., Bridgewater, N.S.; May, 1913, to Nov., 1918, General Superintendent, same road, Bridgewater, N.S.

W. U. Appleton,
Mechanical Superintendent, Eastern Lines,
Canadian National Railways.

H. E. Bissell,
[illegible]

Major F. L. C. Bond, who has been appointed Chief Engineer, G.T.R., Montreal, was born there in 1877, and educated at Montreal High School, Collegiate Institute and McGill University, graduating in 1898, when he entered G.T.R. service, since when he has been, to 1901, Assistant Engineer, Eastern Division; 1901 to 1902, engineer in charge of double track construction; 1902, [illegible] superintendent on construction of the Park Ave. tunnel, New York; 1902 to 1913, Resident Engineer, Eastern Division, G.T.R.; 1913 to 1916, when he went overseas, Division Engineer, G.T.R., Montreal.

Lafayette S. Brown, who has been appointed General Superintendent, Maritime Division, Canadian National Rys., including Canadian Government Rys. east of Mont Joli, Que., and the Halifax and South Western Ry., at Moncton, N.B., was born at Nelson, N.B., Oct. 19, 1864, and entered I.R.C. service, Jan. 15, 1880, since when he has been, to Dec. 20, 1881, cleaning locomotives, and machinist helper, Newcastle, N.B.; Dec. 20, 1881, to Sept. 5, 1882, shunting in Newcastle yard and learning telegraphy; Sept. 5, 1882, to Nov. 25, 1883, assistant agent, Newcastle, N.B.; Nov. 26, 1883, to Oct. 4, [illegible], train dispatcher, Moncton and Ste. Flavie District, Campbellton, N.B.; Oct. 4, [illegible], to April 30, 1912, Chief Dispatcher, New Glasgow, N.S.; May 1, 1912, to July 31, 1913, Assistant Superintendent, Moncton and Ste. Flavie and Fredericton to Loggieville, N.B., Newcastle, N.B.; Aug. 1, 1913, to June 1, 1917, Superintendent, Truro, Sydney and Oxford District, Intercolonial Ry., latterly known as District 4, Intercolonial Division, Canadian Government Rys., New Glasgow, N.S.; June 1 to Sept. 17, 1917, Assistant General Superintendent, Eastern Lines, Canadian Government Rys., Moncton, N.B.; Sept. 17, 1917, to Dec., 1918, General Superintendent, Eastern Lines, Canadian Government Rys., Moncton, N.B.

Capt. A. E. Doucet, civil and consulting engineer, Quebec, and formerly District Engineer, National Transcontinental Ry., has been elected President of the Quebec Garrison Club.

John Patrick Driscoll, who has been appointed General Superintendent of Car Service, Canadian National Railways, Toronto, was born at Montreal, Apr. 4, 1866, and entered railway service in June, 1879, since when he has been, to July, [illegible], clerk, G.T.R., Montreal; July, [illegible], to 1888, chief clerk to Car Accountant, C.P.R., Montreal; 1888 to 1894, chief clerk to Superintendent of Car Service, C.P.R., Montreal; 1894 to [illegible], Car Accountant, C.P.R., Montreal; [illegible] to Nov., 1918, Superintendent of Car Service, Canadian Northern Ry., Winnipeg.

Albert H. Eager, who has been appointed Mechanical Superintendent, Western Lines, Canadian National Rys., Winnipeg, was born at Waterloo, Que., [illegible], and entered railway service, [illegible], since when he has been, to [illegible], machinist apprentice, [illegible] Ry. and C.P.R., Farnham, Que.; [illegible] Farnham, Que.; [illegible], Locomotive Foreman, C.P.R., Farnham, Que.; Nov. 1, [illegible], Locomotive Foreman, C.P.R., Megantic, Que.; May 1, [illegible], General Foreman, C.P.R., Cranbrook, B.C.; May 1, [illegible], General Foreman, C.P.R., Calgary, Alta.; [illegible], District Master Mechanic, C.P.R., Kenora, Ont.; [illegible], Locomotive Foreman, C.P.R., Calgary, Alta.; May 1, [illegible], to Aug. 1, [illegible], Superintendent of Motive Power, Canadian Northern Ry., Winnipeg; Aug. 1, [illegible], to Dec., 1918, Assistant Superintendent of Rolling Stock, Western Lines, Canadian Northern Ry., Winnipeg.

Anthony C. Egan, who has been ap-

[illegible] Auditor of Agencies, Canadian Northern Ry., Toronto, was born at Winnipeg, [illegible], and entered railway service in [illegible], since when he has been, to [illegible], accountant, C.P.R., Winnipeg; 1904 to 1909, in accounting department, Canadian Northern Ry., Winnipeg; 1909 to 1911, Chief Travelling Auditor, same road, Winnipeg; 1911 to 1918, Auditor of Agencies, Western Lines, same road, Winnipeg.

J. L. Englehart, Chairman, Temiskaming & Northern Ontario Ry. Commission, Toronto, advertises having lost a certificate for 54 shares of C.P.R. stock.

Harry Gray Foreman, who has been appointed Assistant Treasurer, Canadian Northern Ry. System, Toronto, was born there, Sept. 2, 1882, and entered railway service Sept. 15, 1898, since when he has been, to June 15, 1902, clerk, General Auditor's office, Lake Erie & Detroit River Ry., Walkerville, Ont.; June 15, 1902, to Feb. 15, 1903, clerk, Accountant's office, Engineering Department, Pere Marquette Rd., Detroit, Mich.; Feb. 15, 1903, to June 15, 1909, clerk, Accounting Department, Canadian Northern Ry., Toronto; June 15, 1909, to Nov., 1916, chief clerk, Accounting Department, Canadian Northern Ry., Toronto; Nov., 1916, to Dec. 31, 1918, Chief Accountant, Canadian Northern Ry., Toronto.

C. E. Friend, who has been appointed Comptroller, Canadian Northern Ry., Toronto, was born at Brighton, Eng., Oct. 12, 1871, and entered railway service in Jan., 1894, since when he has been, to Oct., 1896, secretary to Traffic Manager, C.P.R., Winnipeg; Oct., 1896, to June 1, 1901, Assistant to Superintendent, Canadian Northern Ry., Winnipeg; June 1, 1901, to July, 1910, Auditor, same road, Winnipeg; July, 1910, to Dec. 1, 1918, General Auditor, same road, Winnipeg.

Gerard G. Ruel, who has been appointed Counsel, Canadian National Rys., Toronto, was born at St. John, N.B., July 5, 1866, and studied law there, subsequently graduating in law at Harvard University, Cambridge, Mass., in 1889. He practised in St. John for a number of years, and was for some time a partner in the law firm of Blair, Ruel & Blair. From July, 1899, to Oct. 1, 1905, he was Law Clerk of the Railways and Canals Department, Ottawa; from Oct. 1, 1905, to 1909, Assistant Solicitor, and from 1909, Chief Solicitor, Canadian Northern Ry., Toronto.

Grant Hall, Vice President, C.P.R., and Mrs. and Miss Hall, who have been living at the Ritz-Carlton since arriving at Montreal, have taken up their residence at 1 Macgregor St.

Grant Hall, Vice President, C.P.R., has been nominated to act as one of the representatives of the Citizens' Protective Committee on the board of arbitration to settle wages disputes of civic employes at Montreal.

William Harrison, Manager of the refreshment rooms at the Toronto Union Station, for the Canada Railway News Co., died at Toronto, Dec. 15. He had been in the company's service for 28 years, and prior to coming to Toronto, in [illegible] was in a similar position at Kingston, Ont.

Arthur J. Hills, who has been appointed Assistant to President, Canadian National Railways, Toronto, with the duties defined in Canadian Railway and Marine World for Dec., 1918, pg. [illegible], was born at Toronto, Feb. 15, 1879, and educated at Ridley College, St. Catharines, Ont., Upper Canada College, Toronto, and the University of Toronto. He entered railway service in Apr., 1899, since when he has been, to June, 1901, Stores and Material Agent, Construction Department, Canadian Northern Ry., in Manitoba; June, 1901, to Dec., 1903, clerk in General Superintendent's office, same road, Winnipeg; Dec., 1903, to Jan., 1908, in Third Vice President's office, same road, Toronto; Jan., 1908, to July, 1914, Superintendent, Canadian Northern Ontario Ry., Toronto; July, 1914, to Aug., 1916, General Superintendent, Eastern Lines, Canadian Northern Ry., Toronto; Aug., 1916, to Feb., 1917, in Third Vice President's office, same road, Toronto; Feb. 10, 1917, to Dec., 1918, Assistant to the Executive, same road, Toronto.

J. Bain,
Superintendent, Halifax & Southwestern Railway.

L. S. Brown,
General Superintendent, Maritime Division,
Canadian National Railways.

J. M. Horn, who has been appointed General Freight Agent, Canadian National Rys., Winnipeg, was born at Allanton Mills, Lanarkshire, Scotland, Apr. 12, 1880, and entered railway service in July, 1890, since when he has been, to 1900, abstract clerk and biller; 1900 to 1901, checker, local freight office, Northern Pacific Ry., Winnipeg; May, 1901, to 1902, rate clerk, local freight office, Canadian Northern Ry., Winnipeg; 1902 to Apr., 1904, chief clerk to Local Freight Agent, same road, Winnipeg; Apr., 1904, to May, 1909, City Freight Agent, same road, Winnipeg; May, 1909, to Mar., 1916, District Freight Agent, same road, Edmonton, Alta.; Mar., 1916, to Dec. 31, 1918, Assistant General Freight Agent, Western Lines, same road, Winnipeg.

Louis Lavoie, who has been appointed Assistant General Purchasing Agent, Canadian National Railways, Toronto, was born at Rimouski, Que., June 22, 1879, and entered railway service Oct. 1, 1894, since when he has been, to Nov., 1901, clerk, General Manager's office, Intercolonial Ry., Moncton, N.B.; Nov., 1901, to Aug., 1902, stenographer to Manager's Assistant, same road, Moncton, N.B.; Aug., 1902, to Sept., 1904, secretary to General Superintendent, same road, Moncton, N.B.; Sept., 1904, to Nov., 1909, chief clerk to General Superintendent, same road, Moncton, N.B.; Nov. 1, 1909, to Mar., 1910, Purchasing Agent, Canadian Government Railways, Ottawa, Ont.; Mar., 1910, to Nov., 1918, Purchasing Agent, Canadian Government Railways, Railways and Canals Department, Ottawa, and from 1913, also Purchasing Agent for Hudson Bay Railway and the Port Nelson terminals.

Lorne W. Mitchell, who has resigned his position as Treasurer, Canadian Northern Ry. System, and allied companies, on being appointed Head Auditor, T. Eaton Co., Ltd., Toronto, was born at Port Elgin, Ont., Mar. 12, 1879, and entered railway service Jan. 1, 1900, since when he has been, to Jan., 1902, stenographer in Mackenzie, Mann & Co.'s office; Jan., 1902, to Jan., 1903, Assistant to Purchasing Agent (the late A. W. Mackenzie), Mackenzie, Mann & Co., and Inverness Coal & Ry. Co.; Jan., 1903, to June, 1907, Assistant to Treasurer, Canadian Northern Ry., and to Purchasing Agent, Eastern Lines, C.N.R.; June, 1907, on the death of A. W. Mackenzie, to July, 1910, acting Treasurer, C.N.R., and Purchasing Agent, Eastern Lines, C.N.R.; July, 1910, to Dec. 31, 1918, Treasurer, C.N.R., and allied transportation companies, all at Toronto. Mr. Mitchell was entertained to dinner at the Albany Club, Toronto, Dec. 30, by a number of Toronto C.N.R. officers and officials, including D. B. Hanna, Vice President, who occupied the chair; A. J. Mitchell, C. A. Hayes and M. H. MacLeod, Vice Presidents; R. P. Ormsby, Secretary; R. C. Vaughan, Assistant to President; S. J. Hungerford, Assistant Vice President; and R. H. Temple, A. J. Hills, D. Crombie, J. D. Morton, R. S. Gossett, H. G. Foreman, C. E. Friend, H. K. Wicksteed, R. L. Fairbairn, A. L. Graburn, W. H. Grant, F. J. Buller, H. G. Hanna, C. Price Green, T. J. McCabe, Eustace Smith, C. P. Young and Scott Griffin. Mr. Hanna, on behalf of himself and other officers and officials, presented Mr. Mitchell with a silver tea service and a gold watch. The several speakers expressed warm appreciation of Mr. Mitchell's business abilities and popularity, and while regretting his departure from the service, one of them said it was not a time for sadness, but rather for happiness and pleasure at Mr. Mitchell having made such a rapid advance in his career.

Jules Edouard Morazain, who has been appointed General Superintendent, Quebec District, Canadian National Rys., Quebec, Que., was born at Wheatland, Que., July 31, 1875, and entered railway service May 3, 1890, since when he has been, to May 21, 1890, freight clerk, C.P.R., Drummondville, Que.; Aug. 1. 1890, to Jan. 8, 1881, night operator, C.P.R., Foster, Que.; Jan. 9, 1891, to Aug. 12, 1891, day operator, C.P.R., Richford, Vt.; Aug. 12, 1891, to Aug. 15, 1892, at college at Sherbrooke, Que.; Aug. 15, to Sept. 26, 1892, night operator, C.P.R., Sutton, Que.; Sept. 26, 1892, to Feb. 9, 1894, night and day operator, C.P.R., Highlands, Que.; Feb. 9 to July 15, 1894, day operator, C.P.R., Richford, Vt.; July 15 to Oct. 12, 1894, relieving agent and operator at various points, C.P.R.; Oct. 12, 1894, to May 27, 1895, day operator, C.P.R., Highlands, Que.; May 27, 1895, to Sept. 24, 1901, agent, C.P.R., Highlands, Que.; Sept. 24, 1901, to Nov. 15, 1908, agent, C.P.R., Mile End, Que.; Nov. 15, 1908, to Feb. 1, 1913, General Agent, Operating Department, C.P.R., Quebec, Que.; Feb. 1 to Dec. 3, 1913, Assistant Superintendent, District 3, Eastern Division, C.P.R., Quebec, Que.; Dec. 3, 1913, to Feb. 7, 1914, Assistant Superintendent, District 2, Eastern Division, C.P.R., Montreal; Feb. 7 to Oct. 21, 1914, Assistant Superintendent, District 3, Eastern Division, C.P.R., Montreal; Oct. 22, 1914, to Feb. 10, 1915, acting Superintendent, District 1, Eastern Division, C.P.R., Farnham, Que.; Feb. 11, 1915, to Apr. 1, 1916, Assistant Superintendent, District 3, Eastern Division, C.P.R., Montreal; Apr. 1 to Nov., 1916, Superintendent, District 1, Transcontinental Division, Canadian Government Rys., Quebec, Que.; Nov., 1916, to Dec., 1918, Superintendent, District 1, Intercolonial Division, Canadian Government Rys., Levis, Que.

G. N. Palmer, who has been appointed Auditor of Disbursements, Canadian Government Rys., Moncton, N.B., was born at Hampstead, N.B., Feb. 22, 1873, and entered the Intercolonial Ry. service Sept. 28, 1898, since when he has been, to Feb. 1, 1907, clerk in Accounting Department; Feb. 1, 1907, to Oct. 16, 1918, Auditor of Disbursements, Moncton, N.B.

F. H. Phippen, K.C., who has retired as General Counsel, Canadian Northern Ry., Toronto, was born at Belleville, Ont., Aug. 26, 1862. He studied law with R. C. Clute, now one of the judges of the Exchequer Division of the High Court of Justice in Ontario, and subsequently in Blake, Lash & Cassel's and Barwick & Aylesworth's offices, Toronto. He was called to the Ontario bar Feb., 1885, passing first out of 60 candidates, and was called to the Manitoba bar in Aug., 1885, again passing first. He entered Macdonald, Tupper, McArthur & Dexter's firm in Winnipeg in May, 1885, and became a partner in Macdonald, Tupper & Phippen, which firm, with additions to its partnership, continued until he was appointed a judge of the Manitoba Court of Appeal in July, 1906, which position he resigned Apr. 12, 1909, on his appointment as General Counsel, Canadian Northern Ry., Toronto. He was formerly counsel for the Manitoba & Southwestern Ry. Co., and for the C.P.R. Land Department, and his practice was almost entirely devoted to corporation work. He is opening an office in Toronto and will practise there. He is one of the executors of Cawthra Mulock, of Toronto, who died in November, leaving a very large estate. He has been appointed a vice president of the National Iron Works, Ltd., Toronto, of which Mr. Mulock was President.

Arthur Skidmore, Chief Engineer of Power House, G.T.R., Stratford, Ont., was on Dec. 19 fined $500 and sentenced to 30 days imprisonment, for having in his possession several copies of a banned publication. He was released Dec. 31 and the fine remitted.

George Edward Smart, who has been appointed General Master Car Builder, Canadian National Rys., Toronto, was born at Edinburgh, Scotland, Dec. [illegible], 1876, and entered railway service in 1892, since when he has been, to 1897, in various positions in car shops, G.T.R., Montreal; 1897 to 1904, Car Inspector, G.T.R., Montreal; 1904 to 1906, General Inspector of Heating and Lighting, Eastern Lines, C.P.R., Montreal; 1906 to 1909, General Car Inspector, Eastern Lines, C.P.R., Montreal; 1909 to Sept. 30, 1913, Division Car Foreman, in charge of passenger and freight car work, Eastern Lines, C.P.R., Montreal; Oct. 1, 1913, to Feb., 1918, Master Car Builder, Canadian Government Rys., Moncton, N.B.; Feb. to Dec., 1918, Superintendent of Car Department, Canadian Government Rys., Moncton, N.B.

D. A. Story.
Ex Freight Traffic Manager, Canadian Government Rys.

R. Walton.
Master Mechanic, [illegible]

D. A. Story, who has retired as Freight Traffic Manager, Canadian Government Rys., Moncton, N.B., was born at Halifax, N.S., Oct. 26, 1855, and entered railway service, May 26, 1869, since when he has been successively, clerk in audit department, telegraph auditor, train despatcher, and secretary to Superintendent, Nova Scotia Ry., Halifax, N.S. After the taking over of the Nova Scotia Ry. by the government as a part of the Intercolonial Ry., he was clerk in the General Freight Agent's office, Moncton, N.B., and, later, freight agent and accountant, Halifax station, N.S.; from July 1, 1884, to Oct. 19, 1898, he was acting agent, Halifax, N.S.; Oct. 19, 1898, to Sept. 1, 1907, Division Freight Agent, Northern Division; Sept., 1907, to June 1, 1917, General Freight Agent, Intercolonial Ry.; June 1, 1917, to Dec. 31, 1918, Freight Traffic Manager, Canadian Government Rys., Moncton, N.B.

H. C. Taylor, who has been appointed Car Service Agent, Ontario District, C.P.R., Toronto, was born at Wingham, Ont., Nov. 5, 1887, and entered railway service in 1904, since when he has been, to 1906, operator, G.T.R.; 1906 to 1908, operator and agent, Temiskaming & Northern Ontario Ry.; 1908 to 1910, operator and agent, Lake Superior Division, C.P.R.; 1910 to Feb., 1917, despatcher, Lake Superior Division, C.P.R.; Feb. to Apr., 1917, Chief Traffic Supervisor, C.P.R., Montreal; Apr., 1917, to Nov. 15, 1918, Chief Despatcher, C.P.R., Smiths Falls, Ont.

L. C. Thomson, formerly General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto, who was loaned by the company to the Imperial Munitions Board, early in 1916, and who has since then been Superintendent of Transportation for the board at Ottawa, handling the transportation of all products ordered by the board, will probably return to his old position at Toronto in the near future, and it is likely that his former jurisdiction will be extended to cover all Canadian National Railways lines east of Port Arthur, Ont., and O'Brien, Que.

Guy Tombs, who has been appointed Assistant Freight Traffic Manager, Canadian National Rys., Montreal, was born near Lachute, Que., Nov. [illegible], 1877, and entered railway service in Sept., 1892, since when he has been, to Apr., 1896, junior deposit clerk, C.P.R., Montreal; Apr., 1896, to Aug., 1897, secretary to General Manager and Secretary, United Counties Ry., St. Hyacinthe, Que.; Sept., 1897, to May, 1899, chief clerk to Canadian Agent, Central Vermont Ry., Montreal; May, 1899, to June, 1901, rate clerk, Division Freight Office, G.T.R., Montreal; June, 1901, to Apr., 1903, Travelling Freight Agent, Central Vermont Ry., St. Johns, Que., and St. Albans, Vt.; May, 1903, to May, 1909, General Freight and Passenger Agent, Great Northern Ry. of Canada, Quebec, Que.; May, 1909, to June, 1912, General Freight and Passenger Agent, Canadian Northern Quebec Ry., also from Apr. 1, 1908, same position, Quebec & Lake St. John Ry., and also from Apr., 1910, Montreal Representative, Canadian Northern Steamships, Ltd.; June, 1912, to Nov., 1916, General Freight Agent, Quebec Division, Canadian Northern Ry., Montreal; Nov., 1916, to Feb., 1917, General Freight Agent, Eastern Lines, Canadian Northern Ry., Montreal; Mar. 1, 1917, to Dec., 1918, Assistant Freight Traffic Manager, Canadian Northern Ry., Montreal.

J. E. Walsh, who has been Manager, Transportation Department, Canadian Manufacturers Association, at Toronto, for 11 years, has been appointed General Manager of the association, succeeding J. F. M. Murray, who has been appointed as its Ottawa representative.

A. T. Weldon, who has been appointed Assistant Freight Traffic Manager, Canadian National Rys., Moncton, N.B., was born at Dorchester, N.B., Mar. 6, 1876, and entered transportation service in 1890, since when he has been, to Apr., 1900, in different capacities in the Freight Department, Intercolonial Ry.; Dec., 1901, to Aug., 1904, in Division Freight Agent's office, I.R.C., Halifax, N.S.; Aug., 1904, to May 1, 1907, Secretary, Halifax Board of Trade; May 1 to Nov. 18, 1907, General Sales Agent, Port Hood-Richmond Ry. Coal Co., Halifax, N.S.; Nov. 18, 1907, to 1909, Division Freight Agent, I.R.C., Halifax, N.S.; 1909 to Oct. 1, 1914, General Freight and Passenger Agent, Black Diamond Steamship Co., Montreal; Oct. 1, 1914, to June 9, 1917, Assistant General Freight Agent, Canadian Government Rys., Moncton, N.B.; June 9, 1917, to Dec. 31, 1918, General Freight Agent, Canadian Government Rys., Moncton, N.B.

E. R. Wood, President, Dominion Securities Corporation, and one of the Canadian Northern Ry. directors, left Toronto early in December for a holiday in California, where he has a house.

Traffic Orders by Board of Railway Commissioners.

Commodity Rates on Canned Goods.

The Chief Commissioner, Sir Henry Drayton, gave the following judgment Dec. 6:—This application was heard at Toronto, Oct. 17, 1918. It was represented by the Canadian Northern Ry. that these rates were cancelled by the Intercolonial Ry., and that the Canadian Northern, while perfectly willing to maintain rates, could not maintain them in view of the Intercolonial's attitude. At this time the Intercolonial was operated independently of the Canadian Northern, and the Intercolonial, as a government road, was not subject to the board's jurisdiction. The matter, however, was taken up by the board with the Intercolonial's management, with the view of adjusting the situation if possible. The Intercolonial's management has taken the stand that it did not cancel the rates or require their cancellation, but that they were cancelled by the Canadian Northern. It would appear that the real difficulty between the systems interested rests on divisions. The rates ought never to have been taken out. Whatever the merits may be as between the different systems, the matter is now entirely in the hands of the Canadian Northern management, which now controls and operates the Intercolonial. I am of the opinion that an order should go providing that the former joint rates, as increased by order in council P.C. 1863, should immediately be put into effect by the Canadian Northern. The district suffering is entitled to the service, and the necessary order ought now to go.

Order 27914. Dec. 7. Re complaint of Dominion Canners, Limited, against the cancellation by Canadian Northern Ry. of commodity rates on canned goods from points on its St. Catharines Division to points in the Province of Quebec and the Maritime Provinces on the Canadian Government Rys. Upon hearing the complaint at Toronto, Oct. 7, 1918, in the presence of counsel and representatives for the complainant, the Canadian Northern, the Grand Trunk, and the Canadian Pacific Railways, and upon reading the written submissions filed on behalf of the Canadian Government Rys., and upon the report and recommendation of the board's Chief Traffic Officer, it is ordered that the Canadian Northern Ry. be required to restore and put into effect, not later than Dec. 23, 1918, the commodity rates on canned goods from shipping points on its St. Catharines Division, to points on the Canadian Government Rys. in existence prior to Aug. 12, 1918, as increased by order in council P.C. 1863.

John Gunion Rutherford, C.M.G.
Who has been appointed a member of the Board of Railway Commissioners for Canada.

Rate on Nails from Collingwood.

27923. Dec. 12. Re complaint of Imperial Steel & Wire Co., that the Grand Trunk and Canadian Pacific Railways unjustly discriminate against Collingwood, Ont., in favor of Toronto, Hamilton and other points, in their published rates on nail shipments to Vancouver wharf for export. Upon reading the complaint, the written submission filed on behalf of the respondent railways, and the report of the board's Chief Traffic Officer, it is declared that the rate and minimum weight lawfully applicable from Collingwood, Ont., to Vancouver wharf, B.C., by the all rail route of the Grand Trunk and Canadian Pacific Railways from Dec. 5, 1917, to Oct. 31, 1918, on carload shipments of nails, in boxes or kegs, when destined to the foreign ports enumerated in the tariff, was the rate shown in Special Joint Export Freight Tariff, G.T.R., C.R.C. no. E. 3677, as applicable from Toronto and Hamilton.

Rate on Cordwood from Algonquin Park.

27924. Re application of cities of Kitchener and Guelph, and the towns Waterloo and Barrie, and the Lands, Forests and Mines Department for the Ontario Government, for an order fixing flat rates per cord or per carload, instead of by weight, upon shipments of firewood from Algonquin Park to municipalities and public institutions at cost. Upon reading what is filed in support of the application, and on behalf of the G.T.R. and the report of the board's Chief Traffic Officer, and upon its appearing that the board is without jurisdiction to make the order applied for, it is ordered that the application be dismissed.

Warnings of Switching in Cities, Towns and Villages.

The Board of Railway Commissioners passed general order 256, Nov. 20, as follows:—Re sec. 276 of the Railway Act, as amended by sec. 7 of chap. 37 of 7-8 George V, repealing subsec. 1 of sec. 276 of the said act, and substituting therefor the following:—

> "Whenever in any city, town, or village, any train not headed by an engine is passing over or along a highway at rail level which is not adequately protected by gates or otherwise, the company shall station on that part of the train, which is then foremost, a person who shall warn persons standing on, or crossing, or about to cross, the track of such railway."

And re rule 102 of the General Train and Interlocking Rules, paragraphs 1 and 2 of which read as follows:—

> "When cars are pushed by an engine (except when shifting and making up trains in yards where there are no public highway crossings at rail level), a flagman must take a conspicuous position on the front of the leading car.
>
> "Whenever in any city, town, or village cars are passing over or along a highway at grade not headed by an engine moving forward in the ordinary manner, a man must take a conspicuous position on the foremost car, or tender, if that is in front, to warn persons on the highway."

Upon the report and recommendation of the board's Chief Operating Officer, it is ordered that paragraphs 1 and 2 of rule 102 of the General Train and Interlocking Rules be rescinded and the following substituted therefor:—

> "1. When cars are pushed by an engine (except when shifting and making up trains in yards where there are no public highway crossings at rail level, or where there are public highways crossings at rail level adequately protected by gates, or otherwise), a flagman must take a conspicuous position on the front of the leading car.
>
> "2. Whenever in any city, town, or village, cars not headed by an engine are passing over or along a highway which is not adequately protected by gates, or otherwise, at rail level, a man must take a conspicuous position on the foremost car to warn persons on the highway."

The Prince Edward Island Aerial Transportation Co. is being projected, with $25,000 authorized capital and headquarters at Charlottetown, to operate an airplane service between Charlottetown, Summerside and Georgetown, P.E.I., Pictou, New Glasgow and Halifax, N.S., and Moncton, N.B., for the transportation of mails and express, and later on, passengers. A committee of five business men has been formed to take the matter in hand.

The Edmonton, Dunvegan & British Columbia Ry., with its subsidiary lines has brought about a considerable development of the fisheries on northern Alberta lakes. There are reported to be over 100 teams hauling fish from the different lakes to the shipping points at Lac la Biche, Enelda and Athabasca, on the railways. The shipments are principally to United States points.

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—Burnaby municipality has decided to appeal against the Board of Railway Commissioners' decision raising the fares on the company's Burnaby Lake line, and notice of the appeal has been served on the company.

See also "The British Columbia Electric Ry.'s Victoria Franchise, Fares, etc.," on another page of this issue.

Edmonton Municipal Ry.—J. H. Moir, Superintendent, Edmonton Municipal Ry., presented the following report recently:—"As all the cars are one-man operated and giving excellent results, it gives me great pleasure to place the employes on record for services rendered in making this class of operation a success. We have a cleaner record than with the old system. The damage claims up to the present time in 1918 amount to $916.82; in 1917 they were $14,094.06.

"On the present schedule we are operating 620 car hours a day. The maximum wage per car hour for one man is 50c. This for 620 car hours totals $310. The maximum wage per car hour for 2 men (45c an hour each) is 90c. This for 620 car hours totals $558. The above figures show a saving of $248 a day, or $90,520 a year. Without a doubt, one-man operation is the only remedy at present, to keep the expenses at a minimum.

"By comparing 1917 with 1918, the revenue to the end of October shows a considerable improvement, and the expenses are somewhat lower, as follows:

	1917.	1918.
Expenditure	$540,281.07	$534,717.41
Revenue	427,995.96	396,162.76
Operating expenses	329,585.77	322,224.51
Deficit	144,118.31	106,721.36

"Deficits for five years to end of October:—

1914	$190,139.06
1915	126,652.20
1916	96,263.43
1917	144,188.31
1918	106,721.36

"The influenza epidemic cut into the revenue for October. The earnings dropped to $35,691.60, making a loss of approximately $6,000 for that month, and for November $12,000. The deficit for the next two months will be approximately $32,000, making a deficit for the 12 months of 1918 of $138,000. The revenue for the same period will be approximately $73,000, making the total revenue for the year $499,966.05. I gave an estimate at the beginning of the year of a deficit of $116,000, but without a doubt we will have a loss of about $22,000 owing to the epidemic alone. Had it not been for this, my estimate would have been correct.

"The total operating expenses for the year will be approximately $386,561.68, the total revenue $499,496, and the surplus on operation $112,934.32. The proportion of operating cost to revenue has as follows:—1915, 78%; 1916, 67%; 1917, 80%; 1918, 77%.

"During the first 10 months of 1918 we carried 8,453,224 passengers, an increase of 239,000 over the same period of 1917. In October there was a reduction of 83,302 over the previous month, owing to the closing of the churches, theatres, etc., and in November we anticipate a further decrease of approximately 200,000. Under the circumstances, it is doubtful if the total passengers for 1918 will reach the figures attained in 1917, viz., 10,086,213.

"For 1919 we expect much better results, as all cars operating will be of the one-man type, and the cost of material will probably be on the decline. We hope to have an increase in the passenger traffic, owing to the return of the soldiers who left this city to take part in the war. I have given next year's progress considerable thought, and have come to the conclusion that by very careful management and the co-operation of the city commissioners, it will be possible to make a record showing for this utility.

"I would certainly recommend that an adjustment be made in our fares as soon as possible. Every street railway from coast to coast is asking for an increased fare, in most cases to 6c or higher. The Boston Elevated Railway, representing $125,000,000 capital, has been taken over by the state, and the stockholders guaranteed a fair dividend. The fare charged is 7c and should this not cover the cost of operation, the deficit is to be charged to the community. Similar conditions apply to the Bay State Railway, with 900 miles of track, and many more roads would no doubt be glad to operate under similar conditions.

"Assuming that in 1919 we carry 10,200,000 passengers, and the fares are adjusted as follows:—5 tickets for 25c, good only until 8.30 a.m.; 4 tickets for 25c, or 7c cash fare, available from 8.30 a.m. until 11 p.m.; 2 tickets for 10c cash fare after 11 p.m.; children's tickets, 10 for 25c. The average fare would be 6c, and the passenger receipts for the year, $612,000. Adding $12,000 for miscellaneous revenue, the total revenue would amount to $624,000. As our total expenses would certainly be under this figure, the result would be a surplus."

Fort William Municipal Ry.—The Fort William, Ont., City Council has passed a bylaw authorizing the charging of increased fares on the municipal railway from Jan. 1, as follows:—Five cents cash, or 5 tickets for 25c; children from 5 to 12 years, 5c each, or 8 tickets for 25c; children under 5 years, free. Workingmen's tickets are abolished. These fares to be in effect from 5.30 a.m. to midnight, and double fares to be charged from midnight to 5.30 a.m.

Hamilton Radial Electric Ry.—See under "Hamilton Radial Electric Ry. Ceases Operation Owing to Low Fares," on another page of this issue.

The London & Port Stanley Ry., which is owned by the City of London, Ont., and operated by a commission, of which Sir Adam Beck is chairman, was heretofore authorized by the city to charge a 30c fare between London and Port Stanley and return on Wednesdays and Saturdays from May 15 to Oct. 15, for both adults and children. The distance between the two places being 26 miles, or 52 miles for the round trip, this fare has always been considered to be too low, and it has tended to concentrate the traffic on two days of the week. We are officially advised that during the summer of 1918, out of 81,[illegible] tickets sold at London for Port Stanley, [illegible] were sold on Wednesdays and Saturdays. The excess of traffic worked out in such a way that in addition to keeping a number of the company's own cars idle five days a week, provision had to be made to handle the extra traffic on the other two days of the week by renting from 6 to 12 steam railway cars. This was not considered a good arrangement, and the city council was asked to agree to the withdrawal of the 30c rate. The council consented and, on Dec. 17, authorized an amendment to the agreement, under which the Wednesday and Saturday fares will in future be 50c for adults and 25c for children, thus making the fare the same on all days of the week. This 50c fare for adults is still less than 1c a mile, and it is a question if that rate will pay.

Moncton Tramways, Electricity & Gas Co.—The New Brunswick Public Utilities Commission, on Nov. 27, made an interim order putting in operation a temporary schedule of rates, tolls and charges for natural gas, electric current and street railway fares, as set out in a schedule annexed to the company's application. Heretofore the company had a 5c cash fare and sold tickets, good at all hours, 6 for 25c, and workmen's tickets, good during limited hours, 8 for 25c. The order authorizes the company to charge a straight 5c fare and to abolish the workmen's tickets.

The order is based on an agreement between the company and the city council reached on Nov. 26, after a conference with E. B. Reesor, Vice President and General Manager. The matter had been under discussion for some time, the main difficulty in the way of a settlement having to do with the rates for gas. The new schedule is to remain in force for four months from the date of the order, unless a final decision of the board is given sooner. The board directed that R. Carter make an investigation and audit of the company's affairs and report to the board within three months, or sooner if practicable. He is a chartered accountant at Halifax, N.S.

Moose Jaw Electric Ry.—In a general statement on the civic affairs of Moose Jaw, Sask., by the mayor and city commissioner Mackie, the following reference is made to the Moose Jaw Electric Ry.'s affairs:—

"The company has been operating in the city since Sept., 1911, and by the agreement entered into between the city and the company, the company, at the expiry of five years after the signing of the agreement, to pay taxes on 60% of its real and personal property, and a rental of $100 a year for each mile of unpaved streets over which the company's lines run, and $[illegible] a mile on paved streets. The company, through its superintendent, advised the city that the railway was being operated at a loss and as there was no immediate prospect of the railway paying, the company desired some measure of relief from the city in the way of suspended taxes and a rebate of taxes. On Sept. 7, the city commissioners reported to the council fully in connection with the company's financial position and [illegible] should be granted.

"The operating expenditures would be reduced by at least $10,000 annually under the one-man system of operating were adopted, and the council should use every means in its power to secure legislation to make the one-man system made [illegible] as a means of conserving labor, which is admittedly scarce, but also because with the small cars in operation there would be no trouble in its working. It would also enable the company to employ a better type of motormen and pay increased wages. Wages have risen enormously in the last six years and there is no logical reason why the street railway fares should not be raised as a result of this. Indeed there is now hardly a city in Canada where a street railway is in operation where the rates have not been increased or where the increases are not under consideration. The city should place a bylaw before the ratepayers for the purpose of increasing the fare to a straight 5c ticket, which would yield an increase of revenue of about $12,000. If the above recommendations are carried out there is no reason why, if the council is so advised, the railway company should not, in the near future, carry out repairs to the 4th Avenue overhead bridge, but pending such repairs, it should be asked to extend the track along Coteau St. to 9th Ave. S.W. The city should also insist on a sum being set aside each year for depreciation, and no dividend paid until all legitimate charges are met. In connection with the street railway situation, the question of the safety of 4th Avenue overhead bridge also came up and the lumber is now on order to put this bridge in a safe and satisfactory condition."

The matter of the street railway's future was discussed in connection with the municipal elections. H. Bamford, one of the candidates for mayor, is reported to have said that the street railway had spent $[illegible]30,000 in the city and this was one of the concerns which had sunk their money and were looking for returns. He understood the company was losing from $100 to $200 a day. The city was lucky that the street railway was not publicly owned. Regina and Saskatoon had large deficits from their service and it was a good thing that Moose Jaw had not. He understood the council must do something to [illegible] or the railway would have to close down. Even if the company was permitted to charge a 5c straight fare, was exempted from taxation, and was permitted to use the one-man car, this would not meet the case, and the question was, does Moose Jaw want the street railway?

Ottawa Electric Ry.—Particulars of the company's application to the Board of Railway Commissioners for power to increase the fares charged on its Rockcliffe-Britannia line, were given in Canadian Railway and Marine World for Dec., 1918, pg. [illegible]. The company desired the new tariff to come into force Nov. 15, but at the hearing on Nov. 18, the tariff was [illegible] and after hearing part of the argument, the further hearing of the case was postponed to Dec. 2. On that date [illegible], K.C., for the company, put in a statement showing for the line in question a car mileage of 69,801 miles; cost of operation, $11,529.38; revenue, $[illegible]; deficit, $[illegible]3.04 for the two months ended Oct. [illegible], 1918. The representatives of the municipalities were heard at length, and the commission reserved judgment.

Sherbrooke Ry. & Power Co.—Negotiations between the company and the city council with respect to an increase of fares in Sherbrooke, Que., extending over several months, were brought to a termination Dec. 2, when the council passed the following resolution:—"That the city council prepare and submit to the ratepayers who are qualified on real estate a bylaw to amend the existing bylaw to the effect that the Sherbrooke Ry. and Power Co. be granted for five months the increased rates mentioned in its correspondence, and that the city council will within the next five months prepare a new contract on terms to be agreed upon between the city and the company."

The new fares agreed on between the company and the council are as follows:—Day, 6c cash, or 5 tickets for 25c; night, 15c cash. Limited tickets, good from 6 to 8 a.m. and from 4 to 7 p.m. on week-days, 6 for 25c. School children's tickets, good from 8 a.m. to 6 p.m. on week days, 7 for 25c.

The fares which have been in force for some time are: Day, 5c cash, or 6 tickets for 25c; night, 10c cash; workmen's tickets, good from 6 to 8 a.m., 12 noon to 1 p.m. and 6 to 7 p.m., 8 for 25c. School children's tickets, 10 for 25c.

The matter which caused the extension of the discussion of the matter over such a lengthened period was not so much the question of fares, as the improvement of the lines, etc. We are officially advised that negotiations with respect to details of the franchise have been going on in a more or less active form during the past seven years. On Nov. 1, the company notified the council that it would be necessary to have a new and workable franchise put into force, subject to revision by the Quebec Public Utilities Commission, every year if operations were to be continued. In the event of the council not being willing to grant a new franchise, the company offered to sell the lines at a price to be fixed by arbitration. The council allowed the matter to drift, the committee having the matter in charge, while admitting the necessity for increasing the fares, confining itself entirely to the matter of increased service and betterment of lines, in connection with which the company made a counter proposition. At a meeting of the council Nov. 18, this counter proposition was ignored, and a resolution was passed, without prejudice to an action pending against the company, and on condition that the company give guarantees that it will fix its track and roadbed in accordance with the terms of the contract of Oct. 3, 1910, within a month, and fulfil the other obligations of the contract when ordered to do so by the council, the council will pass and submit for the approval of the electors a bylaw granting increased fares on the scale mentioned above. The company's counter proposition was considered by the council Nov. 25, but was laid on the table. This proposition was to the effect that in consideration of the granting of increased fares, the company would, early next spring, lay a second track on Wellington St., from Strathcona Square to King St., and pay $1,000 a year for the upkeep of the roadbed between the tracks, no responsibility to be assumed by the city as a result of any interruption of the service. No further progress was made and on the following day the council was notified that unless an arrangement was made the car service would be stopped on the night of Nov. 30. On Nov. 29, the city proposed that the company continue operations under the original contract for two months, during which interval a new arrangement could be made. This the company refused to accept, and issued a statement to the public explaining its position. The service was stopped at midnight on Nov. 30, and on Dec. 2 the council passed the resolution above, with the result that the company resumed its service on the morning of Dec. 3.

Winnipeg Electric Ry.—As stated in Canadian Railway and Marine World for Dec., 1918, the Manitoba Public Utilities Commission is conducting an investigation into the company's affairs to ascertain at what figures the fares to be charged in future should be fixed. The investigation was opened Nov. 25, and subsequently it was claimed by the City Solicitor that the company was selling commercial light and power below cost and was forcing the deficit on its street car system. The city claimed that all parts of the company's undertaking should be investigated with a view to showing exactly how much money had been invested by the shareholders in each one of them.

Winnipeg, Selkirk & Lake Winnipeg Ry.—The Manitoba Public Utilities Commission began the hearing, on Dec. 2, of the company's application for power to charge increased fares. The company asks for permission to do away with family ticket books, and to increase the rates of both commutation tickets and ordinary fares by from 15 to 20%. In support of the application, E. Anderson, K.C., stated that the company was facing a deficit of $25,048.15 a year, and that if the increases asked for were granted, the deficit would still be in the neighborhood of $20,000 a year. The municipalities through which the company's lines pass challenged the commission's jurisdiction, holding that sec. 4, chap. 166, of the Public Utilities Act had never been extended by the municipalities in question to cover the operation of this utility. The representatives of the town of Selkirk and of one other municipality pointed out that the agreements with the company provided that there was not to be any increase of fares because of certain concessions made by the municipalities. The application was entertained by the commission and final judgment reserved.

Electric Railway Snow Plough.—The Hydro Electric Power Commission of Ontario is having a double end, double track snow plough built by Canadian Car & Foundry Co. It is of wood construction, equipped with arch bar trucks, with wheels 30 in. diar., and fitted with hand brakes. Following are the chief details:

Length over cutter plates	37 ft.	1½ in.
Truck centers	16 ft.	8 in.
Height from rail to top of plough at center	12 ft.	6½ in.
Height from top of rail to top of plough at ends	11 ft.	1½ in.
Height from rail to top of eave at center	12 ft.	3½ in.
Width at eaves	10 ft.	1⅞ in.
Truck wheel base	4 ft.	10 in.

Cost of Service vs. Service at Cost.—R. W. Perkins, President, Shore Line Electric Ry., Norwich, Conn., is reported as having said, in referring recently to the service at cost plan of electric railway operation, as authorized by the Massachusetts Legislature: "It is good so far as it goes, but it is just as important for the state to provide that the company gets the cost of service as that passengers get service at cost. The two expressions are not always synonymous."

Tramway Working Hours in Great Britain.—The National Transport Workers Federation has presented, to all the municipal and privately owned tramways, a demand for a working week of 44 hours, at the present weekly wages.

Hamilton Radial Electric Railway Ceases Operation Owing to Low Fares.

As stated in Canadian Railway and Marine World for Nov., 1918, the Board of Railway Commissioners directed the Hamilton Radial Electric Ry. to operate the minimum of service required by the franchises granted by the municipalities, and on Oct. 17, without making an order, advised the municipalities and the company to get together with a view of amending the franchise bylaws in such a manner that the passenger tariff might be increased. The company accordingly restored the train schedule as directed, and several meetings were held by the municipalities, but E. P. Coleman, General Manager, is reported to have said that at a meeting held Nov. 23, the municipalities asked for two weeks to consider the company's request that the question of rates be left to the Board of Railway Commissioners, and that any bylaws fixing fares be rescinded. A meeting of residents of Burlington was held Nov. 29, representatives of the company being present, when a committee was appointed to meet the company and discuss the best method of effecting a settlement. In the discussion the mayor stated that the council had decided to stand on the bylaw, and General Manager Coleman stated that he had received instructions to discontinue the service. A conference with the committee was held Nov. 30, but nothing was arrived at, as subsequently notice was given by the company that the service would be discontinued on Dec. 7 at 2 a.m. At a special meeting of the Burlington Town Council Dec. 2, a committee was appointed to take such action as might be desirable in order to preserve the town's rights under the bylaw. On Dec. 5, the company's General Manager stated that in view of the negotiations in progress, the date of the discontinuance of the service had been changed to Dec. 13, and he gave the town solicitor a copy of the proposed schedule of fares, including ordinary fares, workmen's monthly tickets and family commutation monthly tickets; fares for school children to remain as before. Representations were made to the Board of Railway Commissioners, which issued the following order, no. 27916, on Dec. 10:—

Re complaint of Burlington Beach Commission, the Town of Burlington, the townships of Burlington and Nelson, and the City of Hamilton, against the reduction in train service by the Hamilton Radial Electric Ry. between Hamilton and Burlington, in violation of the terms of the agreement entered into between the Town of Burlington and the railway under authority of a bylaw passed by the town. Upon hearing the complaint at Toronto, Oct. 17, 1918, in the presence of counsel for the complainants and the railway, the evidence offered and what was alleged at the hearing; and upon reading the written submissions filed in support of the complaint and on behalf of the railway; and its appearing that the proposed reduced train service is in violation of the said agreement, it is ordered that the railway be directed to carry out and perform the terms of said agreement by putting into force and effect forthwith the following train service, namely: To leave Burlington 6 a.m., 8 a.m., 10 a.m., 1 p.m., 5 p.m., and 7 p.m. To leave Hamilton 7.10 a.m., 9.10 a.m., 11.10 a.m., 4.10 p.m., 6.10 p.m., and 11.10 p.m. That the service provided at the hours named shall be adequate and suitable to accommodate all traffic offered for carriage upon the railway.

On Dec. 10, the Burlington Town Council considered a report from the committee appointed Dec. 2, in which it recommended the suspension of the bylaw for a year, during which period the rates prevailing on the steam railway should prevail on the H. R. Ry. This report was adopted.

The service was discontinued on Dec. 13, at 2 a.m., in accordance with the company's notice, and on the following day a protest was made to the Board of Railway Commissioners, and Sir Henry Drayton, Chief Commissioner, in a judgment, concurred by Commissioners McLean and Boyce, said:—"Since order 27916 was issued, requiring the Hamilton Radial Electric Ry. to carry out and perform the terms of its agreement with the municipality of Burlington by putting into force and effect forthwith the train service therein referred to, and since the board's reasons supporting this order were forwarded to the parties, telegrams have been received from the Burlington Beach Commission and the municipalities of Hamilton and Burlington to the effect that the company has ceased operating.

"At the time the municipalities' application was heard in Toronto, on Oct. 17, 1918, the position was made perfectly clear and understood by the municipalities. That position was that the H.R.E. Ry. had a large floating debt, was still losing money, and was living on advances made by the Dominion Power and Transmission Co., and that, unless the company's rates were increased as applied for, the company would be bound to stop operation.

"The hope was then expressed by the board that the municipalities would get together and either make some arrangement with the company for an advance in the rates, which, in view of municipal agreement, confirmed by Dominion statute, the board could not order, or that the municipalities would take over the property and operate it themselves. The company's representatives expressed themselves as willing that this should be done. At the hearing the municipalities were advised that, if they desired, notwithstanding the fact that the service was not a remunerative one and notwithstanding the fact that the company was financially embarrassed, as the company had entered into an agreement, the board would issue an order requiring the agreement to be carried out and the service required to be supplied under it given.

"Since the hearing, representatives of the municipality of Burlington, who are very largely interested, came to Ottawa and requested that a formal order, as indicated, should be issued. The telegrams received request the board to take action to enforce the order that has been made, and to require the company to continue its operations. In view, not only of what happened at the hearing, but also of the information that the Burlington representatives obtained at Ottawa, it might be thought that no further comment was necessary. It apparently is.

"The board's action in the present case is only taken, and can only be taken, under the jurisdiction vested in it to enforce agreements. The board's order already [illegible] defines the service that ought to be given under the agreement and directs that that service should be given. As explained to Burlington's [illegible] method in which the board's orders were enforced is covered by sec. 46 of the Railway Act, under which any party interested may make the board's order a judgment of the Exchequer Court or of any superior court in any of the provinces, when the order becomes immediately enforceable as an order of any of these courts. In addition to this, the company may be proceeded against under the provisions of sec. 427, providing for the collection of penalties.

"The real difficulty is that in all probability, as already pointed out, owing to the financial position of the company and the fact that the operation of the railway is carried on at a loss, no relief will be obtained by the parties who urgently require the continuation of the service. This conclusion has already been pointed out. In order to have the service it was necessary for the municipalities, in whose hands, in this particular case, the matter of rates rests, instead of with the board, so as to adjust the rate that the losses which the company was suffering, and which they endeavored to be relieved of, would disappear or else that the municipalities get together, take over the system and operate it themselves. Unfortunately, this has not been done. There is nothing more that the board can do, and it regrets that its efforts to bring the parties together have been unsuccessful.

"As already pointed out, the board's action is taken under the agreement. The provision in the agreement dealing with default provides that if the company neglects to run electric cars on the railway for the accommodation of the public as provided by the bylaw, etc., for three consecutive months, the company shall thereupon forfeit all privileges and rights which it may have acquired."

In order to provide to some extent for the traffic, motor busses, promoted by the Hamilton City Council, are being run at certain hours from Hamilton to Burlington; another service, promoted by the Burlington Beach Commission, is being operated at certain hours between Hamilton and Burlington Canal; and on Dec. 17, the Hamilton City Council decided to appeal to the Board of Railway Commissioners for an order directing the Grand Trunk Ry. to provide a service. The G.T.R. gave a suburban service prior to the building of the H.R.E. Ry., and early in 1917 the city applied to the board to have this service reinaugurated, but without effect.

The Burlington Town Council wrote General Manager Coleman, Dec. 18, calling attention to sec. 427 of the Railway Act, and stating that if the H.R.E. Ry. did not comply with the Board of Railway Commissioners' order, dated Dec. 10, the council would proceed under the section to recover penalties for every day not operated, and also to proceed against Mr. Coleman personally.

A Hamilton press dispatch of Dec. 27 says:—"After weeks of discussion and negotiation over the question of a service on the radial line between Hamilton and Burlington, the company, failing to get Burlington's consent to an increase in fares, or to leave the matter of service and fares in the hands of the Board of Railway Commissioners, has decided to place its affairs in the Exchequer Court and have the company declared bankrupt. The following telegram was sent to Ottawa Dec. 18:—Owing to cessation of operation of Hamilton Radial Electric Ry., we are obliged to declare that the company is unable to meet its engagements with its creditors, and proceedings are being taken to place the company in the hands of the Exchequer Court forthwith."

Accident Suit Against London Street Railway.

An action brought against the London St. Ry. by F. B. Jarvis, teamster, to recover $2,000 damages for injuries alleged to have been sustained in an accident on the company's railway, was taken from the jury by Mr. Justice Rose, at the High Court sittings at London, Ont., Dec. 10, and a non-suit was entered.

The plaintiff was a passenger on one of the company's p.a.y.e. cars, on Nov. 29, 1917. As the car was approaching one of the regular stopping places at Ashland Ave., the conductor thoughtlessly opened the rear exit door, before the car came to a stop, and the plaintiff stepped off. The plaintiff was thrown sideways, severely bruising his left shoulder and straining the muscles of his back and neck, no bones being broken. He was laid up for several weeks, after which he claimed damages for lost time at $10 a day, which he alleged was the rate he had been earning on contract work as a teamster, and contended that the company was liable for the exit door having been opened before the car came to a full stop. The company made liberal offers of settlement, but plaintiff would not accept any of them, and the action went to trial.

In directing the entry of a non-suit, the judge is reported to have held that the opening of the rear exit door on a car of the type in question was not an invitation to passengers to step off.

The Toronto Railway Car Shortage Penalty.

The Toronto Ry.'s appeal against the penalty of $24,000 imposed by the Ontario Railway and Municipal Board, for the company's non-compliance with the board's order to place 100 additional cars in service by Jan. 1, 1918, was dismissed by the First Appellate Court, Dec. 19, and the board's decision upheld. The amount of the penalty covers 24 days to, and including, Apr. 17, 1917, and, as the order has not been carried out, the company is apparently liable for $1,000 a day for each day since Apr. 17, until the order is carried out.

The Chief Justice's judgment held that the appellant did not comply with the order of Feb. 27, 1917, is admitted, but it is contended that it, in good faith, made all possible efforts to comply with it, but was unable to comply, owing to the impossibility, because of the war and other conditions, of getting the cars built for it, or to obtain the steel and the labor necessary for the building of them if that work had been undertaken by the appellant itself.

The Chief Justice continued: "It was no doubt shown that these difficulties existed to some extent, and were sufficient to have rendered the putting in service of 100 cars by Jan. 1, 1918, difficult, but it is undoubted also that the appellant took no proper steps to obtain contracts for the supply of the cars to be delivered at the earliest date at which car builders would have been willing to have delivered them, and it is clear, I think, from the statement of the appellant's General Manager that if it had been practicable to have obtained the cars in time the appellant would not have bought them because of the very large sum that it would be necessary to expend in the purchase of them. The position of matters today, as to the putting in service of the first 100 cars, is precisely the same as it was when the order of Feb. 27, 1917, was made, and, in my opinion, the appellant has not done all that it could and should have done to ensure the putting in service of these cars at the earliest possible moment."

The judgment points out that the proper course for the company to take was to apply to the board to rescind or vary the order. After dealing with the various arguments put forth by the company's counsel in regard to the validity of the order and the jurisdiction of the board, the Chief Justice concluded: "Applying this rule (referring to one as to the constitutional validity of a provincial enactment) we ought, in my opinion, to hold that in the Ontario Railway and Municipal Board Act, 1906, the legislature must be taken to have constituted a tribunal, the members of which should be appointed under its authority as provided by sec. 4 (2), rather than that the legislature created a superior court and usurped an authority which it did not possess, but which was vested in the Governor General."

It is reported that the company intends taking a further appeal to the Imperial Privy Council, on the question of the validity of the order.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and subsidiary companies.—

	Oct. 1918	Oct. 1917	4 months to Oct. 31, 1918	4 months to Oct. 31, 1917
Gross	$580,354	$491,964	$2,114,137	$1,842,476
Expenses	456,028	393,508	1,751,662	1,551,321
Net	124,326	98,456	362,475	291,155

Calgary Municipal Ry.—Total earnings for 10 months ended Oct. 31, $542,770.57; expenditures, $560,545.56; deficit, $17,740.99. Commissioner Graves is reported to have stated that the traffic was light during October, owing to the influenza epidemic and the enforcement of the mask bylaw, and that similar conditions prevailed during the earlier part of November. The commissioners expected that the December traffic would enable the year to be closed with a deficit of about $15,000.

Edmonton Radial Ry.—The report on the E. R. Ry. for the 9 months ended Sept. 30, issued by the city's public utilities department shows as follows:—

	1918.	1917.
Total revenue	$392,304	$357,830
Operating and maintenance charges	288,975	297,723
Net deficit after meeting capital charges	$87,914	$129,521

Lethbridge Municipal Ry.—The results of the operation of this municipal railway, as reported by the city commissioners, for 1917, as compared with 1916, were:—

	1917.	1916.
Earnings	$50,150.09	$47,812.55
Rental	2,053.79	1,826.99
Gross revenue	$52,203.88	$49,639.54
Expenses.	81,081.84	77,564.43
Deficit	$28,877.96	$27,924.89
Passengers carried	1,052,094	1,028,698
Car miles	262,812	280,391
Revenue per car mile .	19.86c	17.70c
Total cost per car mile	30.85c	27.66c
Passengers per car mile	4	3.66
Average fare per passenger	4.76c	4.06c

Niagara, St. Catharines & Toronto Ry.—The ratepayers of Niagara Falls, Ont., are to vote Jan. 1 on the question of purchasing the company's subsidiary, the Niagara Falls, Wesley Park & Clifton Tramway Co., with all its real and personal property, on payment of the actual value to be determined by the Ontario Railway and Municipal Board.

The railway extends from Bridge St., Niagara Falls, Ont., to Montrose, in Stamford Tp., 4.56 miles. The franchise expires in March and April, 1920. We are officially advised that there have not yet been any negotiations with respect to the purchase with the company.

Regina Municipal Ry.—The city auditor's report for the 10 months ended Oct. 31, laid before the Regina, Sask., City Council recently, said:—"The street railway deficit at the end of the 10-month period was $51,493.82, compared with an estimated deficit for the year of $46,824.82. The big addition of over $9,000 to the street railway deficit in the past month is principally attributed to the influenza epidemic which was responsible for heavily cutting into the traffic during the last two weeks of the month."

Regina Municipal Ry.—

Deficit for Nov., 1918..................	$9,449.38
Deficit, 10 months to Oct. 31...........	51,493.82
Total deficit for 11 months..........	$60,943.20

Toronto Civic Railway.—

	Nov., 1918	Nov., 1917
Revenue	$28,084.28	$24,850.69
Passengers	1,701,445	1,481,471

Toronto Ry.—The company was, on Dec. 9, reported to have sold to New York bankers $1,000,000 of 2-year 6% notes, to finance $1,500,000 of notes which matured Dec. 1. It is said that the company has agreed to pay to the trustees $43,500 in each month, beginning Jan. 1, for the retirement of the notes by purchase in the open market, at a price not exceeding par, and interest, making the total payments during the life of the notes sufficient to retire the entire amount. The company also agrees to pay as far as permitted, by law, all Canadian and U.S. taxes, including any normal U.S. income tax deductible at the source up to 4%. The balance of the money required to retire the old issue was appropriated from income.

Toronto Ry., Toronto & York Radial Ry. and allied companies.—

	Oct. 1918	Oct. 1917	10 months to Oct. 31, 1918	10 months to Oct. 31, 1917
Gross	$1,048,478	$1,043,886	$10,645,075	$9,934,998
Expenses	557,908	599,073	5,759,861	5,331,378
Net	490,570	444,813	4,885,214	4,603,620

Winnipeg Electric Ry., and subsidiary companies.—

	Oct. 1918	Oct. 1917	10 months to Oct. 31 1918	10 months to Oct. 31, 1917
Gross	$295,005	$301,722	$2,969,142	$2,733,516
Expenses	261,441	209,761	2,289,891	2,071,428
Net	33,564	91,961	679,251	662,088

The deficit for October, after allowing for fixed charges, was $23,235.39.

Coal Saving by "Skip-Stop."—Six months operation under the "skip-stop" system adopted by United States street railways as a coal conservation measure, shows a saving in coal, or its power equivalent, in 24 states of 687,122 tons, annually, according to the latest figures announced by the U.S. Fuel Administration. Reports from the other states are not yet available.

Four jitney drivers were fined in Vancouver recently for breaches of the bylaw stopping the operation of jitneys in the city on and since Sept. 13. Charges against ten other jitney owners were withdrawn, as they had ceased operating.

The Death of James D. Fraser.

Jas. Dewar Fraser, Secretary-Treasurer, and one of the directors, of the Ottawa Electric Ry. Co., died with startling suddenness in Ottawa on Dec. 17. Although he had not been quite in his usual robust health for some months previously, he was at his office regularly, and even his closest associates had no apprehension about him. He left his office about 5 p.m., and went to the Rideau Club, where he dined, as he frequently did, and at about 9.30, while playing billiards, he fell suddenly to the floor. Two doctors, who were watching the game, rushed to him, but he was dead, the cause being given as apoplexy.

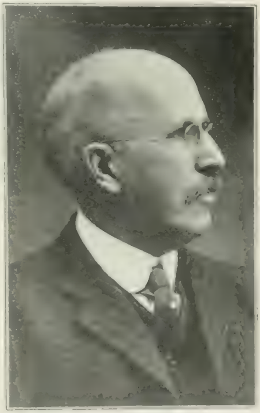
Mr. Fraser was born at St. Andrews, Que., Mar. 26, 1851. When 15 years old he started work as a clerk in the registry office at L'Orignal, at the same time learning telegraphy. He was employed subsequently by the W. C. Edwards Co., lumbermen, at Rockland and Thurso. From 1871 to 1882 he was accountant and telegraph operator for W. McClymont & Co., lumbermen, Ottawa, and from 1882 to 1891 was Secretary-Treasurer, Ottawa City Passenger Ry., which operated horse cars. In 1891 he was appointed Secretary-Treasurer, Ottawa Electric Ry. In 1893 he was also appointed Secretary-Treasurer, Ottawa Car Co., now Ottawa Car Manufacturing Co., and in 1906 was elected a director. In 1913 he was elected a director, Ottawa Electric Ry. Co., and in 1914 was also elected a director, Ottawa Traction Co., of which he was also Secretary-Treasurer. In addition to those positions, he was a director and Secretary-Treasurer, Wallace Realty Co. He was a member of the Canadian Electric Railway Association's executive committee continuously since 1911, was Vice President in 1914-1915 and President in 1915-1916.

Mr. Fraser never lost his interest in telegraphy. He had an instrument on the large office table used jointly by Thos. Ahearn and by him, and with the instruments in both their houses they used the telegraph for communicating with each other more than the telephone.

While Mr. Fraser was of a most unassuming, and almost retiring, disposition, he took an active interest in many matters pertaining to Ottawa's progress. He was a member of the city council in 1891, 1894 and 1896, and devoted considerable time to the Protestant General Hospital, of which he was a director. In his younger days he took a keen interest in sports, and was for some time President, Ottawa Amateur Athletic Club. He was a member of the Ottawa Golf Club, where he played considerably, and spent many evenings, and also a member of the Gatineau Fish and Game Club at Thirty-one Mile Lake, where he enjoyed frequent visits. He was a Presbyterian, and unmarried, and was most devoted to his three sisters, their families, and his deceased brother's family, and left his estate to be divided among them.

The news of Mr. Fraser's death caused very general regret in Ottawa, where he was well known and esteemed by thousands of citizens. It was a severe blow to Thos. Ahearn and Warren Y. Soper, President and Vice President of the Ottawa Electric Ry., with whom he had been associated in business for some 25 years and of whom he was a close personal friend. His associates in the Canadian Electric Railway Association, to whom he had endeared himself during a number of years, will miss him very much. To the writer of this article, who enjoyed his friendship for nearly 20 years, and who has spent considerable time with him in Ottawa during frequent visits there, his death is a great loss and personal grief. The writer will always cherish his memory as that of a true friend, a valued advisor and a most lovable character.

The funeral to Beechwood Cemetery, Ottawa, on Dec. 20, was attended by hundreds of Ottawa citizens of all classes, and by a number from outside places, among them J. E. Hutcheson, General Manager, Montreal Tramways Co., who was associated with Mr. Fraser for many years in the Ottawa Electric Ry.'s management. The Ottawa Electric Ry. and the Ottawa Car Manufacturing Co. were represented by a number of officials; the Board of Railway Commissioners by S. J. McLean, Commissioner, and A. D. Cartwright, Secretary; and the Canadian Electric Railway Association by two members of the executive committee, G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and Acton Burrows, the association's Honorary Secretary-Treasurer. The association's President, A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., much regretted being unable to attend, having to sit on that day as one of the members of a board of conciliation between the Niagara, St. Catharines & Toronto Ry. and its men.



James Dewar Fraser

The Ottawa Journal said editorially:—"The sudden death of J. D. Fraser must have come as a distressing shock to many of his friends because to all appearance he was still a man not very far past the prime of life. That he had nearly [illegible] years of age could have been suspected by but few of those who knew him. His cheeriness, general interest in life, and physical vigor did not seem to be abated. Perhaps it was a happy ending for Mr. Fraser, but not the less a distressing one to others who regarded him with affection as a valued friend, a kindly and generous gentleman and a public-spirited citizen. Mr. Fraser was one of the not too numerous men who never say an unkindly thing about anyone. Independent in his own judgments and firm in his views, he had a wide tolerance for all who thought differently to himself. Such men as he constitute a valuable asset to any community. The Journal begs to pay a tribute of heartfelt respect and esteem to his memory."

Proposed Purchase of Ottawa Electric Railway by City.

The Ottawa City Council, after having had under consideration for some time the question of a new franchise for the O. E. Ry., or its purchase by the city, has decided to submit three questions to be voted on by all municipal electors at the municipal elections on Jan. 6, as follows:

If not earlier acquired, are you in favor of the City of Ottawa acquiring the property and assets of the Ottawa Electric Ry. at the expiration of its franchise in 1923, by arbitration, as provided by the agreement between the city and the railway?

Are you in favor of the City of Ottawa acquiring the property and assets of the Ottawa Electric Ry. by arbitration, as provided by the agreement between the city and the railway, at such date prior to 1923, as may be mutually agreed upon?

Should the Ottawa Electric Ry. be acquired by the corporation, are you in favor of it being managed by an appointed commission?

Mainly About Electric Railway People.

A. S. Fraser, Master Mechanic, British Columbia Electric Ry., Victoria, B.C., has left the company's service, having received a civic appointment at Kamloops, B.C.

J. W. Lyon, of Guelph, Ont., one of the promoters of the proposed hydro electric radial railway system for Ontario, was one of the speakers at the dinner given the Hon. Robt. Rogers, ex Minister of Public Works, in Toronto, Nov. 28.

P. A. Moncrieff has been appointed assistant Traffic and Transportation Manager, Calgary Municipal Ry. The employes union grievance committee protested to the mayor and commissioners, Dec. 16, against the appointment, contending that he had been appointed over senior men.

R. C. Bisette, heretofore agent, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont., has been appointed accountant, vice A. C. Johnstone, deceased. He entered the company's service in Jan., 1913, as stenographer to the General Manager, and in Dec., 1913, was appointed freight clerk; Aug., 1915, chief clerk, freight office, and was, from Mar., 1916 to Oct., 1918, agent, all at Chatham, Ont.

C. F. Waugh, heretofore traffic and freight claims clerk, Chatham, Wallaceburg & Lake Erie Ry., Chatham, Ont., has been appointed Agent. He entered the company's service in Dec., 1913, as baggage clerk, and was from Sept., 1914, to Jan., 1916, freight clerk; Jan. to Aug., 1916, chief clerk; Aug., 1916, to Mar., 1916, agent; and from Mar., 1916 to Oct., 1918, traffic and freight claims clerk, all at Chatham.

The British Columbia Electric Railway's Victoria Franchise, Fares, Etc.

One of the results of the granting increased wages to the B.C. Electric Ry. employes in early 1918, was that the company approached the Victoria City Council, asking for an amendment to its franchise to allow it to charge a 6c fare, instead of the existing 5c fare, in order to help to meet the increased wages. The council at first refused to consider the matter, but later on it decided to discuss it on condition that certain concessions in the way of reduction in lighting rates, maintenance of pavements, etc., should be made. The company's propositions in connection with these matters were outlined to the council in a letter by George Kidd, General Manager, on Aug. 30. He asked the city to pass a bylaw authorizing the company to charge a 6c fare, with transfer privileges, in return for which concession the company would put in force the recommendations of the Shortt report that the Victoria franchise be brought into harmony with the Vancouver franchise except as to the proportion of gross earnings paid, and to apply the Vancouver scale for lighting in so far as practical in Victoria. The principal change which this suggestion would make in the charter would be with respect to the maintenance of track allowance. The company would be prepared to take over the maintenance of the 5.33 miles of track allowance in macadam, and the 18.82 miles of permanent roadway which is in good or fair condition, leaving 4.85 miles of track allowance to be maintained by the city. The company would also desire the passing of a bylaw to eliminate the jitney traffic in the city.

The city council's committee held several meetings for the discussion of the proposition, and reached certain conclusions, which have been incorporated into a draft agreement which was laid before the council Nov. 26, and subsequently sent on to the company. This agreement, it was proposed to make for two years, after which it was to be subject to revision at the instance of either party. Certain sections of the proposed agreement practically embody the company's suggestions as to between-track maintenance of streets, but there are also included provisions for the construction of certain additional lines on a two-third majority vote in the city council; for the regulation of traffic; for the payment to the city of 5% of the gross annual of railway receipts within the city limits, monthly; for the charging of Vancouver rates for light, gas and power; and for the appointment of a receiver in case of violation of the terms of the agreement.

A letter from A. T. Goward, the company's Manager at Victoria, was laid before the council Dec. 10, in which he said: "After very careful consideration of the conditions proposed, it seems to us that the original reason for our request has been lost sight of. At the time of the strike last June demands made by the men for increased wages were so large that the company found it could not meet these demands unless it was able to take in more money on the rates; and to help the company to do this a request was made that it be allowed to charge a fare of 6c, with full transfer privileges. The company felt that it was entitled to this raise in fare, inasmuch as the price of all other commodities had gone up, even the price charged by the city for its domestic water supply, and because other cities in Canada and the United States had recognized the necessity of giving help and had granted similar and, in many instances, larger increases in the rate of fare.

"I refer to these things, as I am anxious to point out that it was because of the vital necessity of securing financial assistance that our company approached the council. Should the conditions laid down by the council have to be accepted before such assistance is granted, the position of the company would be worse than it is at present, inasmuch as the amount of increase in revenue to be derived through the 6c fare would be far more than given away in the concessions sought by the council.

"After very careful consideration, therefore, we have to say that, although we shall be only too pleased to discuss the various clauses with the mayor and council, should they so wish, still it seems to us that the council and ourselves are so far apart and the idea of giving us any help—as suggested by the conditions proposed by the council—so remote, that no good will be arrived at by further discussion unless the council is prepared to meet us with a desire of granting us relief."

The Hamilton Street Railway Situation.

The Hamilton City Council's special committee, which, under the chairmanship of Alderman Langs, has been investigating the street railway situation there during the last two years, presented a lengthy report to the council Dec. 20. It was not made public, but was laid over for the consideration of the council for 1919. In presenting the report, Alderman Langs expressed himself as being in favor of the city taking over the Hamilton St. Ry. lines upon the expiration of the franchise in 1928.

A press report says the committee in the report has arraigned the company in no uncertain manner. It calls for an improved service. It asked that all cars unfit for use be scrapped and that 25 new cars be provided. The report recommends that all faulty tracks be relaid, that a 10-minute service be given to the western city limits, that Sherman Ave. be double tracked, that the line on Stuart St. be extended to Queen St. and along Queen St. to King St., a crosstown service from the head of Wentworth St. to the York St. line, and the company to be asked to furnish daily statements of its operations. The city will also be required to renew pavements to Herkimer St., York St., Margaret St., Main St. and Wentworth St. Figures from government blue books showed a profit on the street railway for the fiscal year 1917 of $194,114, and a loss on the Brantford & Hamilton Ry. of $85,000. There was also a loss on the H. G. & B. E. Ry. of $11,500, and a loss of $28,000 on the Hamilton Radial Electric Ry. for the same period. There was a profit of $6,000 on the Hamilton & Dundas Electric Ry.

The Hamilton Spectator says editorially:—"This report, taken in conjunction with the radial impasse, makes it quite evident that, in justice to the city and the municipalities with whose interests Hamilton is so closely identified, a general clean-up of the present intolerable situation should be insisted upon. The suggestion we have formerly made that the municipalities and the city should get together and arrange first for an adequate service in consideration of reasonable rates still stands good. It seems the only fair way out of the trouble."

Electric Railway Employes Wages Arbitrations.

Grand River Ry., Lake Erie & Northern Ry.—The Minister of Labor has appointed a board of conciliation to deal with the question of wages, etc., for these companies' employes. F. H. McGuigan, Toronto, represents the companies, and J. G. O'Donoghue, Toronto, represents the men.

The Niagara, St. Catharines & Toronto Ry. board of conciliation, which sat during the early part of December, to deal with matters in dispute between the company and its employes, consisted of Judge Livingstone, Welland, Ont., chairman; Albert Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., Kingsville, Ont., and President, Canadian Electric Railway Association, representing the company, and J. F. Marsh, on behalf of the employes. The conductors and motormen asked an increase of 13c an hour for the first six months, increasing to a maximum of 55c for passenger men and 60c for freight men, and a number of other concessions. The board unanimously recommended an increase of 7c an hour, making the new rates as follows:—

Passenger trainmen—1st year, 39c an hour; 2nd year, 41c; third year, 43c; after third year, 45c; after 10 years continuous service, a bonus of 2c an hour.

Freight conductors and engineers—First, second and third years, 47c; after third year, 48c; after 10 years continuous service, a bonus of 2c an hour.

Freight brakemen and polemen—First 6 months, 40c; second 6 months, 41c; after first year, 43c.

Barnmen, shopmen and linemen were increased 7c an hour, section foremen to $10 0a month, regular section men, 35c an hour; sub-station operators, $100 a month; towermen, 1st class, $85 a month; towermen, 2nd class, $75 a month.

Toronto Railway.—The Minister of Labor in Nov., 1918, established a board of conciliation to deal with a dispute concerning wages between the company and its employes, the members being J. A. Barron, County Judge, Stratford, Ont.; F. H. Phippen, K.C., Toronto, representing the company, and H. A. Harper, representing the men. Several sittings have been held, but the proceedings had not been completed up to Dec. 31.

London & Lake Erie Ry. & Transportation Co.'s Dismantling.—The London, Ont., City Council has been offered by the company its right of way to Grand Ave., with the bridge, for $8,750. The section of the right of way offered is said to have cost $4,000, and the bridge $16,000. The company having paid the taxes, etc., due the city of St. Thomas, Ont., the connection between its lines and those of the St. Thomas Municipal Ry. was not removed, and the removal of the rails, etc., which are being taken up, to the steam railway yards for shipment was continued.

The Kitchener & Waterloo St. Ry. service between Kitchener and Waterloo, Ont., was suspended, Oct. 14, until further notice, owing to the influenza epidemic.

Electric Railway Problems and Operation in Montreal.

By W. P. Graves, Chief Engineer, Montreal Tramways Co.

The following address was made at a luncheon of the Kiwanis Club, in Montreal recently, by Mr. Graves:—

Electric railways on this continent have suffered immeasurably by conditions which have prevailed during the past world war, on account of the high prices which have been and are prevalent, for material used, in the operation and maintenance of the properties, also in the high rate of wages. In some instances an increase of 700% in the price of material has been noted. The industry, unlike private or quasi public enterprises, has not been able to adjust the selling price of its commodity to meet these unforseen conditions—the result is obvious, maintenance of the physical property has lagged and any of you who have to do with operating properties know that maintenance is cumulative and, if not currently cared for, results ultimately in complete renewals at a much increased cost. I have noted recently an article on tramway maintenance in a current magazine, in which it is stated that no reconstruction of track had been undertaken in England in the past four years, and that in the next three years there will be required 320,000 tons of rail, when normally only 20,000 tons were required annually. The same conditions apply in both Canada and the United States, only to a lesser degree.

The electric railways in this country and in the United States have also suffered through over regulation by governmental and local governing bodies and commissions, with the net result that it scarcely knows where it stands. Their revenues have been regulated, the disposition of their revenue has been regulated, the operation in detail has been regulated; and last, but not least, the returns to the shareholders have been regulated until, I am quite sure, the industry is just on the point of going into retreat to recuperate, but thanks to the indomitable spirit of its several managements, it has been able to "carry on," but I can assure you that it, as an industry, is sick, and the one large factor in this particular disease is regulation, and the one specific cure is more revenue, until such time as more normal conditions prevail.

Many plans of regulation have been predicated by regulating bodies, on the theory that the service should be furnished to the public at cost and without profit to anyone. Included in this cost of service is the cost of the capital necessary for furnishing such service. It is evident that the term cost, as applied to the operation of an electric railway, represents, under a flat rate of fare, the aggregate cost of the service, and not the cost to each individual; since the difference in the length of haul, and the difference in cost of operation upon various parts of the same system, make it impossible to charge each passenger in accordance with the service rendered. By this general and brief statement of the end which regulating bodies desire to attain, you can readily see that the more bodies appointed to consider the affairs of electric railways, the more plans of operation and regulation we will have, and in the ultimate, the confusion resulting has left the affairs and policies of the companies in a chaotic state. Fortunately, in Montreal this matter of regulation has been definitely settled for a long term of years.

Few people realize the amount of capital invested in the transportation of the public to and from its daily vocations. In this city, which is probably a fair average example of the larger cities on this continent, this investment reaches $[illegible] per capita, or in other terms, $200,000 per mile of track operated.

Under the recent contract entered into between this company and the City of Montreal, there are certain provisions rewarding good management. The first is through an allowance of an operating profit of one-eighth of 1%, which the company receives if it keeps its operating expenses within the amount fixed by the Tramways Commission; this percentage being in the total amount of the operating expenses. The second is a three way division of surplus, after paying the cost of the service rendered as fixed by the terms of the contract, the reserve fund receiving 50%, the city 30% and the company 20%.

One might discuss at length, various other phases of electric railway and public utility operation, but my purpose is only to call your attention to the several salient features of this ultra modern contract under which this company is operating, and the fact that its affairs in detail are supervised by a very able commission, whose members give their entire time to the problem confronting it, assures to the public the maximum of service at the lowest cost, and it is, of course, the management's endeavor to earn the reward offered.

Traffic.—The Montreal Tramways Co. has a personal dealing with some 650,000 people daily, and for sake of comparison, we may say, with every man, woman and child in Montreal, although this is not strictly true, and from that statement, you who are accustomed to dealing with the public can particularly realize, owing to the perversities of human nature, that from 650,000 view points we cannot be perfect; but as a manufacturer and producer of that necessary commodity, transportation, we endeavor, as in other manufacturing industries, to maintain efficiency, in all details, that our earning power may be maintained.

To carry on this business, the company has available some 1,200 passenger and freight cars, of which a large majority are in service at some time during the day, running in the course of a year [illegible],000,000 car miles, and in this latter statement is one of the greatest bugbears of the management of a street railway service, that is, that for about [illegible] of the time an enormous investment in equipment is tied up with no producing and therefore no earning capacity. Can you imagine the plant of the Steel Co. of Canada, of the Canada Cement Co., or any other large industry, shut down for [illegible] of their [illegible] hour operating day and for the other [illegible] hours running at [illegible] to [illegible] overload? You will readily see that the problem of giving the trainmen sufficient hours of work to enable them to earn in total a living wage is a serious one and involves an immense amount of labor in the making of running schedules and assignment of the men to the best advantage both to themselves and the company. Each and every car has a schedule prepared for its operation and in the ultimate this schedule works very much the same as a steam railway timetable, and it is the endeavor of the operating department to [illegible]. [illegible] ly.

Power.—[illegible] the company [illegible] power stations, [illegible] with a total output of [illegible] maximum output [illegible] a large investment [illegible]

We are, as rapidly as circumstances permit, enhancing our use of hydro power, but due to interruption of supply from various causes, we have found that to protect ourselves and maintain the uninterrupted service which our patrons, the public, demand, it is necessary to practically duplicate the power output in steam generation as a [illegible] largest steam turbine generators manufactured and have the same in operation, and more recently have duplicated that generator, and the additional one is now delivered to us and will be installed in the future. These generators have an output of 17,500 h.p. at normal load.

During the past few years the problem of obtaining [illegible] enormous output of energy has been a serious one, [illegible] doubled, but fortunately, through foresight, [illegible] was necessary. [illegible] purchasing power of the small fare which we receive; and the result has been that there has been practically no interruption due to lack of power.

Mileage.—The Montreal Tramways Co. operates a total of 270 miles of single track in the city and on Montreal Island. The investment in tracks alone amounts to upwards of $70,000 a mile at this time. Compare this with the cost of steam railway trackage of $18,000 to $20,000 a mile. I cite these figures to illustrate how little conception the public in general has of the costs entering into a property of this size.

Recently a prominent chief engineer of a steam railway, while observing the installation of a large intersection at [illegible] and St. Catherine Streets, remarked to me that it must have cost the company [illegible]

Within recent years the installation [illegible] the company, with the [illegible] of the City of Montreal, has adopted a grooved girder rail weighing [illegible] lb. a yard and would, under normal conditions, have installed many [illegible], but the steel mills have been unable to roll it on account of war demands, and the result is that we have outstanding orders for several thousand tons since [illegible]

Under the recent contract with the city, the company has been obliged to take over and maintain approximately 1,000,000 sq. yd. of paving in and between its tracks. This has added a very serious maintenance expense to our operation, but we hope in time to have it in such condition that the public may well be proud of its streets.

On the whole, and in conclusion, it is the company's endeavor to give to Montreal's citizens the best street railway service on the continent, and we feel that we are coming measurably close to that goal. We invite constructive criticisms; and complaints, however small, are promptly investigated, and, if justifiable, are remedied; but to finally accomplish this result, we must have the support of the public, and in addition to such support, we must have adequate revenue from fares.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—Brantford, Ont., ratepayers were asked to vote, Jan. 1, on a bylaw authorizing the issue of $125,000 to be expended upon the extension and improvement of the municipal railway, and for additional equipment. The Terrace Hill extension which is proposed, would start at the junction of Market and Marlboro Sts. and extend to St. Paul and Brant Avenues, the exact route, however, not being definitely settled. The amount asked for would also provide for the additional equipment necessary for this line, and for two cars ordered already.

The city council has ordered an investigation to be made by the city engineer as to the condition of the line to Paris. (Nov., 1918, pg. 505.)

The Hull Electric Co., during 1918, laid [illegible] mile of new track on St. Joseph Boulevard, Hull, Que., from Montcalm St. to Montclair Ave., and reconstructed 0.734 mile of old single track on Montcalm St., from Main St. to St. Joseph Boulevard, the new line being a double track one. (July, 1918, pg. 308.)

London St. Ry.—A London, Ont., press report of Dec. 13 stated that a petition was being circulated for presentation to the city council asking that the company be called upon to construct an extension of its line on Quebec St., from Dundas St. to Lorne Ave., and across that avenue to join the north belt route at Adelaide St. Under the company's contract with the city, an additional mile of line has to be built for every increase of 2,000 in the city's population, and it is claimed that the company ought to build several miles of lines in order to meet its obligations. This matter appears to have been discussed by several associations in the city, and it also appears that there has been some informal discussion with the company. The President of the company was reported Dec. 13 to have stated that there [illegible] some trouble in financing new [illegible] the company had not paid any dividends during the past two years, and while it was in a non-dividend paying condition it would not be able to raise new capital. (Feb., 1918, pg. 77.)

Moncton Tramways, Electricity & Gas Co.—At a recent meeting of the Moncton, N.B., City Council, the question of suburban extension was raised. E. B. Reesor, Vice President and General Manager, stated that the suburban line had been abandoned, and the wires and poles removed. The line was unsafe, and did not pay. He hoped the abandonment of the line was not final. If the council would meet the company something might be done, as he thought the people would agree to a 10c rate for the line. If a line was again to be run to the suburban district, the Church St. route was the only possible one. No definite action was taken. (Sept., 1918, pg. 403.)

New Brunswick Power Co.—The New Brunswick Public Utilities Commission concluded its hearing, and reserved judgment, Nov. 27, on the company's application for authority to remove the rails and trestle from Rodney Wharf, West St. John, and the city's counter application asking the re-establishment of the car service on the wharf. The company contended that the wharf was unsafe, that it would cost a prohibitive amount to repair it, and that the traffic did not pay. It is said that before giving judgment the commission will have an engineer report on the wharf condition. (Dec., 1918, pg. 559.)

Nova Scotia Tramways & Power Co.—Controller Murphy, reporting to the Halifax, N.S., Board of Control, Dec. 10, said: "The growing traffic north of Young St. has been called to my attention with a view of asking the N.S.T. & P. Co. to continue its Barrington St. line north from Young St. to Roome St. I would suggest that this matter be placed before the company with a request that the service to the end of their old line be re-established. I feel that the public demand now justifies this being done." The report was approved. (Sept., 1917, pg. 369.)

Toronto & York Radial Ry.—Work is reported to have been started south of Aurora, Ont., on the short piece of line which will connect the company's Metropolitan Division with the G.T.R. This will enable the company to give a freight connection to factories located in the western part of the town. (Dec., 1918, pg. 560.)

Electric Railway Notes.

The London, Ont., city board of control decided recently to ask the London St. Ry. if it would consider favorably a proposition to have it operate a London-Lambeth line.

The Lethbridge, Alta., Municipal Ry. is, we are officially advised, contemplating the purchase of a 300 k.w. d.c. generator, 600 volts, for direct connection to its present engine, 360 r.p.m.

British Columbia Electric Ry. employes on the mainland contributed $128,500 to the Victory Loan through their own organization. One hundred per cent. of the employes of the head office took bonds.

Calgary Municipal Ry. put a new car schedule into effect Dec. 2, including extra cars on a number of lines for the rush hours. A report stated that 20 extra cars would be put on for the rush hour traffic.

The Montreal Tramways Co. has put on sale books of 50 regular tickets, and books of 60 limited tickets, at $2.50 each. This is no reduction in the regular rates and books are only on sale at the company's offices.

The Dominion Trades and Labor Congress' Ontario Executive has asked the Ontario Government to fix an 8-hour day instead of 10 for electric railway employes, and to abolish running boards on electric railway cars.

A large body of citizens has petitioned the Regina, Sask., City Council to restore a full service to the Scarth and Fifteenth Street route, or at least a full service on the route from the C.P.R. station to the Legislative Buildings, between certain hours daily. A one-car service is being given on the line.

Sir Adam Beck and J. E. Richards, Manager of the London & Port Stanley Ry., appeared before a London, Ont., City Council committee recently, and asked for power to fix the holiday rates for 1918 between London and Port Stanley at 50c for adults and 25c for children. The matter was left over until the regular meeting of the committee.

The Toronto Ry. appeal against the judgment in favor of the City of Toronto, to recover $14,391.47 for removal of snow thrown on the sides of streets by the company's sweepers in cleaning the tracks, came before the Appeal Court at Toronto, Dec. 17. The company was given 10 days to take a reference if it so desires, but if not, the appeal is to be dismissed with costs.

The Montreal Tramways Co. has divided its Notre Dame St. line into two sections, the eastern and western, with a common central terminus at Place d'Armes. The eastern section runs from Place d'Armes to First Avenue, and to Dominion Park as needed, and the western section runs from Place d'Armes to Church Ave., Cote St. Paul. The new arrangement was put into effect Dec. 1.

The arbitration proceedings relative to the taking over by the City of Toronto, of the Toronto & York Radial Ry.'s Metropolitan Division were adjourned recently to Jan. 7, owing to the absence of A. B. Ingram, Vice Chairman, Ontario Railway and Municipal Board, through illness in his family, and of Prof. Swain, one of the witnesses, who was overseas dealing with projected reconstruction matters for the American Society of Civil Engineers, but who was expected to return early in January.

A report has been current for some time that the Montreal Light, Heat & Power Co. is negotiating with the Montreal Tramways Co. to acquire the power part of the latter's undertaking, and M.L.H. & P. Co.'s shares have steadily advanced in price during the time the report has been in circulation. The negotiations are said to be semi-official and to be confined to a study of the values of the different properties and the possible benefits that would result to both companies if the M.L.H. & P. Co. became the sole distributor of electricity for power and suchlike purposes, and the M. T. Co. confined itself to the electric railway.

The London, Ont., City Council had a discussion on Dec. 16 on its differences with the London St. Ry., which was raised on a motion to cancel the franchise, on the ground that the company was disobeying the city's regulations. The motion, which also suggested the operation of the line as a municipal undertaking, was rejected, but a resolution endorsing the spirit of the original motion and passing the question on to the new council was adopted.

One-Man Cars for Saskatchewan.—The Regina City Council was informed Dec. 18, by the Deputy Minister of Railways for Saskatchewan, that the Legislature would be asked to amend the Railway Act, so as to permit the operation of one-man cars on electric railways in the province, and the city was invited to send representatives to state its views on the matter when the measure comes before the committee.

Marine Department

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Classification.—All vessels ordered by the Department will be loaded to a freeboard mark, in accordance with the British Board of Trade's rules, as arranged by the classification authority. They will all have wireless equipment and apparatus.

Flags for Steamships.—The Marine Department has had designed a house flag to be flown on all its merchant marine vessels. The flag is 12 x 6 ft., and the design consists of a Greek cross in blue on a white ground, with a ball 18 in. diar. in the center, carrying a yellow anchor, and in the upper staff quarter is shown the Canadian beaver. The burgee pennant is 14 x 6 ft., and has the name of the vessel in blue letters on a white ground. The vessels will, of course, also fly the blue ensign, with the Canadian insignia in fly.

Hull of the Steel Cargo Steamship, Canadian Pioneer, for Dominion Government, by Canadian Vickers, Ltd., Montreal, leaving the ways, Dec. 3, 1918.

Hull of Steel Cargo Steamship, Canadian Pioneer, for Dominion Government, launched at Montreal, Dec. 3, 1918, by Canadian Vickers, Ltd.

Operation of Steamships.—As announced previously in Canadian Railway and Marine World, the steamships being built for the Dominion Government will be operated in connection with the Canadian National Railways and under the same management. A general holding company, the Canadian Government Merchant Marine, Limited, is being incorporated under the Dominion Companies Act, the stock of which will be owned by the Dominion Government. Subsidiary companies, Canadian Voyageur, Limited, and Canadian Pioneer, Limited, are also being incorporated to own those vessels respectively, and other subsidiary companies will be incorporated to own each of the other vessels separately as they are built.

Orders for Steamships.—Canadian Railway and Marine World for December contained particulars of orders placed by the Marine Department for 39 steel cargo steamships. Since then orders have been authorized for 6 more, making 45 in all. Full particulars of the orders are given in tables 1 and 2 on the next page.

Following is the summary of orders given the various builders, the tonnage stated being dead weight.

	No.	Tons each	Tons total
British American Shipbuilding Co., Welland, Ont.	[illegible]	[illegible]	[illegible]

Order in Council re Halifax Shipyards, Ltd., Order.—Canadian Railway and Marine World for December, 1918, stated that the Dominion Government had passed an order in council authorizing the Minister of Marine to make a contract with Halifax Shipyards, Ltd., for 2 steel cargo steamships of 10,500 tons d.w. each at $197.50 a ton. We have since received a copy of the order in council passed Nov. 20, as follows:—

The committee of the Privy Council have had before them a report, dated Nov. 18, 1918, from the Minister of Marine and Fisheries, submitting that he has had under consideration a memorandum prepared by the Naval Constructor in the Marine Department, relative to shipbuilding, and submitted by the Deputy Minister of Marine and Fisheries, stating that, under date of May 15, 1918, the Halifax Shipyards, Ltd., placed a proposal before the department offering to construct, at works to be established in Halifax, 2 steel cargo vessels of the shelter deck type of approximately 10,500 tons d.w. capacity, and having a speed on trial of 11 knots at least, at a cost of $197.50 per long ton dead weight each.

That as the design for this new type

could not be completed in sufficient time to permit of the first shipbuilding berths being occupied when available, the Halifax Shipyards, Ltd., accepted from the department, in lieu of their proposal, a contract for 2 vessels of the standard 2 deck type of about 8,100 tons d.w. capacity which could be proceeded with immediately, and 2 vessels of approximately 10,500 tons d.w. capacity. That the new design has been sufficiently advanced to permit of a contract now being entered into with the Halifax Shipyards, Ltd., and is of the following leading particulars:—

Length b.p.	430 ft.
Breadth moulded	56 ft.
Depth moulded to upper deck	30 ft.
Depth moulded to shelter deck	38 ft.
Deadweight capacity in tons	10,500

That all other general features are in accordance with modern practice in cargo boat construction; that the vessels are designed to Lloyd's highest class, British Board of Trade and Canadian steamship

Orders for Steel Cargo Steamships for Dominion Government. Table 1.

			$52,691,450				

inspection requirements; that a third deck has been added in the new design in excess of the number of decks stipulated by the Halifax Shipyards, Ltd., in its original offer; that it is estimated on the present cost of materials and labor that the value of the vessels is increased $2.50 a ton d.w. each through this addition; that the Halifax Shipyards, Ltd., offers to construct and deliver to the department 2 vessels of this type at a cost of $197.50 a long ton ascertained d.w.; that the company states that one berth will be available for construction during Feb., 1919, and one berth during Mar., 1919; that having regard to the large initial expenditures to be made by this company in laying out and developing the new plant at Halifax, the erection of workshops and the purchase of machinery, the cost of which is upward of 200% in excess of the cost of similar shops and machinery three years ago, and the value to Canada and to the Empire of such an efficient plant for new construction and general repairs at an open port on the Atlantic seashore, the price quoted is considered fair remuneration; that it is considered advisable, owing to the prevailing shortage in tonnage, to utilize to the fullest extent shipbuilding berths as they become available for new construction;

That as the price quoted is considered fair, the Naval Constructor to the department recommends the acceptance of the offer. That the Deputy Minister concurs in the above. The Minister, approving, recommends that he be authorized to enter into a contract with Halifax Shipyards, Ltd., for the construction of 2 steel cargo steamers of approximately 10,500 tons d.w., three-deck type, at the price named. The committee concurs in the foregoing and submits the same for approval.

Pulp and Paper Freight.—The Minister of Marine is reported to have notified the Canadian Pulp and Paper Association of his willingness to do everything possible to facilitate the shipping of Canadian pulp and paper products to foreign countries and to have asked for definite information as to the tonnage required, the destination of the proposed shipments, etc.

Canadian Vickers, Ltd., Montreal.—The first of the ocean going steamships to be built in Canada for the Dominion Government, was launched at this yard, Nov. 28, and the second one was launched there Dec. 3, both being christened on the latter date by Lady Borden, wife of the Dominion Premier. The names given were, Canadian Voyageur and Canadian Pioneer respectively. The Canadian Voyageur has has the following principal dimensions: length 320 ft., breadth 44 ft., depth moulded 25 ft., tonnage d.w. 4,350. The keel was laid June 10, and she proceeded to Quebec under her own steam, Dec. 11, for completion there. A full description of this type was published in Canadian Railway and Marine World for August, 1918. The Canadian Pioneer's dimensions are as follows: length 400 ft., breadth 52 ft., depth moulded 31 ft.; tonnage d.w. 8,100. The keel was laid July 17, and she proceeded to Quebec, Dec. 6, in tow, for completion there.

CANADIAN WARRIOR

Canadian Government Merchant Marine Cargo Steamship, Canadian Warrior, immediately after launching by Collingwood Shipbuilding Co., Dec. 21, 1918.

The keels of three other vessels of the two-deck type, 8,100 tons d.w. capacity each, were laid Aug. 26, Nov. 30 and Dec. 2, respectively.

Collingwood Shipbuilding Co., Collingwood, Ont.—The first of the steel steamships under construction at this plant for the Dominion Government was launched Dec. 21, and named Canadian Warrior. She is of the single deck, lake type, 3,750 tons deadweight capacity, a complete description of which has been given in a previous issue. Three other vessels of this type to be built at Collingwood will be named Canadian Recruit, Canadian Signaller and Canadian Gunner. The company is also building a similar vessel at its Kingston plant, but no name has yet been decided on.

John L. Mullen Construction Co., Prince Rupert, B.C.—The Dominion Government has given a contract to this company, which has its headquarters at Pittsburg, Pa., for the construction of 2 of the standard type steel cargo steamships of 8,100 tons d.w. capacity each.

Nova Scotia Steel & Coal Co., Ltd., New Glasgow, N.S.—The 2 steel cargo steamships of 2,800 tons d.w. capacity each, which have been ordered by the Dominion Government, are specially designed for the West Indies trade. The company will build the machinery for these vessels, as well as the hulls. The hull angle frames have been rolled and the general structural work is passing through the shops. The engines and boilers are also under construction. Both keels will be laid during January, and it is expected that delivery will be made in the early autumn. The general dimensions will be as follows: length between perpendiculars 270 ft., beam 38 ft., depth moulded 20½ ft.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—A contract has been given this company by the Dominion Government for two steel cargo steamships of the 4,300 ton type. The dimensions will be: length 320 ft., breadth 44 ft., depth 25 ft., draft, loaded. 21 ft. 2 in. This is the first of the government orders to be placed at any yard on the Great Lakes, for vessels of this size, and they will each have to be taken through the Welland Canal in two sections, and joined on the St. Lawrence.

The Victoria Machinery Depot, Victoria, B.C., is reported to be considering the lease of a site on the old Songhees Indian Reserve, from the B.C. Government, for the construction of a modern steel shipbuilding plant, where it will build the 2 steel steamships of 8,100 tons d.w. capacity ordered for the Dominion Government. C. J. V. Spratt, President, is reported to have stated that the company is prepared to take over about 6 acres for extensions to its plant, and that vessel construction will be commenced as soon as the steel begins to arrive. The plates and other materials are expected during January.

Wallace Shipyards, Ltd., Vancouver, B.C.—Keels for the 2 steel cargo steamships for the Dominion Government, each of 4,300 tons d.w. capacity, were laid on Oct. 1 and Nov. 16 respectively. It is expected that the first of these vessels will be launched about the middle of February, and the second one about the middle of March. As soon as these vessels are off the ways keels will be laid for the 2 steamships of 8,100 tons d.w. capacity, and launchings are anticipated in June and August.

Trent Canal Construction.—The Dominion Government is considering proceeding with the completion of the construction of the Trent Valley Canal, to connect Lake Ontario with Georgian Bay. The first section, from Lake Ontario to Lake Simcoe, was opened to navigation, June 3, 1918, and portions of the second section, from Lake Simcoe to Georgian Bay, were under contract, but work was suspended in consequence of the war. It is proposed that the suspended contracts be proceeded with until things become normal, when further contracts will be let to enable the completion to be made. The idea of connecting Lake Ontario and Georgian Bay, via the Trent Valley, was mooted in the early days of the 19th century, and construction was commenced in 1837.

Cargo Steamship Building in Canada for British Government.

Polson Iron Works, Ltd., Toronto.—The third of the steel cargo steamships being built by this company for the British Government under order from the Imperial Munitions Board, was launched Dec. 21, and named War Aquila by Lady [illegible]. The War Aquila is 3,500 tons d.w. and is of the following dimensions: length over all 261 ft., beam moulded 44½ ft., depth moulded 23 ft. She is equipped with triple expansion, surface condensing engines, with cylinders 20½, 33 and 54 in. diar. by 36 in. stroke, supplied with steam by 2 Scotch boilers 14 by 12 ft. at 180 lb., and has complete electric lighting plant, winches, windlasses, steam and hand steering gear and evaporating machinery. Keels for 2 other vessels for the British Government are being laid for delivery in the early part of the current year.

Launchings of Steamships.—Following are particulars of steamships ordered by the Imperial Munitions Board for the British Government, and which had been launched up to Nov. 15, giving in each case the date of the launching, the name of the steamship, the name and address of the building company and the deadweight tonnage:—

Steel Steamships.

May [illegible], 1917	War Dog, Wallace Shipyards North Vancouver, B.C.	4,500
July [illegible], 1917	War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	1,800

	Total, 45 wooden steamships	138,600

Aggregate deadweight tonnage of 27 steel and 45 wooden steamships launched, 267,900 tons.

Steamship Management.—The various vessels built for the British Government, under contracts placed by the Imperial Munitions Board, are, on completion, registered in the name of the Shipping Controller, London, Eng., and are then assigned by him to different firms in the United Kingdom, which act as managing owners on behalf of the British Government. Following are vessels built in British Columbia, which have been completed and assigned to managing owners:

War Cariboo, War Nootka, War Puget, War Selkirk, War Songhee, War Yukon. Managing owners, H. Fernie & Sons, 7 Rumford St., Liverpool, Eng.

War Comox, War Tyee. Managing owners, R. & J. H. Rea, 20 Water St., Liverpool, Eng.

War Atlin, War Cayuse, War Edensaw, War Ewen, War Kitimat, War Sumas. Managing owners, J. Cook & Sons, 62 Marischal St., Aberdeen, Scotland.

War Babine, War Camchin, War Haida, War Masset, War Nanoose, War Skeena, War Stikine. Managing owners, Easton, Grieg & Co., 30 George Square, Glasgow, Scotland.

War Casco, War Chilcat, War Nicola, War Suquash, War Tanoo, War Tatla. Managing owners, John Hardie & Co., 11 Bothwell St., Glasgow, Scotland.

Dominion Wreck Commissioner's Judgments on Casualties, Etc.

Judgments have been delivered recently, in connection with investigations into the causes of the following casualties:—

Stranding of s.s. Siberian Prince.

Held at Montreal before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Commander G. E. Bridge and C. J. Stuart, R.N.R., as nautical assessors. The s.s. Siberian Prince, British owned, stranded on Egg Islet, N.S., June 29, bound from Newport News, Va., to Halifax, N.S., for convoy. Dirty weather was met off the Nova Scotia coast. The court found that while the master, H. A. Camp, who had not been on the coast before, had taken casts at different times, and seeing that the depth decreased from 23 to 10 fathoms, he should, at the last sounding, have stopped ship and anchored, or awaited developments. Instead, he continued at half speed, which the court considered was a thoughtless action, and also that there was no show of seamanship subsequent to the ineffective use of the kedge, when the vessel touched her port side to a bank. The court expressed the opinion that the vessel could have been extricated from her position, but no attempt appeared to have been made to do so. It is fortunate that the vessel rested on a soft bottom, and that she suffered no damage. The master has, since the beginning of the war, been in constant active service, experiencing at one time heavy shell fire from a submarine for nearly two hours, and in another instance, by quick manoeuvering of his vessel, avoided a torpedo. These facts being taken into consideration, the court did not deal with his certificate, but found him in default and reprimanded him severely for lack of prudence, and for not exercising the seamanship required by a master in such a case, being of opinion that if a little resourcefulness had been shown, the vessel could have been floated off the following day. The court also considered that at least one officer should have been on the bridge with the master, to attend to the telegraph and steering, and while the first officer, D. Shaw, was exonerated, he showed in some respects a lack of loyalty and was lukewarm in meeting his responsibilities, having already frequented the coast, whereas the master had not. He was therefore cautioned to act up to his responsibilities in future. There was nothing in the evidence indicating other than bad judgment and lack of proper seamanship.

Grounding of s.s. Celtic Prince.

Held at Montreal, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and F. Nash, as nautical assessors, into the causes of the grounding of the British s.s. Celtic Prince on Barnaby Island, off Rimouski, Que., on July 8. The evidence showed that the vessel was carefully navigated from the time of leaving Newcastle upon Tyne, Eng., up to a very brief period before grounding. Although thick and misty weather was encountered in the St. Lawrence, points of land were discerned and the bearings taken placed the distances as intended. Metis fog signal was heard, and the shore sighted, and speed was reduced by one half. Varying depths were obtained by soundings, and when 14 fathoms were found, the speed was further reduced to slow, and when land was perceived, the engines were ordered full speed astern, but without avail. The court held that when 14 fathoms was obtained, the vessel should have been stopped, especially as the Father Point signal had not been heard, which of itself should have caused apprehension and called for the exercise of greater prudence. The plea that there was an unusual set of the current inshore could not be entertained, as the log showed that the vessel was set inshore at every course. The court therefore held that the master, A. H. McKegg, erred in judgment in proceeding at half speed in such shallow water, under the conditions shown in the evidence, and therefore censured him. The evidence as to the operation of the Father Point lighthouse fog horn was contradictory, but no information was obtained by which criticism of a direct nature could be made against the assistant keeper, but the court made the following comments thereon: The keeper was absent and left his son in charge; the son is not a qualified man, and had for his assistant a boy of 16 or 17, who kept watch and operated the fog horn while the son was asleep; that instead of keeping watch in the tower or the immediate vicinity, the boy was on the wharf, some 1,500 ft. from his post, near the vessel Eureka, apparently relying on a call from the Eureka should necessity arise. On these grounds the court criticized the absence of the keeper from his post during the navigation season, and considered it a most serious matter to leave the operation of such an important lighthouse in the hands of one whose knowledge of the [illegible] is unknown, and worse still that such a responsibility should rest on a boy. There is too much property at stake for such important posts to be left in charge of what the court considered irresponsible and incompetent. Incompetent, because the trend of the evidence caused the court to surmise and rightly, that the assistant was not observant enough nor sufficiently experienced to decide for himself when it was time to operate the signal. On the statement that the fog horn is 50% less in sound this year than last, the court suggested that a competent engineer examine the machinery and remedy the defect, if any.

Tide Tables for Canadian Eastern Coasts, prepared by the Tidal and Current Survey of the Naval Service Department, of which W. Bell Dawson, M.A., D.Sc., is Superintendent, have been published in pamphlet form for [illegible], and can be obtained on application to the department at Ottawa.

The Minister of Marine on the Dominion Government's Shipbuilding Programme, Etc.

The Minister of Marine, the Hon. C. C. [illegible], M.P., in speaking in Montreal [illegible] after the launching of the steel cargo steamship Canadian Pioneer, by Canadian Vickers, Ltd., congratulated the company on the manner in which it was performing its contract for building that [illegible] tons d.w., and also the Canadian Voyageur, of 4,300 tons d.w., which was launched a short time before, and which, he said, would be ready to proceed to sea under her own steam in a [illegible] thereafter. The Canadian Voyageur's [illegible] was laid June 11, and the Canadian Pioneer's on July 18. Mr. Ballantyne, in continuing, said:—

I am reminded that when I was one of the harbor commissioners for the port of Montreal from 1907 to 1912, with my late colleagues, G. W. Stephens and L. E. Geoffrion, after long negotiation with the Vickers Co. of London, Eng., we concluded satisfactory arrangements with them, whereby they decided to establish a branch of their business at Montreal, and not only erect the splendid modern shipbuilding plant that we are now in, but also the large floating dock that has a lifting capacity of 25,000 tons. It is interesting to know that the 30 acres of land that the Vickers works are situated on were reclaimed from the bed of the river by dredging.

It is a special pleasure for me to witness the development of steel shipbuilding in Canada, not only in the Vickers works, but in the other 16 yards that are building steel ships for the Government, from Nova Scotia to British Columbia. I am pleased to announce that the government has under construction at present 39 steel steamships, viz., lake type, 9 vessels; 4,300 ton type, 6 vessels; 5,100 ton type, 8 vessels; 8,100 ton type, 14 vessels; 10,500 ton type, 2 vessels.

I have always been a great believer in Canada possessing the necessary enterprise, skill and ability to build steel ships and I am naturally very pleased and proud that our country is making such progress in this new enterprise; and I hope that as the builders of steel ships in Canada gain more experience and knowledge they will be able to compete more effectually with other countries that have been so long in the shipbuilding industry. Canada requires tonnage and very badly. It is estimated that owing to losses by enemy submarines the world's tonnage is at least 10,000,000 tons short of what it was when war broke out. We must also take into consideration that nearly every ship which is in service today requires repairs and docking, owing to the fact that while the war was on these vessels could not be spared to go into dry dock, and these conditions make the world's tonnage of shipping very much short of what it should be.

Canada requires ships as speedily as they can be built, in order that they can be placed on the Atlantic and Pacific Oceans [illegible] the Great Lakes, to complete the Government's transportation system, and work in conjunction and co-operation with our transcontinental railway system. I have already announced that the government's ships will be managed and operated by D. B. Hanna, President of the Canadian Northern Ry., and his board of directors by the creation of a steamship company, the stock of which will be all owned by the government; in order that the government and the people may know what profit or losses the government ships are making. Mr. Hanna and his board of directors have been given a free hand by the government to manage the government's system of railways and they will be given an absolute free hand also in the management of the Canadian Government's mercantile marine.

Happily war is now practically at an end, and Canada and its government are confronted with the tremendous peace problems. To retain our present volume of trade and to take the place of the vast sums of money that have been spent during the last few years in Canada for the making of munitions, it is imperative that Canada should vigorously go after export trade. The government has laid the way for this by providing ships. The responsibility now rests upon Canadian manufacturers to rise to the occasion and use every energy to secure export business. The United Kingdom, overseas dominions and our allies are more sympathetically inclined than ever to buy Canadian products, and I hope that the manufacturers and business men of this country realize that this is the most favorable opportunity they have ever had to go after export business. The government is fully seized with this possibility and has a trade commission in London to see that the way is made easy for Canada to get her full share of the vast amount of materials that are going to be required for the restoration of devastated France and Belgium, and also to get her share of the vast amount of products of all kinds that will be wanted by these countries which have been engaged in war for the last four years, to replenish their stocks.

I wish to refer to the splendid part that the mercantile marine has taken in this war. There has been altogether too little reference to it. The British mercantile marine has played a most important and noble part in bringing about the splendid victory that Great Britain and her allies have secured. I wish to take this opportunity, as Minister of Marine, to pay my tribute to the brave men of England's huge mercantile marine, who manned her ships during these four terrible years of war, and so successfully have carried across the oceans millions of soldiers, immense quantities of munitions and provisions and have made it possible for us to so utterly defeat the enemy, with the aid of our allies.

I consider this day is an epoch in the history of Canada, when for the first time a Canadian mercantile marine flag has fluttered to the breeze on the Canadian Pioneer, just launched. With the lead that the government has given and its determination to assist Canada in every way to do a large export trade, I hope that in the very near future the flag of Canada's merchant marine may be seen in every important port throughout the world, carrying to those distant countries Canada's production of the mine, field, forest and our industries, and bringing back the importations that Canada will find it necessary to make. All this is possible by co-operation of all of Canada's diversified interests. I wish every success to the Canadian Pioneer, the Canadian Voyageur and the other government mercantile marine ships that are to be launched in the very near future.

Suspension of Marine Wartime Regulations.

The British Admiralty has suspended the following regulations, restrictions, etc., which were made or imposed owing to war conditions:—

Restriction of the publication of shipping intelligence and the cabling of shipping information.

Restriction of the use of cameras on board ships.

Order requiring special masthead lookouts, except in areas liable to be mined.

Orders for ships to be dazzle painted, subject to proviso that should necessity arise for ships to be again dazzled, cost will fall on the owners.

Instructions for guidance in care and maintenance of armament, except in so far as they relate to discipline, pay and victualling of gun crew, and care and maintenance of armament. Subject to this latter primary duty, gun crews may be employed on watch keeping duties at sea, and quartermaster's duties in harbor, provided mercantile crew not reduced naval crew not employed on manual labor, below Board of Trade requirements, and except in connection with armament, and their mess, berths, and their duties are not in excess of those required of the mercantile crew.

C.B. 415 war instructions for British merchant ships, except so far as they require arrangements to be made for safety of ship life and confidential documents, and compliance with orders of riers by land and water, and for such British or allied naval authorities. Masters to obtain and comply with instructions regarding routes and movements generally and to take all precautions by use of Otter gear, if fitted, keeping a good lookout and strictly following instructions for the avoidance of mined or possibly mined areas.

As regards C.B. 733, wireless telegraph instructions, certain restrictions on the use of wireless telegraphs are suspended, in that British naval shore stations will accept, without coast charge, for the present, messages addressed to, or sent by, owners and agents regarding the safety and working of ship. Private messages are not admissible. Regulations requiring lowering of aerial in British ports are suspended, as is also the use of secret call signs.

All the foregoing provisions apply to allied vessels so far as practicable.

The Edgewood Shipping Co., Ltd., which has been incorporated under the Dominion Companies Act, with $40,000 capital and office at 220 Board of Trade Bldg., Montreal, was organized to own and operate the schooner Edgewood, under construction by the Quebec Shipbuilding & Repairing Co., Quebec. The price to be paid for the vessel is said to be $160,000, of which $100,000 has been paid, the balance being due on completion and delivery of the vessel. The directors are: R. A. Carter, shipping, etc., broker, Montreal, President; James Playfair, President and General Manager, Great Lakes Transportation Co., Midland, Ont., Vice President; W. C. Job, President and Manager, Job Bros., St. John's, Nfld., Halifax, N.S., and Liverpool, Eng., and of S. Job, Inc., New York, Second Vice President; G. A. Wood, shipping, etc., broker, Montreal, Secretary-Treasurer; and M. P. Connolly, Quebec.

Welland Ship Canal Construction Resumption.

The following order in council was passed at Ottawa Dec. 9:—"The committee of the Privy Council have had before them a report, dated Dec. 6, 1918, from the Minister of Railways and Canals representing that, in pursuance of the general policy of immediately resuming construction upon public works of a necessary character, consideration has been given to the condition of the Welland Ship Canal. The Minister states that contracts had been let for 4 of the 9 sections into which this work has been subdivided; the percentage of the work contracted for that has been performed being respectively 69, 59, 32 and 64% under these contracts. That, owing to war conditions, work under these contracts was suspended by order of the minister in Jan., 1917, and the contracts were subsequently cancelled by agreements entered into in the spring of 1918. The total expenditure that has been made aggregates approximately $16,000,000, which sum included upwards of $2,000,000 incurred in the acquirement of plant, and settlements of other matters incidental to the suspension of the work. That in view of the special knowledge, experience, organizations and facilities possessed by the former contractors, it was deemed advisable to ascertain terms upon which they would be willing to carry on the work of construction upon the respective sections hitherto held under contract by them. That all the contractors have declined to resume the work under the terms of the original contracts, and have pointed out the impracticability of submitting tenders based upon schedule rates, under the uncertain conditions respecting labor and supplies. They have, however, expressed their willingness to resume work upon a basis of cost plus 8%. The Minister, upon the advice of the Chief Engineer of the Railways and Canals Department, recommends that he be authorized to enter into agreements for the resumption of work upon the respective sections formerly held under contract upon the basis of actual cost, plus a percentage nót to exceed 8%, materials, supplies and plant furnished by the department to be excluded in computing cost. The Minister further recommends that such terms, stipulations, conditions and definitions as may to him appear to be in the public interest be included in the foregoing agreements. The committee concur in the foregoing recommendations, and submit the same for approval."

A. J. Grant, heretofore Superintending Engineer, Trent Canal, Peterborough, Ont., has been appointed Engineer in Charge, and John L. Weller, formerly Engineer in Charge, has been appointed Consulting Engineer.

At the time of the suspension of the work on May 2, 1917, it was estimated that contracts on secs. 1, 2 and 5 would have been completed that year, and sec. 3 during 1918, or about a year behind the date specified in the contract.

Sec. 1 extends from Lake Ontario for about 3 miles, and includes pier and trestle work at the entrance to the canal, the construction of lock 1, and canal work to bridge 2. The contract was awarded Aug. 1, 1913, to the Dominion Dredging Co., and the date for completion was set as Apr. 1, 1917. The amount of the contract, as based on schedule rates, was $3,487,727, and the work is about 69% completed.

Sec. 2 covers the work from bridge 2 to bridge 5, about 4½ miles, including locks 2 and 3. This contract was let Dec. 31, 1913, to Baldry, Yerburgh & Hutchinson, Ltd., for completion by Apr. 1, 1917. The amount of the contract, as based on schedule rates, was $5,377,185.75, and the work was 59% completed.

Sec. 3, from bridge 5 to about half way between bridges 9 and 10, covers the heaviest portion of the whole route, and includes the erection of twin guard gates at Thorold, the single lock 7, the construction of a short stretch of canal below lock 7, and also the three twin locks 6, 5 and 4 in flight, one flight for downbound vessels and the other for upbound vessels, overcoming a descent of 139½ ft. The contract was let Oct. 4, 1913, to O'Brien & Doheny, for completion by Apr. 1, 1917. The amount, based on schedule rates, was $9,540,050, and it was about 32% done.

Sec. 5, from just above bridge 12 to just above bridge 13, about 2¾ miles, was let to the Canadian Dredging Co., for completion by Apr. 1, 1918, and was about 64% done. The amount of the contract, as based on schedule rates, was $1,945,788.

A press dispatch from Ottawa, Dec. 26, stated that work on sec. 3 will be continued by Doheny, Quinlan & Robertson, Senator M. J. O'Brien retiring from his connection with the contract.

A Strained Interpretation of Salvage Laws.

Ottawa press dispatch, Dec. 18.—Alex. Johnston, Deputy Minister of Marine, states that the salvage laws of Canada and the United States do not apply to rescue work or sending of assistance to vessels in distress. He was shown an article appearing recently in a United States magazine, which intimated that the Princess Sophia disaster might have been greatly alleviated if the salvage laws of the two countries had permitted Canadian vessels to go to the assistance of the sinking vessel. The vessels which were standing by the Princess Sophia were U.S. boats, he said, and as they were in U.S. waters, there was absolutely nothing to prevent them from acting [illegible].

With regard to the salvage laws of the two countries, he stated that they are intended to apply only to the salvaging of wrecks, and not to the rescue of passengers from sinking boats. An extremely strained and unnatural interpretation of the statute might be said to [illegible] the other meaning, but to intimate that this was in any way the intention of the law was quite incorrect. There was no law to prevent a U.S. vessel entering Canadian waters and assisting a vessel in distress, or vice versa.

It is claimed in the article in question that as under existing laws, both of Canada and the U.S., a U.S. vessel cannot salvage a wreck in British Columbia waters, nor a Canadian vessel do salvage work in U.S. waters, masters of ships are unable to render assistance in cases of dire necessity. Otherwise, it is stated, it is extremely difficult to draw the line between what would be considered a work of humanity and that which would infringe on salvage laws.

Capt. Victor Blue, commanding the U.S. battleship Texas, has been appointed Chief of the U.S. Bureau of Navigation, succeeding Rear Admiral Palmer.

A Question of Jurisdiction Over Water Traffic.

The complaint of C. E. Porteous, that the Compagnie Maritime de Levis was not giving the necessary ferry boat service between the Island of Orleans and Quebec City, came before the Quebec Public Utilities Commission recently. Objection was raised to the commission's jurisdiction, even in a limited degree, over vessels engaged in the carrying trade within the province.

The company's counsel gave argument on this point on Dec. 17, 1918. It was contended that article [illegible] of the act appointing the commission did not originally include any jurisdiction over any means of carriage by water, while the amending statute covering vessels engaged in the conveyance of passengers "across or along lakes, rivers or streams" was not intended to cover lines of vessels employed in the carrying trade. The most important point raised was contained in the second objection, which was, whether the authority conferred by the amendment to the act could be exercised in view of the fact that the British North America Act placed navigation under the Dominion's legislative control. Subsection 10, sec. 92, of the B.N.A. Act, however, gave the provinces control of navigation in local waters, and under the authority of that subsection the provinces licensed ferries, and made regulations for the carrying on of navigation in provincial waters.

The commission held that the part of the St. Lawrence River on which the company's vessels traded was part of the territory of the province. The control which the commission had over the provincial waters was only such as would not trespass on the authority of the Dominion, which, under sec. 91 of the B.N.A. Act, has control over decked boats or [illegible] and over their navigation. The commission held that in anything that does not relate purely to navigation, it has authority. The commission decided that it had authority to act in the matter, but as its decision would probably be appealed, a decision upon the merits of the application would be postponed.

Instructions for Sailing Vessels on the Atlantic Routes.

The British Admiralty has issued orders regarding sailing vessels, which cancel all previous orders regarding routes and orders for such ships, as follows:— Sailing vessels may sail direct for the United Kingdom, and French and other European ports, as follows, being warned of all dangerous areas now or subsequently notified in current notices. For the Mediterranean, call at Gibraltar for orders regarding dangers and routeing. In the United Kingdom and France: (a) Vessels bound for west coast ports, or ports east of Beachy Head or Pointe d'Ailly, must call at Channel port for orders and pilotage, which is compulsory in those waters; (b) Vessels to other United Kingdom or French ports should, at [illegible], give the coast and navigation marks a good offing, at least 10 miles, until morning, and on reaching offing of their ports should, before attempting to enter, ask patrol vessel for instructions. As these approaches may be closed by the time vessels arrive, they are intended as a guide if no notice issued in time.

General Shipbuilding Notes Throughout Canada.

Chester Basin Shipbuilding Co., Malagash, N.S., launched the 4-masted schooner Arthur H. Zwicker, Dec. 4. Her dimensions are: length 180 ft., breadth 36 ft., depth 15 ft.

Cholberg Ship Co., Victoria, B.C.—Of the 9 auxiliary powered schooners which are under construction at this yard, for Norwegian interests, two hulls were reported in frame during December, and a third as one half framed. Ways are reported to be under preparation for a fourth vessel.

S. M. Fields, Parrsboro, N.S., launched the schooner Cape d'Or Dec. 18. She is classified with the American Record, is 373 tons register and is fitted with power for hoisting. On completion, she went to St. John, N.B., to take cargo for the south, on account of La Have parties.

Foundation Co., Victoria, B.C., announces that P. B. Thompson, formerly Superintendent of the company's Portland, Ore., plant, has been appointed Manager, Point Hope and Point Ellice yards, Victoria, vice H. B. Pickering, transferred to Savannah, Ga. He took charge of the plants, Dec. 10, and is superintending the building of 20 wooden steamships for the French Government.

Fraser Brace Shipyards, Ltd., Montreal, —The incorporation of this company, which was mentioned in our last issue, is chiefly for the object of taking over the shipbuilding interests of Fraser Brace & Co., Ltd., as a matter of business convenience. The personnel of the company is the same in each case. The company has an order for 8 wooden steamships for the French Government, some details of which were given in our last issue.

The Harbor Grace Shipbuilding Co., Harbor Grace, Nfld., expected to launch a second schooner during December, of about 300 tons. She was fully rigged with hoisting machinery aboard, and was to be launched all ready for sea. A third vessel is expected to be ready for launching early this year.

Polson Iron Works, Ltd., Toronto.—Keels are being laid for 2 steel cargo steamships for Norwegian interests.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—Following are complete particulars of this company's organization: President, James Whalen, Port Arthur; 1st Vice President, P. G. Chace, New York, N.Y.; 2nd Vice President, R. D. Hubbart, Chicago; Third Vice President and Counsel, A. J. McComber, Port Arthur; other directors: Jas. Playfair, Midland, Ont.; Jno. Burnham and E. W. Rogers, Chicago; General Manager, J. F. Paige; Secretary, A. B. Conmee; Treasurer, A. T. Giles; Assistant Secretaries, E. W. Rogers, Chicago, and F. J. Dolan, Port Arthur; Counsel, A. J. McComber, Port Arthur, and R. A. Pringle, K.C., Ottawa; Purchasing Agent, N. S. Thrasher; Shipyard Superintendent, Jno. Miller; Master Mechanic, Jno. Aldridge; Boiler Shop Superintendent, Jas. Whiteacre; Foundry Superintendent, A. Congdon; Superintendent Engineering Department and Chief Draftsman, L. E. Tornroos.

In our last issue, mention was made of the launching of the ocean steam tug Victoria, and also of a similar tug to be named Murray Stewart, to be delivered before the close of lake navigation. The names given refer to one and the same vessel, the confusion having arisen owing to the Marine Department's refusal to accept the name, Victoria, and her consequent registration under the name, Murray Stewart. She was built for J. F. M. Stewart, Toronto, to Lloyd's classification for ocean going tugs, and has the following dimensions: length over all 126 ft., length between perpendiculars 119 ft., breadth moulded 26 ft., depth moulded 16 ft. 5 in.; tonnage, 240 gross, 80 net. She is equipped with triple expansion engines with cylinders 15, 29 and 47 in. diar. by 36 in. stroke, 850 i.h.p. at 80 r.p.m., and supplied with steam by 2 Scotch boilers each 11 by 11 ft., at 175 lb., and she also has surface condenser, evaporator and dynamo.

Ocean going tug, Murray Stewart, built for J. F. M. Stewart, Toronto, by Port Arthur Shipbuilding Co.

Pugsley & Robinson, Diligent River, N.S., launched the 4-masted schooner Eugenie Mackay, Dec. 18, for A. B. Mackay, Hamilton, Ont. She is 560 tons register, and is equipped with power for hoisting, stockless anchors, etc., and is classified for 13 years with Bureau Veritas.

The Quebec Shipbuilding & Repairing Co., Quebec, Que., has sold the schooner Edgewood, which is approaching completion at its yard, to the Edgewood Shipping Co., Ltd., Montreal, for, it is reported, $160,000. She will be equipped with auxiliary power. The company is reported to have decided to commence building, at once, an auxiliary powered schooner of 2,200 tons, similar to the M. P. Connolly, which was wrecked on Sable Island, on her maiden trip a few months ago, and an auxiliary powered schooner of 1,240 tons, similar to the Edgewood, launched recently. It is intended to push these vessels so that they will be ready for service on the reopening of St. Lawrence navigation.

T. H. Rawding, Allandale, N.S., expects to launch a tern schooner during January. She is reported to have been sold to F. H. Ellis and Co., St. John's, Nfld.

Licenses for Clearance of Sailing Vessels.

The Commissioner of Customs issued the following notice Dec. 18:—"An order in council has been passed, as set forth below, rescinding the order of Feb. 21, 1918, as published in memo. 2177-B, which memo. is hereby cancelled. In future licenses from the Minister of Customs for the clearance of sailing vessels, as called for in that memo., will not be required. Collectors are to note, however, that memo. 2204-B, requiring a license from the Ships' Licensing Committee for any sailing vessel proceeding on a voyage to a destination outside of Canada, is still in effect."

The order in council referred to above, passed Dec. 16, is as follows:—"The Governor General in council, in view of the changed war conditions, is pleased to order that the restriction upon sailing vessels in order in council 436, of Feb. 21, 1918, prohibiting such vessels from clearing from a port in Canada on any voyage in the prosecution of which the vessel would, in the ordinary course, enter, navigate, or pass through the war zone of enemy submarine activity surrounding the British Islands, or in the waters adjacent thereto, unless a license permitting the vessel to clear on such voyage shall have first been granted by the Minister of Customs, is hereby withdrawn, and the said order in council is rescinded."

The Canadian Northern Ry. Car Ferry Canora arrived at Victoria, B.C., Dec. 7, at 7 p.m., on her trip from Lauzon, Que., where she was built, for the car ferry service between Port Mann and Patricia Bay. She left Lauzon Sept. 30, arriving at Sydney, N.S., Oct. 3, left Sydney Oct. 8 and arrived at Halifax, N.S., the same day, where she remained until Oct. 24. She arrived at Colon, Panama, Nov. 6, and left the Panama Canal Nov. 12, passing San Francisco Dec. 3. The distance between Halifax and Victoria, via the Panama Canal, is approximately 7,550 miles. She would have sailed considerably earlier in the year, but was delayed by an accident in Quebec harbor, the s.s. Sicilian colliding with her on Aug. 6, causing considerable damage, which had to be repaired before she could proceed to sea.

Tidewater Realties, Ltd., Three Rivers, Que., which was incorporated recently, with a capital of $100,000, to carry on a general real estate business, and primarily to develop St. Maurice Park, Three Rivers, as residential property, is closely associated with Canada Steamship Lines, Ltd., and Tidewater Shipbuilders, Ltd. Special inducements are being offered to employes of the latter company, to acquire houses on the property. The directors are: J. W. Norcross, President; A. J. Gouin, Managing Director; Jacques Bureau, M.P., H. W. Cowan and F. P. Smith. J. I. Hobson is Treasurer.

Ocean Cargo Carriers Co., Ltd., has been incorporated under the Dominion Companies Act, with capital stock of 1,000 shares without nominal or par value, provided that it shall carry on its business with a capital of $5,000, the company being deemed a private company under the Companies Act and amendments. The head office is to be in Toronto. Power is granted to own and operate steam and other vessels, carry on any other business incidental thereto, and conduct a general navigation business.

Atlantic and Pacific Ocean Marine.

The Dominion Shipping Co. has been awarded $183,354 for the loss of its s.s. Heathcote, through collision with Furness Withy & Co.'s s.s. Kelbergen, in the Bay of Fundy in July, 1918.

The St. Lawrence navigation season was officially closed at Montreal, Dec. 17, ten days later than in 1917. The last vessel to pass through was the s.s. Natironco, one of the lake steamships, bound for Halifax, N.S., for ocean service.

The Harrison Line was announced to have resumed its sailings between United Kingdom ports and British Columbia, by way of the Orient, during December, with the s.s. Professor. It is reported that about 20 of the company's steamships were lost during the war, through the enemy submarine campaign.

The master of the s.s. Olympic, Capt. F. Hayes, C.M.G., D.S.O., was presented with a silver salver and an address by the City of Halifax, N.S., Dec. 16, and with a silver loving cup by the Halifax Board of Trade. In making the presentation, the mayor pointed out that during the war, the Olympic had carried more Canadian troops than any other one vessel.

Canadian Robert Dollar Co., which operates the steamships Bessie Dollar, Melville Dollar and Harold Dollar, on a monthly schedule from Vancouver to Shanghai, Hong Kong and Manila, has under consideration the inauguration of a steamship service between Vancouver and India, but we are officially advised that no details have been worked out regarding it.

The Canadian Pacific Ocean Services' s.s. Minnedosa, which arrived at Halifax, N.S., recently from Great Britain, on her maiden trip, was launched by Barclay, Curle & Co., Glasgow, Scotland, Nov. 17, 1917. Her dimensions are: length 520 ft., breadth 67¼ ft., depth 43 ft.; tonnage, 14,000; sea speed, 17 knots. She has passenger accommodation for 503 cabin and 1,470 third class.

The Royal Mail Steam Packet Co., which operated a steamship service between Halifax, St. John and the West Indies, has been advised that the British Admiralty has released its steamships Chaudiere and Chignecto from war time service. These vessels were requisitioned early in the war, and taken to England for service there. They were expected to leave England about the end of December, and on arrival at Halifax, they will resume service on their old route.

The Canadian Pacific Ocean Services' Atlantic service is in course of being resumed on a pre-war basis. The steamships Minnedosa, Melita, Metagama, Scandinavian, Scotian, Grampian, Corsican and Tunisian, are being operated between West St. John, N.B., and Liverpool, Eng., on the one class cabin plan, and it is announced that the steamships Alsatian and Empress of Britain will be in service shortly on the three class plan.

The White Star-Dominion Line s.s. Regina, which arrived at Halifax, N.S., Dec. 20, with returning troops, was on her maiden trip to Canada, having been built during war time. She is to be run between Montreal, Quebec and Liverpool, during the St. Lawrence navigation season, and from Halifax, N.S., and Portland, Me., during the winter. She was built by Harland & Wolff, Belfast, Ireland, and is about 16,500 gross tons, 600 ft. long, 68 ft. beam, and has accommodation for cabin and third class passengers.

P. V. G. Mitchell, Assistant General Manager, White Star-Dominion Line, Montreal, left there, Dec. 17, for Antwerp, Belgium, on behalf of the International Mercantile Marine Co., to take charge of the company's business there during the reorganization of local conditions. Prior to leaving Montreal, he is reported to have said that the company's interests in Europe, before the war, were very large and that to a great extent they centered on Antwerp. Owing to the German occupation and consequent isolation of Antwerp, the business became disorganized and his task is to find out just what the condition of affairs there is, and to re-establish business connections throughout the continent.

C. E. Benjamin, Passenger Traffic Manager, Canadian Pacific Ocean Services, Ltd., who arrived in Montreal, Dec. 16, from London, Eng., is reported to have said that the steamships Empress of Asia and Empress of Russia, which were transferred from the Pacific to the Atlantic to facilitate the transport of U.S. troops to Europe, had been restored to commercial service and would resume their service between Vancouver and the Orient early in the year. They were then being refitted in an English port, and the first named was to return to the B.C. coast by way of the Panama Canal, carrying returning troops to that province. The second named vessel will return by the Suez Canal, returning troops to Australia on the way.

The Canadian Pacific Ocean Services' s.s. Empress of Britain, which has been engaged on war work practically since the outbreak of war, had, up to the end of November, covered 173,130 miles, while in Admiralty service, and carried 110,000 troops overseas. She took Australian and British troops to Gallipoli, and took them away again, and during the period the Suez Canal was closed to traffic, she made a trip round the Cape of Good Hope, with troops for what was then German East Africa, and also for Mesopotamia. She made eight trips with Canadian troops, and for the first seven months of the war patrolled the South Atlantic as an Admiralty cruiser. She was attacked by submarines about a dozen times and had two narrow escapes. She is at present engaged in repatriating U.S. troops, and is expected to return to her commercial service shortly.

Ontario and the Great Lakes.

The quantity of grain held in storage on vessels in Port McNicoll harbor, is 7,927,186, the largest yet held there during the winter.

Passenger service on Lake Ontario closed Dec. 21, with the sailing of the Canada Steamship Lines' s.s. Macassa from Toronto for Hamilton.

Canada Steamship Lines' s.s. W. Grant Morden, is reported to have made a record showing for her season's operations, with freight earnings on her final round trip larger than any ever made by any other vessel on the one trip.

The Empire Elevator Co. has deposited plans with the Dominion Public Works Department, giving description of site and plan of works, docks and elevator which it has built in Thunder Bay at the mouth of the Kaministikwia River at Fort William.

The mine sweepers Cerisoles and Inkerman, which were built recently by the Canadian Car & Foundry Co. at Fort William, for the French Government, are reported to have been lost, together with their crews totalling 76 persons, during a storm on Lake Superior about Nov. 24. A search party has failed to get any trace of them, but some wreckage, which appears to be part of these vessels, was found during December, off Grand Marais.

The s.s. Atikokan has been docked at the Collingwood Shipbuilding Co.'s plant at Kingston, for structural alterations. She passed through the Welland Canal recently from the Great Lakes, in two sections, and while being rejoined, it has been thought advisable to make certain alterations in the deck design to enable her to encounter a high sea with comparative safety. She is of the whaleback type of construction, and it is said that the designers' ideas have not been fully realized.

The Toronto Harbor Commissioners interviewed the Minister of Public Works, at Ottawa, Dec. 18, when it was reported that assurances were given that the work to be done in the harbor during 1919, would be sufficient to keep about 500 men fully engaged. The chief work to be undertaken, is the concrete superstructure of the breakwater at the western extremity of the harbor, to protect work already done at that point. A turning basin will also be taken in hand, and located in the industrial area at the east end.

British Columbia and Pacific Coast.

The Dominion Public Works Department will receive tenders to Jan. 23 for the reconstruction of the [illegible] wharf at Esquimalt, B.C.

The C.P.R. has deposited with the Dominion Public Works Department a description of site and plans of a wharf or transfer slip proposed to be built in Burrard Inlet, in Vancouver harbor, slightly west of the prolongation of Thurlow St., northerly to Burrard Inlet.

The Marine Department has decided that the enquiry into the loss of the C.P.R. s.s. Princess Sophia, with approximately 346 lives, on the Vanderbilt Reef, in the Lynn Canal, Oct. 24, will be held at Victoria, Jan. 6, in the Admiralty Court, before Mr. Justice Martin.

A press report from Vancouver, Dec. 16, stated that the 12 auxiliary powered schooners, which were built for Canada West Coast Navigation Co. at Vancouver and Victoria, during 1917, had been purchased by the French Government, and that those not already taken over, will come under the French flag on the completion of their present voyages.

Caution re Floating Mines.—The Naval Service Department has been advised that about 30 floating mines were sighted Dec. 8, covering an area of about 15 miles, in the North Atlantic, in lat. N. 36 deg., long. W. 65 deg. 30 min. Vessels are advised to keep a lookout for them and to destroy them by gun fire. If seen, vessels should report by wireless to the U.S. Navy Department.

Shipbuilding in the United States.—C. P. Piez, General Manager, U.S. Shipping Board, Emergency Fleet Corporation, advised the Senate, Dec. 17, that from Aug. 1917, to Nov. 30, 1918, that construction had been commenced for the building of [illegible] steamships, aggregating [illegible] gross tons.

The Dominion Government's Shipbuilding and Canal Policy.

[illegible] White, Finance Minister, and acting Prime Minister, when in Toronto, Dec. 16, gave out a statement calling attention to the things accomplished by the Union Government during its first year of office. Among other things he said:

"An outstanding feature of the government's policy has been the establishment of a great shipbuilding industry. Over 40 [illegible] vessels for government account are now under order, the total estimated programme for this and the coming year aggregating over $60,000,000. The activities of all Canadian shipyards are being maintained at their highest capacity, furnishing employment for an army of workmen and sustaining many subsidiary enterprises of an important national character.

"To provide employment during the periods of demobilization, the Railways and Canals Department is proceeding with the construction of the Welland Ship Canal, work on which has been shut down because of the war. In the same way work will be resumed on the final section of the Trent Canal."

Mainly About Marine People.

Jas. McShane, who died at Montreal, Dec. 14, aged 85, was at one time a member of the old Montreal Harbor Board, and later, harbor master there.

Jas. Carruthers, President, Canada Steamship Lines, Montreal, was one of the speakers at the dinner given the Hon. Robt. Rogers, ex Minister of Public Works, in Toronto, Nov. 28.

August Bedard, Montreal representative of the Ottawa Transportation Co., died at the Royal Victoria Hospital, Montreal, Dec. 10, aged 68, after about two weeks illness from heart trouble.

Hon. C. C. Ballantyne, M.P., Minister of Marine, was reported, Dec. 27, to be confined to his home at Montreal with appendicitis. An operation was performed and he was reported to be progressing satisfactorily.

Frank McDonnell, heretofore Assistant to Chairman, Board of Steamship Inspection, Marine Department, Ottawa, who was appointed Chairman, Board of Steamship Inspection, Sept. 23, 1918, to succeed T. R. Ferguson, deceased, was born Oct. 18, 1877, and first entered government service, Mar. 6, 1905, receiving a permanent inside appointment Sept. 1, 1908, being appointed Assistant to Chairman, Board of Steamship Inspection, Oct. 1, 1912. This is a correction of an item published in Canadian Railway and Marine World for Dec., 1918, in which the dates of birth and previous appointment were incorrectly stated, having been copied from erroneous official information.

John L. Weller, who has been appointed Consulting Engineer, Welland Ship Canal, was born at Cobourg, Ont., Feb. [illegible] government service [illegible] he has been, to 1885, Assistant Engineer, Trent Canal, Peterborough, Ont.; 1885 to 1888, Assistant Engineer, Murray Canal, Brighton, Ont.; [illegible] Resident Engineer, St. [illegible] Ont.; 1900 to 1912, Superintending Engineer, Welland Canal, St. Catharines, Ont.; 1912 to May 2, 1917, Engineer in Charge, Welland Ship Canal, St. Catharines, Ont.

Miles A. Overend, Freight Agent for Ontario, White Star-Dominion Line, Toronto, died there, Dec. 28. He was born in England, and came to Canada in 1872, entering the Great Western Ry. service, Hamilton, Ont., in the mechanical department, and continued in that service until the absorption of the road by the G.T.R. in 1884, since when he was, to June, 1885, clerk in General Freight Agent's office, G.T.R., Hamilton, Ont.; June, 1885, to June, 1892, clerk in District General Freight Agent's office, same road, Toronto; June, 1892, to Nov., 1893, clerk in same office, Toronto; Nov., 1893, to May, 1895, Ontario Agent, Canada Atlantic Fast Freight Line, Toronto; May, 1895, to Sept., 1896, City Freight Agent, G.T.R., Toronto; Sept., 1896, to Apr., 1898, Ontario Agent, Canada Atlantic Fast Freight Line, Toronto; Apr., 1898, to Oct., 1905, Foreign Freight Agent, Canada Atlantic Ry., Montreal; Oct., 1905, to Apr., 1906, in private business; Apr., 1906, to Aug., 1911, Travelling Freight Agent, White Star-Dominion Line, Toronto, at which latter date he was appointed Freight Agent for Ontario, for that line.

Restoration of Canada's Shipping Facilities to a Pre-war Basis.

London, Eng., cablegram, Dec. 12.—Some progress has been made in the work of restoring Canada's shipping facilities to a pre-war basis. Sir George Foster, Minister of Trade and Commerce, has been dealing with the question in conference with the British Minister of Shipping. An agreement on a number of important points has been reached.

Freight and passenger service between Canada and the Orient is to be re-established. The Canadian Pacific Ocean Services steamships, Asia and Russia, which have been employed in European waters in transportation work, will be back with cargoes to Vancouver or Hong Kong, and will then be released to their owners. The 6 freight steamers formerly plying between Vancouver and Australia were all requisitioned by the Admiralty and 5 of these were lost. It is arranged that these are to be replaced as rapidly as possible and a beginning in the freight service will be made at once.

Service between Halifax and the West Indies has already been re-established. The former shipping service between Canada and South Africa was one ship a month. The British Shipping Ministry promises 3 ships between now and May and thereafter a resumption of old service.

In all these services private control of rates will be resumed, as they are re-established. The North Atlantic freight service is likely, however, to remain for a considerable time under the control of the International Maritime Transport Council, which has been co-ordinating and controlling the shipping resources of the allied nations. Rates and cargoes will remain in control of this body, but the amount of space allocated for private commercial business, which was limited last year to from 2 to 5% of the cargo space, will be considerably increased, especially in eastbound ships.

The consent of the Shipping Control to imports into England will be required, but it is thought the disposition will be to encourage the resumption of private trading in goods required here, so far as exigencies of the exchange situation will permit. License to import requires the endorsement of the Treasury, and this may not be forthcoming in cases where the present disadvantageous position of England with respect to exchange would be accentuated. But despite this, opportunities and facilities for private trading between Canada and Great Britain will steadily increase from this time forward. It is expected that Canada will be given a representative on the International Maritime Transport Council, probably Lloyd Harris, chairman of the Canadian Mission to Great Britain.

Wooden Shipbuilding in Canada for Foreign Countries.

Following is a complet list of licenses granted by the Dominion Marine Department up to Dec. 9, 1918, for building wooden steamships for export:—

1918.	Builder.	Vessels.	Tons d.w.	For
Mar. 11	British American Shipbuilding & Engineering Co., Vancouver, B.C.	20 steamships	3,000	Norway
June 3	LeClaire Shipbuilding Co., Sorel, Que.	4 aux. schooners	1,200	Norway
July 18	Three Rivers Shipyards, Ltd., Three Rivers, Que.	25 vessels	3,000	France
July 18	LeClaire Shipbuilding Co., Sorel, Que.	3 motor vessels	1,000	Norway
Aug. 5	Cholberg Shipyard Co., Victoria, B.C.	3 steamships	1,500	Norway
Sept. 6	LeClaire Shipbuilding Co., Sorel, Que.	2 aux. schooners	1,200	Norway
Sept. 12	Davie Shipbuilding & Repairing Co., Lauzon, Que.	12 steam barges	1,500	France
Sept. 12	—Fraser, Brace & Co., Montreal	8 steam barges	1,500	France
Sept. 12	New Westminster Engineering & Construction Co., New Westminster, B.C.	5 steam barges	1,500	France
Sept. 12	Wm. Lyall Shipbuilding Co., Vancouver, B.C.	8 steam barges	1,500	France
Sept. 12	Pacific Construction Co., Port Coquitlam, B.C.	2 steam barges	1,500	France
Sept. 12	Northern Construction Co., Vancouver, B.C.	5 steam barges	1,500	France
Sept. 12	National Shipbuilding Corporation, Three Rivers, Que.	10 steam barges	1,500	France
Oct. 12	Foundation Co., Victoria, B.C.	20 steamships	3,000	France
Oct. 12	Davie Shipbuilding & Repairing Co., Lauzon, Que.	1 steamship	1,500	Greece
Nov. 2	New Westminster Engineering & Construction Co. New Westminster, B.C.	3 steamships	3,200	Belgium
Nov. 2	Northern Construction Co., Vancouver, B.C.	4 steamships	3,200	Belgium
Nov. 2	Pacific Construction Co., Port Coquitlam, B.C.	3 steamships	3,200	Belgium
Nov. 15	Pacific Construction Co., Port Coquitlam, B.C.	2 steamships	2,800	Greece
Nov. 17	Wm. Lyall Shipbuilding Co., North Vancouver, B.C.	6 aux. schooners	2,500	Belgium
Dec. 19	—LeClaire Shipbuilding Co., Sorel, Que.	2 aux. schooners	1,200	Norway
Dec. 19	—LeClaire Shipbuilding Co., Sorel, Que.	2 aux. schooners	1,200	France

Total, 147 vessels; 339,100 tons d.w. capacity.

The Deputy Minister of Marine on the Shipbuilding Contracts.

Alex. Johnston, Deputy Minister of Marine, is reported to have stated to the Toronto Globe's Ottawa correspondent recently that in concluding contracts for 45 steel steamships, with an aggregate tonnage of 263,850 tons d.w., to cost $52,691,450 in all, the department contended that it had made arrangements as good as could possibly be made in this country. Mr. Johnson referred to a statement made recently by C. F. Piez, now at the head of the U.S. Emergency Fleet Corporation, when giving testimony before a Senate committee at Washington, to the effect that the cost of ships in construction in the U.S. would be $225 a ton.

"But why should the price in Canada and the U.S. be so much more than it is in the British Isles?" he was asked.

"It is almost entirely on account of the greater cost of labor to us," said Mr. Johnson. "Just to show you the impossibility of our producing vessels at the same price as they do in the British Isles, let me quote you some comparative figures of wages paid in our shipyards and in those of Great Britain. Shipwrights in Great Britain are paid $16.50 a week of 50 hours, while in Vancouver, for less efficient labor, we have to pay $36.30 for a week of 44 hours, an increase of 120%. In the lake yards $34.45 is paid to shipwrights, and in Montreal $27.80. This is not an isolated instance, but applies to all kinds of shipbuilders. Take riggers, who get $13.20 a week of 50 hours in Great Britain, while in Vancouver they are paid $33 for a 44-hour week, or 140% more; in the lake yards $31.50 a week is paid to riggers. Machinists, who get $14.40 a week of 50 hours in England, get $29.25 in Montreal, $35.75 a week in Port Arthur and the lake yards generally, including Toronto, and about the same on the Pacific coast. Riveters are paid $15.55 for a 50-hour week in England, and $33 generally throughout Canada."

"Is there a similar difference in the price of steel?" he was asked.

"Our information is that the price of steel in Great Britain is $53 a ton delivered to shipyards, whereas steel is being delivered at Vancouver for $102.25 a ton, at Port Arthur for $89.37, at Toronto for $78.84, and at Montreal for $96.89."

On being asked to explain the difference between the price at Pittsburg for steel plates of $65 a ton and the guaranteed price to the new ship plate mill being erected in Sydney at $85 a ton, Mr. Johnson said: "You must remember that we made that arrangement before there was any prospect of an armistice, and when the military situation was such that an early ending of the war was very improbable. It was a war expenditure, which we would not have been justified in neglecting at the time. The situation in the U.S. at that time was such that we succeeded in getting only 6,000 tons of plates from March last to the time the armistice was signed. The united efforts of the Marine Department, the War Trades Board and the Canadian War Mission at Washington could not make it any better than this, and if the war had continued the situation would have been worse instead of better. It was intimated to us on more than one occasion that, instead of looking for an improvement, we could expect worse deliveries. The efforts of R. H. McMaster, who was on the Canadian War Mission at Washington, deserve all praise, as through his efforts we got more than we could possibly have obtained otherwise under those circumstances. If the shipbuilding industry were to continue in Canada we had to have a mill to manufacture our own plates.

"You say that we will have to pay $85, when U.S. plates will be offered at $65, and we must admit that at once, it is regrettable and unavoidable. We had to do it at the time, and the extra price which we will continue to pay in peace times is really a war expenditure, in that we agreed to pay it on account of conditions made by the war. However, it made the establishment of that industry possible, and will help it to establish itself in the next five years, the price diminishing every six months if the cost of ingots as determined at the end of each six months' period justifies it."

Questioned as to the ratio between the cost of labor to that of material in the construction of ships, Mr. Johnson said that the cost of labor in producing certain sets of boilers and engines amounted in England to $43,140, compared with $95,000 in Canada, while the materials for the same engines and boilers in Great Britain would cost $98,600, and in Canada approximately $160,000.

"Mr. Piez told the U.S. Senate committee in his evidence that England was paying $140 a ton. Taking into account the differences in the cost of material and labor here, and the experience of shipbuilders here that labor in England is 25% more efficient, you will see that $199 a ton as an average condition price is far from being exorbitant. The United States pay more than we do, and their labor costs about the same. They get their steel for the same price at the mill, but the freight is cheaper. The freight rate from Pittsburg to the coast is $13.80 a ton, and to Halifax only $11.87 a ton."

It is probable that the plate mill at Sydney will compete at market prices with U.S. mills in Canada and the U.S. for business over and above the Government's requirements. When normal conditions are restored, and there are abundant supplies of steel, coal and ore to enable the general steel plant at Sydney to maintain a maximum production, the cost of producing pig iron and steel, and consequently the cost of producing ingots, will decline. Under the government contract it will get the benefit of any decline in the price of steel ingots which these or any other conditions may bring about. There is little probability, however, that the price paid by the government will ever get as low as the market price until five years have gone by. The government's requirements will not be only for ship's plates, but for plates for many railway purposes as well. Until the ship plate mill begins manufacturing next autumn the government will have to depend on supplies from the U.S. Last autumn delays in deliveries held up shipbuilding, but hereafter no such trouble is anticipated by Mr. Johnson.

W. Grant Morden, of the Canada Steamship Lines, London, Eng., Advisory Committee, has been elected to the British House of Commons for the Brentford and Chiswick Division of Middlesex as a supporter of the Unionist Government.

The North Atlantic Passenger Services.

Belfast, Ireland, press despatch, Dec. 20, 1918.—Contrary to what had generally been anticipated, some large liner tonnage is coming off the ways of British shipyards. Since the signing of the armistice half a dozen large ships have made their maiden voyage or are about to do so.

Recently among the British men filtered the information that some months ago the British Admiralty decreed that naval construction was in such shape as to permit a switch from naval to mercantile construction. On the strength of this the British shipyards quickly proceeded, it is stated, to complete liner tonnage contracted for long ago, and left in various stages of completion.

The White Star and Dominion lines figure chiefly in the most recent liner deliveries. The Vedic, a new White Star steamship, is a 10,000 ton vessel, and will be operated in one or other of the line's North Atlantic services. The Vedic, which has not yet made her maiden trip to America, was built at the Queen's Island Shipyard of Harland & Wolff, Belfast.

The Dominion Line has two new ships, the Regina, 16,314 gross tons, and the Rimouski, of 10,000 tons, both built by Harland & Wolff. The Rimouski is a sister ship of the Vedic. Besides being important cargo carriers both the Vedic and the Rimouski will carry one-class passengers, these boats having been specially designed to provide accommodation for those desiring to travel comfortably, but economically.

Another new liner delivered recently by Harland & Wolff is the Minnedosa, of the Canadian Pacific Ocean Services. She is a vessel of 14,000 gross tons, with triple screws. She left Liverpool on her maiden trip Dec. 5, and reached St. John, N.B., on Dec. 14, carrying 808 troops and 498 civilians. The Minnedosa is a sister ship of the Melita, which first crossed the ocean in Jan., 1918.

The Alsatian, 18,000 tons, the largest vessel in the Canadian Pacific Ocean Services fleet, will probably be returned to her regular run in the near future. The Empress of Britain will also be restored shortly to the Canadian North Atlantic service. On the other hand, the Empress of Asia and the Empress of Russia will return to the trans-Pacific run.

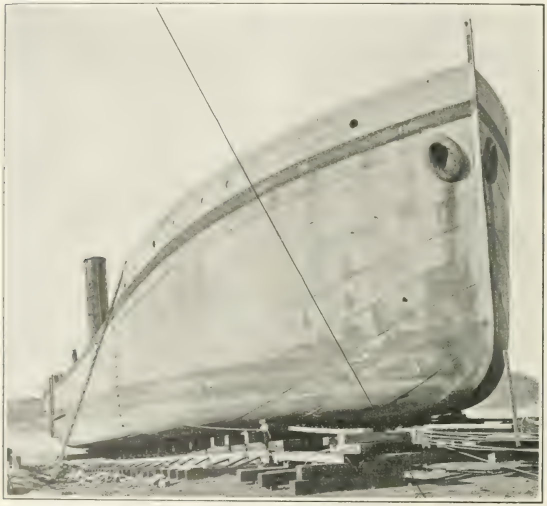
Other liners of the C.P.O.S. which have survived the war are: the Virginian, 12,000 tons; the Victorian, 12,000 tons; the Metagama, 12,000 tons; the Scandinavian, 12,100 tons; the Grampian, 10,187 tons; the Scotian, 11,000 tons; the Corsican, 10,000 tons and the Tunisian, 10,000 tons. Sunk during the war were: the Calgarian, 18,000 tons; the Missanabie, 12,000 tons; the Hesperian, 10,920 tons, and the Ionian, 9,000 tons.

St. Lawrence River Improvements Temporarily Disapproved by U.S. Authorities.—A report submitted to Congress by the War Secretary, Dec. 16, contained the statement by the Chief of Engineers, that "until the actual completion of the enlarged Welland Canal, and [illegible] of the deepening of the Canadian St. Lawrence River channel and canals from St. Regis to Montreal indicate a reasonable [illegible] by vessels of deeper draft than those now on the Great Lakes, any proposed improvements in the St. Lawrence River between [illegible], N.Y., and Montreal, to make those waters navigable for ocean going vessels, be disapproved.

Conversion of an Ocean Steel Dredge into a Freight Steamship at Levis, Que.

An interesting operation in marine work was carried out recently by the National Shipbuilding Co., of Goderich, Ont., at its St. Lawrence dock, Levis, Que. Having undertaken to convert an ocean going steel dredge into a freighter for French shipowners, a quick delivery being especially called for, and there being no drydock available in which to carry out the work, the company decided to bring the vessel out of the water on a marine railway.

A site having been selected on the St. Lawrence River opposite Quebec, active operations were commenced on the construction of the slipway, together with all the necessary shops and buildings required in a modern shipyard. Owing to the impossibility of securing the necessary machinery and appliances for a regular marine railway in the limited time available, it was decided to use greased ways, instead of the usual steel rollers. The grade of the slipway was fixed at 4%, and it was found that if advantage was taken of the highest tides for floating the vessel on to the cradle, a total vertical lift of 11 ft. would be sufficient to ensure the stern being above high water mark for the balance of the season. This lift, on a 4% grade, fixed the hauling distance as 275 ft. and the length of the slip at 508 ft. (viz., length of ship 233 ft., plus haul 275 ft.). The length of the slip, however, was subsequently reduced to 485 ft., as the bow of the ship was allowed to overhang the cradle by 23 ft.



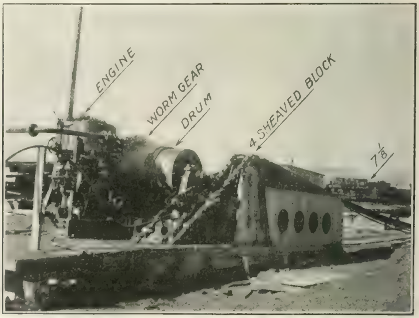
Dredge Galveston, being hauled up the marine railway.

The site selected for the operations contained a wharf of sufficient width to allow of the upper portion of the slip being excavated for a length of 225 ft., the material with which the wharf had been filled originally being shale debris from the adjoining cliffs, provided a good foundation for the ways. Beyond the wharf, soundings taken in the river showed from 4 to 5 ft. of mud and blue clay overlying the rock, and although it would have been preferable to have carried the foundation of the ways down to rock, it was realized that as work could only be carried on during low tide, it would require the remainder of the season to clear the site, consequently the mud only was removed and the cross timbers laid on the blue clay, which on closer inspection proved quite suitable for a solid foundation.

The cross timbers, 12 x 12 in. x 40 ft. long, of B.C. fir, were laid at 4 ft. centers, the next course above being composed of longitudinals, and above this cross timbers again, the whole cribwork being filled in with rock and shale from the wharf excavation. The standing ways were constructed of two 12 x 12 in. oak baulks bolted together with 1 in. bolts at 5 ft. centers, the bolts also passing through the 6 x 15 in. oak guides fixed on the outside of the ways and projecting 3 in. above the surface of same to hold the sliding ways in position.

A center way was also provided for a certain distance, to carry the stern of the vessel where the engines and boilers were situated, and where the lines of the hull did not allow of it being supported on the side ways. The sliding ways carrying the cradle, 210 ft. long, were also of oak, a center way 75 ft. long being also provided to carry the stern of the vessel where the greatest weight was concentrated. Timbers 12 x 12 in. x 24 ft. long were laid across the sliding ways at 10 ft. centers, with short blocks in between, so that the vessel would be supported by blocking at 5 ft. centers throughout the length of the cradle. This blocking was carried up to a height of 4 ft. above the standing ways at the after end of the cradle and 2½ ft. at the forward end,

Construction of the cradle at low tide, for hauling up the Dredge Galveston.



Hauling apparatus, engine, worm gear, drum, 4-sheaved block, ⅞-in cables.

these heights being fixed by the draught of the vessel fore and aft and the estimated elevation of the tide on the day fixed for the hauling operation. A margin of 2 ft. was allowed between tide and darught for clearance and vagaries of tides, which were found to vary considerably from the tide tables when the wind was in certain directions.

During the construction of the slipway a large gang was employed cutting away and removing all parts of the vessel not required in the reconstruction; the engines and boilers, however, remained in position, and the total weight when placed on the cradle was approximately 1,000 tons, the dimensions of the vessel being 233 ft. between perpendiculars and 39 ft. beam.

A somewhat difficult problem to solve was the pull required to overcome the initial inertia on greased ways on a 4% grade, though it was considered that once this inertia was overcome the coefficient of friction would not be higher than .10, which, on the 4% grade, represented a total pull of about 140 tons. This difficulty, however, was successfully overcome in the manner described later on in this article. The hauling engine and drum were bolted down to a heavy concrete foundation, weighing approximately 150 tons, and also anchored back to same with 1¾ in. steel rods. Two 2½ in. steel cables were attached to the rear end of the cradle, and passed forward beneath same to the forward end, where they were shackled to two heavy 4 sheaved steel blocks; $\frac{7}{8}$ in. steel cables were reaved over 3 sheaves in each block, making a 7 part line on either side, extending to similar blocks fixed in front of the winding drum, the distance between the blocks being 313 ft., each cable being 2,500 ft. long. The cradle was erected in position at the lower end of the ways and weighted with rails and rock; 3 timber uprights bolted on one side of same 50 ft. apart and exactly 19½ ft. from the centre line, acted as guides for bringing the vessel into correct position, a fourth one being fixed on the centre line 23 ft. forward of the cradle for locating the position of the bows.

The high tide, occurring at night, made the operation a more difficult one. The vessel was warped into position by cables attached to the wharf on one side and to an anchor and tug on the other, and at 8 p.m. (high tide) was over the submerged cradle, at 8.45 the bows had settled on the blocks at the forward end, and at 9 p.m. the hauling winch commenced to pull on the cradle. As almost the entire weight of the vessel was still water borne, the initial inertia was small and easily overcome, and the cradle moved forward up the ways, with the vessel gradually settling down on same until entirely supported. During this operation very great care had to be exercised in manipulating the mooring cables at the stern, which was subsequently found to have settled within a few inches of the center of the blocks. The cradle steadily mounted the ways, with its huge burden, until the entire hull became visible, looking in the dim light like some monster of the deep rising from the sea with the water dripping from its sides. The total distance of 275 ft. was covered in 40 minutes, at a mean speed of approximately 7 ft. a minute, and the vessel was high and dry in position adjacent to the shops all ready for reconstruction work. No camber had been given to the ways, but there was no settlement, neither was anything displaced or broken.

Dredge Galveston, in yard, after having been hauled up the marine railway.

In the accompanying illustrations the vessel is shown stripped of bulwarks, bridge deck and all top hamper down to the main deck. The alterations and reconstruction call for increasing the moulded depth by 8 ft., remodelling the stern, new bottom for half the length of the vessel, construction of cargo holds, crew quarters, etc., providing masts, booms, deck winches and all fittings necessary for relaunching completely ready for sea. Within 2½ months of taking possession of the site the necessary machine shops, carpenter shops, moulding loft stores, offices, etc., had been installed and the vessel brought out of the water. The operations here described were carried out under the direction of D. A. Andrus, the company's Manager and Engineer at Levis.

The Gulf of St. Lawrence Shipping & Trading Co., Ltd., the incorporation of which, with $1,000,000 capital and office at 147 Mountain Hill, Quebec, Que., has been announced previously, is reported to have been granted a subsidy by the Dominion Government for a steamship service during the navigation season, for 5 years, to 1923, at $70,000 a year, to operate 4 vessels to the west shore of Newfoundland, making four trips a month, and one trip to Gaspe, Prince Edward Island and Pictou, and one between Pictou and Magdalen Islands, on a semi-weekly schedule. One steamship, Gaspe, was operated at the end of the past season, and it is said that arrangements are being made for the chartering or purchasing of other vessels for service in the spring. The company intends doing a general trading business, in addition to carrying on a passenger, mail and freight service. The officers are: President, C. A. Barnard, K.C., Montreal, a director of Canada Steamship Lines, Ltd., and President, Davie Shipbuilding & Repairing Co., Lauzon, Que.; Vice President, A. E. Doucet, Quebec, formerly District Engineer, National Transcontinental Ry.; Secretary-Treasurer, H. P. Hamel, Quebec; Marine Superintendent, Capt. J. E. Bernier, Arctic explorer; General Manager, J. de S. Bosse.

Steamship Corinthian Wrecked.—Canadian Pacific Ocean Services' s.s. Corinthian, outward bound from St. John, N.B., from Glasgow, Scotland, with general cargo, on Dec. 14, struck on [illegible] Ledge, commonly known as the northwest ledge, Brier Island, at the entrance to the Bay of Fundy, and became a total loss. The crew of 86 were rescued Dec. 15, by the Dominion Government s.s. Aberdeen and patrol s.s. Festubert. The weather at the time of the casualty was reported as dense fog with a heavy sea running. The master reported that when he left the vessel, the holds were full of water, and that it was impossible to salve anything. She was built at Belfast, Ireland, by Workman, Clark & Co., in 1900, for the Allan Line, and was 446 ft. long, with a gross tonnage of 7,332. Included in the cargo was 120,000 bush. of wheat. An enquiry was held at St. John, N.B., Dec. 20, when it was reported that the court had decided that the loss was due to indifferent seamanship, and suspended the certificate of the master, Capt. Tannock, for three months, and that of chief officer [illegible] for six months.

Dry Dock for Vancouver.—It is reported that a company is about to apply to the Dominion Government under the Drydock Subsidy Act for a subsidy for the construction of a first class drydock at Vancouver. The report states that the interests concerned in the proposed company include the Wm. Lyall Shipbuilding Co. and the Pacific Construction Co., both of which carried out wooden shipbuilding contracts for the British Government, through the Imperial Munitions Board, and are now building wooden steamships for the French Government. So far as the Pacific Construction Co. is concerned, Stuart Cameron, Vice President, is reported to have stated Dec. 13, that this is an old story revamped, that the company has no plans in this connection whatever, and though it has been asked to consider a proposition, nothing at all has been decided. Some years ago the company carried on some investigations with the view of establishing a dry dock on the north shore.

Steamship Control Relinquished in United States.—The Clyde, Mallory, Merchants & Miners and Southern Steamship Companies were relinquished from U.S. federal control Dec. 5 by order of the Director General of U.S. Railroads. Steamship companies owned by railways will be retained under management of the Railroad Administration. The four lines turned back to private management were taken over by the government, April 13, under war powers of the President, and their operation consolidated with other steamship lines under the Railroad Administration.

Manchester Liners, Ltd., report for the year ended June 30, 1918, mentions that the operations were satisfactory. All of the company's vessels were under requisition and operated on government account, though several were retained in the Canadian trade. The fleet, at the outbreak of war, consisted in 15 vessels, and of these, 8 were sunk by mines or submarines. Two new vessels were built, and five others were purchased. The new vessels, Manchester Brigade and Manchester Division, with capacity for 9,000 tons each, were both in Montreal during the past season.

Among the Express Companies.

Robt. J. Timpson, heretofore stenographer, has been appointed chief clerk, Superintendent's office, Canadian Ex. Co., Toronto. He entered the company's service Feb. 5, 1907.

Canadian Railway and Marine World for November, 1918, announced that J. H. Chadwick had been appointed agent, Canadian Northern Ex. Co., Edmonton, Alta. We have been officially advised that this is incorrect, J. H. Morrison being the company's agent there.

John T. Madigan, heretofore chief clerk, Superintendent's office, Toronto, has been appointed route agent, Canadian Ex. Co., Hamilton, Ont. He entered the company's service Dec. 1, 1911, as clerk in the Superintendent's office at Toronto, and was promoted to chief clerk Nov. 18, 1912.

F. G. Airy, who was, until recently, in charge of the joint agency, maintained in New York, by the various companies operating in the U.S., for the purpose of publishing tariffs in which all the companies were interested, is now chief clerk in the American Railway Ex. Co.'s tariff bureau.

The Board of Railway Commissioners has fixed hearings for the application of the Express Traffic Association of Canada, on behalf of all express companies operating in the Dominion, for an increase in rates, for the following dates: Jan. 7, at Ottawa; Jan. 13, at Toronto, and Jan. 16, at Montreal.

Henry Samuel Julier, who retired as Vice President and General Manager, American Ex. Co., New York, a few years ago, and Mrs. Julier, celebrated the 50th anniversary of their wedding, Dec. 15. In his early days of service with the company, he was train messenger on the old Buffalo & Goderich Ry., prior to its acquisition by the G.T.R. On his retirement from active service, he was one of the most widely known express officials on the continent.

The Court of Review at Montreal gave judgment Dec. 19, on Omer Jolicoeur's appeal against the Dominion Ex. Co., claiming $150 for the loss of a trunk and contents, in transit between L'Epiphanie and Montreal, Aug. 13, 1917, in favor of the appellant, thus reversing the Superior Court's judgment, which limited the company's liability to $50, in accordance with the company's conditions as set out on its receipt form. The appellant claimed that the conditions were printed in English, which he did not understand, that they were not explained to him, and that the law required the conditions to be printed in both English and French, which contentions were upheld by the Court of Review.

Telegraph, Telephone and Cable Matters.

The Bell Telephone Co.'s application for increased rates will be heard by the Board of Railway Commissioners at Ottawa, Jan. 8; Toronto, Jan. 13, and Montreal, Jan. 16.

C. W. Macdonald, local agent, C.P.R. Telegraphs at London, Ont., since 1911, has been appointed chief operator at Montreal, and N. Souch from the Toronto office has been appointed local agent at London, Ont.

The Great North Western Telgraph Co. has opened offices at Cartierville, Grenville, La Forest, St. Andrews East and St. Benoit, Que.; Ostrom, Ont., and has closed its offices at Mechanics Falls, Me., Beaumaris, Bedford Mills, Rosseau and Smiths Falls, Ont.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Edison Storage Battery Co., Orange, N.J., has appointed G. F. Simons, District Sales Manager, Detroit District, succeeding Bertram Smith, who has been appointed Assistant General Sales Manager, at Orange.

V. I. Smart, B.A., C.E., formerly Professor of Railway Engineering and Transportation, McGill University, and J. A. Burnett, E.E., formerly Electrical Engineer, G.T.R., have associated themselves as consulting civil, electrical and mechanical engineers. Office, 821 New Birks Building, Montreal.

The Brown Hoisting Machinery Co., Cleveland, Ohio, announces the following changes in its organization:—Harvey H. Brown, Chairman of Board of Directors; Alex. C. Brown, President; Melvin Pattison, Vice President, General Manager and Director; Robt. G. Clapp, director; John F. Price, director; Ewen C. Pierce, General Manager of Sales.

Edison Storage Battery Co.—Bertram Smith, heretofore District Sales Manager, Detroit District, has been appointed Assistant Sales Manager, at the main office, Orange, N.J. J. K. Mahaffey, who has been representing the company in Washington, D.C., in connection with Government business, has been appointed District Sales Manager, Pittsburg District.

Vapor Car Heating Co.—R. P. Cooley, heretofore in charge of sales in southwestern region, at Chicago, has been appointed Eastern Sales Manager, at 30 Church St., New York, N.Y., succeeding G. T. Cooke, resigned. N. T. Burns, formerly with the New York Central Rd., has been appointed to the Vapor Car Heating Co.'s sales department at Chicago.

Robert W. Hunt & Co.—A reception was held at Chicago, Ill., Dec. 9, in honor of the 80th birthday of Robert Woolston Hunt, President, R. W. Hunt & Co., and a memorial was presented by the board of direction of the American Institute of Mining Engineers, congratulating him on "his notable achievement as a pioneer in the manufacture of iron and steel, and his long and admirable service as a pracical director and as a wise critic and counsellor in that art." Other congratulatory messages were received from other engineering societies. He established his bureau of inspections, tests and consultation, in Apr., 1888, was President of the American Society of Mechanical Engineers in 1890, and of the American Society for Testing Materials in 1912, and in the last mentioned year, was awarded the John Fritz medal for his contributions to the early development of the Bessemer process.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, 70 Bond Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, 305 Boyd Block, Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Railway War Board—W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 553 Church Street, Vancouver, B.C.

LACHINE, JACQUES CARTIER AND MAISONNEUVE RAILWAY COMPANY.

Notice is hereby given that the Lachine, Jacques Cartier and Maisonneuve Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time for the completion of the construction of the railway referred to in section 1 of chapter 55 of the Statutes of 1917, and for other purposes.

Dated at Montreal, this 25th day of November, A.D. 1918.

W. H. BIGGAR,
Solicitor for the applicants.

Canadian Railway and Marine World

February, 1919

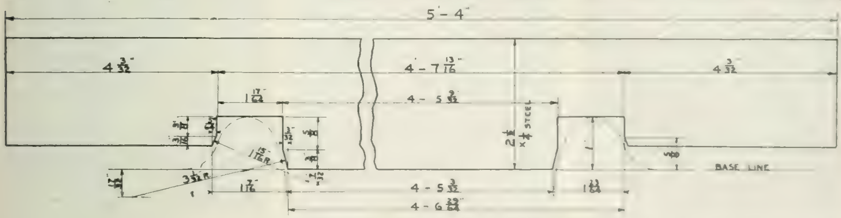
Railway Car Trucks.

By L. Brown, Supervisor, Angus Car Shops, Canadian Pacific Ry.

A car truck is mechanically a small 4 or 6-wheel car under each end of a railway car and carries the latter as a dead load by means of two swiveling center plates connected by a center pin or king bolt. The purpose of the truck is to enable short wheel bases to be used in connection with long car bodies. In England such trucks are called bogies.

Trucks form an important part of railway car equipment. Their weight is approximately one-half that of the body or one-third of the total weight of the car. If they are good, almost any kind of car has a reasonable chance of reaching its destination safely, but when they fail, the result is usually a train wreck with serious loss. They are located near the ends of the cars, so that they will be near the draft gears, and one of the ideals for a draft gear would be for it to pivot directly over the center of the truck. The farther the draft gear is away from the center of the truck, the more strain is placed on the truck laterally, and consequently there is more danger of derailment. The trucks in further relation to the car body are as the supports of a bridge are to the superstructure, but they are also required to be capable of moving forward and backward, rotate horizontally under the superstructure, adjust themselves to uneven tracks and withstand severe strains from heavy loads, high speeds and sudden stops.

The usual construction of trucks consists of two or more pairs of wheels, each pair being connected together by an axle, and the axles are held together by a frame, which carries springs and other parts on which the car body rests. The wheels have smooth rolling surfaces and they are kept from sliding down inclined track rails by the friction caused by their own weight and by the load they carry, and are prevented from slipping off the rails sideways by their flanges, which engage with the inner edges of the rails. The larger the diameter of the wheel, the less revolutions there are at the journals and the better the bearing on and against the track rail. The materials of which wheels are usually made are cast iron for freight cars and steel for passenger cars. Cast iron wheels are much cheaper than steel wheels and give excellent service under heavy loads running at moderate speeds, but they have not the tenacity to withstand shocks like those made of steel. The treads of cast iron wheels are chilled while in the molten state of casting, which gives them a harder wearing surface than the best steel has. The hubs are soft like ordinary cast iron and can be easily bored to fit the axles. Steel wheels are usually made by being forged, but some are cast. Some makers of light cast wheels endeavor to get a hard wearing tread as in the cast iron wheels by mixing manganese in the molten steel, in such a way that it will appear in the tread but not at the hub. The forged wheels are made with thicker treads, so that they can have their wearing surfaces renewed repeatedly, and this to a considerable extent offsets their larger cost when new. Tires which can be replaced by other tires after they are worn out are largely used on steel centers, and in some cases on cast iron centers. The usual method of securing tires is to bore them about one thousandth smaller in diameter than the outside of the centers and then by heating so expand them that they will fit over the centers and tighten on them as they cool. If the tire is shrunk on much tighter than mentioned, the steel is too much strained and is liable to break or the tire becomes loose in service.



The wheels are mounted on the axles by hydraulic pressure of approximately 10 tons for each inch of wheel seat diameter, thus making them solid with the axles, which is very different to the method used on road vehicles, where the wheels usually rotate on axles which are fixed. The distances apart at which wheels may be mounted on axles is limited to a total variation of one-eighth of an inch, which makes it necessary for very careful work to be done, not only when mounting, but also when [illegible] flanges, boring hubs and [illegible] axles.

The M.C.B.'s standard mounting and check gauge for wheels is used in two ways: by measuring from the back of one flange to the throat of the other, when mounting; and by measuring between the backs and over the throats of the two wheels, when checking, after they have been in service. The method of measuring when mounting is correct, but the method of measuring when checking wheels in service is open to question because it allows wheels to be out of gauge, according to fig. 9 on pg. 69 of the M.C.B. rule book. The rule book may be wrong in stating so positively that wheels are out of gauge if more than 4 ft. 6 29/64 in., because wheels when mounted to this dimension exceed it as soon as the treads start to wear. The distance of 4 ft. 6 29/64 in. is a standard dimension and if wheels do not exceed it when mounted, they ought not to be condemned for exceeding it in service, as long as they are within the limits intended by the check gauge. That the check gauge does the work it is intended to do is not apparent when wheels which have been correctly mounted are condemned as soon as the treads start to wear, because on account of its design it condemns the wheels when it cannot touch the treads of both of them and that this is wrong is proved by the fact that a large proportion of wheels in service are running safely which would be condemned by the gauge if it was tried on them; also, the gauge cannot measure on worn wheels the distance of 4 ft. 5 3/32 in. at the original base line, as required by fig. 9, on pg. 68 of the rule book. Worn wheels are intended to be limited by the wheel defect gauge, and the purpose of the check gauge should be limited to providing that wheels which were correctly mounted shall not be condemned by it, unless they move from their original locations in relation to each other. This purpose can be accomplished by a gauge of the same limiting dimensions as the present gauge, but stopped by the apex of the wheel flange instead of by the tread. In cases of derailment, the blame is very liable to be unjustly put against the wheels by the present gauge.

A small mounting defect will cause the flange of the opposite wheel to gradually wear itself away against the inside edge of the track rail. A wheel with a sharp flange is dangerous, because of the greater liability for the flange to break off and also to mount the rail and climb a [illegible]. Sharp flanges are generally caused by wheels of unequal diameter being mounted on the same axle. The treads of the wheels are coned and the larger wheel in finding a diameter equal to the smaller wheel tracks nearer the outer rim thus forces the smaller wheel to track nearer the flange. Curvature of tracks also has considerable effect in causing sharp flanges. The wheels on one side of a six wheel truck are frequently forced ¾ in. out of line with each other, by the curvature of the track rails. A great saving of material in steel wheels can be made by taking those with worn flanges out of service before they reach the limits allowed by the M.C.B. wheel defect gauge. Steel wheels are frequently found on which the flanges are so much worn that ¾ in. of metal has to be turned off the tire thickness in order to restore the tread and flange to the standard shape, while the opposite wheel on the same axle, which generally wears hollow, does not require more than ¼ in. to be turned off. When we consider that ⅛ in. of tire thickness is worth a day's wages, it is well worth while to inspect wheels closely under cars at home terminals for evidences of worn flanges. The M.C.B. wheel defect gauge is the only gauge in regular use for detecting worn flanges, but it was primarily intended for limiting the wear on cast iron wheels which cannot be re-turned, and it is unsuitable for gauging the flange thickness on wheels which can be re-turned, because it allows such wheels to get in the condition before mentioned. A very suitable gauge for limiting the flange wear of wheels which can be re-turned is the M.C.B. flange limit gauge for remounting cast iron wheels for cars of 80,000 lb. capacity and over. When the bottom inside corner of this gauge (which is nearest the throat of the wheel flange) rests on the wheel tread, the flange is usually so worn that seldom more than ⅜ in. is required to be turned off to restore the standard shape. The use of this gauge will save further waste of good material and frequently prevent the necessity for remating wheels. A similar advantage, but somewhat less, could be obtained by limiting the worn vertical height of flanges to ⅞ in. instead of 1 in. on wheels which can be re-turned.

The axles are made of steel, and are of sufficient strength to carry the loads, and to withstand the shocks they are liable to get under ordinary conditions. The shocks received from the track strain the axles as much as the load. All other parts of the truck which have to carry the load of the car should be proportionately strong with the axle. The whole load of the car is distributed on the axle journals, which are located outside the wheels. These are finished smooth, by rolling, so as to reduce friction and prevent heating. Axles are also becoming universally used as a source of power to generate electricity for lighting passenger cars. The revolving axle is harnessed to drive a dynamo which is frequently supported by the truck frame. The journals are enclosed by a metal box which also holds a brass bearing on the journal, a wedge to keep the bearing in place and the oil and waste necessary to keep the journal and bearing lubricated. The purpose of the box is not only to hold these parts, but also to keep out dirt and water. The causes of hot boxes are numerous, but the troubles may generally be attributed to lack of proper movement of the parts in relation to each other, or to lack of proper lubrication. When inspecting journal boxes, it is well to see that they have freedom to move in pedestals, that covers fit well and are tight, that dust guards fit well around the wheel seat, and inside the box, but have freedom to move in the box, that journal collars are not too large nor too small, and that they have no sharp or rough edges to catch or tear the packing, that journals are perfectly smooth and that there is some clearance between the collar and the end of the bearing or between the side lugs of the bearing and the stops for same inside the box, that the bearing is central on the journal, that the wedge is resting on the bearing in proper relation to it and to the box, and that clearance is provided for the wedge to rock on its rounded surface under the top of the box; also that the packing is of good quality, free from grit, well oiled, and well packed in the bottom of the box to a height half way up the journal.

Journal bearings are made of brass because it is much softer than steel, and therefore will not get hot so readily from the friction created in service; but brass is costly and they are lined by a cheaper and softer metal called babbit, which is composed of lead and other ingredients which give it the required hardness for wear, and yet render it soft enough to adjust itself to the varying diameters of journals. Bearings on which the linings have become worn can easily be relined by melting off the old lining, retinning the connecting surfaces where necessary and recasting the old babbit metal as a new lining. It is not to be expected, however, that the new lining will adhere to an old bearing, as well as to a new bearing, on account of the oil which has saturated the brass, therefore, when melting the babbit, the bearing should be made so hot that the tinning will be burnt off and the oil on top of the molten babbit should all be skimmed off before any metal is taken out of the caldron to be recast. Grooves on each side of the inside of the bearing are good to form keyways for the lining so that it cannot move out of place should it become loose, but this is not provided for in the M. C. B. standard designs. Some railways re-bore the old brass, thus providing a surface practically as good as on new brass.

Journal bearing wedges or keys are made of steel, either cast or drop forged, and others are made of malleable iron. Wedges partially hollow on the tops came into use a few years ago, but have since been condemned on account of the ribs bedding into the tops of the boxes and thus doing away with the usefulness of the camber on the wedge, which is designed to eliminate the strains caused where the two track rails are not of equal height in relation to each other.

Journal box packing should act like a lamp wick, so that it will keep the oil continually in contact with the journal. In order to do this, the packing should not only be in sufficient quantity to reach the journal, but it should have the quality of permanent springiness, as packing which sags soon loses contact with the bearing. It is for this reason that wool waste is better than cotton. Packing which has been in service gets clogged and lumpy, and contains dirt, cinders and metal, which not only interferes with the process of lubrication, but injures the journal. Such packing should be removed and renovated when cars are undergoing repairs. The renovating process is done by heating the packing so that it will loosen and allow the solid matter to fall apart.

Dust guards should be capable of keeping dirt and cinders from entering the back of the journal box at all times. They should fit close to the axle, but without injuring it. The height and width should be such that they will have as much freedom to move in the slots in the boxes as the axles have, but the thickness of the guard should almost fill the slot. The method of closing up the top of the dust guard slot in the box with a piece of tapered wood seems to leave something to be desired, as the blocks are frequently missing.

Truck frames have to transmit the load of the car to the axle journals and have to take the shocks from the track in return. They have also to keep the other parts of the truck in their proper places. There are two kinds of truck side frames most generally used for freight cars, one kind is the arch-bar type, built of rolled steel bars, and the other consists of a steel casting. The arch-bar type has its faults, which are principally that its parts become loose under the severe usage they get. These parts are bolted together, the strains cause the bolts to get loose, and the nuts become slack and eventually there would be numerous breakdowns if inspectors and repair men were not continually on the look out for parts getting slack. The cast steel frames are more expensive, and though they overcome some of the troubles of the arch-bar type, it is more difficult to obtain a casting to replace one that is broken, and also more difficult to put it in place when it is obtained. The welding of cast steel frames which have broken into two or more pieces does not produce good results and should only be used as a temporary expedient, and such frames should be replaced at the first opportunity. Small cracks may, however, be welded with good results. Attempts have been made to rivet the arch-bars together, and, while this is some improvement, it becomes a difficult proposition for repairs to be made at places where there are no facilities for cutting rivets. Other attempts have been made to improve the side frames by using two bolts at each column. This is of some advantage, because by using two bolts or two rivets in line, their size can be reduced with a corresponding increase in the area and strength of the arch-bars. Columns for arch-bar trucks are best made of cast steel because cast iron columns, even if very thick, will not stand the shocks delivered to them, neither will malleable iron castings. The truck frames are also so arranged as to hold the springs which carry the bolsters, and also to provide attachments for the brakes.

The bolsters being supported at the ends only and having to carry one-half of the car body at the center, have to be strong and substantial. There are two kinds of bolsters being made, those built of rolled steel sections and those made of steel castings. Both kinds are giving good satisfaction and it is largely a question of cost as to which is the more satisfactory of the two.

The springs to a large extent reduce the jarring which a car would otherwise get from the track. The helical form of spring is generally made of round steel bars, turned into coils of a uniform diameter, rising one above the other. The strength of these springs increases as the thickness of the steel increases and as the diameter decreases. The adding of coil upon coil simply gives the spring so much more movement and does not increase its strength to carry a load. These springs simply distribute the shocks and do not absorb any of them. Elliptic springs are made of flat steel plates put together in layers and arched. The strength of these springs increases as the thickness and number of the plates increases and as their length decreases. Elliptic springs are no stronger than semi-elliptic springs, and the additional half of the spring simply gives so much more movement and absorbs twice as much shock by the friction between the additional plates.

The center bearing is where the car body rests on the truck bolster. This is located at the center of the truck and is so made that it forms a pivot between the car body and the truck. A pin through the center keeps the bearing plate on the car body from getting away from the truck plate. Some center pins are so designed that they will hold the trucks to the body when the car is derailed. Center plates require lubricating occasionally, which is generally done when cars are being repaired. In order to keep the lubricating oil in place and to form a bearing for the center pin, a wall around the pin hole in the truck plate is a desirable feature.

Side bearings are required to prevent the car from tilting sideways, and as they are located near each side of the truck, they are formed to correspond with the radius from the center. It is not desirable for the car to rest on the side bearing all the time, as it does on the center bearing. If a car is resting hard on its tice to try to maintain an average clearance of from ⅛ in. to ¼ in. at each side bearing. If a acr is resting hard on its side bearings it is more liable to turn the trucks off the tracks. A side bearing should always be ready to receive the load of the car body temporarily, whether on straight tracks or curved tracks, and to move under it with as little friction as possible, and to allow the load to release itself as soon as necessary. There are many designs of side bearings on the market, some of which are very complicated and expensive. It is desirable that they should be simple in construction and have as few parts as possible. Complicated bearings, which are usually designed to be anti-friction, are very liable to get out of order, and their parts get lost and are difficult to replace. The old style of flat bearings, with an oil well in the centre of the bottom part, gives the least trouble to maintain and probably averages greater efficiency than the more complicated roller bearings.

The swing hangers under track bolsters enable the car body to ride more easily over curved tracks. If they are properly set, they become lower on the side of the truck which rises on the outer track rail, and higher as the other side becomes lower on the inner rail, thus allowing the springs, bolsters, and side bearings to maintain a more nearly horizontal position for the car body.

Various roller bearing schemes have been tried and are in quite general use, but they are not a great success, as the rollers tend to bed themselves into the surfaces they come in contact with, or they get clogged with dirt and cinders.

The brakes on a truck are attached to the truck frame, and the power required to stop a car is applied by means of metal shoes being forced against the treads of the wheels, thus retarding their tendency to roll on the rails. Generally, this power is applied at a height a little below the center of the wheel, and on one side of the wheel only, and the force in many cases exceeds the load on the wheel. One reason for applying the brakes on one side only is to have the arrangement of parts as simple as possible, but it is far from being the ideal system. The effect of applying the brakes on one side only, is to force the axle journal to one side of the bearing and for the journal box to wear on one side against the truck frame. A better system is to apply the brakes on both sides of the wheels, and this is known as the clasp brake system. Some of the best passenger cars on this continent are now being equipped with this system, and it has been in use many years in England. It overcomes the bad features of the single sided system already mentioned, and also allows lighter brake beams to be used. One of the troubles with the single sided system is that such great power is applied to the beams that they yield under the strain, and make it difficult to maintain the correct piston travel at the air brake cylinder. Brake beams when new are required to withstand tests equal to the greatest pressure liable to be put on them in service, but it seems necessary that this test should be considerably increased, so that they will be able to withstand the greatest service pressures after they have been in use for years. Trussed brake beams are now becoming universally used for freight cars, as the solid beams deflect too much under heavy cars and are also rapidly failing under light cars. On freight car trucks the attaching of brake fulcrums to the bolsters has a somewhat bad effect, inasmuch as the pressure from the lever causes one side of the bolsters to wear against the columns of the side frames whenever the brakes are applied. This wear is more apparent on trucks which allow the bolsters to have side motion. The suspending of brake beams from the truck frames is much better than suspending them from the bolsters, because the frames move in relation to the wheels and do not have the variable vertical movement which the bolsters get from the springs. Safety supports should be provided for all beams in order to keep them from falling down on the track in case of failure of the ordinary hangers or pins.

Fastenings, such as bolts, rivets, pins, cotters, nuts, nut locks, and other parts requiring replacement, should be located and applied so that they will be conveniently accessible for work to be done on them easily.

The modern truck is made almost entirely of steel, and of course has greater strength and staying qualities than those which were formerly made partially of wood, but it has not that extent of resiliency and feeling of easy riding which is a feature in favor of the wood frame trucks. In order to provide the easy riding qualities of steel passenger trucks, resort is made to cushions of softer material, such as wood or rubber, and these are usually inserted under the center plates and over the springs.

Clearances under all circumstances and at all times are a necessary requirement, and provision for easy adjustment to compensate for wear and movement should be made in the design. Vertical clearances should be provided for springs and bolsters to be free when new and without any load, and for all the moving parts to be free under load, when tires, journals, bearings, pins and springs are at their smallest limits. Horizontal clearances should be provided so that trucks can rotate horizontally on all railway track curves. An approximate figure for horizontal clearances for passenger car trucks and one easy to remember is 1 in. for each foot distant from the center pin. Clearances of parts above the top of track rails should be ample, so that when wheels and other parts are worn down to their smallest limits there will be no danger of anything striking the track. Some track switch parts project 2½ in. above the rails, and all truck parts, with the exception of wheels, should always be kept well above that figure.

Friction between moving parts requires some consideration. Steel against steel soon wears away, and steel against iron is little better. Steel against cast iron is somewhat better, but cast iron against chilled cast iron gives still better results. These effects may be noted between journal boxes and pedestals, columns and bolsters, and upper and lower center plates.

Trucks and their parts should, as much as possible, be kept to one standard for each kind, in order to facilitate interchangeability and expedite repairs. One class of truck can be used under various classes of cars, but what is standard for one railway is too often not standard for other railways, and cars are frequently kept out of service for months waiting for unusual material to effect repairs. The M. C. B. standards should always be followed, unless there is a very good reason to do otherwise, and all railways should take an interest in helping that association to adopt the best practices that ingenuity can devise.

The foregoing paper was read before the Canadian Railway Club recently.

Argentine Railways' Requirements.

The railways of Argentina will spend over $100,000,000 on rolling stock and equipment in the next two years, according to a statement by F. A. Lagrange, Technical Inspector of the Argentine Government Railways. If the manufacturers of American railway supplies will conform to Argentine railway standards, he says, there will be a market for their products, and even the introduction of American standard equipment, though difficult at any time, will be easier in the immediate future on account of the temporary withdrawal of European competition. European manufacturers, he states, will have to give close attention to necessities at home for some years to come.

The moral—can you grasp it?

The complete system of railways in Argentina has about 11,000 miles of track, of which about 6,500 miles are of 6 ft. 5 in. gauge, about 900 miles of 4 ft. 8½ in. gauge, and about 3,600 miles of the 3 ft. 4 in. gauge. The Argentine Government owns about 1,900 miles, or 18% of the total, which is under the direction of the Administracion de los Ferrocarriles del Estado, a board composed of a chief engineer, a chief of explotation and an auditor general. It is presided over by an administrator who is appointed by the President of the republic. The other members of the board are appointed by the administrator. All of the railways are under the control of the "Direccion General de Ferrocarriles" (Argentine Administration of Railroads) which is headed by an Argentine engineer.

During the last four and a half years the railways have been unable to obtain materials, so that their maintenance and reserve stocks are very low and an expenditure of about $100,000,000 for the next two years is probable. In addition to this, extensions are to be built, for several of which there is urgent need. It is expected that they will amount to about 1,000 miles and entail an expenditure of $75,000,000. This is exclusive of the electric lines which will also receive considerable attention.

In conclusion, he points out that although the opportunities are favorable for the introduction of American equipment, the market cannot be gained without a struggle, and that success will depend on close study and sound business principles.

Steel Bridge Replacements on Sydney Subdivision, Canadian Government Railways.

By A. H. Jones, Assistant Engineer, Canadian Government Railways, Moncton, N.B., formerly Resident Engineer, District 4, New Glasgow, N.S.

To take care of the heavy power which the management desired to operate on the Sydney Subdivision, C. G. Rys., the work of replacing 16 steel bridges and viaducts on the line between Point Tupper and Sydney was undertaken by the engineering department in 1915, and is now completed. This section of the Intercolonial Ry. was built in 1887, and consequently the bridges are of a lighter design than the present day requirements, and are not strong enough to carry the heavy locomotives which it is now necessary to operate, in order to economically handle the great amount of freight going to and from the Sydneys in connection with the large steel works, coal mines and other industries located at these points, and also for trans-shipment by vessel to Newfoundland and other places. It has consequently been necessary for some years past to place speed restrictions on nearly all the steel bridges on this subdivision, resulting in a slow schedule and a loss of much valuable time.

It would be impossible to give anything here but a very brief description of the more important portions of this work. Eight steel bridges were replaced with heavier spans during 1916, including the big bridge at Grand Narrows, necessitating in most cases quite extensive alterations to the old masonry abutments and piers. Two steel viaducts have been entirely replaced with steelwork of a heavier design, on new concrete pedestals and abutments, viz., Ottawa Brook and Walker's Gulch, and 5 steel viaducts have been filled in. This extensive bridge replacement work, involving an outlay of approximately $750,000, has made it possible to remove the speed restrictions from all these bridges, and during 1916 we removed the restrictions from 10 bridges.

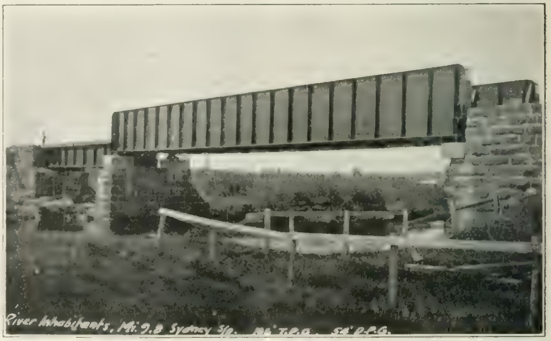
River Inhabitants Bridge, showing new concrete bridge seats.

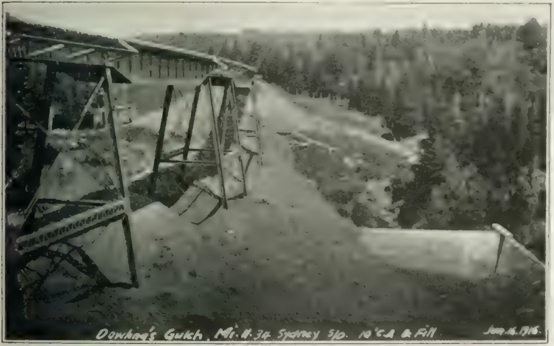
The most interesting part of this work was perhaps the replacing of the old spans of Grand Narrows bridge with heavier ones. This bridge, which is across the narrows between the Big Bras d'Or and Little Bras d'Or Lakes, is one of the objects of special interest to tourists on this section of the C.G.R. It is 1,697 ft. long, or nearly a third of a mile, and consists of 6 through truss spans, each 242 ft. long, and a swing span at the east end of approximately the same length. The piers are of stone masonry and the highest ones are over 80 ft. above the bottom of the lake. The water is very deep, coming up to within 5 ft. of the top of the piers at high water. All the spans of this bridge were replaced with heavier ones during the winter of 1915-16, by the Dominion Bridge Co., which company built the old bridge in 1888. The new swing span is operated by a 4-cylinder, 4-cycle marine engine, located in a cabin overhead in the center of the span, which will open or close the bridge in one minute. The method of replacing these heavy spans—the new ones weighing almost 400 tons each—was as follows: Falsework was driven near the shore, at the east end of the bridge, and just south of the existing structure. Each new span was erected and rivetted up complete on this falsework. When a new span was ready to go in, scows containing water ballast



River Inhabitants Bridge, showing new spans in place.

were floated under the span to be replaced, sufficient water was pumped out of the scows to allow them to raise the span from its seat. Tugs then towed the scows and the old span away to the erection site, where it was deposited on falsework by pumping water into the scows. The new span was then raised and floated into its place on the old piers in a similar manner. The work of replacing the spans could only be done under favorable conditions of wind and tide, which conditions are somewhat rare at this place, and it took from the early part of November to the end of March to replace the 7 spans.

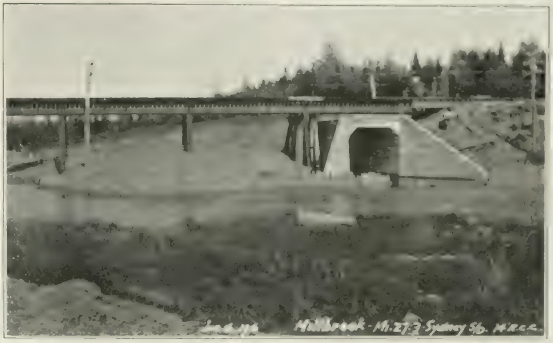
In connection with the new steel bridges put in at Sydney River, River Denys, River Inhabitants, Jamesville Road, Leitches Creek and Ball's Creek, considerable alterations were necessary to the old masonry abutments and piers, on account of the different design of the new bridges. The old bridges, with the exception of Jamesville Road, were of the through pier-connected truss design, and the new bridges are of standard through, or deck plate, guide spans. The masonry alterations consisted of cutting down the old bridge seats to about 1½ ft. below the elevation of the new bridge seat, or to the masonry course nearest to this, and building up a new bridge seat of concrete. The part of the bridge seats immediately under the pier members consisted of concrete blocks, which were cast during the winter of 1915-16 in the locomotive house at Point Tupper and were afterwards taken, as required, to the bridge site and swung into place with a small crane. Later, concrete was run in between the blocks and the bridge seats completed. Thirty-two of these concrete blocks were required in all and each weighed approximately 2 tons. The masonry alterations were made by the bridge and building department, and the new steelwork was furnished and placed by the Canadian Bridge Co. and the Hamilton Bridge Co.



Dowling's Gulch Steel Viaduct, showing culvert and filling.

Ottawa Brook and Walker's Gulch steel viaducts were entirely replaced with new steel of a heavier design, and new concrete pedestals and abutments were put in. Ottawa Brook viaduct is 540 ft. long and consists of six 60-ft. d.p. girder spans, supported on steel towers. Both viaducts are situated on curves. The concrete substructures were let by contract to Jones & Girouard, contractors, Ottawa; the steelwork was furnished and erected by the Dominion Bridge Co.

The steel viaducts at Jamesville, Millbrook, Dowling's Gulch and McDonald's Gulch were filled in. Most of this work was done by contract in 1916, and was completed and ballast put on by the railway forces in 1917. It was necessary in connection with the filling in of these viaducts, to construct concrete culverts to take care of the water-courses, and some of the culverts were of considerable length on account of the height of the fill, the one at McDonald's Gulch being 280 ft. long and containing 3,000 cu. yd. of concrete. To avoid damaging the steel towers during the filling, by boulders striking them, aprons, made of spruce poles from the adjacent woods, were constructed along the ends of the ties over the towers, to throw the filling clear of the structure. Owing to the nature of the material used for filling at McDonald's Gulch and the great height (85 ft.) of this structure, considerable trouble was experienced from time to time by the material sliding out, and on one occasion the fill slid out beyond the ends of the culvert, breaking off parts of the wing walls and filling up the waterway beyond the ends of the culvert.



Millbrook Steel Viaduct, showing new culvert.

Although the filling was carried on as uniformly as possible, on either side of the trestle and from one end to the other considerable shifting took place in the trestle and an anxious time was spent

Sydney River Mi.

Sydney River Bridge, showing new d.p. girder in place.

until the fill was completed. After the filling of these viaducts was completed to the under side of the guides, the guides were removed, but the posts and bracing of the steel towers remained in the fill.

The fill at Dowling's Gulch was the first to be completed and to have the girders removed. This steel viaduct consisted of two 60 ft. and six 30 ft. d.p. girder spans. The work of taking out the girders was accomplished in two days, without any interference to passenger trains. Work was started about 7 a.m. on Sunday after express train no. 7 had passed, and by 6 o'clock the same evening, 5 of the 9 spans had been removed, the fill completed to grade from material previously deposited on the shoulder of the fill, and the track laid and connected up, in time to let express train no. 5 over. The following day we took out the remaining 4 spans and laid and ballasted the remainder of the track. The district wrecking crane (50 tons) was used to take out the spans. The 60 ft. girders were removed singly, but the 30 ft. girders were pulled out in pairs without first removing the bracing.

The Unit System of Handling Railway Correspondence.

By W. H. Mathews, Chief Clerk to Superintendent, Canadian National Railways, Capreol, Ont.

All office organization swings somewhere between two extremes—inefficiency one one hand and red tape on the other—and the routine of railway organization tends distinctly towards the red tape extreme for two closely coupled reasons, viz., because no record of detail may be omitted, but must actually and properly be made, and because all routine duties must be based on the capacity of the average employe. .

Every office, I am sure, is endeavoring to simplify its methods of getting the best results, or I might say to get speed in the filing of correspondence without reducing safety; at least this has always been my object. Almost the first work I did in a railway office was filing correspondence. I have clung to it as a hobby, and have studied closely the various methods employed in different offices where I have been on the staff, therefore I believe I have found numerous short cuts which are most efficient in the handling of railway correspondence.

The unit system of handling correspondence is without a doubt the only system for a railway office. If properly run, unnecessary correspondence will be avoided and time and expense saved. The system is simple and a chief clerk in charge of an office can save much of his own time, as well as that of his employer, by the adoption of it.

On the eastern lines of a large railway in Canada, it was decided some three years ago to inaugurate the unit system of handling correspondence. With this in view I started to work on a filing system that would cover successfully all operating departments. I completed in rough form a filing book, which I termed "Unit System of Filing." This done, I started to re-arrange all the engineering department's correspondence, likewise that of all other departments. Inside a very short time I had the files of the superintendent's office, engineering department, assistant superintendent, roadmasters, bridge and building master and chief dispatcher's offices all in one, according to the idea of the unit system of filing. This unit system also included the district master mechanic's office.

The morning mail bag arrived at 8.30, as did also the mail register clerk. He opened the mail (except personal), brought the letters to my desk, whereupon I looked them over, put the proper file numbers on the communications myself and turned them back to the register clerk, who attached the proper files to the letters requiring them, dated them and returned them to my desk. In other offices the mail clerk performed these duties alone. I sorted them according to the different officials and distributed them. Please bear in mind that I did not give the officials all the correspondence, but just what was actually necessary, as I considered it was my duty to look up all information called for, dictate it, and leave it on their respective desks for signature. The reader may perhaps question the matter of having the register clerk bring the letters to my desk immediately he opened them. The reason for this is that I am a firm believer in having things done in the proper manner, and it is always my desire to be able to locate correspondence when called upon; therefore I personally supervised the numbering of files, as I was in a better position to judge for myself what particular file the letter should be placed on, than the average file clerk, who would place the same subject under different files, although they might not at all refer to the same subject in correspondence. Then there was the handicap of losing a file clerk by resignation or unforseen reasons, and his successor, not being fully acquainted with railway correspondence, would file the letter, in a great many instances, under whatever file number came to his mind first. Or on the other hand, he might see that he was getting behind a little in his daily routine of office work and say to himself, "Oh, well, that number will do; nobody will ever know the difference." Hence my reason for, as I have previously stated, supervising the filing as far as the numbers are concerned. While dealing with this point I may say that it was never known during three years for a single file to go astray. The register clerk acted as an understudy, and he was an admirable one. Correspondence was not registered in a register book, but simply given the proper file number, and when acted upon, filed accordingly. No trouble was ever experienced to any great extent of having to repeat the hackneyed phrase, "Never received your letter of such and such a date." Properly filed, it was there when wanted.

Placing of file numbers.—Railway correspondence file books which are for sale, while good in certain respects, are not, what I term, exceptionally good value. There are too many subjects from which a file clerk can, and will, take incorrect file numbers for his correspondence. I aimed at making a file number cover like subjects, i.e., for example, a delay to a car of material, pilferage of goods from a car, a claim for shortage from a car, over, short and bad order reports, practically all bear the same file number, as I will describe below—likewise a derailment, delay to train, locomotive failures, hot boxes, etc. Other filing systems in vogue have separate file numbers for each subject. Take, for instance, a derailment. The train is delayed. Why use two special file numbers for the same case? Again, a locomotive failure—the train is delayed in this case. Why file under two different subjects, i.e., delay to trains and engine failures? This is being done by many railway offices; in fact, by the greater number. Two months after, some official will call for the file in connection with train such and such a number that was delayed, through what cause he is unable to say—might be locomotive failure, hot box, etc. This means to the file clerk that he has to search in different files for the papers desired, i.e., the locomotive failure file, the derailment, delay to train, and hot box files. To overcome this difficulty and to make it simple for the file clerk, the stenographer, and also for accuracy in locating the file, I classified derailments, delays to trains, locomotive failures, etc., all under one number. For example, train no. 8 was derailed on June 5. My file number would be 8-5, 8 denoting the train number and 5 the date. If the train was delayed on account of hot box, or other causes, the same file number would apply, therefore, as above stated, making one file number.

DATE	TRAIN	CONDUCTOR	ENGINEER	REMARKS
Aug.5	10	"X"	"Y"	Hopper on "XYZ" Car 225,—came open allowing ballast to spill and derailing tender wheels of engine.
File number 10.5				

CAPREOL MP. 144.8

Sample of Card 1 (11 x 8)

I had a file guide made for each train on the district, and behind it placed the correspondence in date order. This system applied to regular trains only. For extras, I worked in the following manner: I had a card (sample 1), which I placed in the mileage order of the district. Therefore if an extra "fell down" at a certain mileage, I registered the particulars on the card, and treated it in the same manner as delays to regular trains, as far as the file number was concerned. For example, extra 3421 on the 6th inst., was delayed. It was given file number 3421-6 and filed accordingly, viz., in numerical order, according to the number of the extra.

Correspondence relating to delays to cars, over, short and bad order reports, pilferage from cars, and claims.—Each of these subjects bears a special file number in the great majority of railway correspondence file books. I had one file number and worked it out in the following manner: I maintain that a delay to a car oftentimes results in a claim being submitted for damages, on account of it containing perishable freight. Therefore, why two file numbers, one for claims and one for delay to cars? Over, short and bad order reports invariably result in claims. Pilferage from cars results in claims. Then with this in mind, I cannot realize why different file numbers are used for each subject. To facilitate the matching up of correspondence, so that every little detail pertaining to the special car was at my finger ends, I used for a file number the last two figures of the car number. For example, car 123456 was delayed, pilfered, or over, short and bad order report issued in connection with it, etc. Its number would be 56. I filed the correspondence numerically, arranging my file guides from no. 00 to 99. For damage to coaches, equipment missing therefrom, etc., I used the same principle, only filing it in a different compartment in the cabinet.

Staff records of employes.—Based on the 26 letters in the alphabet, I filed my correspondence pertaining to staff records of employes, etc. For example, if I had correspondence pertaining to John Jones, I made my file number 10, as "J" (Jones) is the tenth letter in the alphabet, and so on. This method I found very good and reliable at all times.

Drainage claims, private sidings and special matters pertaining to improvements on the district were filed according to the mileage at which the work was performed. I have a special card (sample 2), and as soon as a correspondence started on the subject, I gave it a number. My cabinet for filing this correspondence was arranged in mileage order of the district and the correspondence placed, as mentioned above. I registered a letter only once on my cards, viz., when the subject was first brought up.

The above are not simply suggestions, but tried out principles which have proved their worth time and again. I would not hesitate a moment to recommend their adoption by any railway office which wishes to be up to date in modern filing systems.

Editor's Note.—The writer of this article was formerly chief clerk to Superintendent, C.P.R., Smiths Falls, Ont., and also chief clerk to Master Mechanic, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont.

Canadian Railway and Marine World will be pleased to hear from any other chief clerks or others, either in discussion of Mr. Mathews' article, or to describe other systems they may have in use.

Sample of Card 2 (11 x 8)

The Canadian Northern Railway's Montreal Tunnel and Electric Zone Construction and Operation.

By W. G. Gordon, Transportation Engineer, Canadian General Electric Co.

The City of Montreal is divided into two principal levels; the commercial and financial quarter being on a plain only a few feet above high water, and the residential and shopping districts being at a height of about 75 ft. above the river. As the space between Mount Royal and the St. Lawrence River is limited, this district has become very congested. Business has largely forced the residence section up and down the river, and around the mountain. The tunnel under Mount Royal was built with the idea of giving the Canadian Northern Ry., which property now belongs to the Dominion of Canada, an entrance into the heart of the city, and to render available a large area for residential purposes, only a few minutes by train from the main terminal.

The location of the present temporary terminal is about midway between the two levels and it is proposed to extend an elevated line, at the same uniform grade, which will connect with the proposed viaduct on Montreal Harbor Commissioners' lines, thus giving direct access to trans-Atlantic steamers, and all the harbor facilities.

The tunnel is 3.1 miles long and is the shortest line that could be devised to take advantage of the geological formation. It has a uniform grade of 0.6% toward the city to ensure proper drainage. In order to meet the various physical conditions, different cross sections were used; where hard, sound rock, unsound rock, and soft ground, were encountered respectively. The twin section type of tunnel was adopted for economy in construction, ease and economy in ventilation, protection and safety in case of derailment or accident.

In addition to working from both ends of the tunnel, a shaft was sunk one mile from the west portal at Maplewood Ave. When the heading from the west portal met that being driven from the Maplewood Ave. shaft, the lines checked within 1/16 in. on the alignment, and ¼ of an inch in grade, and where the headings between the Maplewood Ave. shaft and that from Dorchester St. met, under the highest point of Mount Royal, the error was ¾ of an inch in alignment, and ¼ of an inch in grade.

The method employed was to drive a bottom center heading about 8 ft. high by 12 ft. wide, as this heading could be driven ahead rapidly without much regard for the character of the ground, and full sized excavation could be developed from it at as many places, simultaneously, as desired. Four drills were used in each heading, supported on a horizontal bar; the drills being operated by compressed air at a pressure of about 100 lb. a sq. in. The breakups, where the upper part of the tunnel section was excavated to the full width and height, were opened at intervals of from 400 to 800 ft. along the center bottom heading, the practice being to open up as many of these as necessary to keep up with the heading progress. The compressed air used for operating the drills and other pneumatic machinery was obtained from two plants, one at each end of the tunnel, with an aggregated capacity of 11,000 cu. ft. of free air a minute compressed to 110 lb. to the sq. in. The muck from the tunnel was hauled out by two 10 ton and one 8 ton trolley locomotives and a 4 ton storage battery locomotive.

The load curve was worked up on the following data of train weights and speeds:

Class	Trailing tons	Speed level	m. p. h. at grade	Schedule
Transcontinental	1130	47.[illegible]	[illegible]	21.2
Express and local	550	47.[illegible]	37.[illegible]	21.6
One motor car	60	50.6	41.[illegible]	[illegible]
Three motor cars	180	50.6	41.[illegible]	[illegible]
Three motor cars and two trail cars...	260	47.8	34.8	21.8
Freight	1000	[illegible]	[illegible]	[illegible]

The substation is a handsome building, and will harmonize with the buildings which will be erected in the neighborhood. Power is purchased from the Montreal Light, Heat & Power Co. at 63 cycles, 11,000 volts, 3 phase. It is delivered to the substation by a lead covered, 3 conductor cable, carried in a duct through the tunnel, and also by an overhead line, to ensure continuity of service. The general arrangement and capacity of the switching equipment provides for the later addition of a steam auxiliary plant at the Back River, near the Cartierville yards, for extension of the electrification of the main line to Ottawa.

There are 2 motor generator sets with provision for a third later. Each of these sets consists of a synchronous motor direct coupled to and on common bedplate, with two [illegible] kw., [illegible] volt, d.c. generators, the set running at [illegible] r.p.m. The generators are connected in series giving [illegible] kw. at 2,400 volts per set. The sets have an overload capacity of [illegible] for [illegible] minutes. The [illegible] capacity of these machines is obtained by the use of a pole face winding of [illegible] and coils through holes near the pole faces, which is connected in [illegible]. It opposes the armature reaction, thus [illegible] satisfactory operation up to the heavy overload mentioned. The [illegible] are [illegible] connected on the ground side of these machines. The shunt fields of the d.c. generators and the synchronous motor fields are arranged for 125 volt excitation. Each of the synchronous motors is started by a 3 phase, 11,000 volt compensator. This auto transformer has one coil per phase, with suitable starting tops brought out.

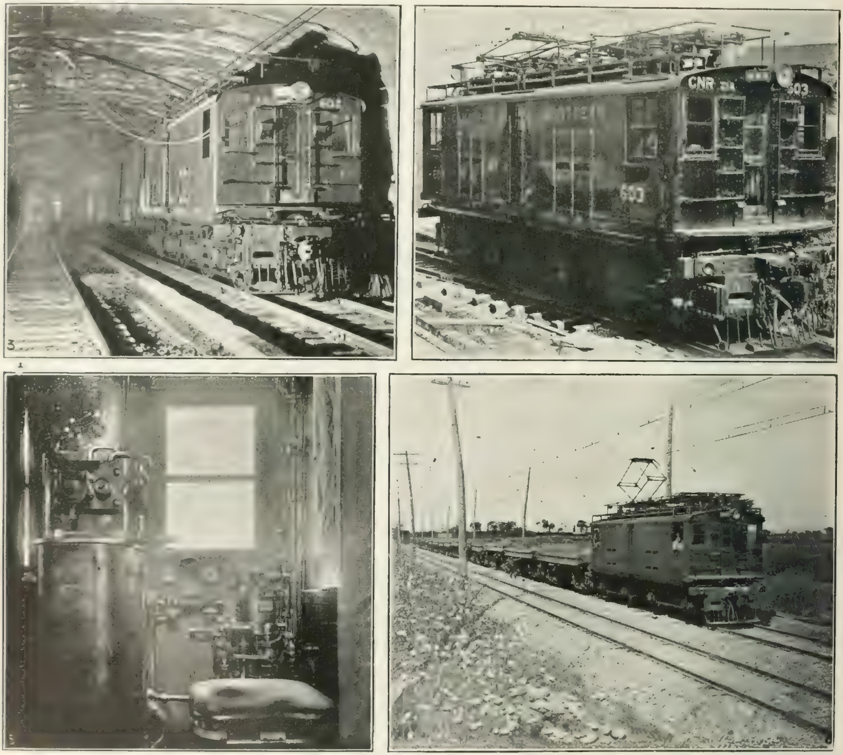
The 3 exciter sets each consist of a 50 k.w., 125 volt, d.c. generator, driven by induction motor. The generators are commutating pole type, flat compounded for the specified voltage, and are especially adapted for exciter work and voltage regulator control. A bank of six 100 k.w. single phase transformers supply the induction motors of the exciter sets and miscellaneous station requirements.

All oil switches on the 11,000 volt circuits, except the synchronous motor, magnetizing and starting switches, are enclosed in masonry cells, and have 2 breaks per pole, each break in a separate tank. These switches have a rupturing capacity of 16,000 arc amperes at 11,000 volts. They are motor operated and will open automatically on overload, the incoming line switches excepted, either instantaneously or with a time limit action as desired. The incoming line switches operate automatically on the reversal of power only. The synchronous motor starting switches are remote control, solenoid operated, mounted in cells, and have a rupturing capacity of 2,000 arc amperes at 11,000 volts.

The main switchboard is of three section panels of natural black slate, 90 inches high. The 2,400 volt direct current circuit breakers and lever switches are mounted on a panel, back of and above the main switchboard. They are operated by insulated handles on the front of the main board, so as to eliminate any possibility of the operator coming in contact with the 2,400 volt circuit. The circuit breakers are mounted between fireproof barriers and are equipped with powerful magnetic blowouts. The field switches are mounted on a base back of the panels with the operating handles on the front of the main board.

There are 6 locomotives in operation. Each locomotive has 4 axles, with all the weight of the locomotive upon the 8 driving wheels. The running gear consists of two 4-wheel trucks, articulated together by a heavy hinge. The equalization of the trucks is accomplished by a semi-elliptic leaf spring over each journal box, connected through spring hangers to the frame and to the equalizer bars. The equivalent of a 3-point suspension is thus obtained through the side equalization of one of the trucks and both side and cross equalization of the other truck.

The friction draft gear is mounted in the end frame casting of the truck. This type of construction restricts the hauling and buffing stresses to the truck side frames and articulated joint, thus relieving the cab and apparatus from the effects of severe shocks. The cab, which is of the box type, is divided into 3 compartments, the center one for the apparatus, and the two end ones for the operator. Each operator's compartment is supplied with controller, control switches, ammeter, air brake and pantograph control, air gauges, 2,400-volt cab heater, bell rope, and control for the whistle and



Montreal Terminals Electrification, Canadian Northern Railway.

Upper row: Left, locomotive pulling in messenger and taking current from opposite track. Right, locomotive with low catenary construction. Lower row: Left, control apparatus in operator's cab. Right, catenary construction tangents.

sanders, thus providing the locomotive with complete double end control. The motors are nose-supported in the usual way, and geared to the axle by twin gears, each of 4 in. face.

The motor equipment consists of 4 GE-229-A commutating pole motors, wound for 1,200 volts and insulated for 2,400 volts, 2 of these motors being permanently connected in series for operating on the 2,400 volt trolley circuit. The one hour rating of each motor is 320 h.p. at 1,200 volts. The motors are designed for forced ventilation, which is obtained by a blower in the locomotive cab. Either pair of motors may be cut out, by a special handle on the change-over switch. The locomotives are geared for a free running speed on tangent level track of approximately 45 m.p.h., and are operated as 2-speed machines, with 10 points in series and 9 points in series and 9 points in series-parallel. The master controller used is of the non-automatic type, and has 2 handles, one regulating the applied voltage at the motors and the other for controlling the direction of rotation of the motors. The rheostats, which form the external motor resistance, are placed near the roof of the cab and provided with ample natural ventilation.

The master controller and contactor energizing circuits are designed for 125 volts. Each contactor is easily accessible, without any disturbance to adjacent contactors. A special electro-pneumatic, change-over switch is used for making the transition between series and series-parallel connection of the pair of motors. The 125 volt current for operating the contactors and for lighting the cab and headlights is obtained from a motor-generator set, the motor of which has two 1,200 volt windings and two 1,200 volt commutators in series for operation on 2,400 volts. This set is mounted in the center cab and also drives the blower for providing forced ventilation to the main motors.

Fuses of the copper ribbon type, placed in fuse boxes, provide protection for each individual circuit, as well as the main circuit from the trolley. These fuse boxes are all arranged to blow into a common chamber, designed to take care of the arc. In addition to the fuse on the main circuit, a main switch is also provided. This is of the knife blade type, being opened and closed by a handle, in a position for easy operation in case of emergency, or when it might be necessary to open the circuit while carrying current. This main switch blows into the chamber provided for the fuses, and has a powerful magnetic blow-out.

The trolleys are of the slider pantograph type, pneumatically operated and mounted on insulated bases. Two pantographs are used per locomotive.

A speedometer, similar to the type largely used on automobiles, but especially designed for locomotives, is located in each operating cab. These are connected to the driving wheels of the locomotive by flexible shaft and gearing.

A combined straight and automatic air-brake equipment is provided on each locomotive. It includes a 2,400 volt motor driven air compressor, the set consisting of two 1,200 volt motors, operating in series on 2,400 volts, and direct connected to an air compressor having a displacement of 100 cu. ft. of free air a minute. The approximate total weight of each locomotive is 83 tons. Some of their principal dimensions and characteristics are given in the following table:

Length inside knuckles	37 ft. 4 in.
Length over cab	31 ft. 0 in.
Overall height, pantograph down	15 ft. 6 in.
Height over cab	12 ft. 10 in.
Overall width	[illegible]
Total wheelbase	[illegible]
Rigid wheelbase	[illegible]
Total weight, all on drivers	[illegible]
Wheel diameter	[illegible]
Tractive effort at [illegible] tractive coefficient	[illegible]
Tractive effort at one-hour rating	[illegible]
Tractive effort at continuous rating	[illegible]
Speed at rated amperes, one-hour rating	[illegible]
Total horse power, one-hour rating	[illegible]
Speed at rated amperes, continuous rating	[illegible]
Total horse power, continuous rating	[illegible]
Gearing, [illegible]. Reduction, [illegible]	

The multiple unit motor cars for handling local traffic are not yet in operation. The principal dimensions of these cars are given in the following table:

Length over buffers	[illegible]
Length over body corner posts	[illegible]
Truck centers	[illegible]
Width over side sill angles	[illegible]
Width over eaves	[illegible]
Height top of rail over roof	[illegible]
Height top of rail to underside of side sill	[illegible]
Center to center of body side bearings	[illegible]
Center to center deck sills	[illegible]
Approximate weight loaded and equipped	[illegible]

The electric hot air system of car heating is used. One complete heater is placed underneath each car and receives its energy direct from the 2,400 volt supply. The heater has a capacity of approximately 25 k.w. and is constructed for 2 heat combinations so as to provide for changes in temperature conveniently and economically. The complete heating equipment consists of the heating unit, blower and regulating mechanism, the controlling switch and thermostat, all the regulating mechanism being arranged for operation from the 600 volt supply. Air is forced over the heating unit by the blower, and distributed to the car through the air ducts along the sides of the car. The blower used for the circulation of the air is operated by a motor, which is connected in series with the heating unit on the ground side. The capacity of the blower is approximately 1,000 cu. ft. of air a minute.

The motor equipment consists of 4 self ventilated GE 239-A, 125 h.p., 1,200 volt commutating pole motors insulated for 2,400 volts. Two of these motors are permanently connected in series for 2,400 volt operation. Ventilation of the motor is accomplished by drawing air into the armature at the pinion end by the fan on the armature shaft. The air passes longitudinally through the whole interior of the motor and is exhausted through an opening in the frame at the commutator end protected by wire mesh.

The control is of the non-automatic type for multiple unit operation. The equipment includes a motor generator set for furnishing 600 volt current for the control circuits, the air compressor and lighting circuits. This set consists of two 1,200 volt motors operating in series on 2,400 volt, direct connected to a 600 volt generator. The master controller, contactors, switches, resistors and pantographs are essentially the same construction and appearance as those already described for the locomotives. The controller has 5 steps in series and 4 steps in parallel. It differs from the locomotive controller in having the usual motorman's operating handle, instead of a lever. This handle is provided with the so called "dead man's" feature, for cutting off power and applying the air brakes in case the motorman removes his hand. Compressor governors similar to those on the locomotives are used, and an emergency cell lighting [illegible] is installed on each car.

EDITOR'S NOTE.—The multiple unit cars have not yet been built, so the description must be taken as applying to what is intended.

Several local conditions and extremely low temperatures introduced features making the design of the substation system for this electrification somewhat out of the ordinary. The present electrified track is about 10 miles long and in that distance there is a passenger terminal station [illegible], a [illegible] tunnel, double track in a cut with low clearances under highway bridges, a long stretch of single track, both tangent and curve, and a large freight yard with repair shops and storage tracks. The

Switchboard in Substation, Mount Royal Tunnel temperature in the coldest winter weather reaches 35 deg. below zero; while in the hottest summer weather it will go as high as 110 in the sun. In the early spring severe sleet storms sometimes occur.

The poles are of eastern white cedar. The specifications for these poles, and also for the creosote oil used as a preservative, were based upon those of the National Electric Light Association. Steel poles are used in the terminal yard in the city, on account of their more sightly appearance. The wood poles are set 7 ft. in the ground and are all back-guyed. They are long enough to carry 2 cross arms for feeders, signal circuit and a 3-phase transmission line for supplying the shops in the Cartierville yard with electric power. On top of the poles there is a no. 000 copper ground wire, which serves both as a protection against lightning for the circuits on the poles, and also as a preventive against any trouble that might be caused by breakage of the rail bonds, which latter are of the welded V-type. The poles throughout the single track construction are spaced 150 ft. on tangents and 120 ft. on the 2-deg. curve. On the double-track portion, where the overhead clearance is limited, the spacing is reduced to 105 ft. on tangents.

The messenger for the electrification outside the tunnel consists of a ½ in., 7-strand Siemens-Martin steel cable, with an ultimate strength of 11,000 lb. and an elastic limit of 6,600 lb. Two no. 0000 copper feeders are installed, one the full length of the electrification outside the tunnel, and the other for about a mile west of the substation. The messenger is anchored every half mile by running the end of one half mile length past the end of the next for a distance of one span. It is then made fast to an anchor eye on the bracket, through an insulator and turn-buckle, and the same point of the bracket is guyed back to the next pole, which in turn is guyed against this strain. The two messengers, where they pass each other, are kept from 8 to 10 in. apart. By anchoring the trolley wire on the same bracket, the anchorage becomes a section insulation, the air space between the messenger and trolley wires forming the insulation. Where a section insulator is not required, a copper jumper is placed between the messenger and trolley wires. For the double track portion of the line, cross-span construction is used, the cross-span being a ⅜ in., 7-strand Siemens-Martin steel cable. The messenger is fastened to this by a small malleable clamp. This cross-span is made up with a turnbuckle, strain insulator, and wedge grip in each end, and fastened to the poles by means of eyebolts.

In yard work spanning more than 2 tracks, the construction is similar, but with the addition of a cross messenger of ½ in. cable above the ⅜ in. cable. This cross messenger is made fast to the poles directly, without insulators or turnbuckles, and carries the weight of the spans below through lengths of ¼ in. steel cable. These fasten to eyes in the tops of the messenger hangers, and to to the cross messenger, by Crosby clips. There is a strain insulator in each of these lengths.

Pull-offs are used on curves, for holding the contact wire and messenger in the correct position over the track, and at intervals on long tangents, for steadying the contact wire. The pull-offs are made of sherardized steel tubing, bent to avoid fouling the pantograph. Each pull-off is fitted with a clamp ear at one end and an eye at the other. Adjustable links are sometimes required with the pull-offs, to keep the trolley wires the right distance apart at certain points, such as where the trolley wire for a turn-out approaches the main trolley wire at an angle. Each link is composed of 2 malleable iron brackets, with clamp ears, connected by a ½ in. pipe, the length of which is adjusted between the brackets and held by set screws.

Egg type insulators are used in two sizes. The larger, used with a ½ in. and ⅜ in. steel cable, withstands a wet flash-over test of 14,000 volts, and has a breaking strength of 22,000 lb. The smaller, used with ⅜ in. and ¼ in. steel cable, withstands the same voltage test, and has a breaking strength of 12,000 lb. The insulator used on the bracket construction is of the ordinary glazed porcelain, double petticoat, pin type, 4¼ in. in diameter. It has a wet flash-over test of 20,000 volts. The messenger rests in the groove in the top of this insulator, and is not tied, except on curves.

The contact wire is of special bronze composition, size 0000, with a breaking strength of 65,000 lb. a sq. in. and an elastic limit of 39,000 lb. a sq. in. Its section is American Electric Railway Association's standard 0000 grooved trolley wire. The use of this wire, instead of hard drawn copper, was thought advisable, both because of its longer life, when subjected to the wear caused by sliding pantographs, and also because it could be pulled up tighter than copper, on account of its greater streigth. This latter reason was considered of special importance, because of the wide variation in temperature in Montreal, with the consequent great variation in the sag of ordinary copper trolley wire between winter and summer.

The trolley wire is hung straight over the center of the track, as the natural side sway of the pantograph is sufficient to prevent wearing grooves in the contact strips. The height of the trolley wire above top of rail is ordinarily 23 ft., except along the double track construction and in the tunnel, where it is 16 ft. In this section 2 wires are used over each track. They hang side by side, supported from the same messenger, the hangers of one wire being staggered with those of the other. These double wires do not raise the hanger loops as high as would a single wire, when a pantograph passes along, which is an obvious advantage where the head room is limited. Sparking and consequent wear, both of the contact shoes and contact wires, is reduced to a minimum, as there is always good contact between the slider strips and one of the contact wires. The hangers are all of the long-loop type, having a malleable iron, single bolt, clamp ear, and a strap varying in length to suit its position in the span. All parts are sherardized. In spans of all lengths from 150 ft. to 90 ft. the hangers are spaced 15 ft. apart.

Lightning arresters of the magnetic blow-out type are installed at half mile intervals. The arrester is placed near the top of the pole, and the ground wire run down the pole to a ¾ in. iron pipe driven about 10 ft. into the ground. Before driving this pipe, a 2 in. pipe was driven down about 5 ft., then withdrawn and the hole filled with rock salt. The ¾ in. pipe was driven down through the salt. In addition to these arresters on the poles, aluminum cell arresters are installed in the substation on the positive busbars and on each feeder.

In order to string the messenger cable with the proper tension, a dynamometer was used. It was therefore necessary for the foreman of the line gang to know what the tension should be at different atmospheric temperatures. The right sag at any given temperature was also of importance, as a check on the tension. This information was supplied in tables to which the line gang worked, the sags and tensions being given at 5 deg. intervals. In the tunnel the overhead clearance was so limited that the catenary had to be very flat. This meant pulling the messenger up very tight for spans of reasonable length. A cable of phosphor bronze was decided upon, composed of 19 wires, and having an overall diameter of 0.888 in. This cable has an ultimate breaking strength of 22,000 lb., and an elastic limit of 18,600 lb. This messenger is supported every 90 ft. from the roof of the tunnel by a combination of iron yokes held in the concrete by four 1-in. bolts. The cross yoke carries the messenger insulator, and is supported on two insulators carried on the 2 end yokes, so that there are 2 insulators between the messenger and the ground. The insulators are of glazed porcelain, and have a wet flash-over test of 20,000 volts. All clamps and small parts of the messenger supports are of malleable iron sherardized. The yokes are of 2 x ⅝ in. and 1½ x ⅞ in., mild steel, painted with an asphaltum compound as a protection against rust.

Two no. 0000 phosphor-bronze contact wires hang side by side from the messenger. The hangers for each contact wire are spaced 15 ft., or 7½ ft. between adjacent hangers. The hanger lengths very from 6 in. to 13¾ in., with 90 ft. span. The 2 hangers nearest the messenger support, viz., those 11¼ and 13¾ in. long, are made with 2 loops, one sliding inside the other, where the clearance to the roof is small. The remaining hangers are similar to those used outside the tunnel, except that the loop is wider, in order to take the larger messenger. It was found that the 2 messenger cables and the 4 contact wires over the 2 tracks in the tunnel would give ample conductivity, so that no feeders through the tunnel were required. Both the messenger and contact wires are anchored every half mile. Two bridles of ½ in. steel cable are fastened to the messenger by six ⅞ in. Crosby clips, and the ends of the bridles are fastened each way, through 2 cemented-type strain insulator in series, a turnbuckle and wedge grip, to roof plates. The contact wire is anchored by lapping the ends for one span and then carrying each end up and slightly to one side of the center, making fast to a roof plate through 2 insulators, a turnbuckle and a wedge grip.

At the only curve in the tunnel, one of 2-deg., 2 pull-offs are placed in each span, over each track, one for each of the contact wires. The pull-offs are fastened to the tunnel arch through 2 strain insulators in series by an expansion bolt. The 2 pull-offs are placed 7½ ft. apart, and this arrangement prevents hard spots and at the same time keeps the 2 contact wires close enough together for satisfactory operation.

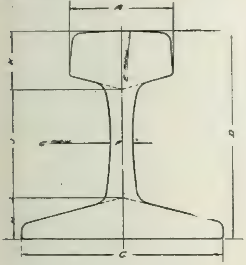
The United States Court, sitting at Grand Rapids, Mich., on Dec. 27, refused to grant the Grand Rapids, Grand Haven & Muskegon Interurban Ry.'s application to prevent the state from enforcing the 2c a mile railway rate. This is a matter in which the G.T.R. is interested.

Vancouver, B.C., merchants are asking the railways running into the city to abandon the 5c arbitrary rate, and a report states that the Board of Railway Commissioners may be appealed to upon the matter by the Vancouver Board of Trade.

Frog, Switch and Crossing Manufacture at Transcona Shops, Canadian Government Railways.

By S. Lewis, General Foreman, Blacksmith Shop, C.G.R., Transcona, Man.

Successful maintenance of any railway equipment means the greatest reliability in service combined with greatest economy. The Canadian Government Railways engineering department, above all other departments, must have had one object in view pertaining to railway track and track work, and that must have been to standardize its equipment, and the advantage of standardization tends toward an effective system of railroading. Under such conditions it is possible to have uniformity, and above all it can be known exactly from one end of the system to the other what is required, to the smallest detail, without any possible chance of a misunderstanding.



Weight per yard	A	C	D	E	F	G	H	J	K
83	2¼	5¼	5¼	10	3/16	—	7/8	2⅝	1¾
85	2 21/32	3⅜	5⅛	12	3/16	12°	27/64	2⅜	1 27/64
80	2⅝	3	5½	14	[illegible]	14	[illegible]	2¼	1½
80	2⅞	5	5	12	17/32	30°	7/8	2⅞	1½

Fig. 1.

I do not need to enter into the fundamental principles of design or emphasize the importance of uniform standards, because this has already been recognized with reference to switches, frogs, guardrails, and crossings, and a good grade of this special track structure largely affects the smooth riding of trains and the life of the rolling stock on the C.G.R. Our standard plans containing details of all this work are unique, and any person with elementary education can read them and well understand how to manipulate these special parts. The subject of rail sections has been an absorbing one.

Fig. 1, shows the various designs in active use of the 80 and 85 lb. sections per yard, in which a little metal has been added to the head or to the base of the 80 and 85 lb. section.

Fig. 2, shows three popular sections in which the exceedingly small differences are apparent, and yet one section cannot be substituted for the other in the manipulation of frogs and switches without much trouble and care.

There is no reason why an 85 lb. rail should not conform to an 80 lb. or vice versa, to eliminate different patterns for the different fittings for frogs, switches and crossings; it would be a decided saving rather than to carry in stock a variety of these fittings for the small amount of differences existing between those two sections.

There is no class of work at the C.G.R. shops at Transcona given more attention as to detail and accuracy of workmanship than the building of frogs, switches and crossings. And there seems to be a great diversity of opinion among railway engineers as to the deviations allowable from drawings and specifications in given dimensions. The character, class and nature of the pieces also have a bearing upon the degree of accuracy to be expected or the variation allowable, and it would be a difficult task to set fixed rules to cover all cases. The matter must be left largely to the good judgment of the person directly in charge of this class of work.

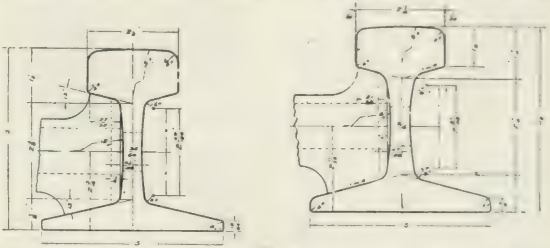


Fig. 2.

The question of gauge is a very important one, and almost every engineer has his own views in regard to it. The American Railway Engineering Association has recommended that 8 degree curves and under should be maintained to standard gauge, and that the gauge should be widened ⅛ in. for each 2 degrees, or fraction thereof, over 8 degrees, to a maximum of 4 ft. 9½ in. Where frogs occur on the inside of curves, the gauge at the frog should be standard, or the flangeway should be widened to compensate for the increased gauge. A slight variation from standard gauge is not seriously objectionable, provided the variation is uniform and constant over a long distance. Wide gauge due to worn rail need not be corrected until the excess over the proper gauge is equal to ½ in.

The most universally used switch point is the split one, which is made exclusively of the T rail (80 and 85 lb.) and is planed as a general rule. The split switch is shown in fig. 3, in which 2 rails of the switch were reduced to a given point. A train coming in either direction, whether travelling on the main line or on the siding, has to pass over one of these points, and there is no doubt left that this type of switch is universally acknowledged to be the best, and possesses decided advantages for high speed trains at junctions, over all other types of switches which are more or less in use on other systems. Split switches were first introduced in England in [illegible].

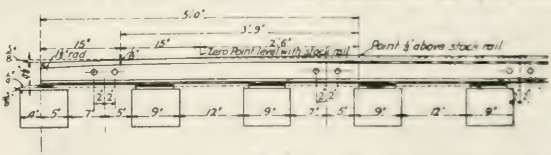

Fig. 3.

The method of bending and planing switch rails and the shaping of the point have been under discussion ever since the split switch was first introduced. First, the rails are sawn to length, then bent horizontally so as to bring the stem or web of the rail directly under the extreme point. It is further planed vertically so that a portion of its base flange is [illegible] to pass over the base flange of the [illegible] stock rail and to rest upon [illegible] plates. Furthermore, it is planed vertically, so as to bring the top of the switch rail somewhat above the [illegible] of stock

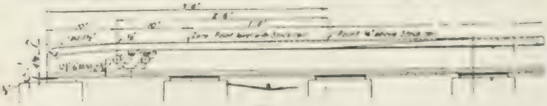

Fig. 4.

rail, to facilitate the passing of hollowed out wheel treads with the so-called false flanges over and across the head of the stock rail. The same thing applies to the spread at the heel of the switch and the throw at the point. The C.G.R. has one standard, almost every road has a different spread. Our standard is 5 5/16, while other roads have different spreads for every different length of switch. There is no reason why all roads should not follow the recommendation for a standard spread for switches of all lengths, which is ample to allow the easy fastening of any style of joint plate. Side planing and bending are conformed to a spread at the heel of 5 5/16 in. between gauge lines of the stock rail and the switch rail, and a thickness of ¼ in. at the point. The bending and planing is done so as to give a straight gauge line to the switch rail; and the head of the switch rail must fit neatly against the head of the stock rail, from the front of the switch rail to the point of divergence. The inner edge of the head of the stock rail and the outer face of the web of the switch rail at the point, must be in the same vertical line when the switch point is fitted against the stock rail. The top planing must conform to the measurement shown in figs. 3, 4, and 5. In the two latter drawings it will be seen that the top of the switch rail is carried on the same level above the main rail from the planed down point all the way back to the heel. This requires elevation plates for the entire length of the switch, but at graduated thickness even beyond the heel.

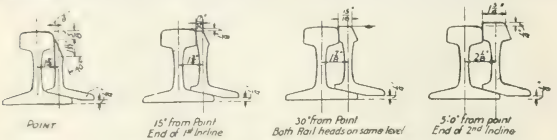

Figure 5

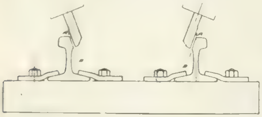

Figure 6

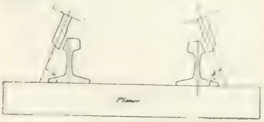

Figure 7

The practice followed at Transcona [illegible] to bend the rail sufficiently to bring the side of the web at or near the gauge line, and the bend is made to such length that the point of bend occurs at the intersection of the line of the stock rail and the line of the back of the switch point rail head. This length is usually increased by an allowance of ½ in. for each foot of bend length, which allowance has the effect of giving a slight clearance between the two rails at the bending points. The reason for doing so is obvious: that the points may be allowed to close tight before the points farther toward the heel close. The rails then are placed on a 62 in. planer in pairs, which consist of a right and left hand in special adjustable jigs, designed by J. Rugg, foreman of this department, which are shown in fig. 6, and also the position of the rail at first cutting. These simple and serviceable jigs are so made that the rails can be adjusted vertically and horizontally—the rails are held quite rigidly—but owing to the base planing causing rails to spring, they must be taken to the bender and completed by removing spring. The portion of the rail heads is planed off by automatic self-feed and not by hand.

1st movement. The rails are planed first on top in such a manner that the point will be from ¼ to ⅝ in. below the top of the stock rail, when it is in position on the elevation plates. This planing is accomplished by setting the chuck vertical in such a way as to bring the required line horizontal.

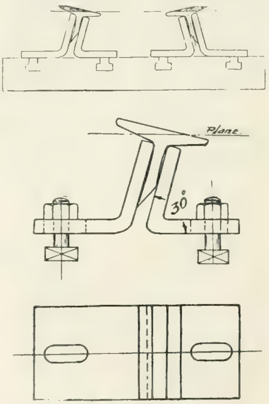

Figure 8

2nd movement. The line A, B, of the planing is not arbitrarily determined, but must be followed along specified lines and length. The widths of the cuts include the total depth of railhead. Both tool heads feed automatically; the average cut being from 1½ in. wide by 3-32 in. feed to 2¼ in. wide by 1/10 in. to 3-32 in. feed.

The speed of the planer which has been found to give the best results is 30 ft. a minute, the return of course being considerably faster. The tools are of the shape of a right and left offset side parting tool, size 2 x 1 in., made of high speed steel.

3rd movement. The planing on the third movement is done so as to give a straight gauge line to the switch rail, when the tools are on an angle of 70 degrees. Such operations as illustrated in fig. 6 are continued on account of having only one planer to take care of this class of work, and upwards of 200 rails are finished off in this manner before the chucks or jigs are changed to plane off the base.

The portion of the flange shown in section lining in fig. 7, is then planed off. This amount varies with the thickness of the elevation plates to be used, and with the thickness of the flange of the stock rail. This completes the switch point outside of dressing the extreme point drilling for the lugs and stops; which can be seen in fig. 8.—C. G. Rys. Employes Magazine.

The British Railways and the War.

British railwaymen of all ranks have reason to be proud of the part played by their great industry during the four years and four months between Aug. 4, 1914, and the signing of the armistice on Nov. 11, 1918. When hostilities began the railway service, like the navy, was ready for any task that might be given to it, and whatever industry or department of state may have been found inefficient or lacking in preparedness for any eventuality, certainly the railways of the British Isles were proved beyond reproach.

Whole volumes might be written on the wartime activities of the British railway service. For the moment it is sufficient to recall the dispatch of the British Expeditionary Force; the prompt reply to the state of railway-owned steamships, and the use of docks owned and worked by railways. Then mention should be made of the use of the great locomotive and general railway workshops, for the manufacture of the munitions of war and the building of ambulance trains.

Of the railway staff quite 25% entered war service, and a large number of railway officers were lent to the Government for administrative and military duties. Prominent among these were Sir Eric Geddes, Sir Albert Stanley, Sir Guy Calthrop, Sir Guy Granet, and Sir Sam Fay.

Fortunately the government in taking over the control of railways had sufficient wisdom to leave the administration in the hands of capable railway officers. The work of Sir Herbert Walker, acting Chairman of the Railway Executive Committee, will never lack appreciation. Truly, Sir John Aspinall in his presidential address to the Institution of Civil Engineers was able to say: "The deadening effect of government operation of industry has not been felt on the railways."

That the victory has been won by all sections of the community pulling together is an accepted fact. There is today a much better understanding between employers and the employed, and the railway service is no exception to the rule.—Railway Magazine.

The Pacific Great Eastern Ry. is reported to show a profit on operation for 1918. As showing how traffic is being secured along the line, it is stated that during 1918, from the Chilcotin and 150 Mile House districts, over 7,000 cattle were shipped out.

The Canadian Northern Ry. Transfer Co., on Jan. 2, took over the handling of the collection and delivery of freight in Winnipeg for the National Transcontinental Ry. It now handles all freight in that city for the Canadian National Rys.

Trial Shipment of Bulk Wheat From Vancouver via the Panama Canal to the United Kingdom.

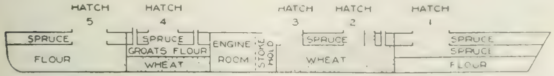

Fig. 1. Diagram showing section of vessel and illustrating general arrangement of cargo.

Since the opening of the Panama Canal the possibility of shipping bulk wheat from Canada to Europe by this route has been discussed a great deal. It was the opinion of many that the conditions to which the grain would be subjected in the tropics would be found too severe for Canadian grain, and that there would be a grave danger of cargoes arriving at their destination in a heating condition. It was decided, therefore, by the Trade and Commerce Department, when arrangements were made in the autumn of 1917 for sending a trial shipment of wheat from Vancouver, to have the Dominion Grain Research Laboratory make as thorough an investigation as possible as to the feasibility of the route. In order that a complete record of the temperature changes which occurred in the grain might be secured, the ship's holds were equipped with electrical thermometers and a representative of the laboratory accompanied the shipment to make observations and to examine the cargo when it was discharged. Similar experimental work had previously been done by the U.S. Department of Agriculture in connection with the shipment of corn to Europe, and valuable results, which were found of great use in setting the standards for corn, were obtained. From the recent investigation it was hoped to secure definite information as to the temperatures which grain would have to stand when carried by this route, and to determine what precautions should be taken to minimize the danger of heating in the event of future shipments being made.

Fig. 2. Section fore and aft through forward hold, showing arrangement of different layers of wheat.

The wheat for this shipment was collected from various points in western Alberta. In Calgary, an average sample from each car was tested for moisture and graded by the Inspection Department, and in order to confirm the results of these moisture tests, further samples were taken in Vancouver when the cars were unloaded. These latter samples were sent in air tight containers to the laboratory, where they were tested on an electrically heated Brown-Duval apparatus. All the wheat in this shipment was straight grade, i.e., it did not, in the inspector's opinion, contain excessive moisture and was in every way sound and fit for warehousing. But although the wheat felt very dry and hard, it was found that some of the cars contained relatively high percentages of moisture, and it was decided to keep such wheat separate from the rest of the parcel to which it really belonged. Three out of the four parcels were thus divided in the elevator into two portions, these two parts being subsequently kept separate in the holds of the ship. By this means it was thought that some additional information might possibly be obtained with regard to the carrying qualities of wheat containing different percentages of moisture, but otherwise similar in every way. Before being binned in the elevator any carload lots containing more than one per cent. of dockage were passed over the cleaners.

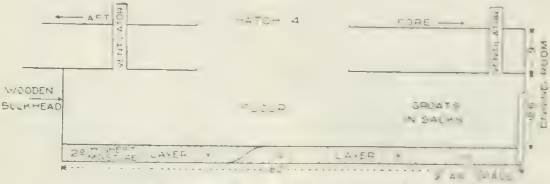

Fig. 4. Section fore and aft through afterhold.

The vessel which carried this cargo was the War Viceroy, a new steel steamship which had just been built on the Pacific Coast. The grain was placed in two of the lower holds, all of it being below the water line when the vessel was fully loaded. The accompanying diagram, fig. 1, shows the disposal of the wheat in the vessel.

The dimensions of the forward hold into which the main bulk of the wheat was loaded were roughly 100 x 50 x 18½ ft. It was prepared for the reception of the wheat by flooring with 3 in. boards, and lining the sides to a height of 7½ ft. with the same material. Above this lining the wheat was in direct contact with the ship's side. A substantial shifting board was erected fore and aft down the center to the full height of the hold, and a wooden partition was built at the after end so as to allow an air space of 1 ft. between it and the iron bulkhead which separated the hold from the fire room. The after hold was similarly floored and lined and in this case a wooden partition was placed 9 in. from the engine room bulkhead. It was unnecessary to build a shifting board in the hold as it was divided to a sufficient height by the propeller shaft tunnel. All the lumber used in the holds had been thoroughly dried.

Each parcel of wheat, after being delivered to the vessel, was trimmed so that its surface was practically horizontal, and then separating cloths were spread over the top to divide it from the succeeding layer. During the loading average samples of each parcel were again taken for moisture test. It was decided to keep the grain, which had been segregated on account of its high moisture content, away from the stokehold bulkhead, where the greatest heat might be expected, and with this object a quantity of the dryer grain was placed between the partition near the stokehold and the high moisture No. 1 Northern, while the high moisture No. 1 Hard was loaded into the forward end of the hold.

Throughout the experiment the necessity of avoiding such precautionary measures as would be impossible under ordinary trade conditions was not lost sight of, but it would have been an unnecessarily severe experiment had the wheat most liable to damage been placed in the warmest part of the hold. In some seasons fairly large parcels of straight grade wheat might be found containing as high as 15% of moisture, but this would be exceptional. Had no separation on account of moisture been made, all the wheat of each grade would have been thoroughly mixed by the time it had been trimmed, and the average moisture content would have been only a little more than the average in the lower moisture parcels. This was because the high moisture parcels were relatively small in quantity.

Figures 2 to 4 show how the parcels of grain were loaded into the holds.

The electrical resistance thermometers which were placed in the holds had been previously used in storage tanks on a large scale in elevator bins and had been found to give very satisfactory results. With this apparatus the measurement of temperature depends upon the well known fact that the electrical resistance of a metallic wire varies with the temperature, the principle of the Wheatstone bridge being used in determining the change in resistance. The thermometers were tied on to long steel cables with marlin, friction tape being wrapped round each lead to prevent it from slipping. They were usually arranged in sets of 11 along each cable so that a distance of 5 ft. separated one thermometer from another. After each parcel of wheat had been trimmed, and just before spreading the separating cloths, the line of thermometers for that particular layer was dropped down one of the ventilators leading into the hold, stretched out and embedded in the grain at a depth of 6 to 12 in. All the lead wires from the line of thermometers passed up through the ventilator and their ends were soldered to a thirteen point switch. This switch was screwed into a hard wood box which was lashed to the outside of the ventilator and afterwards covered over with tarpaulin for protection against the weather. When the temperatures were to be measured, the cover was taken off, the door of the box opened and the switch connected with the temperature indicator and battery.

The loading of the grain, owing to delays from various causes, occupied five days and was concluded on Nov. 13, 1917, but it was not until Dec. 3, after taking on further cargo at Portland, Oregon, that the ship sailed for the Panama. During the voyage between Portland and Norfolk, Virginia, daily records were kept of the maximum temperature of the air, and of the readings of wet and dry bulb thermometers, while the sea water temperatures were obtained from the engineer's departmnt. The humidity of the air was usually very high, often reaching the saturation point after sunset. On the arrival of the ship at Norfolk on Jan. 10, 1918, the sea water and air temperatures were about 32° F, and the weather remained cold until the voyage was resumed on Jan. 26. While crossing the Atlantic no observations were made, on account of the very rough weather experienced. The readings of the electrical thermometers in the holds were taken every two or three days during the voyage between Portland and Norfolk. Fig. 6 illustrates the variations in temperature shown by 4 of the thermometers situated in different parts of the hold.

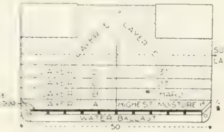

Fig. 3. Section through hatch 2.

The ship docked in London on Feb. 16, 1918, and the discharging of the grain was started two days later. An attempt was made to take the temperatures in the holds before discharging, but this was found to be impossible. The protection of the switches had not been sufficient for the very rough weather which was experienced, and the metal contacts had corroded to some slight extent, so that when the battery was connected, short circuits were set up and it was impossible to obtain an accurate balance on the galvanometer. Careful examination of the grain at the time of unloading showed that a certain amount of damage had occurred.

In layer A. the wheat was found to be heating in two places close to the stokehold bulkhead. This wheat was slightly warm and very musty, but the amount so affected was quite small—probably not more than about 3 bush. altogether. In addition, a few pounds of wheat, which was wet, soft and discolored, had caked here and there to the floor of the hold in the vicinity of the bulkhead. Except in these places the floor was quite clean and dry, and the rest of the wheat in this parcel was perfectly sound.

In layer B. heating wheat was found immediately above the warm spots in layer A. The amount of damaged grain was rather more than in the bottom parcel, but it was still quite small. There was no other damage in this layer.

Layer C., except for a few bushels of hot wheat close to the stokehold bulkhead, arrived in good condition.

In layer D., the quantity of wheat found to be heating was considerably more than in layer C., probably amounting altogether to about 60 bush. The position of the damaged grain was the same as in the lower layers.

Layer F., with the exception of about 2 bush. of slightly warm wheat under the forward ventilator on the port side, arrived in perfectly sound condition.

In layer E. the damage was most extensive. A body of grain occupying the space between the sides of the ship and the oil settling tank was found to be heating and musty. In some places the wheat was warm 5 ft. away from the bulkhead, and to the full depth of the layer. Probably 700 to 800 bush. were affected altogether, some of it being very warm, covered with fungi growth, and caked so badly that it was difficult to break down, while in other places it was only just warm and held together very loosely. All the heating wheat which has been described up to the present was mixed up and worked in with the sound wheat during the unloading. The cargo superintendent apparently considered that the damage was not sufficient to make the separate treatment of this grain necessary, and it is for this reason that more accurate information cannot be reported with regard to the weight of grain which arrived out of condition. Underneath the port ventilator at the forward end of the hold, about 4 bush. of grain were found to be badly heating in this parcel. There seems to be little doubt that the cause of this damage was the drainage of water down the ventilator. This wheat was not mixed up with the sound grain. Along the sides of the ship in the after half of the hold there was a thin layer of very wet, sour and discolored grain, which near the surface had sprouted badly. The bad condition of this wheat was attributed to sweat damage. All the grain so affected was kept separate from the main bulk of the parcel.

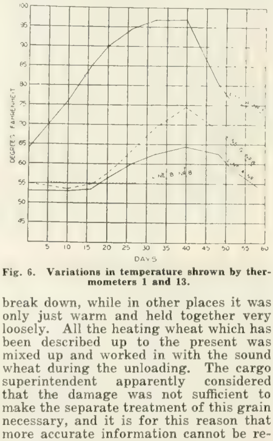

Fig. 6. Variations in temperature shrown by thermometers 1 and 13.

In layer X. very small quantities of soft, wet wheat had caked in places to the floor of the hold. This damage was probably caused partly by sweat and partly by the leakage of small amounts of water around the rivets in the ship's side.

Layer Y. was discharged in good condition except for a little wheat which had caked round the side, as in layer X., and small quantities which were heating and musty on each side of the propeller shaft tunnel immediately under the mast. This latter damage was evidently caused by the leakage of sea water around the mast.

The damaged grain from layers X and Y, together with that from under the forward ventilator and the sweat damaged grain in layer E, was weighed up apart from the rest of the cargo, the total quantity being about 160 bush. This was the only damage reported by the cargo superintendents, and amounted to less than 0.2%. But the total quantity of damaged grain was increased by probably more than 800 bush. if the more or less injured grain be taken into account. As far as this shipment is concerned, this damage is perhaps of little commercial interest, since the wheat affected by it was mixed with the sound grain when the usual practice was followed during the discharging. It will indicate, however, where trouble may be expected in the case of future shipments unless certain precautions are taken.

While the reported damage was evidently due to sweat, or to the admission of water into the hold, the cause of the heating near the stokehold bulkhead is not quite so clear. The heating took place under the ventilators, down which a little water may have dripped during and after the loading. Tests on samples of heating wheat from layer C showed 15.2 and 15.7% of moisture, while a sample from layer E, contained as high as 21% of moisture. These percentages do not, however, necessarily indicate the admission of water into the hold, since the chemical changes due to respiration, which is very rapid in warm grain, always result in an increase in the proportion of water present. But whether the cause of the heating was the drainage of some water from the outside, or whether the moisture content of the wheat as loaded was dangerously high for the conditions in that part of the ship, there is no doubt whatever that the temperatures close to this bulkhead were altogether too high for safety.

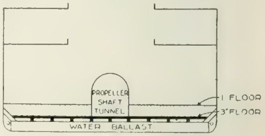

Fig. 5. Section through hatch 4.

During the discharging of the grain, average samples were collected from some of the parcels. These samples were tested in the laboratory for moisture and the results obtained showed that no appreciable changes in moisture content occurred during transit.

A comparison shows 99,209 bush. of wheat loaded on the ship and 98,833 bush. discharged, a loss of less than 0.4%.

Conclusions.—The results of the investigations in connection with this shipment indicate that if certain precautions are taken wheat may be carried to Europe via the Panama Canal without damage. The following recommendations are therefore made:

Only wheat which is quite sound in every way should be shipped by this route. It should be carefully tested for moisture and any lots containing an excessive amount should not be loaded into the vessels. It has not been possible to determine just how much moisture the grain may safely carry, but until some limit is definitely set, a moisture content of more than 14.5% should be regarded as dangerous.

The temperatures recorded by the thermometers against the false bulkheads near the engine room and stokehold are evidently too high for safety, and an unventilated air space of 9 to 12 in. cannot then be considered sufficient protection. It is recommended therefore, that when it is necessary to stow grain close to the engine room or stokehold, these spaces be either ventilated or extended. The records clearly show that it was only in these portions of the holds and close to the propeller shaft tunnel that dangerously high temperatures occurred. The conditions will very in different ships, but the adequate protection of the grain cargo in these parts of any vessel is one of the most essential conditions for its safe transportation.

Excepting in the neighborhood of the stokehold bulkhead, the only damage which occurred in this shipment was due to sweat, or the admission of water. The importance of keeping the grain dry during loading and of preventing the subsequent entrance of water into the holds hardly needs to be emphasized. If the Panama Canal route is used to any extent for this trade, most of the shipments will probably be made from Vancouver during the rainy season, and it will therefore be necessary to take steps to prevent water from dripping down the hatches and ventilators during loading. In addition to this, the ventilators should be covered during rough or wet weather at sea, and no wet cargo of any sort should be stowed in the same hold as the grain.

One feature which was against the present shipment was the length of the voyage, the grain being in the vessel 3½ months altogether. When heating once starts in a body of grain it proceeds at an accelerating rate, so that the length of time the wheat is in transit must have a great deal of influence on the quantity which arrives out of condition, and the extent of the damage.

The conditions to which the grain is subjected in transit by this route are much more severe than those experienced by Atlantic shipments. The temperatures are higher and the voyage much longer, but it is believed that if it is possible to observe the above precautions, there will be little difficulty in carrying wheat cargoes safely. The results of this experiment certainly seem to justify further trials.

The foregoing are extracts from a bulletin by F. J. Birchard, Chemist in Charge, and A. W. Alcock, Assistant Chemist, Trade and Commerce Department's Dominion Grain Research Laboratory.

Birthdays of Transportation Men in February.

Many happy returns of the day to:—

T. Britt, General Fuel Agent, C.P.R., Montreal, born there Feb. 3, 1871.

J. S. Byrom, General Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Jersey City, N.Y., Feb. 10, 1872.

H. R. Charlton, General Advertising Agent, G.T.R. and G.T.P.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Colclough, Superintendent, District 1, Transcontinental Division, Canadian Government Railways, Quebec, Que., born at Bic, Que., Feb. 24, 1871.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

V. A. G. Day, Resident Engineer, Toronto Terminals, C.P.R., born at Aberdeen, Scotland, Feb. 4, 1883.

A. J. Donegan, ex-Superintendent, Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Perth, Ont., Feb. 17, 1872.

R. W. Drew, Division Freight Agent, Saskatchewan District, C.P.R., Regina, born at Kingston, Ont., Feb. 17, 1874.

E. A. Evans, M.Can.Soc.C.E., ex-General Manager and Chief Engineer, Quebec Ry., Light & Power Co., Quebec, born at Kensington, London, England, Feb. 26, 1855.

Goodwin Ford, General Superintendent Western Lines, Dominion Express Co., Winnipeg, born at Bordentown, N.J., Feb. 23, 1859.

U. E. Gillen, Vice President (Operating), G.T.R., Montreal, now on leave of absence, born at Brooklyn, Mo., Feb. 27, 1867.

L. L. Grabill, General Baggage Agent, G.T.R., Toronto, born at Walkerton, Ont., Feb. 6, 1878.

A. J. Hills, Assistant to President, Canadian National Railways, Toronto, born there, Feb. 15, 1879.

T. C. Hudson, General Master Mechanic, Eastern Lines, Canadian National Railways, Montreal, born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, Manager of Telegraphs, G.T.R. and G.T.P.R., Montreal, born at London, England, Feb. 15, 1883.

C. Gardner Johnson, Lloyd's Agent for British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

A. H. Jones, Assistant Engineer, Canadian Government Railways, Moncton, N. B., born at Liverpool, Eng., Feb. 16, 1884.

John McCraw, ex-General Agent, Central Vermont Ry., New London, Conn., born at Craigvale, Ont., Feb. 6, 1868.

G. L. McCrea, Local Freight Agent, C.P.R., Vancouver, B.C., born at Springtown, Ont., Feb. 9, 1876.

T. McNab, ex-Master Mechanic, Alberta Ry. & Irrigation Co., now of Picture Butte, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNellie, Superintendent, Susquehanna Division, Delaware & Hudson Co., Oneonta, N.Y., born at Toronto, Feb. 23, 1874.

J. D. McNutt, Inspector of Train Dispatching, Canadian Government Railways, Moncton, N.B., born at Stewiacke, N.S., Feb. 8, 1873.

D. C. Macdonald, Assistant General Claims Agent, C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

C. S. Maharg, Superintendent, Cranbrook Division, British Columbia District, C.P.R., Cranbrook, born in Dufferin County, Ont., Feb. 4, 1867.

V. J. Melsted, ex-Engineer of Water Service, C.P.R., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, Vice President and General Manager, Algoma Central & Hudson Bay Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent, G.T.R., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

M. G. Murphy, General Agent, Passenger Department, C.P.R., Detroit, Mich., born at Halifax, N.S., Feb. 26, 1878.

J. E. Proctor, District Passenger Agent, C.P.R., Calgary, Alta., born at Sarnia, Ont., Feb. 17, 1878.

C. T. Ridalls, Car Foreman, C.P.R., London, Ont., born at St. Heliers, Jersey, Channel Islands, Feb. 8, 1864.

W. J. Robider, General Master Car Builder, C.P.R., Montreal, born at Savannah, Ga., Feb. 15, 1869.

A. E. Rosevear, General Freight Agent, G.T.P.R. and Grand Trunk Pacific Coast Steamship Co., Winnipeg, born at Montreal, Feb. 20, 1863.

J. G. Scott, ex-General Manager, Quebec & Lake St. John Ry., Quebec, born there Feb. 13, 1847.

J. J. Scully, General Superintendent, Algoma District, C.P.R., North Bay, Ont

G. Spencer, Chief Operating Officer, Board of Railway Commissioners, Otta born at Montreal, Feb. 3, 1872.
wa, born in London, Eng., Feb. 21, 1865.

H. E. Suckling, Treasurer, C.P.R., Montreal, born at Gibraltar, Feb. 27, 1861.

F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping, Dining and Parlor Cars, and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

A. Williams, Superintendent, London Division, Ontario District, C.P.R., London, born at Mono Road, Ont., Feb. 22, 1872.

There's an Excuse for Everything, Except Excuses.

By G. A. Hoag, Superintendent, Canadian National Railway, Capreol, Ont.

Once upon a time a poor farmer owned a team of horses. In the early spring, one of the horses died. The man started to find a mate for his one horse. Horses were scarce and high. He failed to find one within the reach of the few dollars he had, with which to buy. But he found a bull whose owner claimed that the animal was broken to work.

The farmer decided to buy the bull and hitch him with his horse. He took the bull home. He fed him well, gave him a good straw bed, and left him to get a good rest for the next day's work. When the morning came, the bull refused to get up. The farmer finally filled the rack with hay, put some oats in the manger box, and left with his one horse for the field.

That night he fed the bull again, bedded him down, and went to the house. After the farmer had left the bull spoke up to the horse and said "How did you get along today?" "Pretty well," said the horse. "We needed you and could have done more if you had been there to help, but we got along pretty well under the circumstances." The bull ate his oats and lay down and chewed his cud. He decided he had a snap and would continue the strike.

The next morning he refused again to get up. The farmer gave him an extra portion of oats, and all the hay he could possibly eat, and all the water he would drink, and left with the horse for the field. That night he gave the bull another extra fine meal, a good bed to lie on and as soon as he had left for the house the bull again inquired of the horse how that had got along. "Better than yesterday," replied the horse. "Not so well as we would had you been there to help us, of course. In fact, we needed you very much, but we accomplished quite a good day's work." "Did the boss mention me?" asked the bull. "No, he didn't mention you all day."

The bull decided, since he was having such good "eats" and such an easy time in general, that he would continue the system. He therefore refused to get up the next morning, and again at night, after the farmer had left for the house, the bull inquired of the horse how they got along.

"Fine!" said the horse. "Much better than before. To be sure, we needed you, but we are managing to get along, and are doing better each day." "Did the boss say anything about me?" demanded the bull. "No," said the horse. "He said nothing about you to me, but on the way home we met the butcher, and I heard him mention your name to him."

I could truthfully tell a lot of fellows, right now, that I heard their employers mentioning their names to the butcher. And I could tell them why, just as I could tell all the lazy bulls.

G. H. Shaw's Farewell to His Staff.

Geo. H. Shaw, General Traffic Manager, Canadian Northern Ry., on retiring from that position recently, issued the following circular to the freight and passenger traffic officials.

"June 1, 1901; vale Dec. 31, 1918.

"Dear Sir:—In retiring from the service of the Canadian Northern Railway after 17½ years of service, I wish to express my appreciation of your loyalty and assistance in the upbuilding of the business of the company, without which no such results as attained would have been possible. Under conditions, often discouraging and disheartening, you have been prompt and tireless in your devotion to the business interests of the company. No Canadian railway has received a greater measure of service from its representatives, and to this fact is largely due the substantial increase in its revenues, as shown by the following figures for the fiscal years 1901-1902 and 1917-18:—

	1901-1902	1917-1918
"Mileage	1,286	9,433
"Passengers	169,270	10,025,200
"Passenger revenue	$249,020	$7,151,500
"Freight revenue	$1,00[illegible],166	$32,565,400
"Freight tonnage	[illegible]	14,506,300
"Mail, express and sundries	$28,115	$2,433,700
"Total revenue	$1,28[illegible],625	$42,150,600

"These figures indicate substantial growth, but are no indication of the earning power of the property when deferred maintenance is overtaken, terminal and divisional points adequately equipped and the necessary locomotives and rolling stock provided to enable the staff to furnish a reliable and efficient freight and passenger service to the public.

"My successor is unknown to most of you. He merits your generous and loyal support. With best wishes for your future prospects and happiness, I am, yours very truly, Geo. H. Shaw."

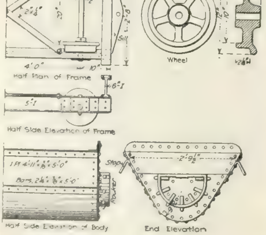
St. Felicien & Ungava Ry.—The Quebec Legislature is being asked to incorporate a company with this title, to build a railway from St. Felicien, Lake St. John County, by way of Lake Michikun, to the waters of Lake Petitsikapou, in the Ungava area, and also to build branches. Demers & Demers, Quebec, are solicitors for applicants.

Small Dump Car for Railway Ditching.

To facilitate the clearing of ditches along railway tracks, a ¾ yd. side-dump steel car has been designed and built by the Baltimore & Ohio Rd. The car is operated on a track of 20 in. gauge laid directly over the ditch, and is made low and narrow so as to clear trains in narrow cuts. One car can be loaded and handled by two men, but where the work is heavy and requires a long haul, two or three cars are coupled and are hauled by a home-made motor car, as shown in the illustration. For this latter plan a larger crew is employed, with two trains, a switch and siding being put in at the end of the track so that one train can be placed for loading while the other is being taken away and dumped.

Dump car, on track 20 in. wide.

Train used for clearing ditches, on track 20 in. wide.



Details of construction of small dump car for railway ditching.

The dump cars contain a single plate forming the V-shaped shell, which is 5 ft. long, 3 ft. wide at the top and about 25 in. deep.

Rockers on the end plates have projecting lugs or teeth which engage with perforated castings on the end sills, and thus hold the body in position as it dumps. The rockers can be locked to prevent accidental dumping. The frame consists of 2 end sills resting on side sills, the latter being connected by diagonal bars and reinforced by plates at the holes for the axles. Cast iron 10 in. wheels are secured to 1½ in. axles by set screws and give a wheelbase of 4 feet.

The design of the car was made under the direction of Earl Stimson, General Superintendent of Maintenance of Way and Structures, Baltimore & Ohio Rd.

The Northwest Route, Limited.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the westerly end of Baker Lake, northwesterly to the eastern end of Schultz Lake; from the junction of the Hanbury and Thelon Rivers, westerly and southwesterly to Old Fort Reliance at the eastern end of Great Slave Lake, or in the alternative, from the junction of the Hanbury and Thelon Rivers, westerly to the southeastern end of Clinton Golden Lake, and from southwest of Kasba Lake southwesterly to the northeastern end of Artillery Lake; or from the junction of the Hanbury and Thelon Rivers westerly to the northeasterly end of Artillery Lake; and from the southwesterly end of Artillery Lake to Old Fort Reliance at the eastern end of Great Slave Lake; with power to build branch lines to connect the different sections of railway by steam or other vessels, to build wharves, and to improve the navigation of the Thelon River. Smellie & Lewis, Ottawa, are solicitors for applicants.

Central Ry. of Canada Winding Up.—In connection with the winding up of the affairs of this railway, the rather ambitious projects of which ended disastrously, application is being made to the Board of Railway Commissioners for a recommendation for confirmation by order in council of agreements of sale between the company and the following companies:—Central Counties Ry., Ottawa Valley Ry., Ottawa River Ry., Carleton & Grenville Ry., St. Agathe Branch Ry., and Ottawa River Navigation Co. The agreements were signed by the president and secretary of the respective companies in Sept. and Oct., 1911. Copies of the agreements can be seen at the offices of the receiver, F. Stuart Williamson, 103 St. Francois Xavier St., Montreal.

Shefford, Bagot & Missisquoi Ry.—The Quebec Legislature is being asked to extend the time within which this company may build its projected railway from the parish of St. George de Clarenceville, on the Quebec-Vermont boundary, northeasterly to a junction with the Intercolonial Ry. between Bagot and St. Eugene; a branch from Adamsville to the International Boundary in the parish of St. Armand, and a branch from Roxton Point, northeasterly to Richmond. The company is authorized to connect its lines with those of any existing railway,

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—**EUGENE E. FAIRWEATHER, M.A., LL.B.**, who has been apopinted Assistant Counsel, Canadian National Rys., at Ottawa, as announced in Canadian Railway and Marine World for January, also continues as Departmental Solicitor, Railways and Canals Department, there.

STANLEY SCOTT, heretofore chief clerk, General Superintendent's office, Canadian Northern Ry., Vancouver, and formerly Secretary to M. H. MacLeod, then General Manager and Chief Engineer, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Secretary to the President, Canadian National Rys., D. B. Hanna, at Toronto, succeeding **W. A. TUXFORD**, who has been appointed in charge of the Pass Bureau.

WALTER PRATT, heretofore General Superintendent, Sleeping, Dining and Parlor Cars and Hotels, Canadian Northern Ry., Winnipeg, has been appointed Manager, Sleeping, Dining and Parlor Cars and Hotels, Canadian National Rys., with jurisdiction over all lines. Office, Toronto.

A. L. GRABURN, heretofore Assistant Superintendent of Rolling Stock, Eastern Lines, Canadian Northern Ry., Toronto, has been appointed General Fuel Agent Canadian National Rys. Office, Toronto.

W. L. CRIGHTON, heretofore Advertising Agent, Canadian Government Rys. Moncton, N.B., has been appointed General Advertising Agent, Passenger Traffic Department, Canadian National Rys Office, Toronto.

R. R. EDGLEY, heretofore acting Superintendent, Canadian Northern Ry. Quebec, has been appointed Superintendent, Saguenay Division, Quebec District Canadian National Rys. Office, Quebec.

E. W. OLIVER, heretofore Assistant Engineer, Canadian Northern Ry., Toronto, consequent on the appointment of E F. Seixas, heretofore Manager Niagara St. Catharines & Toronto Ry., as General Manager and Official Representative. Monterey Ry., Light & Power Co., has been appointed General Superintendent, N. St. C. & T. R., reporting to S. J. Hungerford, Assistant Vice President, Canadian National Rys. He will also be in charge of the Toronto Suburban Ry. and the Toronto Eastern Ry. Office, Toronto.

W. T. MOODIE, heretofore Division Engineer, Canadian Northern Ry., Winnipeg, has been appointed Superintendent, Division 1, Central District, Canadian National Rys., vice J. E. Nelson, transferred. Office, Port Arthur, Ont.

B. T. CHAPPELL, heretofore Superintendent, Pacific District, Canadian Northern Ry., Vancouver, B.C., has been appointed General Superintendent, Prairie District, Canadian National Rys. Office, Saskatoon, Sask.

W. I. MUNRO, heretofore Chief Dispatcher, Canadian Northern Ry., Winnipeg, has been appointed acting Superintendent, Division 2, Prairie District, Canadian National Rys., vice T. J. Brown, assigned to other duties.

D. R. CAMPBELL, heretofore Assistant General Manager, Pacific District, Canadian Northern Ry., Vancouver, B.C. has been appointed General Superintendent, Pacific District, Canadian National Rys. Office, Vancouver.

J. E. NELSON, heretofore Superintendent, Division 1, Central District, Canadian Northern Ry., Port Arthur, Ont., has been appointed Superintendent, Pacific District, Canadian National Rys. Office, Kamloops Jct., B.C.

R. M. MITCHELL, heretofore Right of Way Agent, Canadian Northern Ry., Winnipeg, has been appointed Right of Way Agent, Western Lines, Canadian National Rys. Office, Winnipeg.

THOMAS TURNBULL, heretofore Assistant Chief Engineer, Canadian Northern Ry., Winnipeg, has been appointed Engineer, Maintenance of Way, Western Lines, Canadian National Rys. Office, Winnipeg.

A. V. REDMOND, heretofore Division Engineer, Transcontinental Division, Canadian Government Rys., Cochrane, Ont., has been appointed District Engineer, Central District, Canadian National Rys. Office, Winnipeg.

H. L. VERCOE, heretofore Special Engineer, Canadian Northern Ry., Winnipeg, has been appointed District Engineer, Prairie District, Canadian National Rys. Office, Saskatoon, Sask.

F. J. Butler.
Local Treasurer, Eastern Lines, Canadian Northern Railway System.

T. W. WHITE, heretofore Assistant Engineer, Bridge Engineer's Office, Canadian Northern Ry., Winnipeg, has been appointed District Engineer, Western District, Canadian National Rys. Office, Edmonton, Alta.

W. H. PIRIE, heretofore Car Foreman of Shops, Canadian Government Rys., Halifax, N.S., has been appointed General Car Foreman, Halifax Terminals, Canadian National Rys. Office, Halifax.

J. B. TURNER has been appointed District Car Foreman, Maritime District, Canadian National Rys., all lines Mont Joli, Que., and east, except Halifax terminals.

C. STEEVES, heretofore General Boiler Inspector, Canadian Government Rys., has been appointed General Boiler Inspector, Eastern Lines, Canadian National Rys. Office, Moncton, N.B.

A. McGOWAN, heretofore Supervisor of Car Work, Canadian Northern Ry., Winnipeg, has been appointed Master Car Builder in charge of all car work, Western Lines, Canadian National Rys. Office, Winnipeg.

H. G. REID, heretofore Assistant Superintendent of Rolling Stock, Canadian Government Rys., Transcona, Man., has been appointed General Master Mechanic, Western Lines, Canadian National Rys. Office, Winnipeg.

H. A. ENGLISH, heretofore Master Mechanic, Central District, Canadian Northern Ry., Winnipeg, has been appointed Master Mechanic, Central District, Canadian National Rys. Office, Winnipeg.

L. G. ROBLIN, heretofore General Master Mechanic, Western Lines, Canadian Government Rys., Cochrane, Ont., has been appointed Master Mechanic, Prairie District, Canadian National Rys. Office, Saskatoon, Sask.

W. H. GRANT, heretofore Tie and Timber Agent, Eastern Lines, Canadian Northern Ry., who has also been acting as General Storekeeper, during the absence in the Imperial Munitions Board's service of L. C. Thomson, has been appointed General Tie Agent, Canadian National Rys. Office, Toronto.

F. W. HARGRAVE, heretofore Purchasing Agent, Canadian Northern Ry., Toronto, has been appointed Assistant to General Purchasing Agent, Canadian National Rys., Toronto.

J. A. SUTTON, heretofore Fuel and Tie Agent, Transcontinental Division, Canadian Government Rys., has been appointed District Fuel Agent, Divisions 1 and 2, Central District, Western Lines, Canadian National Rys. Office, Cochrane, Ont.

T. J. LOWE, heretofore Fuel Agent, Western Lines, Canadian Northern Ry., has been appointed Fuel Agent, Western Lines, Canadian National Rys. Office, Winnipeg.

L. C. THOMSON, General Storekeeper, Eastern Lines, C.N.R., who was loaned to the Imperial Munitions Board early in the war, and has been its Superintendent of Transportation at Ottawa, has returned to his duties at Toronto, and his jurisdiction has been extended over all Eastern Lines, Canadian National Rys.

W. F. TAYLOR, heretofore General Storekeeper, Canadian Government Rys., Moncton, N.B., has been appointed Assistant General Storekeeper, Eastern Lines, Canadian National Rys., east of Port Arthur, Ont., and O'Brien, Que. Office, Moncton.

A. E. COX, heretofore General Storekeeper, Western Lines, Canadian Northern Ry., has been appointed General Storekeeper, Western Lines, Canadian National Rys. Office, Winnipeg.

P. MOONEY, heretofore Assistant General Freight Agent, Canadian Northern Ry., Toronto, has been appointed Assistant General Freight Agent, Canadian National Rys., with jurisdiction on Quebec City, Levis, east of O'Brien and Garneau to Chicoutimi and Quebec, and also Quebec and Saguenay Ry. Office, Quebec, Que.

J. F. LePAGE, heretofore Division Freight Agent, Canadian Government Rys., Quebec, Que., has been appointed Division Freight Agent, Canadian National Ry., with jurisdiction Quebec City, Levis, east of O'Brien and Garneau to Chicoutimi and Quebec, also Quebec and Saguenay Ry. Office, Quebec, Que.

R. E. PERRY, heretofore Assistant General Freight Agent, Canadian Government Rys., Moncton, N.B., has been appointed Assistant General Freight Agent, in charge of publication of tariffs and divisions for lines east of Fort William and Armstrong, Ont. Office, Montreal.

S. G. TIFFIN, heretofore Assistant General Freight Agent, Canadian Government Rys., Montreal, has been appointed Assistant General Freight Agent, Canadian National Rys., with jurisdiction Kingston and east of North Bay, Ont., to Garneau and Matapedia, Que., and Edmundston, N.B. Office, Montreal.

JAMES ORR, heretofore General Freight Agent, Canadian Northern Ry., Montreal, has been appointed Assistant General Freight Agent, Canadian National Rys., with jurisdiction, west of Kingston to Windsor, Ont., Toronto to Port Arthur, Armstrong, Ont., and O'Brien, Que. Office, Toronto.

G. R. FAIRHEAD, heretofore District Freight Agent, Canadian Northern Ry., Hamilton, Ont., has been appointed Division Freight Agent, Canadian National Rys., with jurisdiction west of Kingston to Windsor, Ont., Toronto to Port Arthur, Armstrong, Ont., and O'Brien, Que. Office, Toronto.

G. M. THOMAS, heretofore Travelling Freight Agent, Canadian Government Rys., Toronto, has been appointed District Freight Agent, Canadian National Rys. Office, Hamilton, Ont.

W. HATELY, heretofore Chief of Tariff Bureau, Freight Traffic Dept., Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Assistant General Freight Agent in charge of publication of tariffs and divisions for lines west of Port Arthur and Armstrong, Ont., and Duluth, Minn. Office, Winnipeg.

W. A. WHYTE, heretofore District Freight Agent, Canadian Northern Ry., Regina, Sask., is reported to have been appointed District Freight Agent, Canadian National Rys., Calgary, Alta.

H. G. FOREMAN, heretofore Chief Accountant, Eastern Lines, Canadian Northern Ry., Toronto, has been appointed Assistant Treasurer, Canadian Northern Ry. System. Office, Toronto.

F. J. BULLER, heretofore Cashier and Paymaster, Eastern Lines, Canadian Northern Ry., has been appointed Local Treasurer, lines east of Port Arthur, Ont., Canadian Northern Ry. System. Office, Toronto.

W. L. BROWN, heretofore Assistant Auditor of Agencies, Canadian Northern Ry., Toronto, has been appointed Auditor of Agencies, Canadian Northern Ry. System, Toronto, vice A. C. Egan, promoted.

A. C. EGAN, heretofore Auditor of Agencies Canadian Northern Ry., Toronto, has been appointed Assistant to Comptroller, Canadian Northern Ry. System, Toronto.

W. D. WADDELL, heretofore chief clerk, Audit Department, Canadian Northern Ry., has been appointed Chief Accountant, Canadian Northern Ry. System. Office, Toronto.

Canadian Pacific Ry.—W. H. CAVERS, heretofore Night Chief Dispatcher, has been appointed Chief Dispatcher, Smiths Falls, Ont., vice H. C. Taylor, whose appointment as Car Service Agent, Ontario District, Toronto, was announced in a recent issue.

C. L. LEIGHTY, heretofore Superintendent of Telegraphs, Ontario Division, Toronto, has been appointed Night Chief Dispatcher, Smiths Falls, Ont., vice W. H. Cavers, promoted.

Major W. M. KIRKPATRICK, M.C., who, prior to going overseas with the 87th Battalion, Canadian Grenadier Guards, was Assistant Freight Traffic Manager, Eastern Lines, Montreal, has been appointed Assistant Freight Traffic Manager, Western Lines, vice W. B. Lanigan, who was, some months ago, appointed Freight Traffic Manager, Montreal. Office, Winnipeg.

G. H. HUTTON, Superintendent, Dominion Experimental Farm, Lacombe, Alta., is reported to have been appointed Superintendent of Agriculture and Animal Husbandry, Department of Natural Resources, C.P.R., vice J. G. Rutherford, C.M.G., whose appointment as a Railway Commissioner for Canada has been announced previously. Office, Calgary, Alta.

E. OFFICER, heretofore chief clerk to District Passenger Agent, Calgary, Alta., has been appointed Travelling Passenger Agent there.

I. G. TRUDEL, Storekeeper, Moose Jaw, Sask., is reported to have been appointed Storekeeper, Vancouver, B.C.

SIR GEORGE McL. BROWN, heretofore European Manager, has been appointed European General Manager. Office, London, Eng.

Delaware & Hudson Rd.—G. W. DITMORE, heretofore Assistant Master Car Builder, Colonie, N.Y., has been appointed Master Car Builder, vice R. W. Burnett, resigned, and his former position has been abolished. Office, Colonie, N.Y.

Grand Trunk Ry.—W. WALKER, heretofore acting Division Engineer, Eastern Lines, Montreal, has been appointed Division Engineer, Eastern Lines, vice Major F. L. C. Bond, promoted. Office, Montreal.

J. E. DUVAL, heretofore General Superintendent of Transportation, has been appointed General Superintendent of Car Service. Office, Montreal.

W. KENNEDY, formerly in G.T.R. and Central Vermont Ry. service, but latterly in private business, has been appointed General Mechanical Inspector. Office, Montreal.

H. R. McLENNAN has been appointed Chief Dispatcher, Brantford, Ont., vice W. M. Doherty, assigned to other duties.

F. A. RUTHERFORD, heretofore Inspector of Transportation, has been appointed Trainmaster, District 17, Sarnia Tunnel to Hamilton, including Petrolia Subdivision, District 18, Komoka to Glencoe, District 19, Glencoe to Kingscourt Jct., and District 24, vice R. E. Newcomer, transferred. Office, London, Ont.

R. E. NEWCOMER, heretofore Trainmaster, London, Ont., has been appointed Trainmaster, Districts 20 and 21, Brantford, Ont.

Grand Trunk Pacific Ry.—F. BARNARD has been appointed Assistant Car Foreman, Melville, Sask., vice R. Laing.

A. M. BOUILLON, heretofore Resident Engineer, Regina, Sask., has been appointed Assistant Engineer, Prince George, B.C.

Kettle Valley Ry.—ANDREW McCULLOCH, Chief Engineer, has been appointed acting General Superintendent, vice J. W. Mulhern, resigned.

Pacific Great Eastern Ry.—R. WILSON, heretofore Auditor, Vancouver, B.C., has been appointed acting Manager, vice G. L. Courtney, heretofore General Manager. Office, Victoria, B.C.

Toronto, Hamilton & Buffalo Ry.—J. McBRADY has been appointed foreman blacksmith, Hamilton, Ont., vice J. Templeton.

Canadian Northern Railway Earnings, etc.

Gross earnings, working expenses, net earnings, increases and decreases compared with those of 1917, from July 1, 1918.

	Gross earnings.	Expenses.	Net Earnings.	Decreases.
July	$3,739,400	$3,462,700	$ 276,700	$628,200
Aug.	3,933,300	3,433,700	499,600	93,600
Sept.	4,050,900	4,109,000	* 58,100	484,000

Inc.	10,422,043	13,291,692	....	....
Dec.	....	....	2,869,649	....

*Decrease.

Approximate earnings for December, $6,130,471, against $4,311,598 for Dec., 1917; and for two weeks ended Jan. 14, $2,033,209, against $1,428,642 for same period 1918.

An Overloading of Passengers Case.—The Niagara, St. Catharines & Toronto Ry. and two of its conductors were charged before the St. Catharines, Ont., Police Magistrate on Jan. 8 with breaches of the board of health's regulations, by carrying more passengers than seats were provided for in the cars. The company's solicitor, in defence, urged that the company was incorporated by the Dominion Parliament, that all its cars ran through other municipalities as well as St. Catharines, which was the only restricted area, and that as common carriers the company was obliged to carry all passengers offering, whether there was sitting room or not. A local report of the case adds that it was also contended that the board of health's order was not directed against the steam railways operated in the city, and therefore was discriminatory. The magistrate dismissed the case.

Railway Finance, Meetings, Etc.

Boston & Maine Rd. shareholders voted Jan. 9 by a large majority to adopt the plan for a reorganization of the system endorsed by the directors and by Hon. W. G. McAdoo, while Director General of U.S. Railroads. The specific proposal voted on was the adoption of an agreement consolidating a number of small lines with the B. & M. Rd. Co. One of the lines so consolidated is the Concord & Montreal Rd., part of the route between Boston and Montreal.

Canadian Northern Ry.—It was reported in New York, Jan. 22, that the $7,500,000 of C.N.R. equipment trust 6% gold certificates, Series B, placed on the market recently, had been oversubscribed. The bonds were offered at a price to yield 6¼%.

The Dominion Securities Corporation is making an issue of Canadian Northern Western Ry. Co. 4½% first mortgage coupon bonds at a price to yield 5¼%. These bonds are issued by the Canadian Northern Western Ry. Co. (Canadian Northern Ry. System), under its trust mortgage of June 22, 1912, and supplementary mortgage of April 8, 1913, and are a direct first mortgage lien at various rates from $13,000 to $20,000 a mile on certain branch lines in Alberta, which province has unconditionally guaranteed payment of principal and interest. The entire capital stock of the Canadian Northern Ry. System is owned by the Dominion of Canada, and the road has been merged with other roads owned by the Dominion into the Canadian National Railways, thus in effect placing the credit of the Dominion of Canada behind these securities, in addition to the guarantee of the Province of Alberta.

Canadian Northern Ry.—There has been deposited with the Secretary of State at Ottawa, a duplicated of a trust mortgage dated Oct. 22, 1919, made between the C.N.R. and Lloyd's Bank, London, Eng., and the King, securing an issue of 5% guaranteed secured gold notes of the company.

Timiskaming & Northern Ontario Ry.—

	Nov., 1918	Nov., 1917
Passenger revenue .	$ 47,198.91	$ [illegible]
Freight revenue . ..	151,9[illegible]	116,[illegible]
Total revenue. .	202,121.25	[illegible]

White Pass & Yukon Route.—The earnings from Jan. 1 to Sept. 30, 1918, were $645,687, against $570,127 for same period 1917.

Freight and Passenger Traffic Notes.

The C.P.R., on Jan. 6, began the operation of its Waltham Subdivision trains into the central station at Ottawa, instead of into the Broad St. station as theretofore.

The privilege heretofore granted to Dominion civil servants of certificates enabling them to travel at half fare on Canadian Government Railways has been withdrawn.

From Jan. 2, inbound and outbound freight theretofore handled by the National Transcontinental Ry. sheds at Winnipeg is being handled at the Canadian Northern Ry. freight sheds.

The traffic carried over the Quebec bridge during 1918 is reported to have included 10,000 loaded freight cars, 11,[illegible] empty freight cars, and 3,644 passenger cars in 860 regular trains.

A. R. Mainer, a C.P.R. employe at Piapot, Sask., was fined $5 and costs at Moose Jaw, Sask., Jan. 7, for stealing railway tickets from the company. Mrs. Mainer was detected in an attempt to travel to Quebec on a stolen ticket, and Mainer, when arrested, had another one in his possession.

Passenger service on the following C.P.R. branch lines in Alberta has been reduced to a one day a week train, as follows:—Irricana to Bassano, Thursdays, returning on Fridays; Suffield to Lomond, Wednesdays, returning Thursdays; Lethbridge to Manyberries, Tuesdays, returning Wednesdays.

The Canadian passenger associations withdrew the privilege granted to soldiers in uniform of buying return tickets at single fare rate, as from Jan. 1, for eastern Canada, and from Jan. 10 for western Canada. This special rate is now only available for hospital patients and convalescents, who must produce forms signed by the superintendent of the hospital on the roll of which they are carried.

Owing to a rock slide on the line connecting the C.P.R. and the Kettle Valley Ry. at Hope, B.C., the K.V.R. trains are being operated via Spences Bridge, and this will continue until the line is cleared. dian triangulation in the Juan de Fuca clearing of the line will not be undertaken until the summer.

The G.T.R. is reported to have applied to Connecticut State authorities for a lease of the state dock at New London, in order to increase its available docking space for overseas trade, the accommodation at Portland, Me., not being sufficient.

C.P.R. eastern passenger officials met in Montreal, Jan. 15, under the presidency of C. E. E. Ussher, Passenger Traffic Manager, for their annual conference, the following being present: F. R. Perry, New York; L. R. Hart, Buffalo; G. Clifford, Cleveland; E. F. L. Sturdee, Boston; H. E. Malone, Cincinnati; R. L. Elworthy, Minneapolis; A. L. Powell, Winnipeg; F. G. Chesborough, Atlanta; C. L. Williams, Pittsburg; M. G. Murphy, Detroit; S. J. Wall, Chicago; E. G. Sheahan, St. Louis; Max Enos, New York; C. B. Foster, W. H. Snell, A. O. Seymour, A. B. Calder and J. M. Gibbon, Montreal.

The June Mechanical Conventions.—At a recent meeting of the executive committees of the American Railway Master Mechanics Association and the Master Car Builders Association, at New York, it was decided to hold the annual conventions at Atlantic City, N.J., as follows, the Master Car Builders Association, June 18 to 21, and the American Railway Master Mechanics Association, June 23 to 25.

Siberian Railway Control.—A press dispatch from Vladivostok Jan. 20 says that an inter-allied agreement for controlling the Siberian Ry. has been signed. The British control the line from Omsk to the front; the French control the [illegible] way, the Japanese the line from [illegible] to Chita and the United States control from [illegible] to Omsk, 3,000 miles. The administrative positions are filled by Russian and United States officials in equal numbers, and there are Russians only in the working staff. Major Stevens is Chief Administrator with Gen. Horvath as co-director. The United States is to guard the line. Cars and locomotives are being supplied from America. Great work shops are being opened up in Vladivostok and every effort will be made to speed up operations.

The Future of Railways in the United States.

A statement made by Hon. W. G. McAdoo, Director General of U.S. Railroads, before the Interstate Commerce Committee of the United States Senate on Jan. 3, just prior to his retirement from that position, has been issued. It covers 48 closely printed pages, and reviews the result of the operation of U.S. railways from the time their operation was taken over by the Federal Government. The first section deals with a survey of the railway conditions as they existed from the autumn of 1916, when "the transportation stringency reached such a point that traffic was almost paralyzed through inability to dispose of it at destination," until the end of 1917, when, after "strenuous efforts and a larger degree of co-ordination than had ever before been attempted" in connection with the railway service, there was "on all roads a total of nearly 145,000 cars accumulated on account of the congestion which prevailed in the territory east of Chicago and St. Louis and north of the Ohio and Potomac in excess of the normal movement." Control of the lines was taken by the Federal Government Dec. 28, 1917. During the year that has elapsed there had been put into operation such plans as were deemed necessary for the cutting out of all unnecessary traffic; for the co-ordination of routes, so as to compel traffic to be carried by the shortest route direct to destination; the use of all terminal facilities in common; the pooling of repair shops, and numerous other reforms which only the unification of control of all the railway systems of the country could permit. The putting in force of these plans under general orders not only cleared up the congestion of traffic that was found to exist at the end of 1917, but permitted the carrying to the seaboard of immense quantities of supplies for Europe and the transportation of over 6,000,000 troops within the country.

The most important section of the statement is that devoted to changes inaugurated during 1918, many of which, it is claimed, should prove of permanent value, and which it is recommended should continue as far as possible whatever form of control is decided upon. These changes are: The maintenance of the permit system, so as to control the traffic at its source; the maintenance of heavy loads for cars; the pooling of repair shops; the elimination of circuitous routes; the unification of terminals; the maintenance of the sailing day plan; the consolidation of ticket offices; the utilization of universal mileage tickets; the standardization of equipment; the maintenance of the uniform freight classification introduced by the U.S. Railroad Administration; the maintenance of common time tables between important points; the maintenance of high demurrage rates and uniform rules; the establishment of through waybilling freight from point of origin to destination; rendering unnecessary the rebilling by connecting or intermediate routes; the elimination of the old practice of paying mileage or per diem rental for the use of freight or passenger cars of one carrier by another; the simplification of the old practice of apportioning interline passenger revenue; and the utilization of water routes for the relief of crowded rail lines.

The permit system prohibits the loading of traffic, in the absence of an assurance that it can be disposed of at destination. Under the heavier loading system in use during 1918 the average train load was increased from 655 to 682 tons, and the average car load from 26.8 to 29 tons, resulting in producing 1.9% more ton miles, with a decrease of 2.1% of train miles and a decrease of 5.8% of loaded car miles. The experience of the year showed that, due largely to the co-ordination of shop work, there had been an average increase of 20.93% each week in the number of locomotives receiving classified repairs. By re-routing freight a total of 16,863,633 car miles were saved in eastern and northeastern regions, and in the ore trade from Minnesota and Michigan mines to Lakes Superior and Michigan ports, 64,770 loaded and empty cars were rerouted, saving 3,577,464 car miles. A table showing 24 old routes, covering 15,764 miles, is given, together with the new routes, covering 11,203 miles. Information is also given as to the other changes which it is urged should be continued.

Questions affecting rolling stock, for which $656,943,745 was authorized; of betterments for which $531,925,525 was authorized, and of new construction, for which $46,421,888 was authorized, are discussed. Labor matters and questions affecting public convenience are also dealt with, as well as water routes.

The concluding section deals with the future, and recommends that the government should continue to exercise control over the lines for five years, in order that the value of the fundamental changes outlined should be fully tested.

The Interstate Commerce Commission's Recommendations.

At another sitting of the Senate's Interstate Commerce Committee, E. E. Clark, one of the Interstate Commerce Commissioners, presented an alternative to Mr McAdoo's plan for a five year extension of government control. A majority of the Interstate Commerce Commission considers that the 21-month period intervening between the signing of the peace treaty and the return to private ownership affords sufficient opportunity for readjustment before the roads are turned back by the government. Mr. Clark said, among other things:—"Considering and weighing as best we can all of the arguments for and against the different plans, we are led to the conviction that with the adoption of appropriate provisions and safeguards for regulation under private ownership it would not be wise or best at this time to assume government ownership or operation of the railways of the country."

He also stated that it seemed obvious that no plan of private ownership should be considered unless it be under broadened, extendd eand amplified government regulation. He said that comparatively few contracts for compensation had been perfected between the transportation companies and the government. Return to private ownership and operation should, therefore, not be understood as meaning precipitous return. A reasonable period of readjustment or preparation should be afforded, and reasonable notice given that upon a given date the properties would be restored to their owners.

Commissioner Woolley dissented from part of the report and gave a number of reasons why he favored the extension plan proposed by Mr. McAdoo, saying that the good accomplished far outweighed the shortcomings and was a promise of better things for the future, and that the proposal to return the railways to private control had not been productive of any concrete plan which would carry the undertaking safely over the breakers obviously ahead.

The Interstate Commerce Commission reiterated its recommendations, made last year, that the presidential power to merge lines during war or peace should be continued, that railway construction should be limited to works of necessity, and that inland waterways should be developed and co-ordinated with the railways.

The Railway Companies Managements' Position.

At a meeting in Philadelphia Jan. 5 the Association of Railway Executives, of whose standing committee T. De Witt Cuyler is chairman, unanimously adopted a plan calling for the creation of a Department of Transportation, headed by a Secretary of Transportation, who would be a cabinet officer and to whom would be transferred the administrative functions now performed by the Interstate Commerce Commission. Among other principles for an elaborate revision of existing railroad control legislation, the plan includes the following:

Private ownership, management and operation should, as a matter of national policy, be continued.

The power of regulation, including all rates, state or interstate, should be exclusively in the hands of the Federal Government, but administered through machinery or agencies responsive to the needs of and convenient to the people of the several states.

The carriers should have the power to initiate rates. The statute should provide the rule of ratemaking, and should require that rates be not only what has been called reasonable, but adequate and sufficient. Rates, whether approved or disapproved by the Secretary of Transportation, should by complaint be brought before the Interstate Commerce Commission, which should have power to pass upon their reasonableness and adequacy. The Interstate Commerce Commission should have power to prescribe minimum rates as well as maximum rates.

Other provisions were submitted covering in detail the questions of rates and the required modification of the Clayton Act, the control of securities and a system of federal incorporation.

Traffic Orders by Board of Railway Commissioners.

Diversion of Carload of Beans.

28045. Jan. 21. Re complaint of Universal Importing Co., Montreal, against refusal of C.P.R. to divert a carload of daifuku beans ex steamer Chicago Maru from Victoria wharf to New York: Upon hearing the complaint Jan. 17, in the presence of counsel for C.P.R., no one appearing for the complainant, and what was alleged, it is ordered that the application be dismissed.

Hudson Heights Commutation Tickets.

28046. Re complaint of John Barrett, Montreal, that C.P.R. refuses to sell monthly commutation books containing less than 55 tickets, between Montreal and Hudson Heights, Que.: Upon hearing the complaint at Montreal, Jan. 16, in the presence of counsel for the railway, the complainant appearing in person, and what was alleged, it is ordered that the complaint be dismissed.

Canadian Pacific Railway Construction, Betterments, Etc.

Betterments in 1918.—Following are particulars of the principal works done last year:—

On the main line tracks over 3,685,000 ties were renewed, and 460,000 tie plates, and 64,100 rail anchors were inserted.

A large amount of track has been reballasted in gravel and crushed rock. In the New Brunswick district the portion of the line between Fairville and West St. John was double tracked.

The bridge and culvert work consisted of the necessary repairs and a few renewals, and was confined principally to standard bridge work, or the reinforcing of second-hand bridge material.

On the line between Leaside Jct. and North Toronto on the double track work, the large reinforced concrete viaducts over the reservoir ravine were completed.

Interlocking and extension of block signals and changes of this character were carried out at a number of essential points and about 20 miles of automatic signals between Guelph Jct. and Guelph, Ont., were installed.

At Delson, Kemoka and Fairville, the interlockers were reconstructed and the plant at Delson was equipped with track circuit locking.

A number of crossing bells and gates were erected at various points, as well as interlocked signals and derails.

Mechanical time locks on electric approach or route locking were applied to all interlocking plants.

At a number of terminals, the facilities for handling locomotives were extended and increased by making additions to the shops, locomotive houses, coaling stations, water towers, machine and boiler extensions, housing and rest accommodation for the men and storage for materials, etc.

At St. John, N.B., the freight sheds were extended and alterations and additions made, the cold storage plant was also improved, and the amount of freezing space was largely increased.

At Outremont, Que., an additional 5-stall extension and a large machine shop was added to the locomotive house, including a 2-track depressed ash pit and a water supply tank. At Sortin a large coaling station was erected and the water facilities improved. At Sherbrooke an extension to 5 stalls was built to the locomotive house.

At John St., Toronto, a 7-stall addition was added to the locomotive house, as well as a larger machine shop; in addition, the old house was extended and partially rebuilt. At this point also the coaling station was remodelled and a new addition built to serve 4 tracks. An administrative building was erected at the west end of the present freight shed for the accommodation of the locomotive and clerical staff.

A number of terminal renewals and improvements were made on the Manitoba district at Fort William and Winnipeg. These consisted principally of general repairs, including some track work.

In the British Columbia district a transfer slip was completed at Vancouver. At Field accommodation was provided for a Y.M.C.A. building.

Western Lines Work for 1919.—D. C. Coleman, Vice President, Western Lines, gave out a statement at Winnipeg, Jan. 22, as to the betterments projected for the western lines for this year.

"The company will continue to follow the policy of making timely and prudent provision for the continually expanding traffic in western Canada, and for the maintenance of the property in the best possible manner.

"The work to be done on bridges will be most extensive. The most interesting work of this nature to be undertaken will be the replacement of the bridge over the Assiniboine River at St. James, and the filling of the great structures over Scissors Creek and Bear Creek on the Neudorf line and the large bridge over the Battle River at Hardisty.

The usual generous provision is made for ballasting, steel replacements and improvements to the road bed.

"The programme as to new lines cannot be determined until certain surveys now being made are completed, and until certain legal formalities are complied with, but an announcement on this point will be made before spring.

"New station buildings will be erected at Harding, Marchwell, Schwitzer, Rutland and Dafoe.

"The locomotive houses at Weyburn, Moose Jaw and Cranbrook will be extended and the locomotive house at Sirdar, B.C., will be rebuilt.

"Coaling plans will be built at Raith, Ont., and North Bend, B.C.

"Additional trackage for handling train movements will be provided at High Bluff, Rosser, Fusilier, Stephen, Melita and Rosstown and extensions made to terminal trackage at Portage la Prairie, Revelstoke and Vancouver.

"Locomotive boiler washout plants of the most modern design will be installed at Medicine Hat and Revelstoke.

"To accommodate the largest type of locomotives, new turntables will be installed at Moose Jaw, Field and Revelstoke.

"A permanent concrete floor will be placed in the stock yards at Fort William, and improvements will also be made in the stock yards at Moose Jaw.

"At Winnipeg station the temporary wooden platforms in the train shed, which were put into service until the fill had reached its permanent location, will now be replaced with permanent mastic platforms.

"Very extensive improvements will be made at Winnipeg Beach with a view to giving better accommodation to bathers and picnickers. These improvements include the erection of a new power house, new bathing houses and the removal to a new site and re-erection of a number of the present buildings, and it is expected that the change will greatly promote the amenities of the pleasure resort.

"At Regina additional paving will be done in the local yards to permit more convenient teaming of freight, and there will be improvements made in the ash pit facilities to provide for the more prompt handling of locomotives.

"The station at Moose Jaw having proved inadequate for the traffic handled there, plans are in preparation for a new building, and work will be done in the local yards to permit more convenient teaming of freight, and there will be improvements made in the ash pit facilities to provide for the more prompt handling of locomotives.

"The interior of the station at Medicine Hat will be remodelled to give better accommodation for the public.

"The lining of Connaught tunnel with concrete will be continued.

"An additional transfer barge will be built for Okanagan Lake and an additional car slip provided.

"At Vancouver, the construction of a new ocean pier will be undertaken and the necessary plans are being made. When these are completed the work of dredging and filling will be started immediately."

A press report says that about $6,500,000 will be spent on the betterments mentioned above and that the appropriation does not include any for the construction department, but that anything spent on new lines will be additional.

Manitoba & Northwestern Ry.—The Dominion Parliament is being asked to authorize the company to build a line from its Shell River branch in Tp. [illegible], Range 28, west of the 1st Meridian, northerly to Tp. 25, Range 28, west of the 1st Meridian, Man.

Branch Lines in Saskatchewan and Alberta.—The company is applying to the Dominion Parliament for authority to build the following railways: From Duchess, on the Bassano easterly branch, in Tp. 20, Range 14, west 4th Meridian, northerly to Tp. 25, Ranges 14, 15 or 16, west 4th Meridian, Alta.; from Archive, on the Moose Jaw southwesterly branch, in Tp. 15, Range 27, west 2nd Meridian, southwesterly and westerly to Wymark on its Swift Current southeasterly branch, in Tp. 13, Range 13, west 3rd Meridian, Sask.; from Fortune or [illegible], on the Moose Jaw northwesterly branch, in Tp. 30, Ranges 1 or 2, generally southerly for 50 miles, thence easterly for 30 miles to Tps. 20, 21 or 22, Range 10, west 3rd Meridian, Sask.; from the Weyburn-Sterling line in Tp. 7, Range 29, west 2nd Meridian, southerly to Tp. 5, Range 30, thence westerly to Range 7, west 3rd Meridian, Sask.; from Lanigan, on the Pheasant Hills branch, in Tp. 33, Range 22, west 2nd Meridian, generally northeasterly between the Carrot and Saskatchewan Rivers, and on to Cumberland House, Sask.; from Leader, on the Swift Current northwesterly branch, generally northwesterly for 30 miles, thence generally easterly to Big Stick Lake, in Tp. 16, Rnage 25, west of 3rd Meridian, Sask.; from the Manitou Lake branch in Tp. [illegible], Range 21, west of 3rd Meridian, northwesterly to Whitford Lake, Tp. 56, Range 11, west of 4th Meridian.

Saskatchewan Division.—A press report of Jan. [illegible] stated that an engineering party started work on the previous day upon a survey for a line from Wymark to Buttress, Sask. Wymark is situated at mileage 17 on the line from Swift Current to Vanguard, and Buttress at mileage 16, on the line from Moose Jaw to Assiniboia, on the Weyburn-Lethbridge line. The distance between the two points is approximately [illegible] miles and the route is almost straight easterly. It is reported that the party will also survey a route for an extension of the Swift Current-Vanguard line from the present terminus to another point on the Moose Jaw-Assiniboia line.

D. C. Coleman, Vice President, Western Lines, was in Regina Jan. [illegible], and is reported to have said that two surveys through the district had been made previously, and that a third survey was then being made, the terminal points being Wymark and Buttress. He was not in a position to say what line would be adopted, or whether there would be any construction this year.

Yahk to Meadow Lake, B.C.—We are

officially advised that the company is building a small line from Yahk to Meadow Lake, B.C., to get out ties. The purchase by the company of an additional 17 square miles of timber area for its timber reserve in that district was mentioned in Canadian Railway and Marine World for January, pg. 18.

A press report states that the line is to be 12 miles long, and is to form part of a cut-off between Yahk and Elko, which would reduce the mileage between these two points from 85.5 miles to almost an air line of 46 miles. The suggestion is made that the line will connect up with the Waldo branch; and that it would give easier gradients than the existing Crows Nest Pass line. The press report also states that Jones and Doris, Cranbrook, B.C., are erecting the bunkhouses, etc., for the construction gangs.

Transfer Slip on Burrard Inlet.—Plans have been deposited with the Minister of Public Works at Ottawa, showing the location, etc., of a new transfer slip, on the south shore of Burrard Inlet, Vancouver. The plans show that this slip will be constructed slightly west of the prolongation of Thurlow St. The trestle leading to the apron will be 210 ft. long and 45 ft. wide, supported on creosoted piles. The apron is to be 70 ft. long, and will be composed of 6 deck trusses, with top cord and wooden posts. A contract for the work has been let and it is expected to have the slip ready for the operation of the company's barge traffic this year. (Jan., pg. 13.)

Railway Location and Terminal Question in Hamilton.

The city of Hamilton, Ont., appealed recently to the Dominion Government against two Board of Railway Commissioners' orders affecting that city. One of the orders appealed against authorizes the Toronto, Hamilton & Buffalo Ry. to expropriate some city property for the extension of its Kinnear yards, and the second authorizes the same company to lay down four additional tracks across Selby Ave. The appeal was heard Jan. 22, the City of Hamilton being represented by F. R. Waddell, city solicitor, and Wallace Nesbitt, K.C.; the Toronto, Hamilton & Buffalo Ry. by F. H. Phippen, K.C., and E. D. Cahill; Hamilton manufacturers by S. D. Biggar, K.C., and Canadian National Railways by E. W. Oliver. The government reserved its decision.

The two appeals referred to form only a part of the matter in which the City of Hamilton is interested. The city desires a thorough reconstruction and rearrangement of the railway lines, according to the Tye-Cauchon plan, described in Canadian Railway and Marine World, Sept., 1917, pg. 342, and all its efforts since that date have been directed to get this plan adopted by the railways. Some additional factors have been introduced into the situation recently, owing to the purchase of the Canadian Northern Ry. by the Dominion Government, and an application, which it is reported will be submitted to Parliament by the Hydro-Electric Power Commission of Ontario for power to build an electric railway from Toronto via Hamilton to the Niagara frontier. A suggestion is made that the Railway Act should be amended to give the Board of Railway Commissioners power to order the building of joint railway lines and terminals in any city.

F. R. Waddell, K.C., City Solicitor, is reported to have said, on his return from Ottawa, that he got the impression that the government believes the time has arrived to take over the Grand Trunk Ry., which would make it unnecessary to build a Canadian Northern Ry. line through Hamilton,

Orders By Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

27950 to 27953. Dec. 24. Rescinding clause 3, order 25980, Mar. 30, 1917; clause 2, order 25576, Oct. 27, 1916; order 26887, Jan. 3, 1918, and clause 2, order 27128, Apr. 17, 1918, respecting interswitching, which conflict with general interswitching order 252, Oct. 26, 1918.

27954. Dec. 20. Approving agreement between Bell Telephone Co. and Tara Keady Telephone Association, operating in Bruce and Grey Counties, Ont.

27955. Dec. 20. Authorizing C.P.R. to build spur for A. L. Florence & Son, Ottawa, Ont.

27956. Dec. 24. Approving Canadian Northern Ry. plan showing additional derails to be installed at crossing of Montreal Terminal Ry., Longue Pointe, near Montreal.

27957. Dec. 23.– Authorizing Saskatchewan Highways Department to build highway crossing over C.P.R. near Coalpole, Sask.

27958. Dec. 23. Relieving C.P.R. from providing further protection at crossing at Pickerel Road, Scugog, Ont.

27959. Dec. 26. Authorizing Grand Trunk Pacific Ry. to operate over C.P.R. crossinrgs at Weyburn, Sask., until June 1, 1919, pending installation of interlocking plant.

27960, 27961. Dec. 26. Approving Bell Telephone Co. agreements with St. Marys, Medina and Kirkton Telephone Co., Huron, Perth, Middlesex and Oxford Counties, Nov. 4; and Elmsley South Rural Telephone Co., Leeds adn Lanark Counties, Ont., Dec. 7.

27962. Dec. 27. Authorizing City of Ladysmith, B.C., to make highway crossing over Esquimalt & Nanaimo Ry. north of Ladysmith station.

27963. Dec. 27. Extending to Mar. 27, 1919, time within which C.P.R. is required to install automatic bell at crossing of Main St., west of Morse, Sask.

27961. Dec. 28. Amending order 28706, Oct. 30, re crossing of C.P.R. by Calgary Power Co., just east of bridge over Kananaskis River, Alta.

27965. Dec. 26.—Authorizing C.P.R. to build spur for Northwestern Milling & Export Co., Moosomin, Sask.

27966. Dec. 28.—Authorizing Town of Welland, Ont., to rebuild bridge over Welland River.

27967. Dec. 28. Authorizing Canadian Northern Ry. to cross surveyed road between Secs. 22 and 15, Tp. 12, Range 6, west 3rd Meridian, Sask.

27968. Dec. 28. Authorizing C.P.R. to build extra track at grade (third track) across roadway at Loreburn, Sask.

27969. Dec. 30. Authorizing G.T.R. to build spur for Canadian Blower & Forge Co., Kitchener, Ont.

27970. Dec. 28.—Authorizing Saskatchewan Government to build highway crossing over C.P.R. station grounds, at Strongfield.

27971. Dec. 30. Authorizing C.P.R. to cross road allowance between Lots 5 and 6, Cons. 3 and 4, Paipoonge Tp., Ont.

27972. Dec. 28. Authorizing Canadian Northern Ontario Ry. to build spur for Spanish River Pulp & Paper Mills, Ltd., Champagne Tp., Ont.

27973. Dec. 30. Authorizing C.P.R. to build extension to spur for Imperial Oil, Ltd., Lethbridge, Alta.

27974. Dec. 30.—Authorizing Canadian Northern Ry. to build spur for Imperial Oil, Ltd., Rosetown, Sask.

27975. Dec. 28.—Authorizing Canadian Northern Ry. to build spur for Spanish River Pulp & Paper Mills, Ltd., Dana Tp., Ont.

27976. Dec. 30. Authorizing G.T.R. to build spur for McClary Mfg. Co., London, Ont.

27977. Dec. 30. Authorizing Alberta Government to build highway crossing over C.P.R. in s.w. ¼ Sec. 7, Tp. 8, Range 5, west 5th Meridian.

27978. Dec. 30. Approving Canadian Northern Ry. revised location from Lot 5, Block 48, to connection with Grand Trunk Pacific Branch Lines Co.'s track in Lot 21, Block 39, Moose Jaw, Sask.

27979. Dec. 31. Ordering C.P.R. to install automatic bell at Dechenes crossing, near Dechenes, Que.

27980. Jan. 3. Relieving C.P.R. from providing further protection at crossing at mileage 17.8, Aldersyde Subdivision, Alta.

27981. Jan. 2. Authorizing C.P.R. to build spur for Crane, Ltd., Montreal Parish, Que.

27982. Jan. 2.– Approving plans and specifications of Clark award drain under C.P.R. in Harwich Tp., Ont.

27983. Jan. 3. Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Robert Laidlaw and Oakland Sand & Gravel Co., near Brantford, Ont.

27984. Jan. 3.–Authorizing Canadian Northern Saskatchewan Ry. to cross and divert surveyed road in s.e. ¼ Sec. 14, Tp. 12, Range 6, west 3rd Meridian, Sask.

27985. Jan. 3.—Authorizing Canadian Railway to build spur for Roundhill Collieries Co., Round Hill, Alta.

27986. Jan. 2. Authorizing Canadian Northern Ontario Ry. to build spur for Spanish River Pulp & Paper Mills, Ltd., Champagne Tp., Sudbury District, Ont.

27987. Jan. 7.—Relieving G.T.R. from making connection with C.P.R. at Inglewood Jct., Ont., as called for by order 27691, Sept. 16, 1918, it appearing that time table changes effective Jan. 5 will better suit the travelling public.

27988. Jan. 7.—Authorizing G.T.R. to build spur for E. Long Mfg. Co., South Orillia Tp., Ont.

27989. Jan. 7.—Authorizing G.T.R. to build spur for Dominion Oilcloth Co., Montreal

27990 —Jan. 8.—Authorizing Canadian Northern Ry. to cross Moose Jaw Electric Ry. on Athabasca St., Moose Jaw, Sask.

27991. Jan. 8.—Authorizing Granby Consolidated Mining, Smelting & Power Co. to build three entries under Esquimalt & Nanaimo Ry. near Cassidy Station, B.C.

27992. Jan. 8.—Authorizing G.T.R. to build spur for Lang Tanning Co., Kitchener, Ont.

27993. Jan. 8.—Authorizing Saskatchewan Government to make crossing over Grand Trunk Pacific Ry. at Ruthilda, Sask.

27994. Jan. 8.—Authorizing C.P.R. to cross 12th St., Regina Beach, Sask.

27995. Jan. 8.—Drdering C.P.R. to pay cost of timber bents and sills supporting bridge at Washington St., Rossland, B.C., cost of stringers and other parts of superstructure and approaches to be paid by the city.

Eastern Canadian Passenger Association Officers, Etc.

The following officers and committees were elected at the association's annual meeting in Montreal, Jan. 7:—

Chairman—A. J. Parr.

Executive Committee—R. I. Fairbairn (chairman), W. S. Cookson, W. H. Snell, J. F. Pierce.

Rules Committee—Jas. Morrison (chairman), W. Maughan, C. W. Johnston, J. W. Hanley, R. F. Hill, N. J. Ferguson, S. F. Palmer, F. T. Grant, G. D. Wadsworth.

General Baggage Agents' Committee—L. L. Grabill (chairman), G. C. Allen, R. I. Fairbairn, C. C. Bonter, J. O. Apps, H. P. Dearing, W. M. Skinner, A. E. Plumer.

Secretary—G. H. Webster.

Montreal-St. Helens Island Bridge.—The project for the construction of a bridge across the St. Lawrence River, between the Harbor Commissioners' wharf, Montreal and St. Helens Island, and thence to the south shore, is being revived. The estimated cost is $5,000,000. A delegation of south shore residents waited on the Montreal Harbor Commissioners recently and were advised as to the work which it would be necessary to have done in Montreal in order that such a bridge could be built. The commissioners said the same support would be given the project as was promised formerly. On the invitation of the Mayor of Longueuil, a conference of municipalities was called to be held there Jan. 13, to appoint a delegation to go to Ottawa and discuss the project with the Dominion Government. The proposed bridge would provide accommodation for steam and electric railway, as well as for pedestrian and vehicular traffic.

New Railway Construction. — Hon. Arthur Meighen, Minister of the Interior, is reported to have announced, at a board of trade dinner in Winnipeg, on Jan. 22, that the Dominion Government would expend $60,000,000 on new railway work during this year.

Canadian Transportation Men, Engineers, Etc. in the War.

The Canadian Railway Troops' operations in the field on the western front, during the British advance just prior to the armistice, were of the utmost importance in connection with the advance, and a summary of the work received by the Militia Department deals with this feature up to the signing of the armistice.

During November the Canadian Railway Troops laid 308 miles of track which was in the area evacuated by the enemy and necessary to aid in the advance, for the forwarding of food and other supplies. It was necessary in that time to repair 300 miles of grade. To perform this work there was a force of 6,783 men of the C.R.T., aided by 9,980 men attached from other units, a daily working force of 16,763 being employed on railway work under Canadian direction. In addition to this force, there were employed for maintenance duties 1,309. The care of narrow gauge lines required 1,231 men for construction and 1,358 for maintenance. In all a force of 20,661 men were required to further the Canadian Railway Troops' activities.

A mule tram drawing ammunition, on a light railway, behind the Canadian lines at Vimy Ridge. Canadian Official War Photograph. Copyright reserved.

The report on the work for November says that at the beginning of the month, while the enemy was retiring very rapidly and was being hard pressed by our advancing troops he yet managed to carry out a very systematic demolition of railway lines and bridges. In order to cope with this, all the battalions of the C.R.T. with the exception of a few small detachments, were concentrated on standard gauge reconstruction work, for the most part in the area between Le Cateau and Turcoing.

Dealing with the action of the enemy, the report says:—"The enemy, in his retirement, used three methods in the demolition of railways: first, by the use of a track destroyer, which tore up the rails and bunched the ties together in such a manner that to relay the track it was necessary to remove the rails from the ties, lift the ties, take out the ballast, and then relay ties and steel and reballast. The second method employed was to blow out every other joint on each track. In this way one end of each rail was damaged, and before it could be used again it was necessary to cut and redrill the damaged end. The third method was to place mines in the grade about 100 yards apart. These mines, which sometimes took the form of heavy trench mortar or aeroplane bombs, caused large craters in the grade and the track and ties surrounding the crater were absolutely demolished.

"In some instances the enemy used all three methods, while in others apparently there was only time to use one method. Continual difficulty was experienced with delay-action mines. These had been placed in important places, such as road crossings, bridge abutments, culverts, etc., and the repairing of the track, clearing away the debris and rebuilding the bridges, entailed very heavy work. A considerable amount of time and expense was saved by salving material from damaged steel bridges and using it for reconstruction. Broken girders were taken out by the use of oxy acetylene welders. Temporary abutments were placed, and trestle piers made to receive the shortened girders, the remaining part of the spans being made up of timber."

The report mentioned that all the gaps in the required standard gauge lines had been completed up to undestroyed lines in the territory recently occupied by the Germans.

PERSONAL NOTES.

Brig.-Gen. C. J. Armstrong, C.M.G., has been created a Companion of the Bath. He volunteered on the outbreak of war, and went over with the first contingent as colonel in command of the Canadian Engineers. He was promoted to brigadier general and after receiving severe injuries in a railway accident which kept him in hospital 19 months, he was attached to the Imperial forces. He is now Chief Engineer of the Seventh Army Corps, and in charge of the repair and reconstruction of canals in Belgium and France. He also saw service in South Africa.

Lieut. L. H. Biggar, 42nd Battalion, C.E.F., who has been awarded the Military Cross, is son of W. H. Biggar, K.C., Vice President and General Counsel, G.T.R. and Grand Trunk Pacific Ry., Montreal. He went overseas in 1916, and was shell shocked at Passchendaele in Oct., 1917, and returned to France in Feb., 1918, as Chief Signal Officer, 42nd Battalion, and subsequently took a first class army signalling course, passing with distinction. He was a member of the party entering Mons with the advance guard, on its relief immediately prior to the signing of the armistice, and is one of the few Canadian officers who signed what is known as the Gold Book there. His brother, Capt. W. H. Biggar, is also overseas.

Corporal W. Holohan, Railway Construction Corps, has been awarded the Distinguished Conduct Medal. He and another corporal were responsible for work in connection with the mounting of 7.5 guns in an area continually subjected to heavy bombardment. He displayed great courage, during an arduous time, and although slightly gassed on several occasions, remained at work with his unit, and worthily upheld the fine traditions established by the overseas troops.

Serg. A. E. Lang, Canadian Railway Troops, has been awarded the Distinguished Conduct Medal, for conspicuous gallantry and devotion to duty, in supervising the construction of standard gauge railway in the forward area. On one occasion nine men of his platoon were killed and nine wounded. He assisted his company commander, under very heavy shell fire, in removing the wounded to a place of safety. Perfect discipline was always shown by his platoon, while under shell fire, and during bombing raids, which were very frequent.

Com. Sergt.-Major J. J. McDonald, Canadian Railway Troops, has been awarded the Distinguished Conduct Medal. While engaged on night railway work the enemy suddenly opened an intense bombardment, which wounded five of his men and cut off two trains. He first rescued the wounded and got them under cover from the shell fire, then returned and repaired the broken track, but the two tractors of the train were so badly damaged that they could not work, so he and his party pushed the trains out of the shelled area. He then went on repairing the line, getting up material, etc., under constant shelling, with the utmost perseverance and determination.

Major H. R. Phipps, Canadian Railway Troops, has been awarded the Military Cross. During an advance, he made a difficult reconnaissance of the forward railway lines and supervised the repairing of breaks in the line under heavy shell fire. He later salved a tank, with a party of men, under heavy fire, and throughout the operations set a splendid example to his company.

Lieut. E. F. Roberts, Canadian Railway Troops, has been awarded the Military Cross. While the track were repeatedly being blown up by shell fire he, by his courage and untiring efforts, succeeded in repairing the breaks, and in evacuating a large quantity of valuable rolling stock, which the enemy was endeavoring to destroy. His skill and daring were entirely responsible for the work being completed.

Lieut. A. W. H. Smith, Canadian Railway Troops, has been awarded the Military Cross. He worked with his party for half an hour, under heavy machine gun fire, repairing a break on the line of his light railway, enabling the gas trains to reach their destinations and make the attack a complete success.

Capt. J. Balfour Thom, M.C., who returned to Canada during January, is a son of the late Jas. Thom, Manager of the Dominion and White Star Steamship Lines at Montreal. He went overseas in March, 1916, as a lieutenant in the 12th Field Co., Canadian Engineers, and served with that unit throughout.

Sergt. J. E. Walsh, Canadian Railway Troops, has been awarded the Distinguished Conduct Medal. On one occasion, when 200 ft. of light railway track was blown out by shell fire, and it was necessary to get it repaired at once, to allow ammunition trains to proceed, he volunteered to take a party to do the work, and although it was three times driven from the track by gas and high explosive shell fire, he succeeded in getting the line in running order in an incredibly short space of time.

Pte. H. C. Woodley, who was among the British prisoners released from German prison camps recently, is a son of R. H. Woodley, Travelling Passenger Agent, C.P.R., London, Eng.

Canadian Railway War Board's Work.

Embargoes Against Overseas Shipments.—The board issued the following statement Jan. 11:—A decrease of approximately 80% in the volume of overseas supplies, to be exported via Canadian ports during February, will militate against maintenance of the unexcelled record which the Canadian railways have made in the handling of freight for Europe during the past four years. On account of conditions existing on the other side of the Atlantic, it has been necessary for the government shipping authorities to ask the railways to make a heavy reduction in the deliveries of ocean freight at the Atlantic seaboard, and in order to avoid congestion and the tying up of thousands of freight cars, the board has been compelled to place embargoes against the general acceptance of overseas shipments. How long this embargo will continue depends entirely upon the rate of recovery from congestion at the European ports and authorization from the government to resume the normal movement. The board's reports show that there is now sufficient freight at the seaboard and in transit to meet all requirements of vessels arriving during January."

Joint Rail and Ocean Bills of Lading.—A number of enquiries have been received by the board with respect to the resumption of issuance of through joint rail and ocean bills of lading. The matter has been receiving the board's attention, and on account of the unsettled state of allotment of ocean space and sailings which will continue for some little time, it is considered that the present is an inopportune time to resume the practice. Member lines are requested, therefore, to refrain from resumption of issuance of through ocean bills of lading pending receipt of further notice from the board.

Opening and Closing Hours for Freight Sheds.—The board's circular 83, Oct. 1, 1918, indicated that, on account of the insistent demand of labor, including practically all classes of railway workers, for the 8-hour day, it became necessary, in the various processes of readjustment, to reduce the number of working hours per day for employes engaged in railway freight sheds. It was proposed, therefore, to establish standard opening and closing hours for railway freight sheds in Canada, 7.30 a.m. and 5 p.m. respectively, Mondays to Fridays, inclusive, and 7.30 a.m. and 1 p.m. respectively on Saturdays, thus making the total working hours per week 48, equivalent to 8 per day. Protests were received from a number of points to the effect that 5 p.m. closing is too early to enable merchants, in some instances, to fill orders received during the afternoon, and after a number of conferences of representatives of shippers and members of the board, it was agreed that in such circumstances the opening hour would be made 8 a.m., closing 5.30 p.m., Mondays to Fridays, and on Saturdays, 8 a.m. to 1.30 p.m. It is directed, therefore, that, effective Feb. 1, 1919, and until further notice, the following hours shall be observed for the receipt and delivery of shipments at railway freight sheds in Canada:—

General: Monday to Friday, inclusive, opening 7.30 a.m., closing 5 p.m.; Saturday, opening 7.30 a.m., closing 1 p.m.

At points where local business conditions are such as to make closing later than 5 p.m. essential: Monday to Friday, inclusive, opening 8 a.m., closing 5.30 p.m.; Saturday, opening 8 a.m., closing 1.30 p.m.

Investigations which have been conducted by the board at various points throughout the country indicate that, while the inauguration of the new hours may cause home slight temporary inconvenience to shipper or carrier, or both, at certain points, any such difficulties can be disposed of through the co-operation of the interested parties. It is hoped, therefore, that all concerned will lend their efforts to the successful operation of the revised arrangement.

Paper towels and drinking cups have as a general thing been substituted for the permanent articles in the principal passenger trains and stations. It has come to the board's notice, however, that the use of permanent towels and cups continues in many places, such as the smaller stations, railway offices, bunk rooms, etc. It is suggested to member lines that, in the general interests of safeguarding the health of both their employes and the public, the use of these articles on railway trains and premises be discontinued entirely and that paper towels and cups be substituted.

Patriotic and Relief Societies' Shipments.—On account of hostilities having ceased, a question has been raised as to whether the railways should continue to handle, free of charge, goods shipped on account of the several patriotic and relief societies enumerated in circular 67 of May 1, 1918. As the work of the several bodies in question continues, the Board recommends that the present arrangement remain in effect until April 1, 1919, when the matter will be presented for further consideration.

Return of Canadian Cars from the United States.—Arrangements having been made with the U.S. Railroad Administration, whereby cars of Canadian ownership forwarded to the U.S. will be returned promptly to Canada, instead of being placed in "pool" service in U.S. lines, instructions embodied in the board's circular 73, June 25, 1918, and supplement 1, July 18, 1918, are cancelled. Details of revised regulations to govern the interchange of freight cars as between Canada and the U.S., and the handling of cars of each country while on the railways of the other, are being worked out and will be issued in the near future.

Unauthorized Changes in Waybills.—Investigations which have been made indicate that delays, and, at times, misrouting of cars occur as a result of unauthorized changes being made in waybills. With a view of avoiding such defects in the service, it is desired that member lines place in effect and take steps to secure compliance with the following regulation:—"Alterations must not be made in car numbers and initials, nor in names of destinations, on waybills without first obtaining the sanction of superintendent of division, superintendent of car service, or other duly authorized officer, for such alteration. When change is made, name of station at which change is made, initials of officer authorizing, and initials of party making change must be noted on waybill."

Specifications for Railway Mail Cars.

The Board of Railway Commissioners passed general order 259, Jan. 13, as follows:—Re specifications for railway mail cars and the application by the Canadian Railway Mail Service Branch of the Post Office Department, for an order approving the same: Upon hearing the application at Ottawa, Jan. 7, in the presence of counsel for the Canadian Pacific, Grand Trunk, and Canadian Northern Railways, and the Michigan Central and the New York Central Railroads, the Controller of the Canadian Railway Mail Service representing the Post Office Department in person; and upon reading the representations filed on behalf of the department and the railway companies affected; and upon the report and recommendation of the board's Mechanical Expert, concurred in by its Chief Operating Officer, and its appearing that all interests have agreed to the adoption of the specifications filed as amended, it is ordered that the "Specifications for Mail Cars," dated Ottawa, May 22, 1918, submitted by the Canadian Railway Mail Service Branch, as amended and corrected and on file with the board under file 3083, be approved and adopted as the standard to be used by railway companies operating in Canada and within the legislative authority of the Parliament of Canada.

Mount Royal Incline Ry.—The Montreal Trades and Labor Council favors the municipal ownership of this incline railway and urges that the opportunity offered by the company's liquidation be taken advantage of for its purchase. Under the franchise the city has the option of taking it over on a fair value to be fixed by arbitration, and the city commission on Aug. 4, began enquiring into the matter.

Sir Eric Geddes has been appointed Minister without portfolio in the new British cabinet, and not Minister of Transportation as at first reported.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—When tracklaying ceased at the end of 1916, steel had been laid to mileage 275, or about 18 miles short of the objective at McMurray. From the end of steel to the bank of the Clearwater River there is a drop of 300 ft. The right of way was graded along the side of the hill to the river's bank during 1917, and has since been allowed to settle. During 1918 there were some slides on the right of way, owing to asphalt beds, but these have been filled in, and in some cases trestle work has been put in. Tracklaying is now reported to be in progress, and it was expected to have rails laid to the river bank early in January. A Y is to be laid at this point for shunting freight cars, so as to permit of loading direct on to river steamboats on the opening of navigation. A press report further states that it is expected to have track laid into McMurray at any early date. The grading, it is reported, does not show any difficulties of construction, and only some small bridges will be required. At McMurray, the Clearwater joins the Athabasca River, on which there is clear navigation for 200 miles to Athabasca Lake, thence through the lake for 175 miles to the Peace River, and via the Slave River, Great Slave Lake and the Mackenzie River to the Arctic Ocean. (Jan., pg. 26.)

Athabasca & Grande Prairie Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway from the junction of the Solomon and Athabasca Rivers, northwesterly to the junction of the Smoky and Muskeg Rivers, thence by Bear Lake in the Grande Prairie district to Dunvegan, Alta. The company also desires to obtain powe rto operate steam and other vessels on navigable waters reached by its line, and various other powers incidental to the development of trade in the country through which it will pass. Barnard & McKeown, Montreal, solicitors for applicants.

Brunner, Mond, Canada, Limited.—Application is being made to the Ontario Legislature by Brunner, Mond, Canada, Limited, for power to construct and operate a tramway line across the 2nd concession road in Anderdon Tp.; a tramway line from the company's property on the 1st concession of Anderdon Tp. to the Detroit River; and also, subject to the consent of the Michigan Central Rd., to use as part of such tramway certain N.C. R. ways and tracks.

Calgary & Southwestern Ry.—We are officially advised that the directors are: President, P. Burns, Calgary, Alta.; Secretary, W. E. Corlet, Calgary; other directors: W. J. Wilson, Vancouver, B.C.; C. J. Duggan, Calgary; John Burns, Calgary. The company proposes to build a line from Calgary to the coal mining areas owned by P. Burns Coal Mine, Ltd., in Sheep Creek, Alta., about 60 miles southwest of Calgary. The line has been located and it is expected that approval of the location plans will be asked for shortly. In the meantime, the clearing of the right of way has been commenced in order to save the danger of forest fires in the summer. It is expected that grading will be started in the spring. A contract for the building of the line has been let to the Southwestern Construction Co., which is the title of the concern formerly known as the Great West Construction. Both these companies were incorporated under the Alberta Companies' Act in 1918. The directors are: P. Burns, J. Burns and W. E. Corlet, the first named being President, and the last named Secretary. (Jan., pg. 26.)

Canada & Gulf Terminal Ry.—The Quebec Legislature is being asked to extend the time within which the company may construct the proposed extension of its line at present in operation from Mont Joli to Matane, Que., 59 miles, to Gaspe Basin, 223 miles. The line has been in operation between Mont Joli, on the Intercolonial Ry., and Matane, since 1912.

Central Ry. of Canada.—Application is being made to the Dominion Parliament for an extension of time for the construction of this projected railway from near Grenville, Que., to Montreal, with a branch from St. Andrews to St. Clome, up the Riviere Rouge to Lake Rouge, and also a branch to connect with the Canada Atlantic Ry. at Hawkesbury, Ont. This line was authorized to be built in 1903 by the Ottawa River Ry., the powers of which, after an unfortunate financial the Central Ry. of Canada, a company which, after an unfortunately financial career, has been undergoing a dispersion of its assets.

Esquimalt & Nanaimo Ry.—The Dominion Parliament is being asked to authorize the company to build a line from between Port Alberni and Bainbridge, on the existing Parksville Jct.-Alberni line, northwesterly via Great Central Lake and the Ash River valley to Comox Lake, with a branch line from near Sproat Lake, via Sproat Lake and the Taylor River, to Long Beach on the west coast of Vancouver Island, B.C. (June, 1918, pg. 240.)

Grand Trunk Pacific Ry.—In reply to a question in the Saskatchewan Legislature Jan. 8, Hon. C. Dunning said:—"The time for construction lines authorized by guarantee of the province for the Grand Trunk Pacific Saskatchewan Ry. has been extended on application of the company to permit of construction during 1919. The government has no assurance that the lines will be built, the policy of the company being dependent upon whatever policy may be pursued by the Dominion Government respecting railway matters generally." (Jan., pg. 26.)

Hudson Bay Ry.—J. D. McArthur, the general contractor, is reported to have said in Winnipeg recently that he is ready to go on and complete the line from the Kettle Rapids of the Nelson River to Nelson on Hudson Bay, 90 miles, whenever the Dominion Government orders him to do so. He estimates that it would cost about $1,000,000 to complete the line. Grading has been practically completed, but there is still some bridge work to be done between the Kettle Rapids and Nelson. Track has been laid to the Kettle Rapids. (Jan., pg. 26.)

Kettle Valley Ry. A press report states that it is expected to have the line from Princeton to the Copper Mountain, B.C., mining area completed by June. It was hoped to have track laid on the first three miles to Allenby early in December, but the influenza epidemic held up the construction of the bridge across the Similkameen River, a mile outside Princeton. It is reported that the bridge construction is now in progress and that the tracklaying will be gone on with as speedily as possible. Considerable progress is reported to have been made with grading between Allenby and Copper Mountain (Oct., 1918, pg. 438.)

Lake Huron & Northern Ry.—The Ontario Legislature is being asked to extend the time within which this projected railway from Rock Lake, the northerly terminus of the old Bruce Mines & Algoma Ry., may be built further north, and also to extend the time within which it may place settlers on the land grant voted by the legislature in aid of construction.

The company was voted a grant of 200,000 acres on certain conditions, set out in an act passed by the Ontario Legislature in 1913. The right of way of the old Bruce Mines & Algoma Ry. was cleared up in 1914, and some clearing was done on the right of way for the extension from Rock Lake towards the National Transcontinental Ry. in 1914. During the winter of 1915 some attention was called to the company's affairs owing to its financial advertising, and in April, 1917, a motion was made in the legislature to end the contract, but was withdrawn on the government's assurance that the company's act would expire within a few months and that there need be no worry about any extension of it. The act referred to was assented to May 6, 1913, and the time within which the company could acquire the lands was four years.

A United States press report credits the company with having laid 68 miles of track during 1918, but we have been unable to verify this. (May, 1916, pg. 182.)

London, Ont., Yards.—London press dispatch, Jan. 23:—It is reported that the G.T.R. is about to undertake the reconstruction of London yards, the work to include the removal of the principal shunting area to the extreme east end, where a large territory is available with no street intersections. Plans have been prepared for the laying of 25 miles of tracks. It is said that the virtual abandonment of shunting over Egerton St. crossing, where many fatal accidents have occurred, will be one of the results of the new arrangement.

Magdalen River Ry.—The Quebec Legislature is being asked to authorize the company to change the location of a portion of its projected railway, as follows:—Starting from lot no. 47 of Saint Maxime-du-Mont Louis for about 4,000 ft., about 2,500 ft. being in the Magdalen River Seigniory, but not approaching the east bank of the Magdalen River nearer than 350 ft. The company is authorized to build a line along the Magdalen River valley to Little Falls, thence southerly and westerly to connect with the Atlantic, Quebec and Western Ry., and the Canada and Gulf Terminal Ry. at Gaspe, or any other point on either or both railways, and also has the power, if the railway is built to Gaspe, to build wharves, docks and other deep water terminals. J. Murphy, New Carlisle, Que., and Quebec, is Secretary. (Mar., 1918, pg. 98.)

Pacific Great Eastern Ry.—Speaking at a recent dinner given in his honor at Vancouver, the Premier of British Columbia is reported to have said the P.G.E.R. had been extended 30 miles during 1918, and it was the government's expectation and desire to extend it 150 miles farther during 1919. The future of the line would not be assured until connection was made with the lines from the prairie provinces, and this would be obtained through construction into the Peace River country.

In a recent article on the Peace River Valley, the Vancouver World referred to the probable route of the extension of the

P.G.E. Ry. to a junction with the Edmonton, Dunvegan & British Columbia Ry., at a point on the boundary between British Columbia and Alberta, a few miles north of the northeast boundary of the Peace River block. It said:—"There is every probability that, instead of leaving the valley of the Parsnip River, about 100 miles north of Prince George, the new road will follow on down the Parsnip to Finlay Forks, where the two big streams become the Peace, thence down the Peace through wonderfully rich mineral country to a point about 12 miles above the Rocky Mountain Canyon. At this point it would no doubt swing north to the forks of the Halfway River and thence east to the interprovincial boundary, connecting with the E.D. & B.C. Ry."

Quebec & Ungava Ry.—The Quebec Legislature is being asked to incorporate a company with this title to build a line, with such branches as may be necessary, from near Seven Islands in Saguenay County, northerly to Lake Menikek, thence westerly or northwesterly to Manitounuk Sound, or other harbor on the eastern shores of Hudson Bay, Que. Demers & Demers, Que., are solicitors for applicants.

River Rouge Ry.—The Quebec Legislature is being asked to amend this company's act of incorporation, by changing the name in the English version of its charter; to extend the time for construction of the authorized line from Amherst Tp., Labelle County, southerly to the Ottawa River between Montebello and Grenville; to authorize the extension of the projected railway from Arundel or Amherst Townships northerly to a junction with the C.P.R. in Labelle County, and for other purposes. The company was incorporated by the Quebec Legislature Feb. 9, 1918, with A. Orsali, J. R. Meadowcroft, A. H. Ross, D. E. Parker, and A. G. Spencer, Montreal, as provisional directors. The line is projected to open up timber limits in the townships lying between the Ottawa River and the C.P.R., along the Rouge River valley.

St. John & Quebec Ry.—The New Brunswick Government has issued a statement showing the receipts and expendliture on construction account in connection with the St. John & Quebec Ry. for the year ended Oct. 31, 1918. The total receipts were $491,835.18, made up as follows:—Prudential Trust Co., $208,177.63; subsidy from Dominion Government; $278,716.81; interest, $1,015.63; miscellaneous refunds, $3,926.11. The construction charges were $784,558.12, which, with the adverse balance of $615,675.80 at Oct. 31, 1917, made a total of $1,400,233.92. The debit balance carried forward to the 1918-1919 account is $908,397.74.

Western Dominion Ry.—The Dominion Parliament is being asked to extend the time within which the company may build its projected railway from the International Boundary in Range 23, west 4th Meridian, northerly via Cardston and Pincher Creek to Lundbreck, on the C.P.R. Crow's Nest line, thence to Calgary and Edmonton, Alta., and Fort St. John, B.C., with a branch from Pincher Creek via the south fork of the Old Man River to the Alberta-British Columbia boundary; and has extended for five years the building of a branch line along the north fork of the Old Man River to the Alberta-British Columbia boundary; a branch line along the Highwood River to the Alberta-British Columbia boundary, and another branch along the south branch of the Sheep River to the Alberta-British Columbia boundary. (Sept., 1917, pg. 356.)

Railway Rolling Stock Orders and Deliveries.

The Canadian National Rys. management, as stated in Canadian Railway and Marine World for January, had then given several orders for rolling stock, had asked for tenders for more and was preparing to ask for further tenders. Orders then placed were as follows:

Canadian Car & Foundry Co., Montreal, 100 colonist cars and 20 baggage cars.

Pullman Co., Chicago, Ill., 50 colonist cars.

The Canadian National Rys. management has since given the following orders:

Canadian Car & Foundry Co., Montreal, 10 baggage cars additional, making 30 in all; 150 refrigerator cars, 500 stock cars and 250 ballast cars.

Eastern Car Co., New Glasgow, N.S., 500 general service (coal) cars and 500 flat cars.

National Steel Car Co., Hamilton, Ont., 759 box cars.

The Canadian National Rys. management is asking tenders for 50 locomotives, 25 Pacifics and 25 switchers.

The Canadian National Rys. orders for rolling stock, placed recently and to be placed in the near future, will amount to about $20,000,000, and it is possible that a further $10,000,000 will be expended during the year.

Canadian National Railways have received 306 cars from National Steel Car Co., and 11 Mikado locomotives from Canadian Locomotive Co.

The C.P.R. has ordered 13 steel baggage and express cars and 140 steel ore cars, 50 tons capacity, from its Angus shops, Montreal, and 10 vans from its Winnipeg shops.

The National Steel Car Co. has shipped 306 cars for Canadian National Railways; and 5 coal hopper cars and 40 ore hopper cars, in knocked down shape, for the Bengal-Nagpur Ry. of India.

The C.P.R. received the following additions to rolling stock, between Dec. 19 and Jan. 25:—1 express refrigerator car, 1 steel mail car, 244 steel underframe box cars, 3 baggage and express cars, and 1 decapod locomotive, from its Angus shops, Montreal, and 1 van from its Winnipeg shops.

Canadian Government Railways, during December, received the following additions to rolling stock:—13 coal cars, 50 tons capacity, and 239 flat cars, 40 tons capacity, from Eastern Car Co.; 23 box cars converted to heater cars, from Canadian Car & Foundry Co.; 8 general service tank cars, 8,000 gal. capacity, from Pressed Steel Car Co.; 16 Pacific locomotives from Montreal Locomotive Works, and 13 Mikado locomotives from Canadian Locomotive Co.

The Canadian Northern Ry., during December, received the following additions to rolling stock:—181 steel frame box cars, 40 tons capacity, 6 refrigerator cars, 40 tons capacity, from Canadian Car & Foundry Co.; 99 ballast cars, 50 tons capacity, from Hart-Otis Co.; 96 flat cars, 40 tons capacity, from Eastern Car Co.; 273 steel frame box cars, 40 tons capacity, from National Steel Car Co.; 15 water service tank cars, 8,000 gal. capacity, from Pressed Steel Car Co.; 6 consolidation locomotives from Montreal Locomotive Works.

The 20 baggage cars, which Canadian National Railways have ordered from the Canadian Car & Foundry Co., in addition to the details given in our last issue, will be equipped with drop letterboard, straight electric lighting with axle equipment, vapor heating system with additional emergency heating stove, 5 Mudge peerless ventilators, etc. There will be two 6 ft. door openings and four 28½ in. windows on each side, and the trucks will be of the 6-wheel cast steel type with clasp brakes. Ten of these cars are to be delivered by June 15, and the balance by July 15.

The 100 colonist cars, which Canadian National Railways have ordered from the Canadian Car & Foundry Co., in addition to the details given in our last issue, will be equipped with drop letterboard, 14 sleeping sections in main body and 4 sleeping sections in smoking room, all with curved front upper berths; kitchen equipped with range, sink and running water from gravity overhead tanks. A the smoking room end there will be a wash room equipped with a 3-bowl washstand; straight electric lighting system with axle equipment; vapor heating system with emergency stove at the men's end; 13 Mudge peerless ventilators. The floors will be covered with composition flooring throughout, and the trucks will be of the 6-wheel cast steel type, with clasp brakes. Fifty of these cars are to be delivered by June 15, and the balance by July 15.

Dominion Government to Spend Immense Amounts.

Speaking on reconstruction at the Winnipeg Board of Trade's dinner, Jan. 21, Hon. Arthur Meighen, Minister of the Interior, stated the Dominion Government expected to spend $20,000,000 during the fiscal year on public works, a branch of governmental activity that had been pretty well dropped into disuetude during the last four years. Of that $12,000,000 would be expended in buildings and about $6,000,000 on rivers and harbors, leaving about $2,000,000 for minor work such as roads, bridges and monuments. Of the $12,000,000, some $7,000,000 would be for repairs and maintenance, leaving $5,000,000 for new construction; and $5,000,000 would be expended on the canals.

In regard to the railways, the government felt itself compelled to enter upon an expenditure for improvements and betterment, new construction and equipment, which would not only bring a very considerable amount of business to allied interests all over the Dominion, but would put the arilways abreast of conditions before the war. They would have to spend $30,000,000 in the building and purchase of equipment, including over 4,000 freight cars. About the same amount would be expended in betterments and new construction. The latter would be confined almost wholly to such branches as were already almost constructed; so far as the grading, etc., was concerned. That was to say, there would be absolutely no new ventures. This expenditure was in addition to the expenditure that would be incurred out of the Canadian National Railways earnings.

The Great North Western Telegraph Co. has opened offices at Milnikek, Que., Smiths Falls and Thamesville, Ont., and has closed its offices at Beamsville and Brucefield, Ont., and Brooking, Sask.

The Canadian Northern Ex. Co. has opened regular offices at Hodgson, Man., and Prince, Sask. The office at Rosseau, Ont., has been closed.

Mainly About Railway People Throughout Canada.

Canadian Railway and Marine World readers who are returning to civil life from military, naval or other government service are strongly urged to send in items about themselves and about their friends who are in a similar situation. Items should give former position, describe character of military or other service and state the civil work to which the transportation official, etc., in question is going. In the case of those with service abroad, information regarding the activities of the units to which they were assigned is especially desired.

E. W. Beatty, President C.P.R., was the principal speaker at the Sunday Meeting Association, Montreal, Jan. 12. The association is composed largely of railway men, who meet weekly on Sunday evenings to hear addresses on public matters. Mr. Beatty discussed the question of the nationalization of railways from the viewpoint mainly that it is one in which all the citizens of Canada are concerned.

E. W. Beatty, President C.P.R., addressed the employed boys of the evening educational classes at the Y.M.C.A. Montreal, Jan. 9. In the course of his address he related a number of his schoolboy experiences.

E. W. Beatty, President, C.P.R., has been elected an honorary vice president of the Albatross Club, Montreal, an organization of men associated with the Royal Air Force.

George McLaren Brown, European Manager, C.P.R.. London, Eng., has been made a Knight Commander of the Order of the British Empire, for services during the war. He has been actively associated with many matters concerning transportation, especially those connected with overseas traffic, from the commencement of the war, and has been of considerable service to the authorities. For the past three years he has acted as Assistant Director General of Railway Operations He was born at Hamilton, Ont., Jan. 29, 1865, and entered railway service in 1882. since when he has been, to 1885, in Freight Department, Northern & Northwestern Ry.; 1885 to 1887, in Superintendent's office and other departments, G.T.R.; Sept., 1887, to 1902, ticket agent, District Passenger Agent and Executive Agent, successively, G.T.R., Vancouver, B.C.; July, 1902, to Nov., 1905, Superintendent, Dining, Sleeping and Parlor Cars and News Service C.P.R., Montreal; Nov., 1905, to Dec., 1908, General Passenger Agent, Atlantic Steamship Lines, C.P.R., Montreal; Dec., 1908, to Jan., 1910, General Traffic Agent, C.P.R., London, Eng.; and from the latter date, European Manager, C.P.R., London, Eng.

J. R. Cameron, Assistant General Manager, Western Lines, Canadian Northern Ry., Winnipeg, whose jurisdiction has been extended over all Canadian Government Railways west of O'Brien, Que., was born at Truro, N.S., Nov. 5, 1865, and entered railway service, May, 1882. since when he has been, to Apr., 1883, brakeman and baggage man, C.P.R., Winnipeg; Apr., 1883, to Mar., 1886, conductor, C.P.R., Winnipeg; Apr., 1886, to Apr., 1887, conductor, Manitoba and North Western Ry., Winnipeg; Apr., 1887, to Oct., 1898, conductor, Northern Pacific Ry. in Montana; Oct., 1898, to June, 1901, Trainmaster, Northern Pacific Ry., Grand Forks, B.C., with jurisdiction over the company's lines in Manitoba; June, 1901, to Aug., 1904, conductor, Canadian Northern Ry., Winnipeg; Aug., 1904, to Dec., 1905, Superintendent, Canadian Northern Ry., Kamsack, Sask.; Dec., 1905, to Jan., 1908, Superintendent, District 1, Canadian Northern Ry., Port Arthur, Ont.; Jan., 1908, to Nov., 1911, General Superintendent, Canadian Northern Ry., Winnipeg; and since the last mentioned date, Assistant General Manager, Western Lines, Canadian Northern Ry.

A. W. Campbell, Deputy Minister of Railways and Canals, who was granted leave of absence in June, 1918, for a year, pending his retirement from that position, has been appointed by the Dominion Government to investigate the question of improved highways in Canada. This matter will come under the Reconstruction and Development Committee, which reported recently that the problem of transportation necessarily begins at the farm or other point of production, and involves the consideration of improved highways, which, it is considered, should be taken up in consultation with the various provincial governments. It was also considered that the duty of investigating the matter should be placed in the hands of one with experience and knowledge of transportation problems in general, and of highways in particular. Mr. Campbell was born at Wardsville, Ont., in 1863, was appointed City Engineer, St. Thomas, Ont., in 1891, and was, for some years, one of the editors of the Municipal World. From 1896 to 1902, he was Ontario Commissioner for Highways, and in the latter year was appointed Deputy Minister of Public Works for Ontario, and for a time was Supervising Engineer, Temiskaming & Northern Ontario Ry. He was appointed Deputy Minister of Railways and Canals for the Dominion in Jan., 1910, retiring from that position in June, 1918, with leave of absence for a year.

Sir George McLaren Brown,
European General Manager, Canadian Pacific Railway.

Thos. Cantley, Chairman of the Board, Nova Scotia Steel & Coal Co., and one of the Canadian National Rys. directors, has left New Glasgow on a business trip to Great Britain.

E. J. Chamberlin, formerly President, G.T.R. and Grand Trunk Pacific Ry., is spending the winter in California.

A. F. Chapman, a conductor on the C.P.R. Montreal-Ottawa trains, has retired under the pension rules after 50 years service. On behalf of the company, A. D. MacTier, Vice President, Eastern Lines, presented him with a watch and an annual pass over the system for himself and wife, on Jan. 9. E. W. Beatty, President, wrote also a letter stating that for the past 30 years he had occupied the position of conductor in a manner which reflected credit on himself and the road.

B. T. Chappell, who has been appointed General Superintendent, Prairie District, Canadian National Railways, Saskatoon, Sask., was born at Charlottetown, P.E.I., May 1, 1878, and entered railway service in Sept., 1895, since when he has been, to 1897, clerk in Freight Department, Northern Pacific Ry., Winnipeg; 1897 to 1901, in train service, same road; 1901, on the taking over of the Northern Pacific lines in Manitoba by the Canadian Northern Ry., to 1903, in train service, C.N.R.; 1903 to 1905, Yardmaster, same road, Port Arthur, Ont.; 1905 to 1907, Trainmaster, District 1, Western Division, same road; 1907 to Jan. 1, 1913, Trainmaster, District 4, Western Division, same road; Jan. 1, 1913, to Nov. 22, 1915, Superintendent, District 2, Western Division, same road, Saskatoon, Sask.; Nov. 22, 1915, to Dec. 30, 1918, Superintendent, Pacific Division, same road, Vancouver, B.C.

H. R. Charlton, General Advertising Agent, G.T.R., has been awarded a gold medal, by the Canadian National Exhibition's awards committee, for the excellence of the G.T.R. exhibit at the exhibition in Toronto in 1917.

Frank Clark, whose appointment as Locomotive Foreman, Grand Trunk Pacific Ry., Melville, Sask., was announced in our last issue, was born at Cowes, Isle of Wight, England, Mar. 20, 1884, and entered railway service in Mar., 1898, since when he has been, to Mar., 1905, apprentice and fitter, Isle of Wight Central Ry., Newport, I.O.W.; Mar., 1905, to Nov., 1906, Locomotive Inspector, London & South Western Ry., Guildford, Eng.; Nov., 1906, to Mar., 1907, fitter, C.P.R., Chapleau, Ont.; Mar., 1907, to Feb., 1911, machinist, Canadian Northern Ry., Edmonton, Alta., and Dauphin, Man.; Feb., 1911, to Jan., 1913, assistant foreman, same road, Dauphin, Man.; Jan., 1913, to Jan., 1914, Locomotive Foreman, same road, Radville, Sask.; Feb., 1914, to Apr., 1918, Locomotive Foreman, same road, Calgary, Alta.; May to Oct., 1918, machinist, C.P.R., Calgary, Alta.; Oct. to Nov., 1918, Shop Foreman, Grand Trunk Pacific Ry., Regina, Sask.

Lieut. O. D. Cochrane, youngest son of Hon. Frank Cochrane, formerly Minister of Railways and Canals, died at Ottawa, Jan. 23, from an illness resulting from an injury received in England last year, while on active service. The funeral, which took place at Toronto, Jan. 26, was attended by Hon. J. D. Reid, Minister of Railways and Canals, D. B. Hanna, President, Canadian National Railways, M. H. MacLeod, Vice President, Canadian National Railways, and many other railway officials.

A. E. Cox, who has been appointed General Storekeeper, Western Lines, Canadian National Railways, Winnipeg, was born at Huddersfield, Eng., Mar. 12, 1863, and entered railway service in 1883, since when he has been, 1883 to 1887, timekeeper on Western Division, C.P.R., Moose Jaw, Sask., and other points; Mar., 1887, to Mar., 1893, chief clerk, Stores Department, Manitoba & Northwestern Ry.; Mar., 1893, to May, 1900, when the M. & N.W. Ry. was absorbed by the C.P.R., storekeeper; July, 1900, to Jan., 1902, Assistant to Superintendent of Construction, Ontario and Rainy River section, Canadian Northern Ry.; Jan., 1902, to Jan., 1903, chief clerk, Stores Department, same road, Winnipeg; Jan., 1903, to Oct., 1912, Storekeeper, same road, Winnipeg; Oct., 1912, to Jan., 1919, General Storekeeper, Western Lines, same road, Winnipeg.

R. Creelman, who has been appointed Assistant Passenger Traffic Manager, Canadian National Railways, Winnipeg, entered railway service Sept., 1891, since when he has been, to 1893, messenger, City Freight Agent's office, G.T.R., Toronto; 1893 to 1897, ticket clerk, G.T.R. city office, Toronto; 1897 to 1900, chief clerk, District Passenger Agent's office, G.T.R., Toronto; Jan. 1, 1900, to Aug., 1901, in General Passenger Agent's office, C.P.R., Winnipeg; Aug., 1901, to Sept. 1, 1903, in Passenger Traffic Department, Canadian Northern Ry., Winnipeg; Sept. 1, 1903, to July 1, 1906, City Ticket Agent, Northern Pacific Ry., Winnipeg; July 1, 1906, to July 1, 1909, Travelling Passenger Agent, Canadian Northern Ry., St. Paul, Minn.; July 1 to Oct., 1909, Commercial Agent, Canadian Northern Ry., St. Paul, Minn.; Oct., 1909, to Mar. 1, 1911, Assistant General Passenger Agent, Canadian Northern Ry., Winnipeg; Mar. 1, 1911, to Dec. 31, 1918, General Passenger Agent, Western Lines, Canadian Northern Ry., Winnipeg.

Waldo B. Cronk, Vice President and General Manager, Caraquet & Gulf Shore Ry., and Vice President and Manager, Kent Northern Ry., Bathurst, N.B. died at the home of his son, E. P. Cronk, who is in Canadian National Rys. service at Toronto, Jan. 27. He was born at Footville, Wis., Nov. 11, 1862, and entered railway service in Jan., 1878, since when he was, to 1898, consecutively, operator, agent, dispatcher and chief clerk to Superintendent, Chicago & Northwestern Ry.; 1898 to 1900, dispatcher, Chicago, St. Paul, Minneapolis & Omaha Ry.; 1900 to 1902, chief clerk to General Superintendent and Divisional Dispatcher, Baltimore & Ohio Rd.; 1902 to 1903, chief clerk to General Superintendent, Chicago, Rock Island & Pacific Ry.; 1903 to 1906, in private business; 1906 to 1911, consecutively, dispatcher, Assistant Superintendent and Superintendent, C.P.R.; 1911 to Sept. 1, 1912, Superintendent, Grand Trunk Pacific Ry.; Sept. 1 to Nov., 1912, Superintendent of Transportation, National Transcontinental Ry., Winnipeg; Nov., 1912, to May, 1913, General Superintendent, N.T.R. He was subsequently appointed Vice President and General Manager, Caraquet & Gulf Shore Ry., and Vice President and Manager, Kent Northern Ry., Bathurst, N.B.

J. E. Dalrymple, Vice President, in charge of traffic, G.T.R., who celebrated his 50th birthday, Jan. 1., completed at the same time 35½ years service with the company.

K. J. Dunstan, Manager, Ontario Division, Bell Telephone Co., Toronto, has been elected President of the Toronto Board of Trade.

J. E. Duval, who has been appointed General Superintendent of Car Service, G.T.R., Montreal, entered transportation service in Nov., 1884, as agent and operator, Canada Atlantic Ry., now part of the G.T.R., at Coteau Landing, Que., and from May, 1885, to 1902, was train dispatcher; 1902 to 1904, Chief Inspector, Board of Railway Commissioners; and in 1906 he organized the Canadian Car Service Bureau, of which he was appointed Manager, holding that position until Aug. 1, 1913, when he was appointed General Superintendent of Car Service, G.T.R., and in Feb., 1917, General Superintendent of Transportation, G.T.R., Montreal.

Anthony C. Egan, who has been appointed Assistant Comptroller, Canadian Northern Ry., Toronto, was born at Winnipeg, Oct. 6, 1883, and entered railway service in 1901, since when he has been, to 1904, accountant, C.P.R., Winnipeg; 1904 to 1909, in accounting department, Canadian Northern Ry., Winnipeg; 1909 to 1911, Chief Travelling Auditor, same road, Winnipeg; 1911 to Dec., 31, 1918, Auditor of Agencies, Western Lines, same road, Winnipeg; Jan. 1 to Jan. 13, 1919, Auditor of Agencies, same road, Toronto

G. E. Smart,
General Master Car Builder, Canadian National Railways.

J. W. Farrell, Superintendent, G.T.R. Lines in New England, under the U.S. Railroad Administration, Island Pond, Vt., has been granted leave of absence.

Paul Hazelton Fox, whose appointment as Assistant Superintendent, Ottawa Division, Canadian National Rys., Trenton, Ont., was announced in our last issue, was born at Medicine Hat, Alta., May 6, 1888, and entered railway service Nov. 1, 1904, since when he has been, to Mar. 1, 1905, car checker, C.P.R., West St. John, N.B.; Mar. 1, 1905, to May 1, 1906, fireman and yardman, C.P.R., West St. John, N.B.; May 1, 1906, to Jan. 10, 1907, telegraph operator, C.P.R., West St. John, N.B.; Jan. 10, 1907, to July 6, 1908, agent and operator, Canadian Northern Ry., Rosedale, Ont.; July 6 to Aug. 1, 1913, track dispatcher, same road, Toronto; Aug. 1, 1913, to Dec. 26, 1914, Chief Dispatcher, same road, Rosedale, Ont.; Dec. 26, 1914, to Sept. 1, 1915, Chief Dispatcher, same road, Trenton, Ont.; Sept. 1 to Nov. 28, 1918, Chief Dispatcher, same road, Rosedale, Ont.; Nov. 28, 1915, to May 1, 1917, Chief Dispatcher, same road, Capreol, Ont.; May 1, 1917, to Dec. 23, 1918, Chief Dispatcher, same road, Rosedale, Ont.

Alan Travers Fraser, whose appointment as Chief Engineer, Western Lines, Canadian National Railways, Winnipeg, was announced in our last issue, was born at Pembroke, Ont., Jan. 13, 1872, and entered railway service in July, 1892, since when he has been, to 1893, chainman, Gatineau Valley Ry., Wakefield, Que; 1893 to 1895, chainman, rodman and leveller, C.P.R., and Lake Timiskaming Ry., Mattawa, Ont.; 1895 to 1896, timekeeper, Ottawa-Montreal Short Line, Vankleek Hill, Ont.; 1897 to 1900, transitman and Resident Engineer, Crows Nest Pass Ry., Fort McLeod; 1900 to 1901, Assistant Engineer, Pipestone extension and surveys on other branches, C.P.R., Winnipeg; 1901 to 1903, Resident Engineer, Ontario & Rainy River Ry., Port Arthur, Ont.; 1903 to 1905, Locating and Division Engineer, Canadian Northern Ry., Winnipeg; 1905 to 1910, mining and prospecting in Northern Ontario; 1910 to 1911, Locating and Division Engineer, Canadian Northern Ry., Edmonton, Alta.; 1911 to 1915, District Engineer, location and construction of main line and branches in Alberta, same road, Edmonton; 1915 to Dec., 1918, District Engineer, Western District, same road, Edmonton. On leaving Edmonton recently to take up his new duties at Winnipeg, he was presented with a club bag by the local staff.

Frank J. Gascoigne, who has been appointed Assistant Auditor of passenger receipts, Canadian Northern Ry., Toronto, was born at Brockville, Ont., Nov. 5, 1871, and entered railway service in Feb., 1896, since when he has been, to Feb., 1904, clerk in passenger audit office, G.T.R., Montreal; Feb., 1904, to Nov. 22, 1918, chief clerk, Passenger Audit Department, Canadian Northern Ry., Winnipeg.

Richard Selby Gossett, Auditor of Disbursements, Canadian Northern Ry., Toronto, was born there, Sept. 28, 1879, and entered transportation service in Jan., 1893, since when he has been, to 1899, stenographer to President, Toronto Ry.; 1899 to June, 1901, secretary, Construction Department, Mackenzie, Mann & Co., Ltd., Winnipeg; June, 1901, to Dec., 1902, secretary to General Superintendent, Canadian Northern Ry., Winnipeg; Dec., 1902. to 1904, secretary to Third Vice President, same road, Toronto; 1904 to 1907, in charge of disbursements, same road, Toronto; 1907 to 1910, accountant same road, Toronto; and from 1910, Auditor of Disbursements, same road, Toronto.

W. H. Grant, General Tie and Limber Agent, and acting General Storekeeper, Eastern Lines, Canadian Northern Ry., left Toronto Jan. 6 for Prince Rupert, B.C., to arrange the affairs of his brother, Robt. A. Grant, Manager for the P. Burns Co. there, who died suddenly Jan. 1, after having been in that company's service for some 20 years.

"D. B. Hanna, Esq., K.C., Chairman, Canadian National Railways," is the way the St. John, N.B., Board of Trade addressed a memorial recently.

C. A. Hayes, Vice President, Traffic, Canadian National Railways, and Mrs.

Hayes, who removed from Moncton, N.B., to Toronto recently, are living at the King Edward Hotel for the winter.

George Sherwood Hodgins, Editor, Railway and Locomotive Engineering, New York, died there, Jan. 19, of pneumonia, aged 59. He was born at Toronto and educated at Upper Canada College and the School of Practical Science, there. He began work with the Canadian Locomotive Co., Kingston, Ont., in 1881, passing through various grades to chief draftsman. He entered railway service in 1884 in the Master Mechanic's office, Ontario and Quebec Division, C.P.R., Toronto, and in 1886 was transferred to the Pacific Division as Locomotive Foreman at Vancouver, B.C., returning to the Ontario and Quebec Division in 1890. From 1898 to 1900 he was Locomotive Inspector for the C.P.R. system, and superintended the construction of locomotives and cars which were built for the company in the U.S. He also tested locomotive performance on the road over the various divisions and did other mechanical engineering work for the company. In 1900 he re-entered Canadian Locomotive Co.'s service as Mechanical Engineer, subsequently going into technical journalism in New York, and relinquishing that in 1910, after which he spent a short time abroad. In 1912 he was appointed consulting Mechanical Engineer, National Transcontinental Ry., Ottawa, Ont., to make a special report concerning the shops and equipment of the various roundhouses, terminal shops, etc., either built or under construction on the line. On the conclusion of this work he returned to technical journalism in New York.

James Houston, who died at London, Ont., Dec. 20, was formerly District Freight Agent, C.P.R., there, and retired from active service about two years ago, removing to Glendale, Ont.

H. G. Kelley, President, G.T.R. and Grand Trunk Pacific Ry., Montreal, has been elected a director of the Royal Trust Co., in succession to E. J. Chamberlin, who has retired owing to his prolonged absence from Canada.

W. Kennedy, who has been appointed General Mechanical Inspector, G.T.R., Montreal, was born at Belleville, Ont., Dec. 23, 1869, and entered G.T.R. service in 1883, his record being: 1883 to 1886, apprentice, Belleville shops; 1886 to 1891, apperntice and journeyman, Point St. Charles shops, Montreal; 1891 to Sept., 1897, in charge of waterworks between Montreal and Toronto, under Master Mechanic, with headquarters at Belleville; Sept., 1897, to June, 1901, locomotive foreman, Sarnia tunnel; June, 1901, to Nov., 1907, Master Mechanic, Middle and Southern Divisions, Toronto. In Nov., 1907, he was appointed Superintendent of Motive Power, Central Vermont Ry., St. Albans, Vt., and in Jan., 1908, Superintendent of Motive Power and Car Department. He left that company's service in 1908, and was engaged in private business subsequently.

Lt.-Col. R. W. Leonard, St. Catharines, Ont., a former National Transcontinental Ry. Commissioner, has been elected President, Engineering Institute of Canada. He is a graduate of the Royal Military College, Kingston, Ont., and Lt.-Col. of the Corps of Guides, Military District 2.

A. McCowan, who has been appointed Master Car Builder, Western Lines, Canadian National Railways, Winnipeg, was born at Perth, Scotland, Dec. 5, 1868, and entered railway service in May, 1888, since when he has been, to Mar., 1890, carpenter, C.P.R.; Mar., 1890, to 1897, charge hand, C.P.R.; 1897 to 1903, foreman, C.P.R., Farnham, Que.; 1903 to Apr., 1910, foreman, C.P.R., Cranbrook, B.C.; Apr., 1910, to Sept., 1915, General Car Foreman, Canadian Northern Ry., Winnipeg; Oct., 1915, to Dec. 27, 1918, Supervisor of Car Work, Western Lines, Canadian Northern Ry., Winnipeg.

A. B. McNaughton, whose appointment as Superintendent, G.T.R. Lines in New England, under the U.S. Railroad Administration, at Island Pond, Vt., was announced in our last issue, was born at Arnprior, Ont., Nov. 10, 1877, and entered transportation service in 1893 in the telegraph department, Canada Atlantic Ry., and was, from 1894 to 1907, brakeman and freight and passenger conductor, same road; Nov. 1, 1907, to Dec. 3, 1918, General Yardmaster, G.T.R., Ottawa, Ont.

M. H. MacLeod, Vice President, Operation, Construction and Maintenance, Canadian National Rys., who removed from Winnipeg to Toronto recently, has taken an apartment at the Alexandra Palace, University Ave.

Reginald Egerton Perry, who has been appointed Assistant General Freight Agent, Canadian National Railways, east of Fort William and Armstrong, Ont., at Montreal, was born at Drayton, Ont., Juiy 5, 1876, and entered railway service, Oct. 2, 1891, since when he has been, to Feb. 28, 1898, clerk, General Freight Department, C.P.R., Toronto; Mar. 1, 1898, to June 30, 1907, clerk, General Freight Department, Intercolonial Ry., Montreal; July 1, 1907, to July 31, 1909, Chief of Tariff Bureau, I.R.C., Montreal; Aug. 1, 1909, to Feb. 1, 1914, Assistant General Feright Agent, I.R.C., Montreal; Feb. 2, 1914, to Jan. 9, 1919, Assistant General Freight Agent, Intercolonial and Prince Edward Island Rys. (Canadian Government Railways), Moncton, N.B.

Claude W. Price, station agent, Canadian National Railways, Moncton, N.B., died there, Jan. 15, after a few days illness from pleuro-pneumonia. He was born at Petitcodiac, N.B., July 26, 1867, and entered Intercolonial Ry. service in 1883, as telegraph operator.

John Raper, who died at Ottawa, Ont., Jan. 17, aged 82, was formerly in C.P.R. service as an accountant, and retired from active service about 20 years ago.

Herbert Gates Reid, who has been appointed General Master Mechanic, Western Lines, Canadian National Railways, Winnipeg, Man., was born at Pembroke, Ont., Oct. 27, 1863, and entered railway service in Mar., 1884, since when he has been, to Nov., 1884, wiper, C.P.R., North Bay, Ont.; Nov., 1884, to Nov., 1887, fireman, C.P.R., North Bay, Ont.; Nov., 1887, to Dec., 1905, locomotive man, C.P.R., North Bay, Ont.; Dec., 1905, to June, 1906, relieving Road Foreman of Locomotives, C.P.R., North Bay, Ont.; June, 1906, to Feb., 1907, locomotive man, C.P.R., North Bay, Ont.; Feb. to April, 1907, Locomotive Foreman, C.P.R., Chapleau, Ont.; Sept., 1907, to Oct., 1908, District Master Mechanic, District 1, Lake Superior Division, C.P.R., North Bay, Ont.; Oct., 1908, to April, 1915, Master Mechanic, Lake Superior Division, C.P.R., North Bay, Ont.; April, 1915, to May, 1916, Master Mechanic, Saskatchewan Division, C.P.R., Moose Jaw; May to Sept. 30, 1916, Master Mechanic, District 3, National Transcontinental Ry., Transcona, Man.; Sept. 30, 1916, to Jan. 6, 1919, Assistant Superintendent of Rolling Stock, Canadian Government Railways, Transcona, Man.

Willie Frank Sawyer, whose appointment as Assistant Superintendent, Division 5, Quebec District, Canadian National Rys., Edmundston, N.B., was announced in our last issue, was born at Drummondville, Que., June 13, 1883, and entered Canadian Government railway service in Mar., 1899, since when he has been, to Jan., 1900, station porter, Intercolonial Ry., Drummondville, Que.; Jan., 1900, to July, 1901, relieving agent, Drummondville Division; July, 1901, to July, 1907, night operator, Bagot, Que.; July, 1907, to June, 1916, day operator and assistant agent, Montmagny, Que.; June, 1916, to Dec. 31, 1918, agent, Levis, Que.

Mrs. W. Harold Sim, daughter of Jas. Black, Claim Agent, British Columbia District, C.P.R., died at Vancouver recently, from influenza.

Angus Sinclair, proprietor, Railway and Locomotive Engineering, New York, N.Y., died Jan. 1, aged 77. He was for several years Treasurer of the American Railway Master Mechanics' Association.

A. W. Smithers, Chairman of the Board, G.T.R. and Grand Trunk Pacific Ry., London, Eng., has been elected a member of the British Parliament for the Chislehurst division of Kent County, as a coalition-unionist.

Geo. Stephen, Freight Traffic Manager, Canadian National Rys., who removed from Winnipeg to Toronto recently, on his promotion to his new position, has taken an apartment at the Alexandra Palace, University Ave.

J. G. Sullivan, formerly Chief Engineer, Western Lines, C.P.R., has been appointed chairman of the Manitoba Drainage Commission, which has been created by the Manitoba Government, to investigate the question of drainage throughout the province and assessment therefor.

I. G. Trudel, Storekeeper, C.P.R., Moose Jaw, Sask., was entertained to dinner by his associates, Jan. 7, on leaving for Vancouver, B.C., where he has been transferred in a similar capacity.

Walter V. Turner, Manager, Air Brake Department, Westinghouse Air Brake Co., Pittsburg, Pa., died there Jan. 9.

Thomas Turnbull, who has been appointed Engineer, Maintenance of Way, Western Lines, Canadian National Railways, Winnipeg, was, from 1881 to 1889, transitman on location and Resident Engineer on construction on various parts of the C.P.R.; 1889 to 1891, with Newfoundland Government, in charge of location party and construction work on Halls Bay railway; 1891 to 1897, Assistant Engineer Maintenance and Construction, Western Division, C.P.R.; 1897 to 1900, Chief Engineer, west of Winnipeg, Canadian Northern Ry.; 1900 to 1901, on contract work bridging on C.N.R.; 1901 to 1902, reconnaissance work for Dominion Government; 1902 to 1904, inspecting surveys for Dominion Government; 1904 to 1910, Assistant Chief Engineer, C.N.R.; 1910 to 1912, Assistant Chief Engineer, Hudson Bay Railway, 1912 to 1913, Chief Engineer, Hudson Bay Railway; 1912 to 1913, Chief Engineer, Edmonton, Dunvegan & British Columbia Ry., 1913 to Jan. 6, 1919, Assistant Chief Engineer, Canadian Northern Ry., Winnipeg.

W. A. Whyte, District Freight Agent, Canadian National Railways, Regina, Sask., was presented with a travelling bag, and a cut glass set for Mrs. Whyte, by the local staff on Jan 4, on his removal to Calgary, Alta., in a similar capacity.

Canadian National Railways Construction, Betterments, Etc.

Equipment, Betterments, Extensions, etc. Practically ever since the Canadian National Rys.' management was appointed recently, the directors and heads of departments have been busily engaged on the programme for the year's work, and it is said that it has been submitted to the Dominion Government in the following form:—

A list of the rolling stock required to place the Canadian Northern, Intercolonial and National Transcontinental Rys. in first class condition. This largely consists of passenger and freight cars and some locomotives.

Betterments to existing lines, such as grading, new culverts, bridges, etc.

The construction and completion of certain branch lines in the west.

The completion of terminals at Montreal, Toronto, St. John, Vancouver and other points.

These works have been classified into three parts:

1. Those which are absolutely necessary and must be proceeded with this year.

2. Those which are necessary, but could be postponed if it felt cost of construction is too high at present.

3. Works not immediately necessary, but which could be started if needed to give employment.

It is said that the government has consented, subject to parliament's approval, to an expenditure of about $50,000,000, and possibly $60,000,000, this year. Of this, $20,000,000 will be required for rolling stock already ordered, and about to be ordered, and the expenditure under this head may be increased to $30,000,000. Betterments, extensions of lines, etc., will probably require about $20,000,000. In addition to betterments to be carried over the whole system, some partially constructed lines in the west will probably be completed, and there will also probably be some new lines built, both in the east and in the west.

Halifax, N.S., Temporary Station.—The temporary station at the ocean terminals was opened for public use at the end of Dec., 1918. The North St. station has been handed over to the military authorities for making up military trains.

York & Carleton Ry. Extension.—The Stanley, N.B., Board of Trade has invited the Fredericton Board of Trade to cooperate in asking the Dominion Government to extend the Y. & C. Ry. from Stanley to a junction with the National Transcontinental Ry. at Nappadogan. It is claimed that this would give a shorter and better connection between St. John and the N. T. Ry. than that proposed recently via McGivney Jct.

Intercolonial Ry. Second Track.—It is probable that the building of some short stretches of second track between Halifax and Moncton will be considered in the near future.

National Transcontinental Ry., St. Malo Shops, Quebec.—The question of equipping and operating these shops is under consideration, and F. Knight is preparing a report, under the direction of W. S. Appleton, Mechanical Superintendent, Eastern Lines, Moncton, N.B.

Levis Station.—The question of the accommodation at the Levis, Que., station is being raised, and on Jan. 10, it was suggested that the Levis public health authorities should intervene. The present buildings are declared to be not only "most disreputable in appearance," but inadequate in accommodation and "unhealthy and dangerous." (Jan., pg. 28.)

St. Malo, Quebec, Shops.—In connection with the recent discussion as to the opening of the National Transcontinental Ry. St. Malo car shops, the Quebec City Council has passed a resolution consenting to the leasing of the shops to the Canada Car & General Machinery Co., on condition that at least 1,500 men be employed, and that all construction and repair work for the rolling stock on the eastern section of the N.T.R. be done in the shops. Subsequently the mayor telegraphed D. B. Hanna, President Canadian National Railways, Toronto, asking what it was proposed to do with the shops, to which Mr. Hanna replied: "It is our intention to equip and operate the St. Malo shops ourselves at an early date."

St. Charles River Bridge.—Work on the superstructure of the new St. Anne bridge across the St. Charles River, Quebec, was reported to have been started Jan. 2. One half of the superstructure is being put in at present, and it is said that as soon as this is completed the Quebec & Lake St. John Ry. and the Canadian Northern Ry. trains will be diverted from the old bridge to the section of the new bridge; that the old bridge will then be demolished and the second section of the new bridge built. The work is being done by the Dominion Bridge Co., Montreal, under contract with the Dominion Public Works Department, as part of the work for the improvement of the St. Charles River.

Branch to Perth, Lanark and Arnprior.—A deputation of residents of Lanark County, Ont., waited on J. A. Stewart, M.P., at Perth, Jan. 6, to enlist his support for a projected branch of the Canadian Northern Ry. through Perth and Lanark to Arnprior. The project is claimed to have been approved by Sir William Mackenzie in 1914, and the people are desirous that the line should be built now that the Dominion Government has acquired the C.N.R. The starting point of the proposed branch would be at Perth Road, mileage 176 from Toronto, and the route would be through the center of Lanark County, opening up, it is claimed, a country with large lumber and mineral resources, and a large area of gravel deposits for railway ballasting, etc.

Little Madawaska River Bridge.—We are officially advised that the contract for the construction of the abutments for the bridge over the Little Madawaska River, mileage 147.4, Pembroke Subdivision Canadian Northern Ry., has been let to the Hyland Construction Co., Toronto. The steel superstructure is to be supplied from another point on the Canadian Government Railways.

Toronto-Niagara Falls Line.—In connection with the reports current to the effect that the Canadian National Rys. will at an early date start construction on a line from Toronto to Niagara Falls, it may be mentioned that the Canadian Northern Ry., within recent years, secured right of way from Toronto to beyond Hamilton, and also bought considerable property in Hamilton for terminal purposes, etc., the total expenditure being about $1,750,000. It would appear to be reasonable to assume that the new management of the amalgamated lines will seek to make use of this property.

Saskatchewan Branch Line Construction.—Replying to a question in the Saskatchewan Legislature, Jan. 8, as to the probability of the resumption of construction upon branch lines in the province for which the legislature had authorized the government to guarantee bonds, Hon. C. Dunning said:—"Since the Canadian Northern Ry. passed under the control of the Dominion Government no application has been made for an extension of the lines guaranteed by the province. Hence provincial government guarantees with respect to the C.N.R. have lapsed."

Moose Jaw Union Station.—A press report, referring to the projected union station in Moose Jaw, Sask., to be built by the C.N.R., says it will be on Stadacona St. E., between Third and Fourth Avenues. This would necessitate the closing up of Stadacona St., and the construction of subways on Fairford and Athabasca Sts. The plans for the station are reported to have been completed. A temporary station building is reported to be being built on Athabasca St., at the corner of Fourth Ave. and Caribou St. Temporary freight shed accommodation is being provided, and some miles of yard trackage is being laid. The permanent freight accommodation will consist of two large sheds. A later press report of Jan. 11, stated that considerable progress had been made with the erection of the temporary station building, and that the temporary platform had been laid.

Calgary Union Station.—Discussion has been revived in Calgary, Alta., with respect to the building of a union station with the Grand Trunk Pacific Ry. there. The site suggested is on C.N.R. property in the neighborhood of Seventeenth Ave. and First St. West.

Oliver-St. Paul de Metis Line.—A press report states that work is in progress on the Canadian Northern St. Paul de Metis line, from Radway Center, at the crossing of Sucker Creek, mileage 44 from Oliver, Alta., easterly, preparing for tracklaying on the remaining 56 miles of grading completed in 1917. This 100 miles would bring the line to Villette post office, Sec. 20, Tp. 59, Range 13, west of 4th Meridian. The objective of this branch is the boundary between Alberta and Saskatchewan, about 90 miles southeasterly from Villette, there to connect with a branch form Battleford, of which 56 miles, from North Battleford to Turtleford, are already in operation. It is claimed that the whole area through which the line will run in Alberta is well settled, and steps are reported to have been taken to press the Dominion and Provincial Governments to have the construction of the line carried on.

Kamloops-Vernon Branch.—We are officially advised that the bridge across the Thompson River at Kamloops, B.C., has been built, but that some right of way has to be acquired, and grading completed into Kamloops. It is expected that this work will be completed during this year.

Several delegations from the Okanagan district waited on the British Columbia Government recently to urge the construction of the projected line from Kamloops via Vernon to Kelowna, and it was arranged subsequently to send a deputation to Ottawa to interview the Minister of Railways. A press report from Vernon, Jan. 10, stated that the idea of sending a deputation had been abandoned, D. B. Hanna, President Canadian National Railways, having advised the local authorities that construction on the line and the spur to Lumby would be gone on with this year. (Jan., pg. 15.)

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—Following the granting of higher commutation fares on the company's Burnaby Lake line by the Board of Railway Commissioners, the company applied for similar increases on the Central Park line. This line being under the B.C. Government's jurisdiction, application was made to the Provincial Premier, in his capacity of Minister of Railways. The municipalities of Burnaby and South Vancouver opposed the application. The result was a refusal to permit the increase, but it was referred to the proposed public service commission for investigation. This commission is expected to be appointed at the next session of the legislature. The Premier wrote Geo. Kidd, General Manager, B.C.E.R., as follows:—"At a meeting between myself and representatives of the municipalities of Burnaby and South Vancouver, it was urged on behalf of the municipalities that the present rate was sufficiently high; that the company's system of accounting did not show the revenue on the interurban line as separate and distinct from other portions of the company's system, and that an attempt was being made to recoup for losses on other parts of the company's system by increasing the rates on this interurban line; that as far as Burnaby was concerned, the present rates are a substantial part of a consideration which the municipality is receiving in return for a franchise covering a period of 38 years, only five of which have expired; that any increase in rates is a violation of an existing agreement under which the present franchise was secured; that residents of both municipalities invested their money, erected homes and engaged in business, relying upon the effectiveness of the existing agreement; that the statute under which the railway company was incorporated gave the company power to enter into agreements with municipalities; that the present rates are part of an agreement so entered into, and that the General Railway Act only applies so far as it is consistent with the act under which incorporation was secured, and that the Minister of Railways has no jurisdiction. With the evidence which at present is before me I am unable to approve of the schedule of rates submitted to me, and in view of the announced policy of the government to create a public utilities commission, having jurisdiction over the matter of this application, I am inclined to the view that this question may well be left for the adjudication of the proposed commission."

The Vancouver City Council for 1918, at its last meeting, decided to take no action towards appealing against the decision of the court refusing the city an injunction against the charging of a 6c car fare in Vancouver. Whether further action in this line will be taken will rest with the new council, which took office early in January. For several weeks negotiations had been going on between the company and the city for the abandonment of these injunction proceedings, in return for which the company offered 6c light. On these negotiations coming to nothing, the company announced a reduction in the lighting charge within the City of Vancouver on Dec. 24 as a Christmas gift. The new lighting rate went into effect Jan. 1.

As a result of the necessity to increase revenue, to meet the increased wages schedule which went into effect July, 1918, the company abolished school children's tickets on its Vancouver Island lines. It has since made a special arrangement with Esquimalt Municipality, under which school children's tickets are sold within the limits of the municipality at 8 for 25c. No school children's tickets are sold on any other portion of the lines, a straight 5c fare being charged for all passengers.

Calgary Municipal Ry.—The deficit for 1918 on Calgary, Alta., Municipal Ry. is reported as estimated by the Superintendent at $25,000, and the commissioners were reported, Jan. 9, to have under consideration a proposition for charging increased fares.

Vancouver, Fraser Valley & Southern Ry. tariff order 28044, Jan. 22, as follows, passed:—Re application of British Columbia Electric Ry., on behalf of Vancouver & Lulu Island Ry. and Vancouver, Fraser Valley & Southern Ry., for approval of its Standard Freight Mileage Tariff: The said tariff having been filed on the basis prescribed by order in council 1863, July 27, 1918, it is ordered that the said Tariff C.R.C. 132 issued to become effective Feb. 1, 1919, be approved; the said tariff, with a reference to this order, to be published in at least two consecutive weekly issues of the Canada Gazette.

Cape Breton Electric Co.—At a recent meeting of the Sydney, N.S., City Council, the city clerk reported that no report had been received from the Nova Scotia Public Utilities Commission upon the enquiry made on the Cape Breton Electric Co.'s application for authority to increase fares on its electric railway. The investigation was concluded Aug. 16, when the commissioners reserved judgment.

Fort William Municipal Ry.—The Port Arthur and Fort William City Councils passed bylaws on Nov., 1918, setting forth that the operating expenses had increased largely and that it was necessary to increase the passenger fares then in effect, and which had been approved by the Ontario Railway and Municipal Board, as follows:—

(a) One fare in each city.

(b) Regular fare 5c, or 6 tickets for 25c, good from 5.30 a.m. until 12 p.m.

Workmen's fare 5c, or 8 tickets for 25c, good from 5.30 to 8 a.m. and from 5.30 to 7 p.m., from Monday to Saturday, inclusive. Sunday tickets, 8 for 25c, good from 5.30 a.m. to 12 p.m.

(d) Children's tickets, up to 14 years of age, 10 for 25c, good all hours every day of the week, Sunday included. All bona fide students above 14 years privileged to use children's tickets between 8 a.m. and 5 p.m. on school days.

(e) Fares from 12 p.m. to 5.30 a.m., 10c each, good for a through ride.

(f) Children under 14 years of age may use school children's tickets on Sunday and be good for through ride.

The bylaws repealed the fares above mentioned and enacted new ones as follows, to go in effect Jan. 1, 1919:—

Adults: 5c cash, or one ticket at the rate of 5 for 25c.

Children: 5 to 12 years, inclusive, 3c cash, or one ticket at the rate of 8 for 25c. Children under 5 years of age, free

The above good between 5.30 a.m. and 12 p.m., and double the above fares between 12 p.m. and 5.30 a.m.

The Ontario Railway and Municipal Board, early in December, made certain objections to the new tariff, pointing out that the Ontario Railway Act, sec. [illegible], fixes the maximum limit of fares to be charged on electric railways, and that the double fare to be charged for night service must be within that limit. Towards the end of December the two city councils passed similar bylaws providing for the following new rates of fare, to go in effect Feb. 1, 1919:—

Regular fare, 5c cash or 5 tickets for 25c.

Child's fare, ten years and under, 3c cash or 10 tickets for 25c. Good at all times. Children in arms free.

Pupils' fare, under 17 years, 5c cash or 8 tickets for 25c. Tickets sold only at office. Pupils must present certificate that they are bona fide pupils, signed by their principal teacher. Pupils' tickets good only between 8 and 9.30 a.m., also 3.30 and 5 p.m., and then only for the purpose of going to and returning from school.

The Ontairo Railway and Municipal Board approved the new schedule on Jan. 6. It raises the price of regular tickets from 6 to 5 for 25c, changes children's fares, abolishes workmen's tickets, and does away with night fares.

London & Port Stanley Ry.—The directors of this municipally owned line met in London, Ont., Jan. 3, and approved of the amended agreement as to Wednesday and Saturday fares on the line during the summer. One clause was amended by substituting the words "children from 5 to 12 years shall be charged 20c," for the words, "25c current funds for each child under the age of 12 years." The city council is applying to the Dominion Parliament for an amendment to chap. [illegible] of the statutes of 1914, to strike out the clauses in the agreement dealing with the Wednesday and Saturday fares, and to insert in place thereof words necessary to authorize the new fares, and to alter the time within which such fares may be charged from between May 15 and Sept. 15, to between May 24 and Sept. 10.

London St. Ry.—London, Ont., press dispatch, Jan. 19.—A semi-official intimation has been received at the city hall that the London St. Ry. is soon to renew its endeavors to obtain an increase in fares. The mayor, in his inaugural speech, recommended action to ensure better service, but meanwhile the company is preparing for its annual meeting, and according to reliable information, it will again pass its dividends. Receipts have increased, but expenditure is disproportionate. The company will tell the city council, it is reported, that it is prepared and anxious to improve the service, but that it is unable to obtain additional capital for the purpose, while the road is held down to an unfairly low rate of fares. The local Chamber of Commerce has called a general meeting to launch an independent investigation of the street railway situation. A committee of citizens will be appointed to examine different clauses of franchise agreements and possibly to report on the advisability or alteration of municipal ownership. E. P. Fredericks, Publicity Manager of the Ontario Association of Holders of Public Utility Securities, has been asked to appear to explain the service-at-cost method adopted by the Massachusetts Legislature.

Moose Jaw Electric Ry.—See "Moose Jaw Electric Ry.'s Financial Position," on another page of this issue.

Port Arthur Civic Ry.—See Fort William Municipal Ry.

Employment of Women Conductors by Nova Scotia Tramways & Power Co.

The Nova Scotia Tramways & Power Co., which operates the street railway in Halifax, N.S., has employed women conductors since Oct., 1917, the number employed varying from time to time, the maximum number being 35. The pay given women is the same in every respect as that given the men and their working conditions are identical in every respect. The management has not experienced any unusual difficulty through the employment of women as conductors, and considers that the results from their employment have been quite as satisfactory as those obtained from the men; in fact, the records show that the fare collections registered by the women have been, if anything, better than those registered by the men.

The company did not discharge any male conductors, in order to make room for women, for the reason that it did not attempt to employ women until the scarcity of male help made it imperative to do so. Since adopting the plan of employing women, the management has given employment to any satisfactory man or woman who applied for positions which were vacant, and has made no discrimination whatever. At present practically half of the total number of conductors employed are women.

Public Utilities Commission for British Columbia.

A Victoria press report states that the British Columbia Government has completed a draft of a bill which it is proposed to introduce at the legislature's next session, to authorize the establishment of a public utilities commission for the province.

The bill, it is stated, will provide for the creation of a commission of three members to be appointed during good behavior for 10 years, with a provision for reappointment, at salaries to be fixed, and payable out of the consolidated revenue. The commissioners are to be given the powers of the Supreme Court in many respects, and also power to take possession of and manage businesses for the purpose of enforcing their orders; and of dissolving companies in default of there being any other means of enforcing its orders. Provision is made for appeals against the commissioners' decisions. The duties of the commissioners and of all public utilities in regard to the commission are set out in detail, together with numerous penalty clauses.

Service at Cost for Ontario.—It is said that a bill will be introduced at the Ontario Legislature's ensuing session, to provide for a service at cost system on any electric railways in the province, if agreed on between the company and the municipality in which it operates.

E. F. Seixas Goes to Monterey Railway, Light and Power Co.

Lewis Lukes, heretofore Vice President and General Manager, Monterey Railway, Light & Power Co., with office at Toronto, having resigned, Edward Fairgreve Seixas has been appointed General Manager and Official Representative at Monterey, Neuvo Leon, Mexico.

The Monterey Ry., Light & Power Co. operates about 25 miles of city and interurban railway lines in and around the city of Monterey, and connects Monterey with Tope Chico, where it owns the hot springs. It also has concessions for the whole of the electric light, power, gas, water works and sewerage system in the city of Monterey. The following are the company's officers at Toronto: President, Sir Wm. Mackenzie; Vice President, Sir Donald Mann; Secretary, R. P. Ormsby; Comptroller, R. G. O. Thomson.

Edward F. Seixas,
General Manager and Official Representative,
Monterey Ry., Light & Power Company.

Mr. Seixas was born at New York, N.Y., Oct. 26, 1870. From Mar., 1888, to Apr., 1892, he was a student in the electrical department of the Edison Machine Works, now the General Electric Co., Schenectady, N.Y., since when he has been, from Apr., 1892, to Jan., 1894, in electrical department, World's Fair, Chicago, Ill.; Feb., 1896, to Feb., 1901, General Manager, Amsterdam Ry., Light, Heat & Power Co., Amsterdam, N.Y.; Feb., 1901, to Jan., 1919, General Manager, Niagara, St. Catharines & Toronto Ry., St. Catharines, Ont. During his service with the General Electric Co., a part of the time was spent in France, England, Italy and Austria, more or less in connection with electrical research, and he was also engaged in the installation of electric lighting plants in Toronto, Ont., and Minneapolis, Minn. During his residence in St. Catharines, he identified himself with various local organizations, and is President of the St. Catharines Rowing and Canoe Club, and was primarily instrumental, with Toronto members of the C.A.A.O., in establishing the permanent Canadian Henley course at St. Catharines. He is also a member of the advisory board of the St. Catharines Y.M.C.A., and of the Protestant Orphans' Home, and has been connected officially with every patriotic organization in St. Catharines during the war, as well as being vice president of the 1918 Victory Loan campaign for St. Catharines and Lincoln County. He is a Freemason and member of the following clubs:—St. Catharines, Niagara Falls, Transportation (Buffalo), and Argonaut Rowing, Royal Canadian Yacht, Albany, and National, Toronto.

Mr. Seixas expects to leave early in February for Monterey, but Mrs. Seixas and their children will probably remain at St. Catharines, until the late summer, or early autumn.

It is expected that Sir Wm. Mackenzie and Mr. Lukes will also leave at an early date to spend a short time in Monterey.

Winnipeg Electric Railway Aids Collections.

On Dec. 9, 1918, a committee consisting of leading citizens of Winnipeg inaugurated a campaign to obtain contributions to a fund to provide a citizens' Christmas gift to soldiers' families in Winnipeg. They wished to raise $60,000 by voluntary contribution to be divided among the soldiers' families in the city in accordance with the number of persons in each family, to provide Christmas presents for the children, and Christmas cheer generally. A. W. McLimont, General Manager, Winnipeg Electric Ry., took an active interest in the campaign from its inception and the company's donation to the fund took the form of an expenditure of $1,000 in advertising for donations. Mr. McLimont originated the plan of asking the public to "Drop a bill in the fare box" for the Christmas fund. Advertisements were run in the daily newspapers and posters were placed on the street car windows. One of these posters was signed jointly by the Mayor of Winnipeg and Mr. McLimont. The company issues a paper each fortnight, 40,000 copies of which are distributed free on the street cars, and the leading article of Dec. 16 issue was devoted to the campaign and urged everyone to "drop a bill in the fare box" as you left the cars.

All members of the general committee, comprising 200 leading citizens, were sent copies of this issue of the Public Service News by the secretary of the committee.

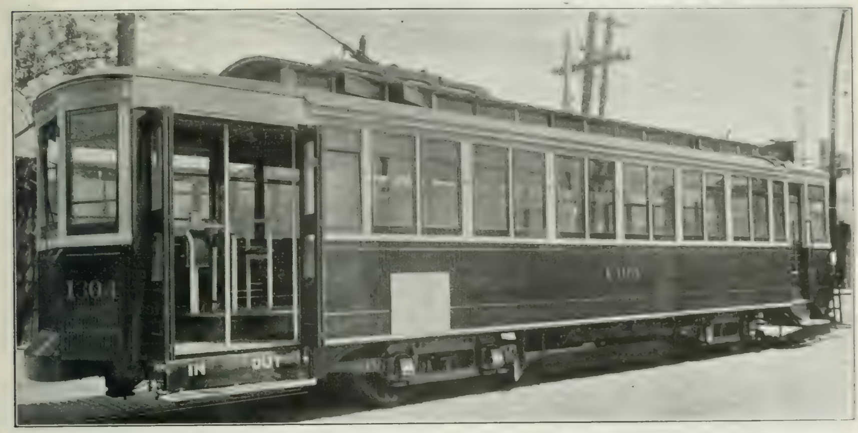
The Winnipeg street cars are equipped with protruding fenders, and a large banner requesting citizens to "Drop a bill in the fare box" was placed on each fender. A full sized billboard was erected on each side of a street car and this car was operated during the rush hours through the principal streets.

It was not expected that any substantial amount would be realized from fare box collections, owing to the fact that the principal source of revenue for the fund was big contributions from the business men of the city. The rank and file of the general public, however, responded very generously to the appeal to place their money in the fare boxes and over $1,000 was realized from this source in addition to an order for a load of wood, Victory Bond coupons, etc. The company's employes contributed $400 to the fund.

The city newspapers and the thousands of soldiers' families affected, commented very favorably on Mr. McLimont's action in getting behind the Christmas gift fund. He feels that the company's employes have greatly benefitted from being privileged to participate in the campaign

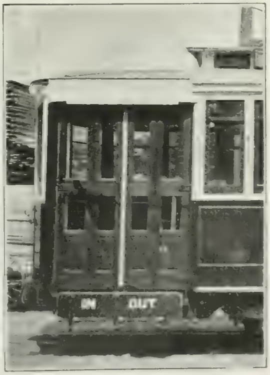
Prepayment Cars on the Toronto Railway.

Twenty-five p.a.y.e. cars were placed in operation on the Toronto Ry.'s College St. route during the first week in January. Although these are not actually the first p.a.y.e. cars which the company has operated, they are the first of a modern type. The first p.a.y.e. cars tried on the Toronto Ry. were merely the ordinary cars, on which passengers paid their fares on entering. There were none of the devices on the car which tend to make the operation of prepayment cars easy and sure, and their use was abandoned.



Toronto Railway Prepayment Car, with doors open and step down.

In the present case, a number of the company's existing palace type of cars were taken off their routes and remodelled, the chief change being made with the rear vestibule. The rear bulkhead was removed and the main floor of the car projected into the vestibule, in order to accommodate a seat for the conductor, and a stationary fare box. By this arrangement, the seating capacity of the car is not interfered with, and there is ample room on either side of the conductor for the entrance and exit of passengers. The rear vestibule is fitted with folding doors and steps, operated by a small pneumatic engine located over the doors, air for its operation being taken from the air brake supply. The folding of the step and the closing of the doors automatically signals the motorman by means of a light, to proceed, and this signal cannot be given until the doors are closed. The space occupied by the conductor projects about 3 ft. into the vestibule, and is 2 ft. wide, the vestibule measuring 6½ ft. from the original car floor line. On entering the car, passengers pass in front and to the right of the conductor, place their fares in the box and go into the car. When all passengers are on, the conductor turns the air to the pneumatic engine, which then closes the doors, folds the step and gives the motorman the signal to proceed, all in one operation. The use of the pneumatic control eliminates any possible strain on the conductor in continually opening and closing doors, and also relieves him of giving the starting signal, thus leaving him entirely at liberty to attend to the collection of fares and the selling of tickets. The door opening is 5 ft. wide and the folding step, when down to allow passengers to enter the car, is 15 in. from the street level, with a rise of 12½ in. to the vestibule floor, which is 9½ in. below the car floor. Exit can be made either at the front or the rear. The door and step operating equipment is supplied by the National Pneumatic Co., New York, N.Y.



Toronto Railway Prepayment Car, rear vestibule, showing doors closed and step up.

Additional cars are being remodelled, and these will be placed in service as soon as possible. It is expected that an additional 25 will be ready early in March.

Edmonton, Alta., city commissioners have let a contract for 110 uniforms for Edmonton Radial Ry. employes at $65 a suit.

Nova Scotia Tramways and Power Co's Operation.

The Nova Scotia Public Utilities Commission issued an order recently, after an investigation of certain matters relating to the Nova Scotia Tramways & Power Co., which operates a street railway in Halifax. It directs the company as follows:

Operate the Gottingen St. extension of its tram lines with through cars, not less frequently than a 20 minute schedule.

On week days between 12 noon and 2 p.m., and between 5 and 6.30 p.m., to operate a car from Buckingham St. via Barrington to Oxford St.

Operate regularly not less than 8 cars on the main line.

Operate regularly not less than 16 cars on the Belt line.

Operate regularly not less than 4 cars on the Gottingen St.-Armdale line.

Not to permit any car to be operated on Buckingham and Jacob Sts. carrying passengers on the rear platform, and it shall be the conductor's duty to stand on the rear platform while the car is being operated on these streets.

With all reasonable expedition to procure and add to its equipment 12 new cars, each equipped with 4 motors, double trucks, air brakes and adequate safety appliances. The type of such safety appliances to be submitted to the board for approval.

To provide at the earliest possible date additional cars to be used as reserve equipment.

To report to the board within 14 days from the date of the order the action taken by the company to comply with the two preceding sections.

Provision is also made in the order for the filing by the company with the board of reports as to cars operated behind schedule, causes for extras, noisy cars, interruptions of service, etc. The time for the round trips of the Belt line between noon and 2 p.m. and between 5 and 7 p.m. on week days is to be 45½ minutes.

Prepayment Car, Toronto Railway, Interior, looking toward rear end.

Electric Railway Notes.

Toronto Ry. directors met in Montreal, where several of them live, on Jan. 27, to consider the annual report, etc.

H. Holgate, C.E., and Professor Ritchie have been appointed by the New Brunswick Public Utilities Commission to value the property of the New Brunswick Power Co., which owns the St. John Ry. They began their investigation at St. John, Jan. 13.

J. H. Moir, Superintendent, Edmonton Radial Ry., and the city commissioners are considering making certain improvements in the electric railway service in the city. Their recommendations are expected to be laid before the city council at an early date.

Sandwich, Windsor & Amherstburg Ry. employees threatened to strike early in January, unless the company would dismiss the Superintendent, F. E. Hayes, and reinstate a dismissed conductor. Subsequently the men applied for a board of conciliation.

London, Ont., ratepayers, on Jan. 6, by a majority of 2,283, voted in favor of permitting the London St. Ry. to operate cars to Springbank on Sundays. Application will have to be made to the Ontario Legislature for the necessary authority to run cars on Sundays outside the city.

W. Dickson was delivering ice in Lachine, Aug. 28, 1917, when he was knocked down by a Montreal Tramways Co.'s car, sustaining injuries resulting in the amputation of his left arm at the shoulder. He brought an action in the Quebec Supreme Court for the recovery of damages assessed at $20,998. After a two days hearing the jury, on Jan. 17, awarded $10,000 for damages and $206 for expenses, but also found that the plaintiff had been guilty of contributory negligence, for which reason the total amount of damage to be paid by the company was fixed at $6,804 with costs.

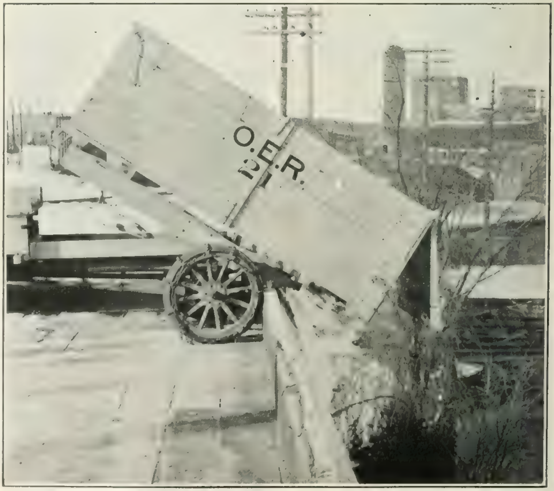
At the Winnipeg Board of Trade's dinner to the Minister of the Interior, Jan. 21, a special table for reserved for officers and employes of the Winnipeg Electric Ry. and there were 30 representatives of the company in attendance. Of these, 12 were members, and it was announced that A. W. McLimont, General Manager, had ordered that membership cards be taken out for the remaining 18.

The Winnipeg Electric Ry. expects to place in service very soon, 10 steel cars, which are being built at Ottawa. These cars were contracted for in June, last, and delivery should have been made on Oct. 31, but in Ottawa, as elsewhere, war conditions interrupted the carrying out of the contract, and the cars will probably be delivered about three months after the specified time. Inability to secure material and labor was directly responsible for the delay. The company is also proceeding rapidly with a rehabilitation programme and has 40 reconstructed cars in commission. Cars are reconstructed at the rate of 10 a month.

Ottawa Electric Railway Snow Dumping Motor Truck.

The accompanying illustration shows one of 25 snow, box, dump motor trucks, which the Ottawa Electric Ry. is using for the rapid and economical removal of snow from streets on which it operates.

As shown in the illustration, special plank driveways are built, so that the snow can be dumped without being shovelled out. The system has proved very successful this winter up to date, and promises great efficiency in both expedition and economy. The truck was designed by the company's Assistant Superintendent, J. M. Ahearn.



Snow Dumping Motor Truck, Ottawa Electric Railway.

Mainly About Electric Railway People.

W. H. Armstrong, heretofore Chief Car Inspector, has been appointed Master Mechanic British Columbia Electric Ry., Victoria, B.C., vice W. S. Fraser, who has been appointed City Electrical Engineer, Kamloops, B.C., as reported in our last issue. The position of Chief Car Inspector is held in abeyance, a redistribution of the work having been made.

Sir Adam Beck has been re-elected chairman of the London Railway Commission, which operates the London & Port Stanley Ry. It is proposed to ask the Dominion Parliament to alter the Incorporation Act so that the directors will be elected by the people in future, instead of being appointed by the city council.

F. J. Calbeck has been elected Chairman, Brantford, Ont., Municipal Railway Commission.

A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry., and President, Canadian Electric Railway Association, who was not at all well when he attended a meeting of the association's executive committee in Ottawa, Jan. 14, returned home at once to Kingsville, Ont., where he became worse and suffered from a slight attack of pneumonia. He is now convalescent.

C. H. Hartman was re-elected a member of the Brantford, Ont., Municipal Ry. Commission, at the municipal elections, Jan. 6.

H. McKay, electrical engineer, Pictou County Electric Co., was instantly killed in the company's power house at New Glasgow, N.S., Dec. 31, while locating some wire trouble.

Wm. A. Martin, who is spoken of by a local paper as agent of the Delaware, Lackawanna & Western Rd., has been appointed a member by the London, Ont., City Council as a member of the London, Ont., Railway Commission which operates the London & Port Stanley Ry., in place of Wm. Spittal, who has been a commissioner and honorary secretary of the board.

E. W. Oliver, heretofore Assistant Engineer, Canadian Northern Ry., Toronto, has, consequent on the appointment of E. F. Seixas, heretofore Manager, Niagara, St. Catharines & Toronto Ry., as General Manager and Official Representative of the Monterey Ry., Light & Power Co., been appointed General Superintendent, N., St. C. & T. R., reporting to S. J. Hungerford, Assistant Vice President, Canadian National Rys. Office, Toronto. Mr. Oliver will also be in charge of the Toronto Suburban Ry. and Toronto Eastern Ry.

G. L. Snelling, heretofore accountant, Ottawa Electric Ry., has been appointed acting Secretary-Treasurer, consequent on the death of Jas. D. Fraser, Secretary-Treasurer.

W. J. Weir has been appointed acting Secretary, Saskatoon Municipal Ry. Saskatoon, Sask., vice L. H. Hardy, Secretary, deceased.

Electric Locomotives Ordered. The Hydro-Electric Power Commission of Ontario has ordered six 50-ton steel locomotives for its Queenston-Chippawa construction railway. The bodies and trucks will be built by Canadian Car & Foundry Co., and the electrical equipment has been bought second hand from the Schenectady Ry., Schenectady, N.Y.

Proposed Purchase of Ottawa Electric Railway by City.

The three questions submitted by Ottawa City Council to the ratepayers, at the municipal elections Jan. 5, as to the Ottawa Electric Ry., were answered in the affirmative by large majorities. Following are the questions with the vote on each:—

If not earlier acquired, are you in favor of the City of Ottawa acquiring the property and assets of the Ottawa Electric Ry. at the expiration of its franchise in 1923, by arbitration, as provided by the agreement between the city and the railway? Yes, 8,174. No, 2,700. Majority, 5,474.

Are you in favor of the City of Ottawa acquiring the property and assets of the Ottawa Electric Ry. by arbitration, as provided by the agreement between the city and the railway, at such date prior to 1923, as may be mutually agreed upon? Yes, 8,770. No, 2,309. Majority, 6,461.

Should the Ottawa Electric Ry. be acquired by the corporation, are you in favor of it being managed by an appointed commission? Yes, 8,943. No, 2,008. Majority, 6,935.

The Hamilton Radial Electric Railway Situation.

The situation which has developed out of the Hamilton Radial Electric Ry.'s application to the Board of Railway Commissioners in July last, continues to be as obscure as ever, and a settlement as remote as ever. The Board of Railway Commissioners granted the application for increased fares, subject to the approval of the municipalities which had bylaws fixing certain fares. The Village of Burlington led the way in refusing to suspend the operation of the bylaw, and finally the company suspended its service. Some temporary expedients were made to provide accommodation, while negotiations were initiated between various interests with a view of bringing the parties together, but without effect.

The Hamilton Radial Electric Ry., on Jan. 2, filed with the Exchequer Court of Canada a scheme of arrangement with its creditors, but containing no provision for settling and defining the rights of shareholders among themselves. The statement of facts contained in the petition showed that the company was incorporated by an Ontario charter in [illegible], and has operated a railway between Hamilton and Oakville for a number of years, and in the operation has lost a large sum, and is now unable to continue operating owing to lack of funds. The company has a bonded indebtedness of $160,000, and other liabilities of $570,300, none of which is secured by bonds. The directors propose that the company's assets be sold, believing that at the present high prices of materials a considerable portion of the creditors' claims can be paid, which would not be the case if the railway continued to operate under existing conditions. The directors therefore ask for the court's authority to sell the company's assets as a whole, or piecemeal or in parcels, as may be most expedient. The petition states that the following are the officers and directors of the company:—President, Sir John Gibson; Vice President, [illegible] Dixon; acting Secretary, Wm. C. Hawkins; other directors, J. R. Moodie, W. F. Phin, A. Bruce, and J. M. MacDonnell.

After a number of meetings, the Burlington council passed a resolution favoring the suspension of its fare bylaw for a year, but it was reported that the company declined to accept this as a settlement. Meanwhile advocates of the system of electric railways to be built by the Hydro Electric Power Commission of Ontario were active, and as a result Sir Adam Beck attended a meeting of the Burlington council Jan. 17. Bylaws for building lines under the commission's plans were defeated in Hamilton city, Saltfleet and Nelson Townships in 1917, and it was urged that these be resubmitted as speedily as possible, so that advantage could be taken of the present situation to take over the Hamilton Radial Electric Ry. and incorporate it either in its entirety or in part into the commission's projected Toronto-Niagara line.

The whole situation was still in the air at the time of writing, Jan. 20.

Moose Jaw Electric Railway's Financial Position.

The Moose Jaw Electric Ry. submitted alternative propositions to the Moose Jaw, Sask., City Council Jan. 13. The directors stated their willingness to advise the shareholders to offer the company's railway and other property, franchises, etc., to the city on a basis to be determined, and to accept therefor the city's 5% debentures. As an alternative, the company asks for assistance from the city as follows:—Cancellation of the company's present indebtedness to the city for materials and labor in the matter of extra cost of pavements; the company to have immunity from taxation and [illegible] charges until the maturing of the present bond issue in 1930, together with a release from all claims for such as have accrued under the present franchise; an increase of passenger rates to 7c., tickets to be sold at six for 40c. or 16 for $1; the city to support application to the Saskatchewan Legislature in favor of the [illegible] of [illegible], exemption of the company from street maintenance until 1930; and that the city bear the expense of repairing pavements between tracks and 18 in. on either side thereof. The company is favorable to continuing the former half line service on the reopening of the Fourth Ave. bridge, but is opposed to the proposed South Hill extension; the directors will consider the completing and connecting up of the Hall St. extension. The directors point out that by the exercise of the strictest economy, they have been able to provide a street car service during the past seven years at a cheap rate, the receipts having barely covered the cost of operation. The company is not in a position after having met the losses of the past seven years, to meet the expenses of renewals, etc. Unless assistance is given at once, the company will be forced to abandon the enterprise.

After some discussion, it was decided to refer the communication to a special committee to be appointed by the mayor.

The Montreal Tramways Employees Union was reported recently to have under consideration the question of asking for higher wages, pay for spare hands, allowance for clothing, holidays and for a 9-hour day. The president is reported to have stated that it would be some time before the union decided whether to present the demands to the company or not.

Electric Railway Finance, Meetings, Etc.

Brantford Municipal Ry.—W. R. Turnbull, who was chairman of the commission in charge of the Brantford Municipal Ry. for 1918, reported at the commission's inaugural meeting for 1919, on Jan. 17, that the receipts for 1918 were $115,000, and that 2,500,000 passengers had been carried without a single accident. F. J. Calbeck was elected chairman of the commission for this year.

British Columbia Electric Ry. and allied companies.—

	Nov. 1918	Nov. 1917	5 months to Nov. 30, 1918	5 months to Nov. 30, 1917
Gross	[illegible]	$525,629	$2,727,030	$2,368,105
Expenses	[illegible]	384,320	2,192,418	1,935,641
Net	[illegible]	141,309	534,612	141,309

London & Port Stanley Ry.—A proposal was made at a recent meeting of directors of this municipally owned line to have the clauses providing for the increase of yearly rental to the city of London to $30,000, $40,000 and $50,000 at certain intervals repealed, and to insert a provision that at no time should the rental payable to the city exceed $20,000, but it was decided to leave the matter over for the consideration of the 1919 directors.

Moncton Tramways, Electricity & Gas Co.—Under the terms of the trust deed of Jan. 16, 1912, the company received tenders to Jan. 20 for the sale to it at a price not exceeding 5% above par and accrued interest of a sufficient number of bonds to exhaust $15,000 held in the sinking fund for the redemption of bonds.

Mount McKay & Kakabeka Falls Ry.—The annual meeting called to be held in Fort William, Ont., Jan. 15, was adjourned on account of the absence from the city of several of the directors.

Niagara, St. Catharines & Toronto Ry.—Niagara Falls, Ont., ratepayers, on Jan. 1, voted in favor of the bylaw providing for the purchase of the company's subsidiary, the Niagara Falls, Wesley Park & Clifton Tramway Co., with all its real and personal property, on payment of the actual value, to be determined by the Ontario Railway and Municipal Board. The vote was: "Yes," 682; "No," 193. The line is 4.56 miles long, and is operated under franchises which expire in March and April, 1920.

Regina Municipal Ry.—

Estimated revenue, Dec., 1918 ..	$21,800
Estimated passengers carried, Dec., 1918	454,000
Estimated total revenue, 1918	$230,582.25

The deficit, after allowing for fixed charges, for November, was $33,814.

Elimination of Unnecessary Stops in Winnipeg.

One of the first things A. W. McLimont, General Manager, Winnipeg Electric Ry., did when he first went to Winnipeg in Oct., 1917, was to have a careful survey of the stop situation in the city made. At that time very few of the stops were designated and it was the practice for the cars to stop at the far side of street intersections. He had the various routes taken one by one, unnecessary stops eliminated, and plans submitted to the civic authorities in each case showing the stops it was proposed to designate as permanent. The general public and the authorities recognized the improvement in service that would result from eliminating unnecessary stops and co-operated. The permanent stopping places were designated by painting the lower portions of street poles adjacent to the stopping place, white, and lettering the words "Car Stop" in black on the white surface. The telephone, telegraph and electric lighting companies, as well as the city street lighting system, gladly granted permission to use their poles for this service without charge.

Before stops were eliminated on any route, the public was notified by window posters pasted on the windows of the street cars or by large advertisements in the daily newspapers. The net result is that within a year Mr. McLimont eliminated at least one-third of the stopping places in the city. The service has been speeded up and the general public is much better satisfied. No reason other than that it resulted in faster service was given to the citizens or authorities when stops were eliminated. Mr. McLimont has eliminated the stops and faster service is being supplied and everybody seems to be satisfied. Although minor adjustments in the location of stops will inevitably have to be made from time to time as local conditions change, no one has even suggested that the old system be reverted to.

The Winnipeg Electric Railway's Franchise, Value, Etc.

Winnipeg's city solicitor, in a recent report to the city council on the Winnipeg Electric Ry.'s contract, pointed out that the company's franchise does not expire in 1927, as generally understood, but that in that year the city will have, on giving six months notice of its intentions, the right to take over the line at a valuation. If the city does not exercise its option, the company's franchise would continue, but the city has the right, on giving one years notice, to take over the line at the end of any five year period. If the company secures a variation of the contract as to fares, it might be argued that a restriction of the period of the franchise would be a proper concession for the city to ask from the company. Then there is the question that might arise when the time for taking over the line arrived, viz.: whether the city transportation could not be conducted in a more efficient manner than by an electric railway as at present laid out, in which event the city might have to purchase an obsolete system in order to rid itself of a franchise incubus on its streets. The letter was filed without discussion.

In the report referred to, mention is made of the fact that the city may take over the line at certain fixed periods on a valuation basis. An appraisal is being made of the company's property by engineers and accountants for the Manitoba Public Utilities Commission, and by representatives of the company, in connection with the company's application for authority to charge an increased fare on its electric railway. It is pointed out that the investigation will show the reproduction value of the company's electric railway property, and that to have the value of the electric railway thus independently determined should completely eliminate any question about the company's capitalization.

At a meeting of the Winnipeg board of control on Dec. 31, it was reported that the amount of taxes, percentages and arrears due by the company totalled $407,499.47, made up as follows:—1916, $4,012.77 taxes and $722.30 in percentages; 1917, $185,139.03, with $16,662.51 in percentages; and 1918, $200,918.86. The percentage for 1918 had not been ascertained.

Regret at Jas. D. Fraser's Death.

The following resolution was unanimously adopted at Ottawa Jan. 14:—"The members of the Canadian Electric Railway Association's executive committee, at their first meeting after the death of Jas. D. Fraser, and at the scene of his activities for over a quarter of a century, desire to place on record their deep regret at his death, and their appreciation of him as a trusted advisor, a true friend and a most lovable character. As a member of the association's executive committee for many years, and as Vice President and President, he rendered most valuable services to electric railways throughout Canada. The members of the committee also desire to express their deep sympathy for Mr. Fraser's relatives and with Messrs. Thos. Ahearn and Warren Y. Soper, with whom he was associated in business, and of whom he was a trusted friend for very many years."

Montreal Tramways Co.'s Franchise.—A Quebec press dispatch of Jan. 22 stated that G. Mayrand, M.L.A. for Dorion, would give notice that afternoon, in the Legislative Assembly, of a bill to abolish the Montreal Administrative Commission and annul the Montreal Tramways Co.'s franchise, and that the bill would provide that no franchise be granted hereafter by the Quebec Legislature without being ratified by a referendum. In this connection it should be borne in mind that the act respecting the city of Montreal, which included among other things the Montreal Tramways Co.'s new franchise, was a government measure. It seems hardly likely that Mr. Mayrand's bill will be seriously considered.

The Quebec Ry., Light & Power Co. is about to place "Cars stop here" signs at all points where its cars stop to let off and take up passengers. The signs have been ordered from Acton Burrows, Limited, Toronto.

R. S. Bauer, Lynn, Mass., advocates a free street car service, by cities, on the same principle that free elevator service is provided in public buildings, and free bridges and highways are maintained at the cost of the taxpayers.

Toronto Suburban and Toronto Eastern Railways Acquired by Canadian Northern Railway.

As stated in Canadian Railway and Marine World for January, the Canadian Northern Ry. is taking over the Toronto Suburban Ry. Co.'s property, including 69.53 miles of line under operation, and is also taking over the Toronto Eastern Ry. Co.'s charter, partially constructed railway, etc. Both are electric lines. It is said that the C.N.R. Co. has acquired the common stock of both companies in consideration of assuming their liabilities, including bonds, etc.

The Toronto Suburban Ry. Co. was incorporated by the Ontario Legislature in 1894, with authorized capital of $250,000, and with power to issue bonds for $20,000 a mile, mainly for the purpose of taking over and amalgamating two separate pieces of electric railway in municipalities north and west of Toronto, but terminating at the city boundary. These lines were built under franchises granted to the Davenport Street Ry. Co., dated Apr. 20 and June 8, 1891, and to the City & Suburban Electric Ry. Co., granted Oct. 5, 1891, and amendments to the same. The municipalities concerned were the township of York, the town of Toronto Junction, the franchises being for 20 years, with certain renewal privileges. A subsequent agreement was made with the village of Weston. The City & Suburban Electric Ry. Co. was the successor of the Weston, High Park & Toronto St. Ry. Co., incorporated under the Ontario Joint Stock Companies Act. Nov. 12, 1890, the title of the company being changed in the following year by the Ontario Legislature. The lines built and operated under these franchises were as follows:

The City and Suburban Electric Ry. built on Keele St., from St. Clair Ave. to Dundas St.; Dundas St., from Humberside Ave. to Lansdowne Ave.; Humberside Ave., from Dundas St. to Glendonwynne Road; Glendonwynne Road to Glenholme Drive, along Glenholme Drive to Fairview Ave., on to Louisa St., along Louisa St., to Lansdowne Ave., and along this avenue to Dundas St.

The Davenport St. Ry. built from the crossing of Bathurst St., by the C.P.R., to St. Clair Ave., thence westerly along Davenport Road to St. Clair Ave., and along that avenue to Toronto Junction.

When consolidated as the Toronto Suburban Ry. Co., there were 9.89 miles of lines, extending from Humberside Ave., on Dundas St., the then boundary of the City of Toronto, along Dundas St. to Lambton Park, with a branch southerly to Evelyn Crescent, a line to Weston, branching from Dundas St. at Keele St., and the Davenport Road line, branching from the Weston Road line, and terminating just north of the C.P.R. tracks on Bathurst St. The gauge of these lines was 4 ft. 10¾ in. On the extension of the Toronto city boundaries in 1899, an arrangement was made by which the Toronto Ry. operated its cars over the T. S. Ry. line from Humberside Ave. to Keele St., that piece of line being relaid to the Toronto city gauge. The corner of Keele St. and Dundas St. thus became the meeting place of the two lines.

In 1901, the company obtained legislative authority to extend its line from Lambton to Hamilton, and in subsequent years the legislature granted further powers for the construction of lines from Hamilton to Niagara Falls, from Weston to Woodbridge, from Lambton to Brampton; branch lines in the Niagara Peninsula; Lambton to Guelph, Berlin, etc., a branch from Cooksville, and a line from near Brampton to connect with the existing Davenport Road line. Some of these lines were authorized to be built, subject to agreements with the local municipalities, along the public highways, and as late as 1916, surveys were made along the highways in certain parts of Peel County by the company's engineers.

It was not until 1911, however, that steps were taken to undertake any construction, following the passing of the control of the company to Sir William Mackenzie and associates in June of that year. This was followed by an issue of £540,000 of 4½% debenture stock in England. The first line built was that from Weston to Woodbridge, of which 0.6 of a mile was built on the highway between the northern boundary of the Village of Weston to the boundary of York Tp., the rest of the route being along the Humber River valley on private right of way. Construction was started in the spring of 1912, and the line was put in operation Oct. 10, 1914.

Construction was started on the Lambton-Guelph line in 1913, and tracklaying was completed in 1915; but it was not until the autumn of 1917 that the line was put in operation. Some grading has been done between Guelph and Berlin, but work was suspended owing to the war.

Both the Woodbridge and Guelph extensions are standard gauge, and in order to operate cars to the Keele-Dundas St. junction with the Toronto Ry., the company, in 1916, applied for power to connect the Guelph extension with the old line at Lambton Park, and to change the gauge of the line. The City of Toronto objected, but the Ontario Railway and Municipal Board gave the necessary powers.

The company built a large car barn, etc., at Lambton, a full description of which was given in Canadian Railway and Marine World for May, 1916.

The statistics for the year ended June 30, 1917, show that the company had outstanding $1,500,000 common stock, and $2,628,000 of bonds. It then owned 15 closed and 3 open passenger cars, 1 freight car, 1 mail, express and baggage car, 2 work cars and 2 sweepers; but this equipment has been added to considerably since then, by the addition of the 10 center entrance cars, built for the Lambton-Guelph line, described and illustrated in Canadian Railway and Marine World for Mar., 1916. Other cars have also been added on both the Guelph and the Woodbridge lines.

The earnings for the year ended June 13, 1917, covering the operation of 18.79 miles of track, were:—Passenger, $168,895.15; freight, $1,076.43; mail and express, $1,991.41; miscellaneous earnings, $35,351.90; gross earnings, $207,317.50. Operating expenses absorbed $104,406.02, leaving $102,911.48 as net earnings from operation. The company received $1,863.70 from miscellaneous sources which gave a total of $104,775.18, out of which taxes absorbed $2,698.39; interest on funded debt $29,929.72; interest on floating debt, $6,255.83; all other deductions from income, $19,661.07, making a total of $58,545.01, and a net income of $46,230.17.

The officers of the Toronto Suburban Ry. Co. are: President, Sir Wm. Mackenzie; Secretary-Treasurer and General Manager, G. C. Royce. Alan H. Royce was Vice President, up to the time of his death, some months ago. The other officials are, Assistant Manager, W. J. Radford; Purchasing Agent, R. Gilbert; Superintendent of Rolling Stock and Substations, J. W. Walker; Electrical Engineer, S. Rosevear; Roadmaster, F. Lindsay; Assistant Road Master, B. Sharpe.

The management of both the Toronto Suburban Ry. and the Toronto Eastern Ry. will, it is said, be given to F. W. Oliver, heretofore Assistant Engineer, Canadian Northern Ry., Toronto, who has been appointed General Superintendent, Niagara, St. Catharines & Toronto Ry., to succeed E. F. Seixas, heretofore Manager, who has been appointed General Manager and Official Representative, Monterey Ry., Light & Power Co.

The Toronto Eastern Ry. Co. was incorporated by the Dominion Parliament, April 12, 1910, to build and operate a railway from Toronto easterly through Whitby, Oshawa and Bowmanville to Cobourg, Ont., with the following branches:—From Cobourg or Port Hope northerly to Peterborough; from Scarborough Tp. northerly to Markham, Stouffville and Uxbridge; from Oshawa northerly via Scugog to Lindsay; from Oshawa southerly to Lake Ontario. Extension of time for construction was granted in 1915, the time for starting construction being limited to 2 years, and for completion of the lines to 5 years.

In July, 1910, the main line was located from Bowmanville to Cherrywood, 23.5 miles; the route map being approved by the Minister of Railways Oct. 14, 1910, and the location plans by the Board of Railway Commissioners Feb. 24, 1911. On Sept. 12, 1912, a route map was submitted to the Minister of Railways and approved by him for the route from Pickering westerly. This line was to cross the Kingston Road just west of Pickering Village and pass through the territory adjacent to the lake, and recross the Kingston Road close to the G.T.R. crossing near the Scarborough Golf Club; the location plans for which were approved May 29, 1913. The location of the line through Bowmanville is along Wellington St., one of the main thoroughfares; through Oshawa, the line passes along Bond St., and through Whitby, along Mary St. In general, the location is as close to the Kingston Road as possible.

A contract was let and work was started in the spring of 1912, and grading has been completed from the eastern end of Wellington St., Bowmanville, westerly to Pickering Village, 10.5 miles. Track was laid and ballasted from Bowmanville to the western limits of Whitby, 14.5 miles. The rails used were 60 lb., with continuous angle bars, except along the streets through towns, where 80 lb. rails were laid. No overhead or other electrical work was done, and all operations came to a standstill after war broke out. A suit over the right of way through the Ruddy property at Pickering, the site of the old Pickering College, is reported to have also affected the progress of construction.

The Winnipeg Electric Ry. has organized a welfare bureau for its employes.

Montreal Tramways Co's Finances.

The Montreal Tramways Co. was reported at the Montreal City Council, Jan. 13, to be indebted to the city to approximately $800,000, and instructions were given to the legal department to take steps to collect it.

In this connection there have been reports for some time as to negotiations for the placing of $7,300,000 of 6½% five year notes of the Monteral Light, Heat & Power Co., in which notes the Montreal Tramways Co. was interested. It was reported Jan. 13 that the notes had been placed with a Montreal syndicate, but on the following day it was stated that the matter had not been finally concluded. The object of the issue is to provide for the retirement of $5,350,000 two year 6% notes falling due in New York in April, and to provide some additional capital. The nature of the arrangement between the two companies is reported to be such as will concentrate all power business in the Montreal Light, Heat & Power Co. control, leaving the electric railways only to the Montreal Tramways Co.

Electric Railway Employes' Wages Arbitrations.

Grand Valley Ry. and Lake Erie & Northern Ry.—As stated in Canadian Railway and Marine World for January, the Minister of Labor appointed a board of conciliation to deal with the question of wages, etc., for this company's employes, F. H. McGuigan, Toronto, representing the companies, J. G. O'Donoghue, the men, and County Judge McGibbon, of Brampton, being chairman. As a result of the award, an agreement was signed Jan. 14 between the company and its employes, who are members of the Amalgamated Association of Street and Electric Railway Employes of America, Division 833. Following is a comparison of the old rates per hour, the rates asked by the men, and the rates awarded by the arbitrators, the new rates being effective from Dec. 16, 1918, to Oct. 31, 1919.

	Old rates	Rates asked	New rates
Conductors and motormen, passenger:			
First 6 months	...	36c	...
Second 6 months	...	37c	...
First year	34c	...	36c
Third 6 months	...	38c	...
Thereafter	...	40c	...
Second year	35c	...	37c
Third year	36c	...	38c
Fourth year and after	37c	...	39c
Conductors and motormen, freight	40c	...	42c
Junior brakemen:			
First 6 months	34c	36c	36c
Second 6 months	34c	40c	36c
Thereafter	34c	43c	36c
Senior brakemen, freight	37c	...	39c

The Toronto Ry. made an agreement with its employes in Aug., 1917, granting an increase in wages from June 16, 1919, based not only on the then increase in the cost of living, but also to some extent on the increased cost of living anticipated thereafter, and until the expiration of the agreement on June 30, 1919. Towards the end of 1918, the men decided to ignore the agreement and asked further advances, by way of bonus, commensurate with the increased cost of living, which they claimed should be an average of a percentage varying from 29.7 to 53.3%. They applied for a board of conciliation, which was opposed by the company on the ground of the existing agreement, but the Labor Minister decided to appoint a board, which was constituted as follows: F. H. Phippen, K.C., representing the company; H. W. Harper, representing the men, and County Judge Barron, of Stratford, as chairman. On Jan. 3, Judge Barron and F. H. Phippen signed a majority report, stating that, for the reasons given fully in their respective judgments, they awarded as follows, That the employes affected by the reference, whose wages under the existing schedule are 30c an hour, be given an increase of 2½c; that all other employes affected by the reference be given an increase of 2c; all increases to date from November 1, 1918. They decided that no change be made in the payment of overtime, and no change in the length of time to elapse before employes go on a higher scale of wages. The men's representative, H. W. Harper, made a minority report, to the effect that the men were entitled to their full demands. The following table shows conductors and motormen's wages per hour under the agreement to June 30, 1919, the increased rates they asked and the rates granted by the majority of the board,—

	Old rate	Asked by men	Rate granted
First 6 months	30c	...	32½c
First 3 months	...	43c	...
Next 3 months	...	43c	...
Second 6 months	32c	...	34c
After 6 months	...	48c	...
Second year	35c	...	37c
Third year and after	37c	...	39c

The following table shows the motor and truck repair and shedmen's wages, under the agreement to June 30, 1919, and the increases awarded by the majority of the board.—

	Old rate	New rate
Motor and truck repair men:		
First 6 months	30c	32½c
Second 6 months	32c	34c
Second year	35c	37c
Third and subsequent years	37c	39c
Shedmen:		
Foremen	37c	39c
Operating shedmen, who operate and do general shed work	33c	35c
Shedmen doing general work, but not operating cars	32c	34c
Car cleaners	31c	33c

It is said that the additional outlay for the company for the period for which increases are granted, viz., to June 30, 1919, will be between $75,000 and $85,000.

The company has intimated its willingness to accept the award, and the men were to meet on Feb. 1 to decide whether they would accept it or appeal to the Dominion Appeal Board.

Electric Railway Projects, Construction, Betterments, Etc.

Berlin & Northern Ry. Co.—The Ontario Legislature is being asked to authorize the company to change its name to the Waterloo-Wellington Ry. Co., and to extend for three years the time within which it may extend its line from Bridgeport to Elora and Fergus, Ont. (Sept., 1914, pg. 431.)

Brantford Municipal Ry.—The ratepayers of Brantford, Ont., on Jan. 6, by a majority of 838, approved of a bylaw authorizing the extension of the line into the Terrace Hill district, and the provision of extra rolling stock at a total estimated cost of $125,000. (Jan., pg. 40.)

Calgary Municipal Ry.—The commissioners were asked by a deputation on Jan. 11, to extend the line up Centre St. on the north hill to North Balmoral, Calgary, Alta. It was stated in the course of the discussion that the commissioners had practically decided to extend the Centre St. line as a single track to Sixteenth St., for which rails are on hand. One objection to the extension to North Balmoral is the estimated cost of $10,000 for the double intersection at Sixteenth St. The matter will be considered further. (Oct., 1918, pg. 453.)

Cape Breton Electric Co.—At a recent meeting of the Sydney, N.S., City Council the extension of the company's lines was advocated, and Alderman Steel asked for the promotion of a line from Sydney to Low Point and New Waterford.

London & Lake Erie Ry. & Transportation Co.—A St. Thomas, Ont., press report Jan. 15 stated that the estate of the late James Duffield, of London, Ont., had arranged to take over a controlling interest in the company's holdings and to reopen the line; that Grand Trunk Ry. and Wabash Rd. interests were associated with the new undertaking, and that the electric railway would be connected up with the G.T.R. in St. Thomas. (Dec., 1918, pg. 557.)

We are officially advised that the reports are without any foundation. (Dec., 1918, pg. 557.)

London St. Ry.—We are officially advised that the company may relay some small sections of its line in London, Ont., if the city council decides upon paving the same during this year. The company is also considering making some alterations and slight extensions to its shops. It may therefore be in the market a little later for rails, ties, and shop material. C. B. King, London, Ont., is Manager. (Feb., 1918, pg. 77.)

Toronto Ry.—At a meeting of the Toronto City Council's works committee, Jan. 16, the Works Commissioner was instructed to report as to the possibility of the completion of construction of the line on Pape Ave.

Edmonton Radial Railway's Future.

In the course of a review of the Edmonton Radial Ry.'s operations published Jan. 14, Superintendent Moir is reported to have said that the influenza epidemic hit the system at a most critical time. Receipts fell away alarmingly, and expenses took a new spurt. Despite all the unexpected setbacks, the system is regaining its strength rapidly and the worst is over. The present average fare is 5.02c, and although the operating surplus for 1918 was $125,000, the deficit is constantly mounting up. The total operating costs and capital charges amount to about $636,000 a year. The present number of passengers carried is 10,300,000, and conceding that there will be a drop to 10,000.-000 with the 6c fare, the revenue would be $600,000. The one-man cars are giving good satisfaction, and have resulted in a saving of $245 a day. With a full service of one-man cars and a 6c fare, the railway should break approximately even. When the population of the city reaches 100,000 it will be necessary to operate two-man cars and to have a zone system of fares.

Superintendent Moir estimated that it would take about three months to catch up on the repair work of the cars. New wheels, with ample gearing for 20 cars, are in stock. During the past two years 50 cars have been remodelled, at a cost varying from $50 to $400 each.

The Nipissing Central Ry. has 2 motor passenger cars on order with the Preston Car & Coach Co., and will shortly be in the market for 2 more cars of similar type.

Marine Department

Trawler and Drifter Construction in Canada for British Government, Through the Canadian Naval Service Department.

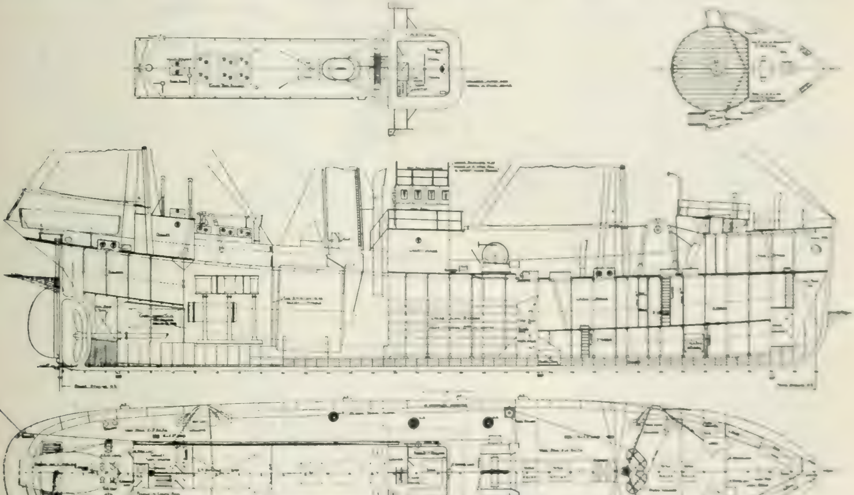
A few years previous to the outbreak of war, the British Admiralty realized that the ordinary steam trawler, on account of the arrangement of the fishing gear and the general design of the vessel, would be particularly adapted for the purpose of mine sweeping. A very large number or these vessels are always in operation from the great fishing centers of the British Isles, and in case of necessity can immediately be called upon for naval duties.

It was decided, after consultation with the large trawler owners, to establish a trawler reserve, and the conditions of hire and payment were provisionally arranged. This branch of the navy came under the Royal Navy Reserve, and was called the Royal Navy Reserve, Trawler Division—known as R.N.R.(T.). It consisted of about 100 steam trawlers owned by fishing companies in various ports around the British Isles. Arrangements were made that the vessels enrolled in the R.N.R.(T.) could be called upon at any time and used for naval service.

In order to provide crews, recruiting officers were sent to the large fishing centers, and the fishermen and engineers (who largely constitute the crews of the steam trawlers), were recruited and enrolled in the R.N.R.(T.) section. These men were paid a yearly retaining fee, on condition that they carried out certain drills every year. In order that proper instruction could be given to this new branch of the service, the Admiralty purchased four modern trawlers, which were fitted in exactly the same way as the ordinary steam trawler, but in addition, mine sweeping kites and arrangements were introduced. These vessels operated at stated periods from the large fishing centers in the British Isles, so that the men resident in each district could carry out their training and become fully proficient in the proper use of mine sweeping gear.

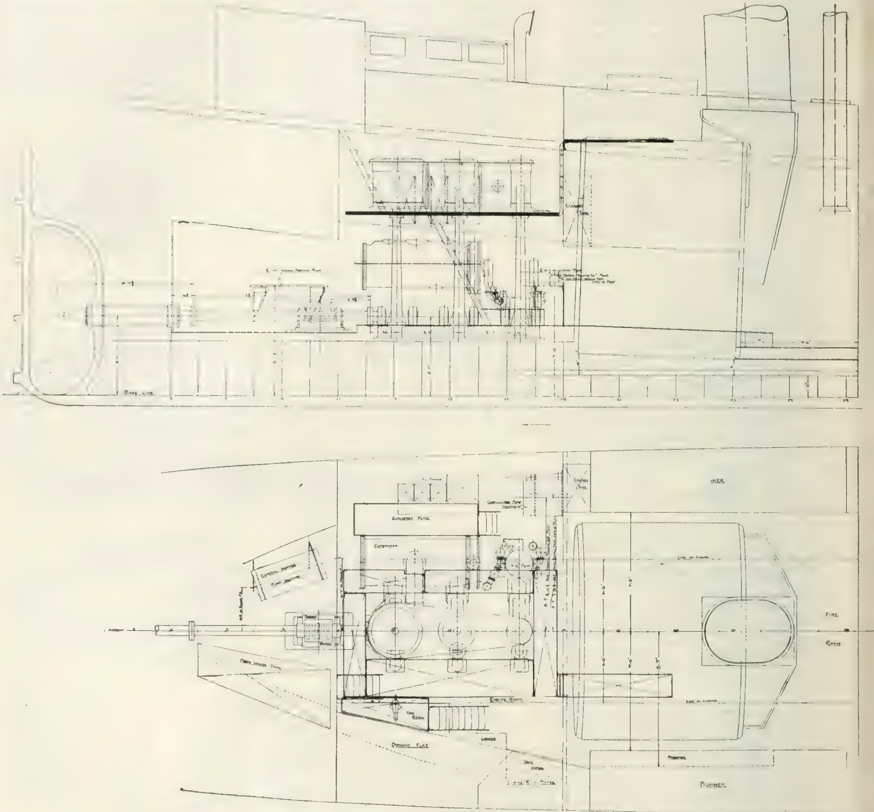
On the outbreak of hostilities the R.N.R.(T.) mine sweeping flotilla was immediately mobilized and commenced its duties in the North Sea on the second day of the war. Mines had been laid off the east coast of England on the first day of the war by a German mine layer, which was no doubt in readiness to commence operations before war was declared, and it was the duty of the R.N.R.(T.) mine sweepers to keep a clear course along the coast, so that the coastal traffic could be carried on without interruption.

The expected naval battle of the Grand Fleet and the German High Sea Fleet did not take place. The German fleet was kept in port, and it was immediately seen that their policy was one of attrition, attacking our vessels singly, by submarines and mines, until the numbers had become so reduced that they could risk



General arrangement, Steel Screw Trawlers.

an engagement with some hope of victory. To meet this new condition, it became necessary to place our fleet in a safe harbor, where it could be always held in readiness, and at the same time not exposed to attacks from enemy submarines, which were operating at this time in the North Sea in large numbers. Scapa Flow, in the Orkney Islands, was chosen for this purpose and the fleet safely berthed, but always ready.



Boiler and Engine Arrangement, Steel Trawlers.

At the same time it was also necessary to provide a constant watch around the shores, and to employ such vessels for submarine attacks as would not prove an easy target, and yet be effective in destroying the submarines. The trawlers were chosen for this purpose, as they could cover the sea in great numbers, and each vessel being of comparatively small value, and their crews consisting of 12 men, the losses would by this means be reduced to a minimum.

It became apparent that the trawler reserve would not meet the requirements, and to carry out this important work practically the entire British fishing fleet, comprising about 4,000 vessels, was taken into Admiralty service. Only a few vessels were left to their owners for fishing work, and these were compelled to operate in prescribed areas which were cleared of mines. The trawlers taken over were first manned by R.N.R.(T.) crews, but when this division became exhausted, the ordinary fishing crews were taken into the service, and the work which they have accomplished is now known to the whole world as one of the finest achievements of the war.

The whole of the British Isles was then divided into a series of numbered areas, each under the control of a naval staff and directly controlled by a central administration at the Admiralty. Each area was divided into bases, from which ports the trawlers operated, and patrols were arranged so that a complete chain could be maintained on watch around Great Britain continually. In addition to this work, escorting duties were also carried out by the trawlers, and operations with submarine nets conducted by the drifters.

As the war progressed and operations were commenced in the Mediterranean, it became necessary to send the fishing vessels to foreign waters. The sphere of action became so extended and continually increased, that it was found that the number of vessels available would not meet the demand. The Admiralty then decided to build 500 new trawlers in the British Isles, but as the ranks of the workmen were already thinned to a minimum for military purposes, and all shipyards were working at full pressure on important naval orders, great difficulty was found in obtaining the number of vessels required without interfering with equally important work.

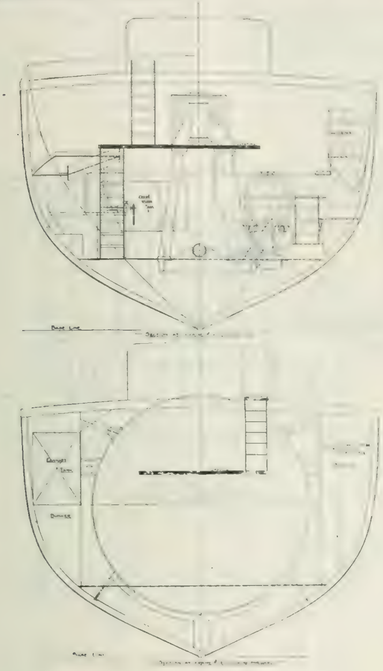
Canada was then asked if it could assist the Admiralty by building trawlers and

drifters to meet this urgent need. The then Minister of Naval Service, the Hon. J. D. Hazen, and the Deputy Minister, Geo. J. Desbarats, C.M.G., immediately enquired what could be done, and it was ascertained that 100 wooden drifters and 36 steel trawlers could be built in this country, as the shipyards were in a condition to carry out this work.

A branch of the Naval Service Department was thereupon organized to handle this work, and J. W. Norcross, Vice President and Managing Director of the Canada Steamship Lines, who offered his services, was appointed at its head, as Director of Ship Construction. The department was glad to avail itself of his intimate knowledge of the shipbuilding resources of the country, and of his organing ability and energy. Commander J. W. Skentelbery, R.N.V.R., was lent by the British Admiralty as expert adviser for the whole of work. The task was a great undertaking, considering that vessels of this kind had not been constructed in Canada, and that the supply of labor and facilities were of a very limited order. The shipbuilders and engineers were immediately called together and after careful consideration, orders for the vessels were allocated to the various firms, and the work was placed as follows:

Drifters.

Canadian Vickers Limited	26
Montreal Harbor Commissioners	4
Leclair & Sons, Sorel, Que.	6
Sorel Shipbuilding & Coal Co.	8
Dominion Government Shipyard, Sorel, Que.	[illegible]
Jas. Sheppard & Sons, Sorel, Que.	3
Davie Shipbuilding & Repairing Co.	50
	100



Boiler and Engine Arrangement, Steel Trawlers.

Trawlers.

Canadian Vickers Limited	11
Dominion Government Shipyard, Sorel, Que.	[illegible]
Kingston Shipbuilding Co.	[illegible]
Polson Iron Works	[illegible]
Collingwood Shipbuilding Co.	8
Port Arthur Shipbuilding Co.	6
	36

In July a further order for 24 trawlers was placed as follows:—

Port Arthur Shipbuilding Co.	[illegible]
Davie Shipbuilding & Repairing Co.	[illegible]
Dominion Government Shipyard, Sorel, Que.	3
Kingston Shipbuilding Co.	4
Toronto Shipbuilding, Ltd.	3
	24

The entire work of making out plans and ordering material was placed in the hands of the Canadian Vickers, Limited, which supplied full detailed drawings to all firms.

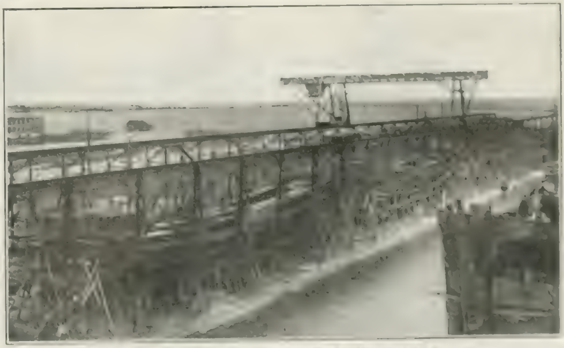
The trawler, which obtains its name from the French word "tralieur"—to drag or pull, was built of steel; length 125 ft., breadth 23½ ft., moulded depth 12½ ft. These vessels when fully loaded and ready for sea have a draft of water aft of 15¼ ft., and are a fine sample of the best design of British trawler.

The machinery consist of triple expansion engines having cylinders h.p., 12¾ in.; i.p., 21½ in.; and l.p. 35 in. diameter by 24 in. stroke, capable of developing about 500 indicated horse power at 118 revolutions a minute, which drives the vessel a speed of 10 knots an hour. A separate surface condenser is fitted, also a direct-acting steam reversing engine, and the most modern and up-to-date equipment for a vessel of this type. Steam is supplied by a large 3-furnace marine multitubular boiler of 180 lb. working pressure.

The coal bunker capacity is 160 tons, which will allow the vessel to remain at sea for 30 days. Large water tanks are fitted for the supply of fresh water for the boilers and accommodation arranged for 14 men in all.

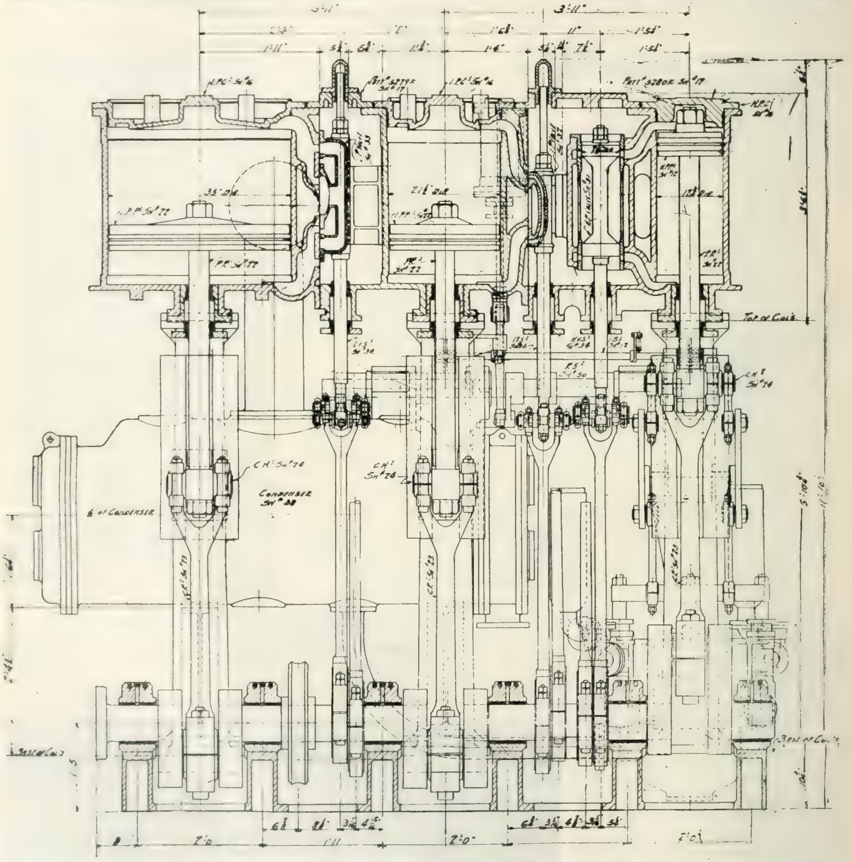
The trawlers are fitted with electric light and wireless telegraphy installation. The electric light installation consists of a 7½-k.w. generator, which serves for lighting the vessel, and also for operating the wireless telegraphy gear. The generating engine is designed in accordance with the best practice and built of the highest grade material of respective sorts procurable.

All bearing surfaces are very large [illegible] necessary for high-speed engines of this type. The crank shafts and connecting rods are of forged steel, [illegible]



Steel steam trawlers being built at Collingwood Shipbuilding Co.'s yard.

being forged solid on the end of the piston rod. All surfaces are lubricated by forced lubrication under an oil pressure of 20 lb. a square inch. The governor is of the centrifugal type, mounted direct on the crank shaft, and is so adjusted that a full load could be thrown on and off without affecting the speed of the engine. Owing to the limited space, these machines are of a very compact design, and are so arranged that they will run for long periods practically without attention.



Triple expansion engines for steam trawlers, 12¾-21½-35 x 24 in. stroke, 180 lb. w.p.

The whole of the fishing machinery is fitted on deck, arranged identically with the best type of British steam trawler. The trawl winch, which plays an important part both in fishing and mine sweeping, has cylinders 9 in. diameter by 14 in. stroke, and works at full boiler pressure. The main shaft is of forged steel, 7 in. diameter, and carries 2 cast-steel barrels with heavy brass bushings and steel sides, each barrel being capable of winding 1,000 fathoms of steel cable. The main driving wheels are of helical cast steel gearing, and the main clutch gear, which engages the barrels, is of cast steel fitted on a square so as to do away with the use of keys. This winch, when complete, weighs over 9 tons.

Full detailed drawings were supplied for all machinery, boilers, winches, deck fittings, and in fact, every part of the vessel was specially designed to withstand the arduous duties which it has to perform.

The drifter, which obtained its name from the mode of fishing with drift nets, was built of wood, length 84 ft., breadth 19¼ ft., draft of water aft 9 ft.

These vessels were fitted with compound surface condensing engines having cylinders h.p. 12 in., l.p. 24 in., stroke 16 in., designed to indicate about 200 h.p. at 140 revolutions a minute, which would give the vessels a speed of 8½ knots an hour. Steam was supplied by a multitubular marine type boiler, fitted with two furnaces, designed for 140 lb. working pressure.

The vessels were arranged in every way similar to the ordinary British herring drifters, a very large number of which are continually operating around the British Isles. Accommodation was arranged for a crew of 10 men, some being placed in the cabin aft, and the remainder in the forecastle. Steel casings were fitted over the engine and boiler room, the after part of which forms a galley on deck, and the forward part the wheelhouse.

Coal bunker capacity was provided for 13 tons in side bunkers, and 7 tons in a cross bunker, and 2 large tanks were fitted for supplying fresh water for the boiler. Seventeen of the vessels were fitted with accommodation for an officer and wireless telegraphy installation.

These little vessels are of such a model that they are considered the most seaworthy type, and are able to proceed to all parts of the world under their own power.

The whole of the vessels were each fitted with a gun, but have been so arranged that the armament and naval equipment can be easily removed and the vessels used as fishing vessels.

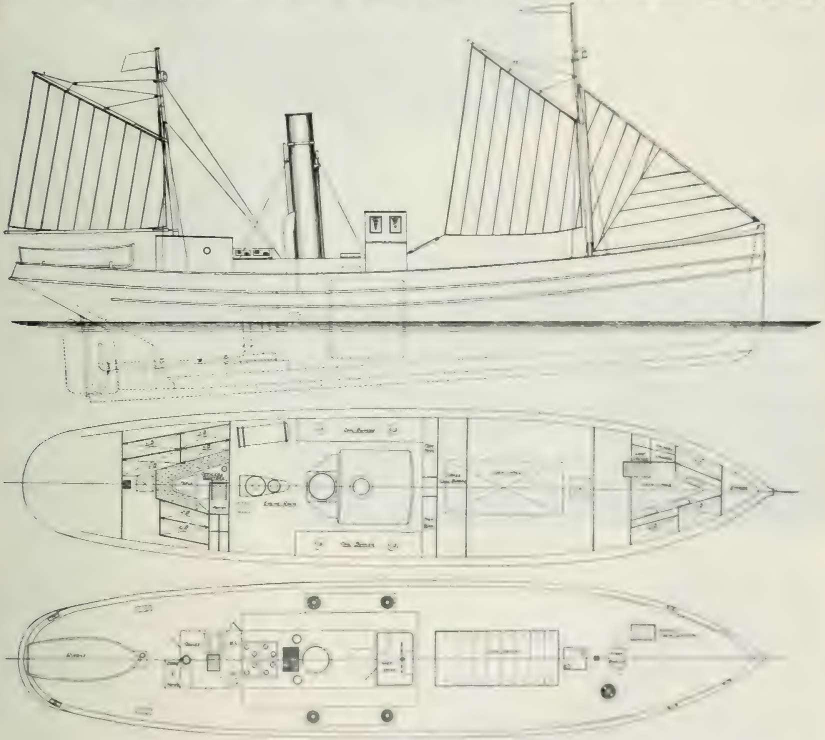
As these vessels were required for war purposes to be used on submarine attacks, the question of prompt delivery was of paramount importance. Even in ordinary times, when factories and labor were not engaged in munition work, the building of 160 vessels of a new type is a formidable undertaking. Mr. Norcross, however, tackled the problem in no uncertain manner. His able assistant, A. A. Wright, proceeded direct to the Pacific coast to obtain the timber to build the vessels, and although the orders to build were only placed about the middle of Feb., 1917, the timber was arranged for and delivery commenced in six weeks.

Transportation offered many difficulties, owing to the already congested state of the railways, but in spite of all this, some cars were only 10 days between Vancouver and Quebec.

The timber used in the construction of the drifters is fine clear Douglas fir, which was purchased sawn to specifications and delivered to the yards, and the whole order of 100 drifters has long since been completed, and many of them have crossed the Atlantic and done service on the other side, whilst the remainder have been used in naval service on the Canadian coasts. The steel plates for the trawler hulls and boilers were ordered and delivered with the greatest possible speed, and the construction of the vessels proceeded without delay.

Whilst the hulls were being built the problem of installing the machinery and finishing the vessels was considered, and a fitting-out basin at Shed 14, Louise Basin, Quebec, was arranged. All machinery and boilers which were not installed at the builders' yards were sent to this place. A carefully considered pipe arrangement drawing was prepared, with each item and pipe numbered. All auxiliary machinery, piping, fittings and other gear were then laid out in sets, and fitted up into units ready to be placed in the vessels. By this means, work could be prepared and easily fitted in place, and in one week 12 drifters were completed, tried under steam and handed over for service. This department handled every vessel which passed through Quebec before proceeding to sea, and in addition to fitting the machinery to the vessels, all gun pedestals and guns were fitted.

One of the most important features of these vessels is the wireless telegraphy equipment, which was fitted to the whole of the trawlers and as before mentioned, to seventeen of the drifters. When on patrol, the vessels are divided into units of six, and two out of this number are fitted with wireless telegraphy gear. By this means direct communication is always maintained between the base from which the vessel operates and the leaders of the patrol, and instructions are sent to each vessel which are communicated by visual signal to the remainder of the patrol which are not equipped with wireless apparatus. Some years ago the Naval Service Department organized a wireless branch, which controls all the wireless work in Canada, coast and ship



Wood Steam Drifter, 84 ft. Between Perpendiculars.

ates the coast stations, inspects all ship stations and operates wireless installation on government ships.

The limited dimensions of these vessels presented a somewhat difficult problem in wireless equipment, but as this was indispensable, and the utility of the vessels largely dependent on their ability to maintain efficient wireless communication, it was essential that this problem should be solved, and after careful consideration and experiment the "cabinet set" was evolved and constructed in the Marconi Telegraph Co.'s factory at Montreal. The result has proved very satisfactory, as the whole installation occupies very small space, and can practically be placed on an ordinary desk, whilst communication could be kept up at 150 miles radius. The cabinets were finished in mahogany and ebonite, and specially designed to withstand the hardest wear and tear which would be encountered at sea, as the work is particularly arduous on such small vessels as trawlers and drifters.

Steel steam trawler T.R. 7, ready for launching by Collingwood Shipbuilding Co.

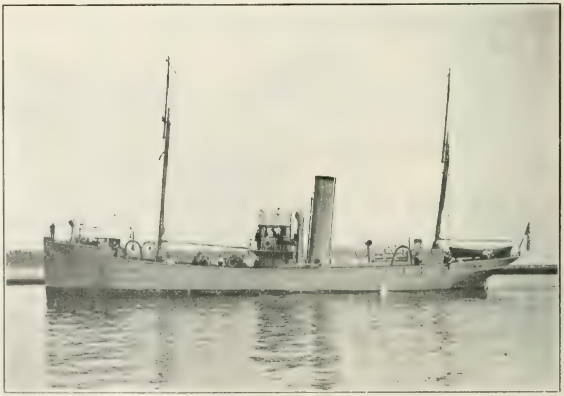
J.F.LEADS
YRDS
Steel steam trawler, being launched by Port Arthur Shipbuilding Co.

Without going into details beyond the scope of this article, the operator's procedure in receiving signals is briefly as follows: A steel needle, not unlike a phonograph needle, is set upon a crystal of carborundum, so as to detect incoming signals, which are made audible by means of a pair of telephones. Having detected signals and made one or two simple adjustments, the operator next proceeds to "tune," that is, to set his receiver in resonance with the distant transmitter, so as to obtain maximum response in his telephones, and this is accomplished by turning an ebonite knob which works a resistance and obtains the desired effect. By following this "tune" until the signal is clearly received, the interference of any other station may be subdued and communication carried on without interruption.

The [illegible] in designing these sets [illegible] both simplicity and efficiency, so that an ordinary operator would be able to carry out any slight adjustment [illegible] worked with practically no attention whatever. The Marconi Co. [illegible] in its up-to-date factory [illegible] and turned out the [illegible] for the service, which, considering the abnormal amount of work which was passing through its hands, reflects great credit upon its enterprise. The completed sets were delivered to the vessels and the installation carried out by the Naval Service's Radio Telegraph Department, and in many cases only two days elapsed from the time that the sets were delivered until they were in working order.

The greater part of this work has long since been completed. A few of the vessels have been sent overseas, but almost the entire fleet has been employed under the Naval Service Department for patrol service and anti-submarine defence work on the Atlantic coast. For obvious reasons, this work was done without publicity, but now that the necessity for secrecy has disappeared, too much cannot be said for the way in which Mr. Norcross and his able staff have carried out this great undertaking, and have constructed 160 vessels to guard our shores, and engage in the protection of our transports from the attacks of the enemy's submarines.

This undertaking has also proved of immense value and education to Canadian



Steel steam trawler, built by Polson Iron Works.

shipbuilders and engineers, as men have been trained, who before the war had no knowledge whatever of the work, and today the result is being clearly shown in the building of ships for the Dominion Government Merchant Marine.

Wooden steam drifter, built by Canadian Vickers, Limited.

Innumerable difficulties were encountered and overcome, and the carrying out of this large programme of ship construction which has been going on almost unnoticed, reflects the greatest credit on the organization, workmen, and all concerned, and speaks volumes for what Canada is able to do in the construction of ships for war purposes.

Although constructed primarily for war purposes, these vessels may now be used as fishing vessels and will prove of great value for this purpose for many years to come. Thus the money invested in them will have a marked effect in stimulating the great industry engaged in turning to account the food resources of the sea.

Editor's Note.—In connection with the foregoing, it may be mentioned that while, for obvious reasons, complete details could not be published when the trawlers and drifters were ordered, Canadian Railway and Marine World was able, in April, 1917, to publish information as to the numbers ordered and to give a pretty complete general description of their types, with illustrations. That article was the first published in connection with the orders and was very favorably received, and widely quoted.

The Gaspe Shipbuilding & Trading Co., Ltd., has been incorporated under the Dominion Companies Act, with $75,000 capital and office at Gaspe, Que., to build, deal in, and operate steam and other vessels, and to carry on a general navigation business, and transport passengers and freight. The incorporators are: A. Lacouvee, master mariner; H. J. Hyman; T. H. Jopling; J. Baker; R. H. Gould; R. Coffin, mariner, and H. S. Leboutillier, insurance and shipping agent, all of Gaspe.

Geodetic Survey Work During 1918.

The Interior Department's Geodetic Survey Branch had, during 1918, cooperation of an international character in war service of some importance. At the request of the United States Coast and Geodetic Survey a party was detailed for triangulation work on the Atlantic coast. A wire drag survey was carried on by the U.S. organization to make certain [illegible] waters available as a naval base for allied fleets, and the positions of numerous points and lighthouses to control the accuracy of this survey were furnished by the operations of the Canadian party.

At the commencement of the war, when the presence of German cruisers was feared in the North Pacific, a Geodetic Survey party in Dixon Entrance and Hecate Strait was able to render some assistance to the naval authorities at Prince Rupert. As the survey had parties on prominent points on the outlying islands, the connecting of these points with Prince Rupert was of great importance in keeping the authorities there acquainted with what might be transpiring on the nearby waters.

The activities of the Canadian Geodetic Survey during 1918 were confined to work of strictly economic importance. Besides the operations mentioned above, triangulation surveys were extended in New Brunswick eastward toward Nova Scotia to fulfil requests made by the Militia Department for the geographic position of points to control the accuracy of its topographic maps in the Halifax vicinity. Reconnaissance surveys were also extended in the direction of Sydney, N.S., at the request of the same department. Smaller surveys were undertaken in the St. John, N.B., and Moncton, N.B., vicinities, at the request of the Geological Survey's Topographic Division.

On the lower St. Lawrence River one party was engaged on primary triangulation, determining also the positions of lighthouses and church spires used in connection with the mapping operations of the Naval Department's Survey.

In British Columbia there was another example of international geodetic cooperation. The Canadian Geodetic Survey's engineers continued the projection

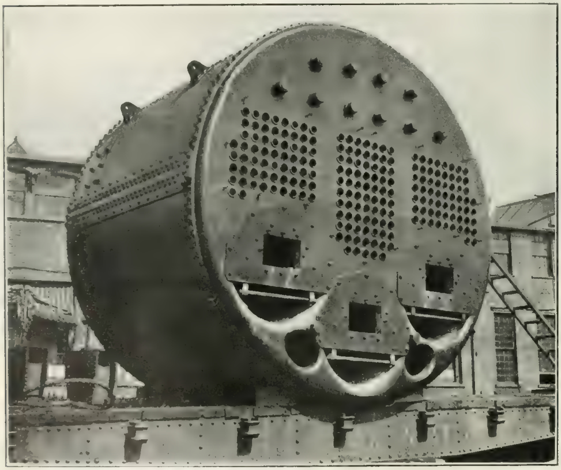
Completed steel steam trawler being launched by the [illegible] Shipbuilding & Repairing Co.

the head of Lynn Canal, the Canadian Geodetic Survey is contemplating the continuance of the primary triangulation along the Yukon River to the point of crossing of the 141st meridian of longitude. This work, when completed, and taken in conjunction with the extension contemplated by the U.S. Coast and Geodetic Survey of their triangulation in the vicinity of Tacoma, Wash., to the Canadian triangulation in the Juan de Fuca Strait, will constitute a geodetic arc of over 25 degrees of latitude and will connect Alaska, Yukon and B.C. with the adopted North American datum.

Dominion Wreck Commissioner's Judgments on Casualties, Etc.

Collision of s.s. Shrigley with Bridge on the Welland Canal.

Held at Montreal before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. F. Nash and C. Lapierre as nautical assessors, into the causes which led to the s.s. J. H. Shrigley, bound from Ashtabula, Ohio, to Montreal, with coal, striking the G.T.R. bridge over the Welland Canal, near Port Colborne, on May 11, 1918. From the evidence given, the court decided, without deeming it necessary to obtain the bridge man's evidence, that the master, William Thompson, erred in judgment in under estimating the speed of his vessel after passing the first bridge. His duty was clear, and he should have waited until the bridge was fully opened, before attempting to steer between the center pier and the bank. It was said that the bridge men were slow in responding to his signals to open the bridge, but even if that were the case, and they had been slower still, it was still his duty to await the opening, and if any delay occurred through lack of diligence on the part of the G.T.R. employes, a complaint should have been lodged. The court therefore concluded that the master attempted to rush the bridge and miscalculated his distance, as well as the speed of the vessel, and therefore he was to blame. The evidence did not show that the bridge was damaged, but if it had been, the court was of opinion that the master and owner, William Thompson, would have been liable.



Boiler for steel trawler, built by Dominion Bridge Co.

Collision of Barge Brookdale with Canal Bridge at Thorold, Ont.

Held at Toronto, before Capt. L. A. Demers, Dominion Wreck Commissioner, assister by Capts. J. B. Foote and Jas. McMaugh, as nautical assessors, into the cause of the collision of the barge Brookdale with bridge carrying the Niagara, St. Catharines and Toronto Ry. over the Welland Canal at Thorold, Ont. The court found that the master of the tug Escort, which had the barge Brookdale in tow, was navigated through the canal on the assumption that the bridge would be left open after midnight, as he claimed was the custom two years ago. He claims to have kept observations and a lookout on his vessel, but this must have been more than indifferent, and the master's evidence on this point was demolished by the vessel's engineer, who stated that the fact of the bridge being closed was observed on the barge Brookdale, which was 100 ft. astern, and means were taken, on board her, to fasten her to the bank. The strain caused by the Escort going ahead caused the mooring lines to part, and the Brookdale's mast came in contact with the bridge and was broken. The court found the master of the tug Escort, William Wright, at fault, that he was remiss in his duty, and suspended his certificate for two months, but as navigation closed Dec. 1, or thereabouts, and a suspension during winter months would be of no avail, the suspension is dated from Nov. 27 to Dec. 1, 1918, and from May 1 to June 27, 1919.

Fire on s.s. Somali.

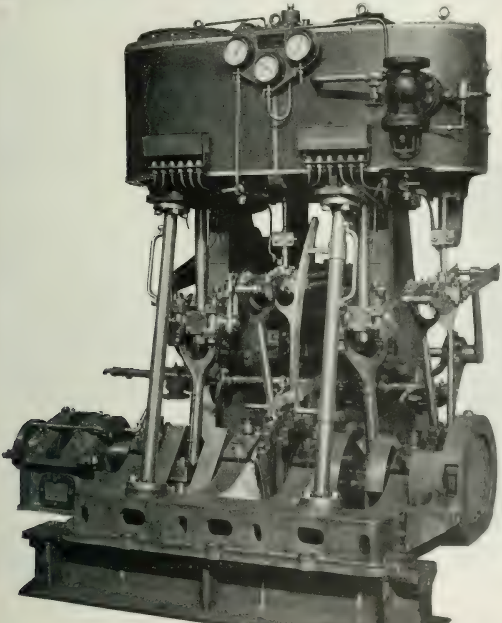
Held on board the vessel at Quebec, Que., before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Koenig and G. Houlgrave as nautical assessors, into the causes of a fire in hold no. 1 of the s.s. Somali, in Quebec harbor, Oct. 6, while en route from Montreal to a British port. After hearing the evidence, the court stated that it could come to no other conclusion than that inflammable material was wilfully placed among the cases of lard stowed in the hold. A so-called supervision of cargo entering the vessel was exercised by the second officer, but this supervision relaxed into uselessness on the part of the third officer, while the chief officer frankly admitted that he witnessed smoking in the holds by laborers to an extent to justify him in complaining to the Montreal officials, who informed him that the practice could not be controlled. The court expressed its opinion that under normal conditions the nature of the cargo would not require rigid supervision from the standpoint of thievery, but as it is realized that the hand of the enemy is ever ready to strike through the treasure of our vessels, an unflinching surveillance should have been exercised of the men permitted to enter the vessel, and if the crew proved inadequate, a military picket should have been detailed to assist in this essential duty.

Pacific Transport-Dartmouth Collision.

At Halifax, N.S., Jan. 3, before Commander H. St. G. Lindsay, commissioner, assisted by Capts. F. Dodd, master s.s. War Erie, and A. J. White, master s.s. War Huron, as nautical assessors, into the cause of the collision between the steamship Pacific Transport and the Dartmouth Ferry Commission's ferry Dartmouth, in Halifax harbor, Dec. 18. The court came to the unanimous conclusion that the collision was due to the action of the Dartmouth's master, M. P. Murphy, in failing to carry out the regulations provided in the International Rules of the Road, articles 19, 22 and 23, thereby placing his vessel and her passengers in a dangerous position. It therefore found the Dartmouth entirely to blame for the collision and severely censured the master, cautioned him to be more careful in handling his vessel in future, and ordered that he pay the costs of the enquiry.

Corinthian Stranding.

Held at St. John, N.B., Dec. 19, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. J. E. Everest and A. J. Mulcahy as nautical assessors, into the cause of the stranding of the s.s. Corinthian on the northwest ledge of Briar Island in the Bay of Fundy, Dec. 14. The court came to the conclusion that the casualty was due to indifferent navigation on the part of the master and first officer, and especially when the circumstances seemed to demand the exercise of greater precaution. The vessel set out to sea under the guidance of compasses, the general susceptibility of which to unexpected agencies is well recognized, and the correction of which by the usual methods was precluded on the day of departure by adverse weather conditions. The court held that the master, in view of the uncertain weather conditions, should have verified the very questionable accuracy of bearings taken, before attempting to navigate so close to the reef as 2½ miles, and it declared it to be a physical impossibility for the vessel to have traversed 8 miles on the last stage within the time given in the evidence. The navigation methods adopted by the master were extremely hazardous, and his ill considered actions involved the total destruction of a costly vessel and of an equally valuable cargo, and while giving weight to this, the court was not unmindful of his previous extended and untarnished record. It therefore held the master, D. T. Tannock, in default, and suspended his certificate for three months from Dec. 20, 1918, to Mar. 20, 1919.



Engine for wooden drifter, built by Goldie & McCulloch Co.

With respect to the first officer, B. [illegible] Simpson, while it was not shown that his observation was negligently or indifferently taken, yet if viewed from the standpoint of his subsequent actions, the accuracy of his word was brought into grave question, and could not be accepted without reserve. It was the court's opinion that if he had, in addition to ordering the helm hard aport, ordered the engines astern, the vessel might have swung more rapidly, and possibly the disaster might have been averted. His total lack of even the elementary demands of seamanship was so obvious, that the court found it incumbent to suspend his certificate for 6 months from Dec. 20, 1918, to June 20, 1919. The circumstances attending the disaster free the Bay of Fundy from any stigma or criticism which may be launched against it as an unsafe or dangerous channel of commerce.

Stranding of s.s. Afghan Prince.

Held at Sydney, N.S., before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. J. Morrison and Lieut. H. C. Owens, R.N.R., as nautical assessors, into the causes of the stranding of the British s.s. Afghan Prince, on or near Guion Island, Cape Breton, N.S., on July 30. The evidence showed that the vessel was carefully navigated from the time of leaving Hampton Roads until she reached Canso, frequent casts of the lead being taken, and a chain established when off Canso, which was passed at a safe distance. The weather was fair regarding wind and sea, but foggy at intervals. The court considered that the master set too fine a course after leaving Canso, especially seeing he was working on a large scale chart and had never navigated these waters before. When 17 fathoms was obtained, ordinary prudence demanded that the vessel's head should have been turned seaward and her half speed brought to slow, and she should have been navigated carefully until 40 or 45 fathoms had been reached, and then the former course resumed. To have remained on the same course in 17 fathoms was an act of poor judgment. The chief officer's evidence gave the impression that there was some nervousness as to the presence of submarines, and that this caused the master to hug the coast. The Admiralty orders may be to the effect that masters should navigate close to the coast line but the court is under the impression that there is a proviso, viz., consistent with safe navigation. During the evidence, it was stated that there were no buoys as indicated on the master's chart, but this statement was not considered of any value, as the intention was not to make for any whistling buoys, therefore their presence was of no consequence, and that if a buoy or aid to navigation was not seen or heard when expected, it would be foolhardy on the master's part to continue on practically half speed, and keeping the same course after finding such a depth as 17 fathoms.

The court stated that in ordinary circumstances it would deal with such a case in no lenient measure, but in view of the then existing conditions, the dread which must have existed as to meeting with an enemy vessel, it feels that, taking into consideration the care exercised in navigating up to Canso, the neat method followed in the log books and the watchfulness of the compass, it should not deal with the master's certificate, but reprimanded him severely and advised him to be more cautious in future. The court suggested that the Admiralty enclose with the folios handed to masters, some sectional charts of the coast which they are to frequent, especially those who are called upon to sail in strange waters.

The Sicilian-Canora Collision.

Held at Montreal, before Captain L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. F. Nash and C. Lapierre as nautical assessors, into the cause of the collision between Canadian Pacific Ocean Services' s.s. Sicilian and the Canadian Northern Ry. car ferry Canora in Quebec harbor on Aug. 6, the latter being moored at a wharf. The evidence showed that the pilot, Jules Lamarre, placed on the s.s. Sicilian as adviser to the master, J. M. Reith, exhibited animus towards the master for effecting a landing without the pilot's counsel about a year ago. Having that in mind, and upon noticing that the master reluctantly listened to his advice, he abstained, without formal instructions, from continuing his work as pilot. This was wrong, and his whole conduct was based on assumption in concluding that the master intended taking matters into his own hands. In standing aloof, he showed a spirit of unwarrantable sulkiness, which the court condemned as childish. His statement to the master as to the tide was given in good faith, and therefore his suggestion to berth the vessel with the starboard side to the pier was justified. Yet the court was of opinion that the only seamanlike method of berthing the vessel, especially a single screw vessel, is by heading the tide. The court therefore held that the pilot purposely forgot his role as adviser, and was in default for this, but not for the casualty. The master amply demonstrated that he voluntarily ignored the pilot, and took upon himself the making of the landing and his reference to the pilot's manner is regarded by the court as simply an attempt to trifle with words. The pilot's suggestion to diminish speed was equivalent to advice and should have been carried out without that seeming nonchalance which was apparent in the evidence. The master's opinion of the ability of the pilot is not based on fact; that he was a good river pilot he did observe, but that he lacked in ability in manoeuvering a vessel had not been tested, and therefore could not be criticized. The master evoluted the vessel himself and therefore no opinion could be formed as to the pilot's knowledge. If, in the past, he had found the pilot incompetent and unequal to his task, it was his duty to report such to his chief, and especially so in view of the fact that it was a special pilot who had been engaged by the owners for some years past. The master is compelled to pay the pilotage fee, but there is nothing in the statutes which compels him to accept the services of one whom he considers incompetent. When he held the pilot's advice in apparent contempt and took upon himself the direction of affairs, it became his own responsibility, and therefore the court holds that he lacked in judgment in approaching the pier at too great speed. The court did not consider it necessary to comment on this state of affairs, more than to say that there was sulkiness on the one side and strong-headedness on the other, neither of which should have existed, and it therefore finds both pilot and master in default. The pilot, Jules Lamarre, was fined $100 and his own travelling expenses, and the master was severely reprimanded.

Wireless telegraph set for steel steam drifter, built by Marconi Wireless Telegraph Co.

Canadian Boat & Engine Exchange, Ltd., has been incorporated under the Dominion Companies Act, with $100,000 capital and office at Toronto, to conduct a general agency business.

Lake Carriers Association Annual Meeting.

The Lake Carriers Association's annual meeting was held at Detroit, Mich., Jan. 17. Consideration of President Wm. Livingstone's annual report, and reports of the welfare plan and other committees, occupied the greater part of the meeting.

A resolution was adopted authorizing an appeal to the federal authorities for an addition to the number of lighthouse tenders on the lakes. Two vessels of that type were withdrawn from the lakes during the war, and additional tenders are necessary to attend properly to the navigation aids. The association hopes to obtain additional aids as well.

The following officers were elected:—President, Wm. Livingstone, Detroit, Mich.; Vice President, J. S. Ashley, Cleveland, Ohio; Secretary and Treasurer, G. A. Marr, Cleveland; General Counsel, H. D. Goulder, Cleveland; Chief Shipping Commissioner, A. R. Rumsey, Cleveland. W. H. Smith, Manager, Canada Atlantic Transit Co., Montreal, was elected a director.

Price of U.S. Wooden Steamships.—The United States Shipping Board has fixed $700,000, or $200 a ton, as the price for each of the 3,500-ton wooden ships which were designed for ocean going traffic and which it now desires to sell to private owners. Where the ships are purchased in lots of five the price will be $675,000 each. Offers have been received from both foreign and domestic buyers.

The President of the British Board of Trade on the Shipping Situation.

Sir Albert Stanley, President of the British Board of Trade, addressing the Huddersfield, Eng., Chamber of Commerce, Jan. 25, is reported in a press cablegram to have said he would be much happier if he could see stronger indications of restoration and development of trade in Great Britain. It was the deliberate policy of the government that restrictions and control would be removed as rapidly as possible, but the blockade must be maintained until peace was definitely secured. The government also proposed to speedily end the system of priority, possibly early in March.

Sir Albert said that there was more shipping available than cargoes and it was expected that this summer the world tonnage afloat would be equal to the pre-war tonnage. They might anticipate a very big slump in shipping rates. He thought it was a fair suggestion that the government should restrict imports until manufacturers were established on a peace footing, and it might be accepted by the government. A Ministry would shortly be established and experienced men had already been invited to join the board.

Rivetless Steamships.—There has been much discussion of late about the feasibility of building electrically-welded steamships and thereby avoiding the time and expense consumed in riveting. From England comes word of the completion of a rivetless 275-ton barge, supposedly the largest electrically welded craft so far produced. It is 125 ft. over all, and 16 ft. beam. The hull is rectangular in section amidships—only the bilge plates being curved. All water tight joints as far up as the latter are continuously welded on both sides, while those thereafter are tack welded on one side. The process permitted an estimated saving of form 25 to 40% in time and 10% in material. The expense of welding amounted to $1,500, $890 of which went for electrodes. In normal times this item would be less by about 60%. Another experimental barge, with certain parts riveted and others welded, is to be built.

Suit Against Northern Navigation Co.—London, Ont., press dispatch, Jan. 20:—The suit of F. McGibbon & Sons, who claim $7,000 damages from the Northern Navigation Co., has been re-entered for trial at the approaching winter assizes. The plaintiffs claim that through the negligence of the defendants, the s.s. Majestic, owned by defendants, was moored, while burning, close to the s.s. Cataract, and as a result the latter ship was burned. The Northern Navigation Co.'s rejoinder is that it did not own the Majestic at the time of the fire, that there was no negligence, and that, in any event, the Cataract had lain for years, an abandoned wreck, on the bottom of Sarnia harbor.

Importation of Wood from Canada to U.S. War Trade Board announces that the restriction on the importation of wood, as classified under par. 647 of the Tariff Act of 1913, except cedar and balsam, and also the restriction on balsam of Oct. 17, 1918, have been modified to permit the issuance of licenses for the importation of all wood therein described, when originating in Canada and coming by any means of transportation. Import licenses, therefore, may now be issued for ocean shipment.

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Steamships.—The two tables on the next page give full particulars of steel cargo steamships to be built for the Dominion Government, through the Marine Department, and to be operated by the Canadian National Railways management, as the Canadian Government Merchant Marine, Ltd. Up to the date of our last official advice, orders in council had been passed authorizing the Minister of Marine to order 47 vessels. Two of these orders in council, passed some months ago, were not acted on, and it will be noticed that the list does not contain any contracts numbered 8 and 9. However, there are contracts numbered 19a and 20a, which bring the total number authorized to be ordered up to 45, as per the following summary:—

	No.	Tons each	Total tonnage
British American Shipbuilding Co., Welland, Ont.	2	4,350	8,700
Canadian Vickers, Ltd., Montreal	2	4,300	8,600
Canadian Vickers, Ltd.	6	8,100	48,600
Collingwood Shipbuilding Co., Collingwood, Ont.	4	3,750	15,000
Collingwood Shipbuilding Co., Kingston, Ont.	1	3,750	3,750
J. Coughlan & Sons, Ltd., Vancouver, B.C.	4	8,100	32,400
Davie Shipbuilding & Repairing Co., Lauzon, Que.	2	5,100	10,200
Halifax Shipyards, Ltd., Halifax, N.S.	2	8,100	16,200
Halifax Shipyards, Ltd., Halifax, N.S.	2	10,500	21,000
John L. Mullen Construction Co., Prince Rupert, B.C.	2	8,100	16,200
Nova Scotia Steel & Coal Co., Ltd., New Glasgow, Ont.	2	2,800	5,600
Port Arthur Shipbuilding Co., Port Arthur, Ont.	4	3,400	13,600
Port Arthur Shipbuilding Co.	2	4,300	8,600
Tidewater Shipbuilders, Ltd., Three Rivers, Que.	4	5,100	20,400
Victoria Machinery Depot, Victoria, B.C.	2	8,100	16,200
Wallace Shipyards, Ltd., Vancouver, B.C.	2	4,300	8,600
Wallace Shipyards, Ltd.	2	5,100	10,200
	45		263,850

British American Shipbuilding Co., Welland, Ont., advised us Jan. 14 that neither of the kells for the 2 steel steamships of 4,350 tons d.w. each, for which it has orders for the Dominion Government, had been laid. It expected to have a berth available towards the end of January, and directly steel arrives the keel for yard no. 4 will be laid, but it will probably be the middle of March before the keel for yard no. 5 can be laid.

Canadian Government Merchant Marine, Ltd., Steamship Canadian Voyageur, 4,300 tons d.w., leaving Quebec Jan. 21 for Halifax.

Canadian Vickers, Limited, Montreal.—Following are particulars of this company's work on steel cargo steamships for the Dominion Government. As stated in Canadian Railway and Marine World for January, the vessel, yard no. 66, 4,300 tons d.w., the keel of which was laid June 10, 1918, was launched Nov. 23, 1918, and named Canadian Voyageur. She left Montreal Dec. 11 under her own steam for Quebec, was completed there and handed over to the Marine Department under the control of which she sailed from Quebec Jan. 21 for Halifax, where she will be transferred to the Canadian National Railways management for operation.

The vessel, yard no. 67, 8,100 tons d.w., the keel of which was laid July 17, 1918, was launched Dec. 3, 1918, and named Canadian Pioneer. She left Montreal Dec. 6, 1918, in tow, for Quebec, for completion there, and it was expected to deliver her to the Marine Department by the end of January.

The keel of yard no. 68, 8,100 tons d.w., was laid Aug. 26, 1918, and it was expected to launch her Jan. 16, but we had no advice of the launching up to the time of writing.

The keel of yard no. 69, 8,100 tons d.w., was laid Nov. 30, 1918, and it is expected to launch her in May.

The keel of yard no. 70, 8,100 tons d.w., was laid Dec. 2, 1918, and it is expected to launch her in May.

It is expected to launch yard no. 71, 8,100 tons d.w., in May; yard no. 72, 8,100 tons d.w., in June; and yard no. 73, 4,300 tons d.w., in June.

Collingwood Shipbuilding Co., Collingwood, Ont.—As stated in Canadian Railway and Marine World for January, the first of the steel steamships built by this company for the Dominion Government, yard no. 61, 3,750 tons d.w., was launched Dec. 21 and named Canadian Warrior. She is expected to be completed about the end of March. The keel for a similar vessel, yard no. 62, was laid June 3, 1918.

J. Coughlan & Sons, Vancouver, have contracts from the Dominion Government for 4 steel cargo steamships of 8,100 tons d.w. each. No keels have been laid, and when they will be depends on the delivery of steel.

We were advised Jan. 20 that slips for laying the keels of four vessels will be ready during February, March and April. The Dominion Government is supplying the steel, and when the keels will be laid depends on the steel's arrival. Up to Jan. 20 there was no advice when it would be shipped, so it was unable to state at all definitely when the keels will be laid.

Davie Shipbuilding & Repairing Co., Lauzon, Levis, Que., advised us Jan. 16 that it had not laid either of the keels for the 2 steel steamships of 5,100 tons each for which it has orders from the Dominion Government, owing to delay in delivery of material.

Halifax Shipyards, Limited, Halifax,

Orders for Steel Cargo Steamships for Dominion Government. Table 1.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for and which orders are to be carried out. Where a contract date is not given the contract had notb een signed at the time of our latest official advices.

Contract no.	Contract date	Builder	Yard no.	Tons d.w.	Type	Classification	Speed, knots
1	Mar. 4, 1918	Canadian Vickers Ltd., Montreal	66	4,300	Single deck, poop, bridge and forecastle	Lloyd's	11
2	May 22, 1918	Canadian Vickers Ltd., Montreal	67	8,100	Two deck, poop, bridge and forecastle	Lloyd's	11
3	Mar. 18, 1918	Collingwood Shipbuilding Co., Collingwood, Ont.	61	3,750	Lake type, single deck, poop, bridge and forcastle	British Corp.	9
4	Mar. 15, 1918	Wallace Shipyards Ltd., Vancouver, B.C.	100	4,300	Single deck, poop, bridge and forecastle	Lloyd's	11
5	Nov. 25, 1918	Wallace Shipyards Ltd., Vancouver, B.C.	106	4,300	Single deck, poop, bridge and forecastle	Lloyd's	11
6	Nov. 25, 1918	Wallace Shipyards Ltd., Vancouver, B.C.	101	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
7	Nov. 25, 1918	Wallace Shipyards Ltd., Vancouver, B.C.	102	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
10	July 5, 1918	Collingwood Shipbuilding Co., Collingwood, Ont.	62	3,750	Lake type, single deck, poop, bridge and forecastle	British Corp.	9
11	Oct. 17, 1918	Collingwood Shipbuilding Co., Collingwood, Ont.	63	3,750	Lake type, single deck, poop, bridge and forecastle	British Corp.	9
12	Oct. 17, 1918	Collingwood Shipbuilding Co., Collingwood, Ont.	64	3,750	Lake type, single deck, poop, bridge and forecastle	British Corp.	9
13	Aug. 9, 1918	Tidewater Shipbuilders Ltd., Three Rivers, Que.	5	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
14	Aug. 9, 1918	Tidewater Shipbuilders Ltd., Three Rivers, Que.	6	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
15		Tidewater Shipbuilders Ltd., Three Rivers, Que.	7	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
16		Tidewater Shipbuilders Ltd., Three Rivers, Que.	8	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
17	Sept. 4, 1918	Davie Shipbuilding & Repairing Co., Lauzon, Que.	459	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
18	Sept. 4, 1918	Davie Shipbuilding & Repairing Co., Lauzon, Que.	460	5,100	Single deck, poop, bridge and forecastle	Lloyd's	11
19	Sept. 4, 1918	Port Arthur Shipbuilding Co., Port Arthur, Ont.	39	3,400	Lake type, single deck, poop, bridge and forecastle.	Lloyd's	9
19a		Port Arthur Shipbuilding Co., Port Arthur, Ont.	41	3,400	Lake type, single deck, poop, bridge and forecastle.	Lloyd's	9
20	Sept. 4, 1918	Port Arthur Shipbuilding Co., Port Arthur, Ont.	40	3,400	Lake type, single deck, poop, bridge and forecastle.	Lloyd's	9
20a		Port Arthur Shipbuilding Co., Port Arthur, Ont	42	3,400	Lake type, single deck, poop, bridge and forecastle.	Lloyd's	9
21	Sept. 13, 1918	Halifax Shipyards Ltd., Halifax, N.S.	1	8,100	Two deck, poop, bridge and forecastle	Lloyd's	10
22	Sept. 13, 1918	Halifax Shipyards Ltd., Halifax, N.S.	2	8,100	Two deck, poop, bridge and forecastle	Lloyd's	10
23	Oct. 11, 1918	Canadian Vickers Ltd., Montreal	68	8,100	Two deck, poop, bridge and forecastle	Lloyd's	11
24	Oct. 11, 1918	Canadian Vickers, Ltd., Montreal	69	8,100	Two deck, poop, bridge and forecastle	Lloyd's	11
25	Oct. 11, 1918	Canadian Vickers Ltd., Montreal	70	8,100	Two deck, poop, bridge and forecastle	Lloyd's	11

				$52,691,450				

N.S., advised us Jan. 15 that building berths were ready, but that it had not been possible to lay keels for any of the 2 steel steamships of 8,100 tons each, and 2 of 10,500 tons each, for which it has orders from the Dominion Government, as the steel had not been received. It was then expected to receive steel in time to lay the keels of the first 2 steamships in February.

Nova Scotia Steel & Coal Co., New Glasgow, N.S.—Particulars of 2 steel cargo steamships of 2,800 tons d.w. each, which the Dominion Government has ordered from this company, were given in our January issue. We were advised Dec. 23 that it was expected the keels of both vessels would be laid early in January.

Port Arthur Shipbuilding Co., Port Arthur, Ont., which has orders from the Dominion Government for 4 steel cargo steamships of 3,400 tons d.w. each, and for 2 of 4,300 tons d.w. each, laid keels for two 3,400-ton ones on Dec. 9 and Dec. 10, 1918, respectively. The approximate launching date is about April 15.

Reference was made in our last issue, to the 2 steel steamships of 4,300 d.w. tons capacity each, which the Dominion Government has ordered from this company, and which, as stated, it will be necessary to cut in two for passage through the Welland Canal. It had been suggested that instead of cutting them in two, they be built in sections, but we are advised that it is the present intention to build them full size, and then cut them, but it is possible that this decision may be changed later.

Prince Rupert Shipbuilding & Engineering Co. has been incorporated under the British Columbia Companies Act, with $500,000 capital, and office at Prince Rupert, B.C., for the operation of the dry dock and shipbuilding plant leased recently from the Grand Trunk Pacific Development Co., at Prince Rupert, B.C., by the John L. Mullen Construction Co., Pittsburg, Pa. The company is said to be a subsidiary of the Empire Shipbuilding & Drydock Co. of the State of Delaware, which is capitalized at $1,500,000, and John L. Mullen, Pittsburg, Pa., is stated to be President. The company has orders from the Dominion Government for 2 steel steamships, as mentioned previously, and in addition, is reported to have several other orders, aggregating about 100,000 tons.

Victoria Machinery Depot Co., Victoria, B.C.—The Dominion Government has authorized the Minister of Marine to give this company contracts for 2 steel cargo steamships of 8,100 tons d.w. each. We are advised that the site for building is being prepared.

Negotiations are reported to have taken place regarding the purchase of this company's plant and business by the Foundation Co. C. J. V. Spratt, President, V.M.D., Ltd., is reported to have stated, recently, that the company was prepared to sell its plant at its appraised value, but that the negotiations for the sale had not been advanced to any appreciable extent during the last two months. The company has 2 contracts for vessels of 8,100 tons each at $198 a ton, from the Dominion Government.

Wallace Shipyards, Ltd., Vancouver, B.C., has laid keels for 2 steel cargo steamships for the Dominion Government. The first one, for yard no. 100, 4,300 tons d.w., was laid Oct. 1, 1918, and the second, for yard no. 106, 4,300 tons d.w., was laid Nov. 15, 1918. On Dec. 18, 1918, we were advised that it was expected to launch the first hull about the middle of February and the second one about the middle of March, and to lay keels for two 4,300-ton steel cargo steamships, yards numbers 101 and 102, about the middle of February and the end of March, respectively, and to launch them in June and August.

Incorporation of Operating Companies.—In accordance with the announcement made in our last issue, Canadian Government Merchant Marine, Ltd., has been incorporated under the Dominion Companies Act, with $1,000,000 authorized capital, and office at Toronto, to build, own and operate steam and other vessels of every description, buildings, machinery, plant, equipment, etc., of every kind connected with the building and management of such vessels, and also to build and operate any railway or branch thereof, at any port of call of any steamship lines, and such buildings as it may be deemed advisable for hotels and restaurants, and to carry on any business that may tend to the travelling public's comfort and convenience. It may also make any arrangements with any railway or navigation company, government or municipal organization, whose railway or vessel lines are or may be adjacent, or connecting, for the leasing to or from it of any part of such undertaking, or for amalgamation on terms and conditions as may be agreed upon. It may also acquire and undertake the whole or any part of such similar business, and may use its funds to acquire shares, bonds and other securities in companies carrying on any business which is capable of being operated to its benefit. The incorporators are Gerald Ruel, L. W. Mitchell, W. B. Langmore, C. D. Cowie and F. J. Buller, Toronto, all of whom are, or were, connected with the Canadian Northern Ry., now a component of the Canadian National Railways. Canadian Government Merchant Marine, Ltd., will be the operating company, through its subsidiaries, for the steel cargo steamships being built for the Dominion Government.

Canadian Pioneer, Ltd., and Canadian Voyageur, Ltd., have each been incorporated under the Dominion Companies Act, with $100,000 authorized capital each and offices at Toronto, their powers being very similar to those of Canadian Government Merchant Marine, Ltd., of which they will be subsidiaries. They will operate the steamships Canadian Pioneer and Canadian Voyageur respectively. The incorporators of both these subsidiary companies are: G. Ruel, R. H. M. Temple, G. N. Limpricht, R. P. Ormsby and R. C. Vaughan, all of whom are Canadian National Railways officials.

Location of Head Office.—There seems to be some little local irritation as to the selection of Toronto for the head office of Canadian Government Merchant Marine, Ltd., which is expressed in various ways. It is natural that the head office be located at the head office of the Canadian National Railways, which is to control the vessels, but this does not necessarily mean that all the details of vessel operation will be undertaken from Toronto. There will naturally be some sort of decentralization, and it is unlikely that other places will be overlooked in regard to local offices. The Quebec Telegraph, perhaps unconsciously, hits the nail on the head, when it describes Quebec as the "vital ganglion of the Government Railway System." A ganglion is described as "a mass of nervous matter."

The s.s. Canadian Voyageur, which, as stated elsewhere in this article, was delivered to the Marine Department at Quebec, Jan. 17, sailed from Quebec on Jan. 21 at 8.50 a.m. for Halifax, to be there transferred to Canadian Government Merchant Marine, Ltd., for operation. She left Quebec in charge of Capt. R. A[illegible], who was appointed by Canadian Government Merchant Marine, Ltd., and a Quebec pilot, the latter to go as far as Father Point. She was accompanied from Quebec by the Dominion Government icebreaking s.s. Montcalm, the latter being intended to go as far as ice conditions might necessitate. The following reports had been received up to the time we went to press:

Jan. 22, 6 p.m. Off Maitougan Bank, 200 miles from Quebec, making about 7 knots.

Jan. 23, 5 a.m. Stopped most of previous night in heavy ice; 8 a.m., making good progress, ice clearing and [illegible].

Jan. 23, 8 p.m. Off Godbout, 2[illegible] miles from Quebec, in easterly gales and blinding snowstorm.

Jan. 25. Montcalm had drifted 46 miles to west, and was then about 3 miles off Port Neuf bank, Canadian Voyageur 4 cables from her. Both vessels tried to go north, but it was impossible to move ahead or astern, there being heavy packed ice everywhere, and strong n.e. winds with blinding snow.

Jan. 26. Gave Montcalm 86 tons of coal and 50 tons water Jan. 25, and proceeded at midnight through ice.

Jan. 26, 11.30 a.m. Off St. Nicholas. Signal service reports n.w. winds, [illegible] clearing.

Steamship Passes Through the Welland Canal on Its Side.

Rolled over on its side, a large lake steamship of beam exceeding the width of the locks has been passed through the Welland Canal. The Charles R. Van Hise, a 9,000-ton Great Lakes freighter, was chosen for a tryout of this new method. It was first cut in two crosswise, as had been done previously with lake steamships too long for the canal locks, but not exceeding in beam the 44 ft. width of the locks.

With a view to securing larger lake ships for ocean traffic, F. A. Eustis, of the United States Shipping Board, suggested that a ship (or half section of a ship) might be sent through the locks when turned on its side, the depth being less than the beam. The Van Hise experiment was planned in consequence, and this experiment has been carried out with success. The forward section of the vessel was turned on its side at Buffalo by the agency of pontoon tanks placed along its side at the deck line and filled with water. The half ship was then towed to the Port Colborne entrance to the Welland Canal and passed down to Lake Ontario.

Vancouver Dry Dock.—In commenting on the possible building of a dry dock at some port on the British Columbia coast, and urging that it be built at Vancouver, the Vancouver World says:—"The Dominion Government, as is well known, stands ready under the Drydock Subsidy Act, 1910, to grant any company, which complies with the essential requirements, a percentage subsidy on its investment, extending over a long term of years. It is understood that there are several companies in Vancouver ready to comply with the conditions if only the Dominion Government will say the word." It would be interesting to know whether any of the companies referred to have applied to the Dominion Public Works Department in the usual way, for a subsidy.

Cargo Steamship Building in Canada for British Government.

Launchings of Steamships.—Following are particulars of cargo steamships ordered by the Imperial Munitions Board for the British Government, and which had been officially reported as launched up to Jan. 14, giving in each case the date of the launching, the name of the steamship, the name and address of the building company and the deadweight tonnage:—

Steel Steamships.

May 18, 1917	War Dog, Wallace Shipyards North Vancouver, B.C.	4,500
July 9, 1917	War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	1,800
Aug. 19, 1917	War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont.	4,300
Nov. 3, 1917	War Dance, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Mar. 16, 1918	War Camp, J. Coughlan & Sons, Vancouver, B.C.	8,800
Mar. 23, 1918	War Power, Wallace Shipyards, North Vancouver, B.C.	4,600
Apr. 3, 1918	War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
May 8, 1918	War Wizard, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
May 21, 1918	War Bee, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	2,400
May 27, 1918	War Osiris, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
June 8, 1918	War Earl, Canadian Vickers Ltd., Montreal	7,000
June 29, 1918	War Duchess, Canadian Vickers, Ltd., Montreal	7,000
July 20, 1918	War Hathor, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
July 29, 1918	War Charger, J. Coughlan & Sons, Vancouver, B.C.	8,800
Aug. 19, 1918	War Chief, J. Coughlin and Sons, Vancouver, B.C.	8,800
Aug. 21, 1918	War Weasel, British-American Shipbuilding Co., Welland, Ont.	3,500
Sept. 6, 1918	War Witch, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
Sept. 19, 1918	War Taurus, Polson Iron Works, Ltd., Toronto	3,500
Sept. 28, 1918	War Faith, Canadian Vickers Ltd., Montreal	7,000
Sept. 28, 1918	War Noble, J. Coughlan & Sons, Vancouver, B.C.	8,800
Sept. 28, 1918	War Storm, Wallace Shipyards, Ltd., Vancouver, B.C.	4,600
Oct. 5, 1918	War Horus, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Oct. 15, 1918	War Hydra, Polson Iron Works, Ltd., Toronto	3,500
Oct. 24, 1918	War Fiend, Midland Shipbuilding Co., Midland, Ont.	3,400
Oct. 26, 1918	War Karma, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Oct. 29, 1918	War Joy, Canadian Vickers, Ltd., Montreal	7,000
Dec. 22, 1918	War Hamilton, Polson Iron Works, Ltd., Toronto	3,500
	Total, 27 steel steamships	129,000

Wooden Steamships.

Dec. 28, 1917	War Songhee, Foundation Co., Victoria, B.C.	3,080
Jan. 4, 1918	War Nootka, Western Canada Shipyards, Vancouver, B.C.	3,080
Jan. 24, 1918	War Yukon, Cameron-Genoa Mills Shipbuilders, Ltd., Vic-	
Feb. 16, 1918	War Puget, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
Mar. 6, 1918	War Selkirk, Western Canada Shipyards, Vancouver, B.C.	3,080
Apr. 10, 1918	War Caribou, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
Apr. 11, 1918	War Comox, New Westminster Construction & Engineering Co., New Westminster, B.C.	3,080
Apr. 11, 1918	War Masset, Foundation Co., Victoria, B.C.	3,080
Apr. 13, 1918	War Tyee, Pacific Construction Co., Coquitlam, B.C.	3,080
Apr. 25, 1918	War Haida, Cameron-Genoa Mills, Victoria, B.C.	3,080
Apr. 27, 1918	War Cayuse, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
May 11, 1918	War Mohawk, Quinlan & Robertson, Ltd., Quebec, Que.	3,080
May 11, 1918	War Sioux, Port Arthur Dredging Co., Port Arthur, Ont.	3,080
May 21, 1918	War Atlin, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
May 23, 1918	War Tatla, Western Canada Shipyards, Ltd., Vancouver, B.C.	3,080
June 12, 1918	War Skeena, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C.	3,080
	ertson, Quebec, Que.	3,080
June 14, 1918	War Edensaw, New Westminster Construction & Engineering Co., B.C.	3,080
June 15, 1918	War Babine, Foundation Co., Victoria, B.C.	3,080
June 24, 1918	War Nicola, Wm. Lyall Shipbuilding Co., Vancouver, B.C.	3,080
June 28, 1918	War Quebec, Quebec Shipbuilding & Repairing Co., Quebec, Que.	3,080
June 29, 1918	War Ontario, Toronto Shipbuilding Co., Toronto	3,080
July 5, 1918	War Huron, Fraser, Brace & Co., Montreal	3,080
July 5, 1918	War Erie, Fraser, Brace & Co., Montreal	3,080

Nov. 2, 1918	War Radnor, Three Rivers Shipyards, Ltd., Three Rivers, Que.	3,080
	Total, 45 wooden steamships	138,600

Aggregate deadweight tonnage of 27 steel and 45 wooden steamships launched, 267,600 tons.

In addition to the launchings of which we had been officially advised up to Jan. 14, as given above, the British American Shipbuilding Co., Welland, Ont., launched on Jan. 21 the War Badger, 3,500 tons d.w.

In the list of launchings published in our January issue, it was stated that the Polson Iron Works, Toronto, had launched the War Aquila, on Dec. 21. Her name was changed subsequently to War Hamilton.

Steamships Under Construction.—Of the 43 steel, and 46 wooden, steamships which the Imperial Munitions Board ordered in Canada, on behalf of the British Government, 16 steel steamships and 1 wooden one still remained to be launched at the date of our last official advices, Jan. 14. Since then, the steel steamship War Badger is reported launched by the British American Shipbuilding Co., Welland, Ont. Following is a list showing the other vessels in process of construction, giving the builders' names, the names which will be given the various vessels, and the deadweight capacity of each:—

Steel Steamships.

Builder.		Tons d.w.
British American Shipbuilding Co. Welland, Ont.—	"War Racoon"	3,500
Canadian Allis-Chalmers, Ltd., Bridgeburg, Ont.—	"War Leveret"	3,500
"	"War Vixen"	3,500
"	"War Wallaby"	3,500
"	"War Wombat"	3,500
J. Coughlan & Sons, Vancouver, B.C.—	"War Chariot"	8,800
"	"War Cavalry"	8,800
"	"War Convoy"	8,800
"	"War Column"	8,800
"	"War Company"	8,800
Midland Shipbuilding Co., Midland, Ont.—	"War Magic"	3,400
"	"War Fury"	3,400
Polson Iron Works, Ltd., Toronto, Ont.—	"War Timiskaming"	3,500
"	"War Algoma"	3,500
"	"War Halton"	3,500
	15 steel steamships	78,800

Wooden Steamships.

Grand & Horne, St. John, N.B.—	"War Moncton"	3,080

Total 15 steel steamships, 1 wooden steamship, 81,880 tons.

The s.s. War Charger, one of the steel steamships built under order of the Imperial Munitions Board, for the British Government, by J. Coughlan & Sons, Vancouver, B.C., is reported to have put back to port for the second time, owing to some slight damage to her machinery. The first return is said to have been deemed advisable on account of the low quality of steam coal which had been shipped.

The Imperial Munitions Board's shipbuilding department has been removed from Ottawa to the Drummond Building, Montreal.

Canadian Pacific Ocean Services and the War.

From the outbreak of war to the signing of the armistice, Canadian Pacific Ocean Services, Ltd., carried well over 1,000,000 troops and passengers on its vessels. Its troop transports proceeded to all parts of the world, including ports in China and Japan, Singapore, Bombay, Colombo, Suez, Gallipoli, Dar es Salaam, Delagoa Bay, Durban and the Mauritius, as well as ports in the Mediterranean Sea, and the west coasts of North and South America, and they also took part in the Mesopotamia expedition. On one consecutive, continuous voyage, one of the vessels steamed 28,441 miles. Over 4,000,000 tons of cargo and munitions of war have been carried, in addition to several thousands of horses and mules.

Of the steamships engaged in the Atlantic service before the war, the Calgarian, Hesperian, Ionian and Missanabie were sunk by submarines, and during the war, two steamships have been built and placed in service, viz., Melita and Minnedosa. The Atlantic service now has 14 steamships in service, and is thus enabled to maintain a weekly schedule.

Of the Pacific Ocean vessels, the steamships Empress of Asia and Empress of Russia, after doing considerable transport service, were overhauled recently at Liverpool, and sailed from there early in January. The Empress of Asia sailed, via the Panama Canal, for Vancouver, carrying returning troops for British Columbia points, and she is scheduled to sail from Vancouver for the Orient on her usual service, Feb. 27. The Empress of Russia sailed from Liverpool, Eng., via the Suez Canal, for Hong Kong, China, carrying returning troops for India and other points.

The Canadian National Railways' car ferry Canora was docked at Esquimalt early in January, for general overhaul after her long trip from Quebec, via the Panama Canal, and preparatory to being placed in service between Port Mann and Patricia Bay.

General Shipbuilding Notes Throughout Canada.

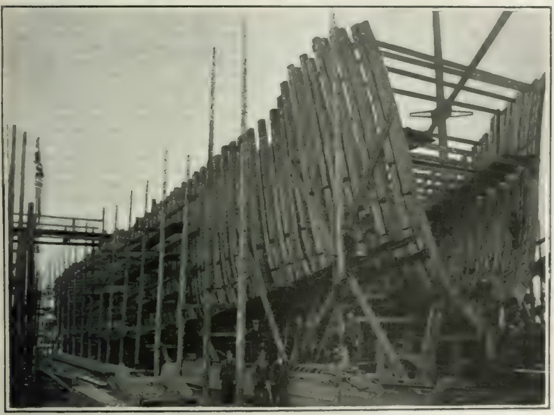
A. Boutilier & Co., Centreville, N.S., launched the s.s. Frances Boutilier at the end of December. The hull is of local wood, the general fittings being of Douglas fir. She is equipped with fore and aft engine, with cylinder 11 x 20 in., with large boiler and up to date machinery.

Burns & Kelliher, Halifax, N.S., have a wooden steamship of 1,600 gross tons under construction at Bayside, N.S., for launching in February. Her dimensions are: length 200 ft., beam 33 ft., depth 21 ft. She is of the 2-deck type, the upper one being flush, with officers' quarters amidships. The propelling machinery will consist of compound engines, with cylinders 21 and 40 in. diar, by 30 in. stroke. After launching, the hull will be towed to Halifax, where the machinery will be installed.

The Duffy-Blinn Co., Ltd., is reported to have been organized at Saulnierville, N.S., to build sailing vessels, and to have acquired a site for a shipbuilding yard there. It is stated that the company intends to confine its operations to coasting and fishing vessels of about 150 tons.

Esquimalt Ship Co. is reported to have contracts for building 4 wooden auxiliary powered schooners of 3,500 tons d.w. capacity each, and is said to be completing negotiations for the establishment of a shipbuilding plant on a site of 24 acres at Victoria, B.C.

Foundation Co., Victoria, B.C.—A recent press report stated that, in addition to the 20 wooden steamships which the company is building for the French Government, of which we have given details previously, it had received a large order for other similar steamships. We have been officially advised that the report is without foundation.



Hull for 3,000-ton wooden steamship, for French Government, under construction by Foundation Co. at Victoria, B.C.

Halifax Shipyards, Ltd., Halifax, N.S., has made an arrangement with the city for the use of the city market building as a mould loft, pending the completion of its own shops. The space utilized is 150 x 50 ft., so that the work is proceeding in somewhat cramped quarters.

International Shipbuilding Corporation, Ltd., Newcastle, N.B.—A petition by a number of creditors for the winding up of this company was before a court at St. John, N.B., recently. A statement by the provisional liquidator showed that the Royal Bank of Canada held security for $168,921. It was also stated that Job & Co., of Newfoundland and New York, had purchased a vessel to be built by the company, and had paid $40,000 on account of the total purchase price of $80,000. The company, of which F. H. McNaught, formerly Manager of the Maritime Foundry, Chatham, N.B., was Manager, had only been in operation about a year.

J. W. Kirpatrick, Eatonville, N.S., launched the schooner Ella L. [illegible], Jan. 17. She is 374 register tons, and is classed in the American Bureau for 12 years. She was built for A. Moulton, Halifax, N.S., and has since been sold to La Have parties. After launching, she was taken to St. John, N.B., where she loaded a cargo of lumber for Barbadoes.

T. H. McDonald, Meteghan, N.S., launched the barquentine T. H. McDonald, Jan. 16. Her dimensions are: length over all, 221 f.t; length on keel, 176 ft.; beam, 40 ft.; depth of hold, 19 ft.; tonnage, 1,138 gross, 1,088 net.

The Nova Scotia Shipbuilding & Transportation Co. launched the tern schooner Gordon T. Tibbo, at Halifax, N.S., recently, for S. Tibbo & Co., Grand Banks, Nfld. The dimensions are: length over all 135 ft., beam 26½ ft., depth of hold 12 ft.; 250 tons register. She is classed with the American Bureau of Shipping for 12 years. The company has under construction a beam trawler for La Have interests, and has laid the keel for a three masted schooner for launching in the spring.

Oromocto, N.B.—It is reported that some British and local interests are concerned in a project for a wooden shipbuilding plant at this point.

Quebec Steel Shipbuilding Plant Rumored.—T. M. Kirkwood, formerly associated with Three Rivers Shipyards, Ltd., Three Rivers, Que., is reported to have stated that he is working on a project having for its object the establishing of a steel shipbuilding plant, with the accompanying rolling mills for the manufacturing of ships' plates, etc., at Quebec, and that he expects to receive orders for steel steamships from various allied governments, especially France and Italy. He is also reported to have stated that vessels would be built under subsidies from the Dominion Government. Among the statements reported is one that, in the establishing of such a plant, no time would be lost in waiting for machinery, as he is owner of two plants in other parts of Canada, machinery from both of which would be utilized in the present project. Another scheme with which Mr. Kirkwood was connected recently, was one for the establishment of a wooden shipbuilding yard at Quebec, and again Dominion Government and local subsidies were to be the chief elements for the carrying out of the project. From statements made from time to time by the Minister of Marine, in enunciating his government merchant marine policy, it may be taken for granted that the Dominion Government has no present intention of subsidizing the building of steamships, either wooden or steel, by such payments. The Quebec scheme, so far as it is at present outlined, we learn, and the foundations on which it is based are more or less suppositions. Presumably, these consist chiefly of promises asked from foreign countries, for the placing of which the Dominion Government would be asked to grant licenses, and [illegible] of the granting of subsidies in cash, by local, provincial and Dominion authorities. No doubt foreign countries are quite willing to place orders for steamships, provided these can be financed satisfactorily, but whether the Dominion Government will favor the building of steel steamships in Canada for foreign registry, in view of the present shipbuilding conditions in the Dominion, is questionable. The government has already stated that steel steamships may be built in Canada for Great

Canadian Allis-Chalmers, Ltd., shipyard (near Bridgeburg), Ont., has completed a fourth slip at its yard. A press report that the company had received orders for three steamships, in addition to the four which it is building for the British Government, is, we are officially advised, incorrect.

Canadian-Chicago Bridge & Iron Co., Bridgeburg, Ont., is reported to be negotiating for 600 ft. of waterfront along the Niagara River, for the establishment of a dock and shipbuilding yard. It is reported that the company has a contract for the building of 12 steel cargo barge for the U.S. Navy.

The Dominion Shipbuilding Co., Toronto, launched a full sized canal freight steel steamship at its yard, Jan. 28. She was named General Currie, and is for private owners. She is of similar type to the s.s. Le Quesnoy, launched at the end of November, and is classed 100 A1 at Lloyd's, for trans-Atlantic service. Her dimensions are: length over all 261 ft., breadth moulded 43½ ft., depth moulded 28 ft. 2 in.; d.w. capacity, 4,300 tons. She is equipped with triple expansion engines 1,400 i.h.p., by John Inglis Co., Toronto.

dian registry, and mention has already been made of its attitude on cash subsidies, the Dominion's response in the matter of shipbuilding, and the growth of the industry, are matters of history, and it is not within our province to question the advisability of any additions to the number of shipbuilding plants, in view of existing conditions in the steel trade, but any project which may be put forward for A press report Jan. 2, stated that the the public to consider should have some reasonably substantial foundation.

J. N. Rafuse & Sons, Conquerall Bank, N.S., during 1917, launched 9 vessels, and during 1918, it launched 12 vessels, at its various yards in the province. In addition to its own yards at Conquerall Bank and Salmon River, it controls the McKay Shipbuilding Co., and the Jos. McGill Shipbuilding Co., Shelburne.

United States Shipbuilding Notes.

The U.S. Shipping Board announced recently that U.S. shipowners may accept contracts to build wooden ships for either foreign or domestic account, without special authorization from the board. Similar permission was granted to companies building steel ships so far as domestic orders are concerned, but the former prohibitions stand with respect to orders of foreign owners. Cancellations of many contracts for wood ships have been announced. The precise number of ship contracts that will be affected is not yet known, as it will depend on the money spent on the particular ship. Work is to be discontinued on every ship on which not more than $200,000 has been spent. The cancellations, however, may for the present be regarded as suspensions, since their disposition will depend upon the success of Chairman Hurley's efforts to sell wooden ships in Europe.

A Paris, France, press dispatch of Jan. 28 said it was officially that E. Hurley, 28 said it was officially announced that E. Hurley, Chairman of the U.S. Shipping Board, will return soon to the United States to take up the question of establishment of a great American merchant marine.

The U.S. Shipping Board has announced the personnel of a committee to examine the building plans of the Emergency Fleet Corporation, with a view to such revision as might be wise in view of the altered international situation. This committee is to consist of J. A. Farrell, President of the U.S. Steel Corporation; P. A. S. Franklin, President of the International Mercantile Marine Co.; George S. Dearborn, President of the American-Hawaiian Steamship Co.; H. H. Raymond, President and General Manager of the Mallory Steamship Co., and F. D. M. Strachan, President of Strachan Shipping Corporation. In addition to the foregoing, Charles Piez, Director General of the Emergency Fleet Corporation, and John H. Rosseter, Director of Operations of the United States Shipping Board, will be ex officio members of the committee. Of these, Messrs. Dearborn and Raymond are the nominees of the American Steamship Association, which was asked to designate two of its members for places on the committee.

Until hostilities ceased the purpose and effort of the Fleet Corporation was to produce useful tonnage in the largest possible quantity to keep pace with the growing need of tonnage as our overseas forces increased, and to repair the destruction wrought by submarines. With the signing of the armistice, the problem of the Fleet Corporation took on a different aspect, and the question now is, "What revisions of type are advisable and what modifications of plan or practice can be undertaken to give the Fleet Corporation's output of ships as high an economic value in world trade as possible?"

The lifting of the pressure, both of need and time, which controlled the Fleet Corporation's decisions during the actual continuance of war, makes it possible to give more consideration to economic standards, and the Director General and the other officials of the Fleet Corporation have for many weeks been engaged in a thorough examination of the corporation's building plans, and have themselves developed some important suggestions. It is to test these proposed alterations of programme that the committee above named has been appointed.

Welland Ship Canal Construction.

Canadian Railway and Marine World for December contained a copy of a Dominion order in council passed Dec. 9, authorizing the resumption of work on the Welland Ship Canal. Another order was passed Dec. 24, as follows:—"The committee of the Privy Council have had before them a report, dated Dec. 23, 1918, from the Minister of Railways and Canals, representing that by an order in council dated Dec. 9 authorization is given for the resumption of construction work upon those sections of the Welland Ship Canal which had been already commenced and partly completed.

"The Minister states that in such authorization it was decided that the work should be proceeded with on actual cost plus a percentage thereon, certain specified expenditures made by the government being excluded in the computation of the cost. That the Chief Engineer of the Railways and Canals Department estimates that during 1919 the maximum amount that would be expended on the several works would be as follows:—Section 1, $500,000; section 2, $600,000; section 3, $700,000; section 5, $500,000. That the amount upon which the percentage would be paid would not exceed more than $2,000,000 on the four sections.

"The Minister further states that the Chief Engineer of the department has made a memorandum in connection with this work in which he states as follows: 'I would most earnestly urge that the services of former contractors be again utilized under cost plus agreements, upon the sections formerly held under contract by them.'

"The Minister observes that the Chief Engineer has arranged with the former contractors to undertake such work temporarily on a cost plus 8% basis which he considers fair and reasonable. The Minister, therefore, recommends that he be authorized to enter into agreements with the former contractors for the work to be temporarily carried on, on the basis of cost plus a percentage of 8% as recommended by the Chief Engineer, the specified expenditures being excluded, and that such contracts so made with them shall not extend until a date later than Dec. 31, 1919, or earlier if in the public interest the Minister decides tenders should be called, and that on or before Dec. 31, 1919, public tenders shall be called for the completion of the works at schedule rates. The committee concur in the foregoing and submit the same for approval."

The sections under contract, and the contractors, are as follows:—

Sec. 1.—From Lake Ontario for about 3 miles, including pier and trestle work at the entrance to the canal, construction of lock 1, and canal work to bridge 2. Dominion Dredging Co., Ltd.

Sec. 2.—From bridge 2 to bridge 5, about 4½ miles, including locks 2 and 3. Baldry, Yerburgh & Hutchinson, Ltd., St. Catharines, Ont.

Sec. 3.—From bridge 5 to about halfway between bridges 9 and 10, including the erection of twin guard gates at Thorold, single lock 7, short stretch of canal below lock 7, and three twin locks, 6, 5 and 4, in flight. Doheny, Quinlan & Robertson, Montreal.

Sec. 5.—From just above bridge 12 to just above bridge 13, about 2¾ miles. Canadian Dredging Co., Ltd., Midland, Ont.; construction office at Port Robinson, Ont., in charge of W. E. Hardison.

Atlantic and Pacific Ocean Marine.

Canadian Pacific Ocean Services' s.s. Empress of Asia was expected at Vancouver about Jan. 28, from Liverpool, Eng., via the Panama Canal, with troops returning to British Columbia. She was reported to have passed through the Panama Canal, Jan. 16.

The United States s.s. Castalia, one of the vessels from the Great Lakes, which was cut in two for passage through the Welland Canal to the Atlantic, is reported to have been lost off Sable Island. After receipt of wireless messages that she had been abandoned, a vessel was sent in search of her without any trace being discovered.

The Blue Funnel Line is resuming its service to Pacific ports, and it is announced that the first vessel to arrive at Victoria, B.C., will be the s.s. Cyclops, about Mar. 1. The s.s. Protesilaus, which arrived at Vladivostock recently with Canadian troops, on a Siberian expedition, is expected at Victoria about Apr. 8, and the s.s. Tyndareus about the end of April.

The Cunard Line is reported to have bought 6 steel cargo steamships from the British Government, aggregating 29,734 tons. They are of the standard type, built for use during the war, and were given names in what is known as the "war" series. They are stated to have been renamed, the new names and the respective tonnage being as follows: Vellania, 5,272 tons; Vennonia, 5,225 tons; Venusia, 5,222 tons; Verentia, 5,185 tons; Vindellia, 4,430 tons; Vitellia, 4,400 tons.

The Ulster Steamship Co. (Head Line) announces that its regular sailings from St. John, N.B., will continue throughout the winter, and that the Montreal service will be resumed on the reopening of the St. Lawrence navigation season. During 1917, the service was carried on under the supervision of the British Ministry of Shipping, and several of the company's vessels were used in convoy and escort service, the owners being complimented by the Admiralty on their performance.

Canadian Pacific Ocean Services' appeal to the Appeal Court in England, against the judgment of the late President of the British Admiralty Court, re the collision between the company's s.s. Montreal, and the White Star Line's s.s. Cedric, off Morecambe Bay, England, during war time, was allowed with costs, in the appeal, and in the court below, the s.s. Cedric being held entirely to blame for the casualty. The Admiralty Court held that both vessels were to blame, the Cedric in the proportion of three to one of the Montreal.

Maritime Provinces and Newfoundland.

The channel approach to the government wharf at Pownell Bay, P.E.I., has been dredged to a depth of 8 ft., the width of the cut at the outer end being 60 ft., widening to 120 ft. at the pier head, to form a turning basin. A berth 220 ft. long by 90 ft. wide on the eastern side has been dredged to an average depth of 8 ft.

The St. John, N.B., ferry commissioners have included in their estimates for this year, $10,350 for repairs and overhauling of the ferry Ludlow, and $9,200 for repairs and overhauling of the ferry Governor Carleton. The operating expenses for 1917 were $90,327, and it is anticipated that there will be an increase of about $9,000 for this year, rather more than one third being due to increased wages. The estimated revenue for 1918 is $40,000.

Maintenance work on the wharf property in St. John, N.B., harbor, which it is proposed to undertake during this year, includes the repairing of decayed or worn out decking, replacement of broken fenders and decayed and broken caps, replacing some timbers in the wharves, and renewing floors, or portions of them, in some of the sheds; also strengthening the foundations of the sheds, painting, etc., and such other maintenance as will preserve the wharves and sheds in fit condition for handling traffic. The approximate amount involved is $70,000.

Province of Quebec Marine.

A shipping chamber is proposed to be established in Quebec, for the government of all matters pertaining to local shipping.

During the St. Lawrence navigation season of 1918, 640 vessels arrived at Quebec, including 81 ocean vessels, 133 coasting vessels from the lower St. Lawrence, and 364 from Montreal and the Great Lakes. This was an increase in the total, of 41 vessels over 1917.

Ontario and the Great Lakes.

The Detroit & Windsor Ferry Co. is reported to have decided to build a concrete ferry dock at Amherstburg, to cost $10,000.

The Great Lakes Transportation Co., which has the contract for icebreaking in Thunder Bay, used the tugs D. S. Pratt and F. W. Grant during the latter part of the year, and it is expected that these vessels will be able to do the work in the spring.

The Foundation Co., which acquired the Reid Wrecking Co.'s yards, etc., at Port Huorn, Mich., recently, is operating same under the name of The Foundation Co.-Port Huron Ship Yard, Inc. The building of a new dry dock at the plant is under consideration, but nothing will be done until the spring.

The U.S. Lake Survey reports the levels on the Great Lakes in feet above mean sea level for December, as follows:—Superior, 602.42; Michigan and Huron, 581.05; St. Clair, 575.42; Erie, 572.21; Ontario, 245.89. Compared with the average December levels for the past 10 years, Superior was 0.17 ft. above; Michigan and Huron, 0.03 ft. above; Erie, 0.60 ft. above, and Ontario, 0.52 ft. above.

A deputation from a number of Northern Ontario municipalities waited on the Dominion Government, Jan. 10, to urge that the proposed Georgian Bay canal scheme be proceeded with. It was stated that the carrying out of the scheme would cost about $16,000,000, or an annual interest charge of $720,000, which, it was claimed, would be met by an estimated revenue of $750,000 from water power. It was also claimed that the entire cost of the canal would be liquidated in 18 years by additional customs receipts due to increased traffic.

British Columbia and Pacific Coast.

The Dominion Public Works Department has awarded a contract to R. Moncrieff, Vancouver, B.C., for $3,500, for the construction of an adjustable slip and alterations to protective fenders on pier 3 at Victoria, B.C.

Regarding the recent loss of the C.P.R. s.s. Princess Sophia, in the Lynn Canal, it is said that from reports made by the diver who was engaged to investigate the position and condition of the wreck, it is more than possible that the vessel may be raised. J. W. Troup, Manager, British Columbia Coast Steamships, C.P.R., is, however, reported as stating that it is more than questionable if this can be done. Investigations by the diver have been more or less interrupted, and while certain fittings may be salved, and bodies recovered, it is not likely that the hull will be found in a condition to be raised.

The Naval Service Department received tenders to Jan. 22, for the purchase of H.M.S. Algerine, sloop of war. She was built in England in 1895, and has been in patrol service on the Pacific Ocean, practically since her construction. She was for some time on the Behring Sea patrol, and later on the southern Pacific. Since the commencement of the war, she has been laid up at Esquimalt. She is of steel, and fitted with twin screw, vertical type, triple expansion, surface condensing engines of 1,100 i.h.p. under natural draft, and 1,400 i.h.p. under induced draft; 2 cylindrical tubular boilers for a working pressure of 155 lb.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert was withdrawn from service, Jan. 15, for her annual overhaul. The company's winter schedule was put into operation Jan. 12, when the s.s. Prince George left Victoria, calling at Vancouver, Ocean Falls, Swanson Bay, Anyox and Prince Rupert, on a weekly service. On the resumption of service by the s.s. Prince Rupert, the s.s. Prince George will be withdrawn for overhaul. The s.s. Prince John, for the balance of the winter schedule, is timed to leave Prince Rupert Feb. 6 and 20, Mar. 6 and 20, for Queen Charlotte ports. The s.s. Prince Albert will be operated without schedule in the general freight business to northern ports.

Mainly About Marine People.

Capt. C. O. Allen, master of the s.s. Strathcona, formerly owned by Canada Steamship Lines, Ltd., and transferred to French service in 1917, communicated recently from Copenhagen, Denmark, with relatives in Canada, following his release from a German prison camp, where he had been confined since April, 1917, after the sinking of his vessel by a German submarine.

Capt. T. A. Clark, head of Clark Co., Ltd., transfer agents, Toronto, and master of the Toronto Ferry Co.'s steamboat Elsie, died there, Jan. 14, aged 58.

R. McLeod, a shipbuilder of Queens County, N.S., is reported to have been appointed surveyor for the American Bureau of Shipping in Nova Scotia.

Capt. G. L. Mackey, who was in Canada Steamship Lines' service when he retired about two years ago, died at St. Catharines, Ont., recently of apoplexy, aged 66. He was a native of Hamilton, Ont., and was for some time in R. O. & A. B. Mackay's service there.

Hon. A. K. Maclean, M.P. for Halifax, N.S., and Minister without portfolio in the Dominion Government, is acting Minister of Marine and of Naval Service during the absence, through illness, of Hon. C. C. Ballantyne.

Sir J. R. Maclay, for some time British Shipping Controller, has been appointed Minister of Shipping in the new British Cabinet.

Lieut.-Col. W. P. Anderson, C.M.G., Chief Engineer, Marine Department, was in Victoria, B.C., about the middle of January, on his way to Califonria, where he will spend the remainder of the winter.

Hon. C. C. Ballantyne, M.P., Minister of Marine and of Naval Service, who left Ottawa Dec. 24 for his home in Montreal, was taken seriously ill that night, becoming unconscious. At first it was thought he was suffering from influenza, but on Dec. 30 he was operated on for appendicitis at the Royal Victoria Hospital, Montreal. Peritonitis and other complications ensued, and he was seriously ill until Jan. 13, when his condition began to improve. On Jan. 24 we were advised that he continued to show improvement, but would probably not be able to leave the hospital.

tal until early in February, when he will go to his house for a week or two and then go south for several weeks.

Jas. Carruthers, President, Canada Steamship Lines, Montreal, has been elected an honorary vice president of the Albatross Club, an organization of men associated with the Royal Air Force, in Montreal.

Capt. S. Filgate, formerly master of the s.s. Filgate, which for many years ran between Montreal and St. Helens Island, celebrated his 100th birthday at his home in Montreal, in December, and died there Jan. 26. He first entered navigation service in 1852, in the operation of a ferry between Lachine and Caughnawaga, and was later, at different times, master of several river steamboats.

World's Shipbuilding Statistics.—New York press dispatch, Jan. 18:—2,144 merchant ships were under construction at the end of the third quarter of 1918. Of these 1,966 were steam and 178 of the sailing type. Ships of less than 100 tons are not included, nor are vessels built for the British Admiralty for other than mercantile purposes. The United States stands out prominently in the returns. Steamships, motor and sailing vessels now under construction report the unusually high number of 1,020, with a gross tonnage of 2,382,709. The United Kingdom and its dominions are building 582 new ships, the total tonnage being 2,048,214. Of these, 383 are being built in the United Kingdom. Ten are sailing ships. The gross tonnage is 1,746,933, compared with a gross tonnage of 4,624,455 being built in other countries.

The Halifax Graving Dock Expropriation is listed for hearing before the Exchequer Court, on behalf of the Dominion Government, the court being asked to fix the amount which the Government is to pay for the property at $1,100,000. The property consists of 7.5 acres of land in Halifax harbor, with graving dock, machine shops, offices, etc. Considerable detail relative to this matter has been given in previous issues, covering a statement by the Minister of Public Works in the Aug., 1918, issue, and a protest by the company's chairman in the Dec., 1918, issue.

A Wooden Ship Suit.—An arbitration award of considerable interest to builders of wooden ships was announced at Halifax, N.S., recently when a Portuguese firm which had purchased the tern schooner Kathleen Crewe, was given $10,000 as damages, it having been discovered that the bottom of the vessel had been eaten out by worms. The vessel was built in 1912 and made her maiden voyage to South Africa, returning to New York and thence to Halifax, where she was sold to her present owners. The original claim was for $50,000.

Shipbuilding Work Hours in Great Britain.—Representatives of the Federation of Engineering and Shipbuilders Trades, and representatives of the employers, are reported to have met recently and decided that a 47-hour week, without any reduction in existing wages, constituted a reasonable attempt to readjust working conditions.

International Export & Import Co., Ltd., has been incorporated under the Dominion Companies Act, with $20,000 capital and office at Montreal, to carry on a general export and import business, and in connection therewith to charter and operate steam and other vessels, and to act as general transfer and transportation agents.

Canada Steamship Lines' Finance.—A Montreal press dispatch states that the five year voting trust which set aside 62,500 shares to assure control of the company to the present management for such period, expired Jan. 19, and a new voting trust was formed for a longer term, and the bulk of the old trust shares exchanged for new.

G. B. Hatfield, Port Greville, N.S., launched the tern schooner Vera H. at Halls Harbor, Jan. 15, and towed her to Port Greville, where her spars and rigging were fitted. She is about 430 register tons, and classed for 12 years with Bureau Veritas.

Yard Trackage for Victoria, B.C.—Speaking before the inner Harbor Association at Victoria, B.C., Jan. 10, J. O. Cameron, acting President, pointed out the lack of railway trackage in the new industrial area, and suggested that the difficulty could be remedied by building up the old Rock Bay bridge, and running a track across it from the Esquimalt and Nanaimo Ry. on Store St. to the mill sites, and to connect up with the Canadian Northern Ry. lines.

Quebec Bridge Contract.—At the Dominion Bridge Co.'s annual meeting in Montreal, Jan. 8, Phelps Johnson, President, in his report said:—"Notwithstanding the loss of the suspended span in 1916, satisfactory profits have resulted from the construction of the Quebec bridge. The St. Lawrence Bridge Co. has also carried out profitable orders for munitions." A press report of the meeting says a discussion brought out the statement that about $770,000 had been received from the Quebec bridge contract since the closing of the books for the year, and that a further sum would be coming to the D. B. Co. on the final settlement. Another report states that, of the profits of $2,477,009 made by the company in the last financial year, $1,100,000 came from the Quebec bridge contract.

The Lambeth Transportation Co. has been organized at Lambeth, Ont., to carry passengers and freight between that place and London. The capital, which is reported to have been fully subscribed locally, is $10,000, and the officers and directors are:—President and General Manager, W. K. Coldicott; Vice President, F. Soper; other directors: R. Piper, T. Hamblyn and Rev. J. Holmes. It is proposed to operate a 3½-ton motor truck, on a 2-hour schedule, making 7 round trips a day. The service, it is proposed, will be operated at as near cost as possible, and the officers, it is said, will not receive any remuneration for their services. This service is projected to provide for the traffic formerly carried between Lambeth and London by the London & Lake Erie Ry. and Transportation Co.'s electric railway, which is now being scrapped.

Vessels Registered in Canada During November, 1918.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing vessels of less than 100 tons register.

Canada's Great Advance in the Shipbuilding Industry.

The year 1918 has been a notable one for the Canadian shipbuilding industry. In the building of both steel and wooden ships great progress has been made, and the industry enters upon 1919 with the brightest of prospects. Indeed, in the building of steel ships, Canada has entered upon a new era, this being assured through the extensive shipbuilding programme announced by the Dominion Government; while the contract entered into with the Dominion Steel Corporation for ship plates assures adequate material from a home source.

It is estimated that the total tonnage of vessels launched in Canadian shipbuilding yards during 1918 was about 460,000 tons deadweight. Of this, 23 steel and 45 wooden steamships, with a tonnage of 253,463 deadweight, were ordered by the Imperial Munitions Board for the British Government. All of these ships have not, of course, been delivered. The tonnage delivered is valued at $37,156,972. Last autumn the French Government contracted in Canada for 70 wooden steamships.

It will thus be seen that the British Government contributed a great deal toward making possible the shipbuilding activity of the past year. All told, the Imperial Munitions Board has awarded contracts for 90 steamships, 46 wooden and 44 steel, with a deadweight tonnage of 356,343 tons. The total value of these contracts is given as $69,675,235, which is the best possible evidence of what the board has done for Canadian shipbuilding. Its orders for wooden ships put wooden shipbuilding on its feet, so that today there are probably under construction in Canada more than 150 ships of that character. Its orders for steel ships also imparted a strong impetus to that portion of the industry.

To the shipbuilding industry generally the most important event of the year was the announcement made by Hon. C. C. Ballantyne of the government's steel shipbuilding programme, which is designed to provide adequate Canadian tonnage for Canada's already large and rapidly-growing foreign trade. Owing to the difficulty in securing steel and the additional fact that several of the yards that had received government contracts for ships have been busy for a much longer period than had been expected in turning out tonnage for the Imperial Munitions Board, not as much progress has been made on this programme as had been hoped. However, at present 45 vessels are under construction or contracted for. These represent a deadweight tonnage of about 268,350 tons, valued at more than $52,000,000. The vessels range in tonnage from 3,400 to 10,500 tons. Two of them will be of the latter tonnage and 16 of 8,100 tons. Nor is this the whole of the programme, it being the intention to build for some time up to the full capacity of the yards.

December 3 was a notable day in Canadian shipping circles, for in the yards of the Canadian Vickers, Limited, at Montreal, was launched the Canadian Pioneer, the first vessel of the Canadian mercantile marine to be officially launched; the first also in the Government's programme. Her tonnage is 8,100 deadweight. The Canadian Voyageur, 4,300 tons, had taken the water even before that. Soon Canada will be represented on the high seas by a numerous merchant marine owned by the Canadian Government in connection with the Canadian National Railways.

It is by comparison with the tonnage turned out in pre-war years that one can best realize what has been done by the Canadian shipbuilding industry during 1918. Putting the total tonnage produced at 460,000 deadweight, this means that Canada produced during last year an amount equal to a little more than one-third of the total tonnage of merchant vessels produced in the shipyards of the United Kingdom during 1917. To state it in another way, Canada last year built more tonnage than was built in all Canadian yards between 1902 and 1914.

One of the especially gratifying features of the expansion of the shipbuilding industry is that the benefits are being distributed generally throughout the country. Today shipyards from the Atlantic coast up along the St. Lawrence to the head of the Great Lakes and on the Pacific coast are busy with government and other orders. Fully 40,000 tons of the Dominion Government's steel shipbuilding programme are being built on the Great Lakes. Important new yards, notably one at Halifax, are also being constructed. Busy as Canadian shipbuilders have been during the year that has just closed, they will be equally as busy during 1919. Only the capacity of the yards to produce tonnage is the limit of its operations.

The action of the Dominion Government Steel Corporation for 250,000 tons of ship plates, and thus making possible the erection of a mill for the production of this particular kind of material, will have an important influence on the future of steel shipbuilding in Canada, for it will render the industry independent of other countries for supplies. Hitherto this country has, in this respect, been largely dependent on the United States, but in this, as in many other respects, Canada now stands on her own feet.—Toronto Globe.

Among the Express Companies.

Harold Joseph Palmateer, who has been appointed Assistant Superintendent, Eastern Division, Dominion Ex. Co., Toronto, entered the company's service July 11, 1902, since when he has been, to Mar. 13, 1911, clerk, Superintendent's office, Montreal; Mar. 3, 1911, to Jan. 1, 1919, chief clerk to Superintendent, Toronto.

The United States Railroad Administration has ordered that its Division of Labor will near and investigate, and recommend adjustments of any disputes between the American Railway Ex. Co. and its employes, not affecting wages and working conditions, these latter matters being dealt with by the Board of Railway Wages and Working Conditions.

George Parker, who has been appointed Superintendent, Eastern Division, Dominion Ex. Co., Toronto, vice J. J. Murray, promoted, entered the company's service Oct. 10, 1892, since when he has been, to 1895, station clerk, Ottawa, Ont.; 1896 to 1897, clerk in city office, Ottawa; 1898 to 1900, station foreman, Ottawa; 1900 to 1903, chief clerk and cashier, Ottawa; 1904, route agent, Ottawa; 1905 to Dec. 31, 1918, agent, Ottawa.

Samuel Chadwick, who died at the General Hospital, Montreal, Jan. 22, aged 79, was, many years ago, agent for the American and Canadian Ex. Co.'s, at London, Ont., and in 1876 assisted in the organization of the Intercolonial Ex. Co., at St. John, N.B., which was merged subsequently in the Canadian Ex. Co. He was appointed Superintendent, Canadian Ex. Co., at Montreal, and later promoted to General Manager, resigning in Dec., 1890.

M. J. Donnelly, agent, Canadian Northern Ex. Co., was found dead in his chair at his office at Quebec, Que., Jan. 8. He was laid up with influenza about two months ago, and did not seem to have fully recovered, but insisted on attending to business. He was formerly in the Quebec & Lake St. John Ry. service, and remained when that company was absorbed by the Canadian Northern Ry. At the inquest it developed that he had shot himself during a moment of acute mental aberration.

The Express Traffic Association of Canada's application, on behalf of the express companies operating in the Dominion, for increases in rates, was before the Board of Railway Commissioners during January. The application is being opposed by the National Dairy Council and the United Farmers of Ontario, represented by D'Arcy Scott, K.C., a former railway commissioner, as well as by others. The chief contention by the opposition is that the present is not the time to make any increases in rates, and that prices in general have a downward tendency.

The Canadian Ex. Co. had exclusive operating rights for many years over the Intercolonial and Prince Edward Island Rys., and latterly over the National Transcontinental Ry. Some years ago the Dominion Ex. Co. also secured operating rights on the I.R.C. and P.E.I.R. It is said that both companies are subject to 90 days notice of the termination of their agreements, and that such notice is likely to be given shortly, in order that the Canadian Northern Ex. Co. may operate exclusively over all the Canadian National Rys., viz., Canadian Northern, Intercolonial, National Transcontinental and Prince Edward Island. In this connection, W. C. Muir, General Superintendent, Canadian Northern Ex. Co., will probably be transferred from Winnipeg to Toronto.

John Joseph Murray, who has been appointed General Superintendent, Lines east of Port Arthur, Ont., Dominion Ex. Co., Toronto, entered express service in July, 1888, in the Customs Department, Canadian Ex. Co., Toronto, and subsequently continued his collegiate course. After engaging in private business for about five years, he returned to express service with the Dominion Ex. Co., Oct. 1, 1897, since when he has been, to 1903, clerk and relieving messenger, Toronto; 1903 to May 1, 1906, chief clerk to Superintendent; May 1, 1906, to Jan. 1, 1911, secretary to President and General Manager; Jan. 1, 1911, to July 1, 1912, Superintendent, Southern Division; July 1, 1912, to Jan. 1, 1919, Superintendent of Eastern Division, on the amalgamation of the Eastern and Southern Divisions.

Telegraph, Telephone and Cable Matters.

T. W. Molson has been elected a director of the Montreal Telegraph Co., in place of Lieut.-Col. Bartlett McLennan, D.S.O., deceased.

The C.P.R. Telegraph Department will move its Winnipeg offices, in February, to the Canada Life Building, at the corner of Portage Ave. and Main St., which it is reported to have purchased recently for $500,000. The name of the building will be changed to Canadian Pacific Building.

The Marconi Wireless Telegraph Co. of Canada's report for the past year shows a profit of $114,953, against $104,929 for the previous year. The balance at credit of profit and loss is $256,059, against $185,745 for the previous year. After providing for sundry charges, $198,414 is carried forward to the current year. At the recent annual meeting, J. N. Greenshields, K.C., was elected President in place of A. A. Allan, and Thomas Robb was appointed Managing Director. The other directors are: G. Marconi, G.C.V.O., Robert Bickerdike, G. C. Isaacs, G. M. Bosworth, W. D. Birchall, E. J. Nally and A. E. Francis.

The Dominion Government has relaxed certain restrictions on the use of wireless telegraphs at sea, to Canadian vessels through Canadian stations. Messages in plain language on ships' business, or from the general public may now be sent to, or received from, Canadian vessels through any regular Canadian commercial radio telegraph station on the east coast, Great Lakes, west coast, and Newfoundland at any itme, except through the naval stations at Halifax, N.S., and Sable Island, which will only handle ships' business in plain language. Canadian ships are also permitted to exchange plain language commercial traffic on the Pacific on any part, and on the Atlantic west of 40 deg. west, which latter is subject to British restrictions, limiting the traffic to ships' business in plain language. The trans-Atlantic wireless, between Glace Bay, N.S., and Clifden, Ireland, has been reopened, but traffic is limited to press messages and government business until further notice.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The General Railway Signal Co. has issued a booklet, 1,003A, describing and illustrating its model 2A signal.

Dominion Bridge Co.—G. H. Duggan, heretofore Vice President and Managing Director, has been elected President, succeeding Phelps Johnson, who asked to be relieved of the position, but who remains on the board.

The Canada Wire & Cable Co. is installing machinery for manufacturing a full line of steel wire ropes in its plant at Leaside, near Toronto. It expects to have this plant in operation by Mar. 15, and will then be in a position to supply all sizes and kinds of steel wire rope.

The William Kennedy & Sons, Ltd., Owen Sound, Ont., is adding to its plant a building 100 x 50 ft., and 33 ft. high, of steel and concrete construction, equipped with an electric travelling crane of 20 tons capacity. It is to be used as an erecting shop for marine machinery.

Calendars for 1919 have been received from: American Steel Foundries, Chicago; Dearborn Chemical Co., Chicago; Edison Storage Battery Co., Orange, N.J.; Flannery Bolt Co., Pittsburg, Pa.; Hiram L. Piper Co., railway and marine supplies, etc., Montreal; Taylor & Arnold, Ltd., railway and marine specialties, Montreal.

Imperial Munitions Board Offer for Sale

PLANT AND EQUIPMENT (IN PART) OF

British Cordite Co. Ltd., Nobel, Ont.

TENDERS, accompanied by marked cheque for 5% of the amount of the bid, will be received by the undersigned up to and including February 20th, 1919, for the purchase of the following, located at Nobel, Ontario:—

ITEM NO. 1. POWER HOUSE.—**Building** of steel frame construction on concrete foundations.

Boiler-room Equipment—10-400 H.-P. Wickes, vertical, water tube boilers, equipped with Murphy Automatic Stokers and 2-1 ton coal-weighing lorries.

Ash Handling System—American Steam Jet Ash Conveyor.

Power-House Equipment—3 Turbo Generators, 3 phase, 2200 volt, 60 cycle; 1-750 K. W. Allis Chalmers; 1-500 K. W. General Electric; 1-1000 K. W. Westinghouse-Parsons, complete with Westinghouse LeBlanc Jet Condenser and 80 H.-P. Sturtevant Turbine direct connected to Booster Pump; 1-25 K. W. Westinghouse-Turbo Exciter Set, 125 volt; 1-25 K. W. Canadian Fairbanks-Morse Motor Exciter Set, 550-volt motor, 125-volt generator; 1-30 K.V.A. constant current transformer.

Switchboard—11 panels fully equipped, 1-10 K.V.A., 2200-110 volts and 3-40 K.V.A., 2200-550 volts, Pittsburgh Transformers; 2-18 x 10 x 12 Worthington Fire Pumps; 2-14 x 22 x 14 x 16 Ingersoll-Rand Air Compressors; 2-No. 785 Cochrane feed water heaters; 4 Alberger heaters; 2-Frick Ammonia Compressors, 30 and 70-ton capacity; 2-4" Goulds Centrifugal Pumps, direct connected to 15 H.-P. motors; 4-1¼ x 8 and 2-5½ x 8 Deane Single Acting Triplex Pumps, belt driven; 1-42 x 10½ x 48 Hydraulic Pneumatic Accumulator.

ITEM NO. 2. PUMPING STATION.—**Equipment**—6-9 x 12 Aldrich Triplex Pumps, directly connected to 40 H.-P. Canadian Fairbanks-Morse, 550 volt, 40 amp., 60 cycle, 3 phase motor, with starting compensators and switch boxes capacity 500 gallons per minute; 3-75 K.V.A., 2,200-550 volts and 1-550-100 volts Pittsburgh Transformers.

ITEM NO. 3. MACHINE TOOLS.—18" Engine Lathe; 20" Drill Press; No. 4 Power Saw; Keyway Cutter; 16" Stroke Shaper; 10" Emery Wheel Stand; No. 34 Little Giant Screwing Machine with taps and dies.

ITEM NO. 4. TANKS.—Steel Horizontal—33—6′ to 20′ diameter. Steel vertical—41—3′ to 8′ diameter.

ITEM NO. 5. STOVES.—7 Nos. 41 and 42 Quebec Heaters, 5 Oxford Ranges and 16 Oil Stoves.

ITEM NO. 6. STEEL CANS.—12,900 Steel Cans, with lugs and lids, 11½" x 12" x 3-32".

ITEM NO. 7. COTTAGES.—15 Cottages, frame construction, 20′ x 34′.

ITEM NO. 8. PRESSES.—8 Dehydrating Presses (Hydraulic).

ITEM NO. 9. PUMPS.—8 Gardner Duplex Pumps, 7" x 3½" x 10".

ITEM NO. 10. WRINGERS.—20 Centrifugal Wringers 24".

ITEM NO. 11. STOCK DRYERS.—3 Sargent (Stock Dryers).

ITEM NO. 12. PICKER MACHINES.—3 Davis and Furber Picker Machines 36".

ITEM NO. 13. KNEADERS.—52 Kneader Machines.

ITEM NO. 14. PRESSES.—19 Darling Presses (Hydraulic). 22 Inglis Presses (Hydraulic).

ITEM NO. 15. PUMPS.—46 Hydraulic Triplex Worthington Pumps, 1 x 4 for 2,000 pounds pressure.

ITEM NO. 16. PUMPS.—10 Vertical Triplex Single Acting, belt driven Worthington Pumps, 3½" x 6" for 250 pounds pressure.

ITEM NO. 17. PUMPS.—6 Aldrich Pumps, Vertical, Triplex, Bach plunger of the solid water end type, double reduction, direct geared for 900 R.P.M. Motor, 9" x 12", Cap. 500 G.P.M., lift 150′.

ITEM NO. 18. BELTING.—A quantity of leather and rubber belting.

Tenders for these items, in whole or in part, will be considered. The owner will dismantle and load on cars; bids are to be made on this basis. Intending purchasers will be given every facility to inspect the buildings and equipment. Complete information may be obtained from the undersigned.

The highest or any tender not necessarily accepted.

Cheques from unsuccessful bidders will be promptly returned.

Canadian Railway and Marine World

March, 1919

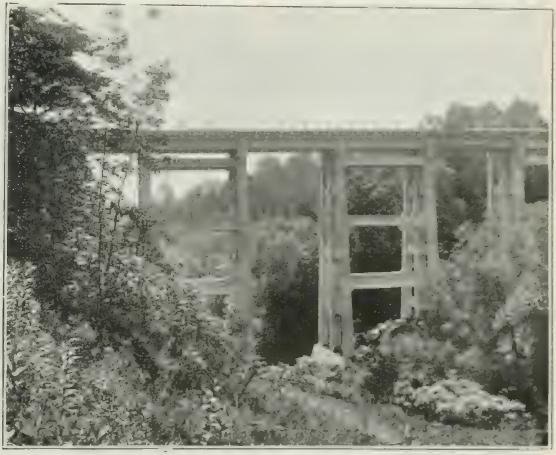
Design and Construction of Reinforced Concrete Viaducts on North Toronto Subdivision, Canadian Pacific Railway.

By B. O. Eriksen and H. S. Deubelbeiss.

General Description and Design.—The greatly increasing freight traffic and a still greater prospective increase in passenger traffic, due to the agreement between the C.P.R. and the Canadian Northern Ry., whereby the latter acquired running rights over the C.P.R. from Leaside Jct. to North Toronto station, necessitated the double tracking of the line between these two stations. While this line is only about two miles long, several reinforced concrete culverts required extensions, and two important bridges, one at mileage 0.9 from Leaside Jct. and the other at mileage 1.8 therefrom, had to be rebuilt. The existing single track steel viaducts at these two points not being adequate for the present heavy rolling stock, and still less for future requirements, had to be rebuilt, so that these bridges would not limit the use of heavier motive power on this important link. Bridge 1.8, being located at the limit of the North Toronto yard, required an extra track for switching, so as not to interfere too much with the main line traffic.

Estimates for both bridges were made for building them in either steel or reinforced concrete. The higher cost of steel viaducts, and the uncertainty of the delivery of structural steel, were the deciding factors in the choice of reinforced concrete trestles as built and here described.

While no designs were prepared for concrete arches at these points, the possibility of building them was considered. The limited right of way at the bridge sites, however, and the necessity of building temporary trestles within these limits, made the maintenance of traffic in building arch structures a most difficult problem. The designs adopted, where all slabs were pre-moulded, and the bulk of the concrete could be cast in forms on the ground, promised a much speedier and safer construction, and permitted the carrying of traffic within our right of way without difficulty. These considerations justified the dropping of further studies of reinforced concrete arches, and the adoption of designs of which the principal dimensions are shown in fig. 1.

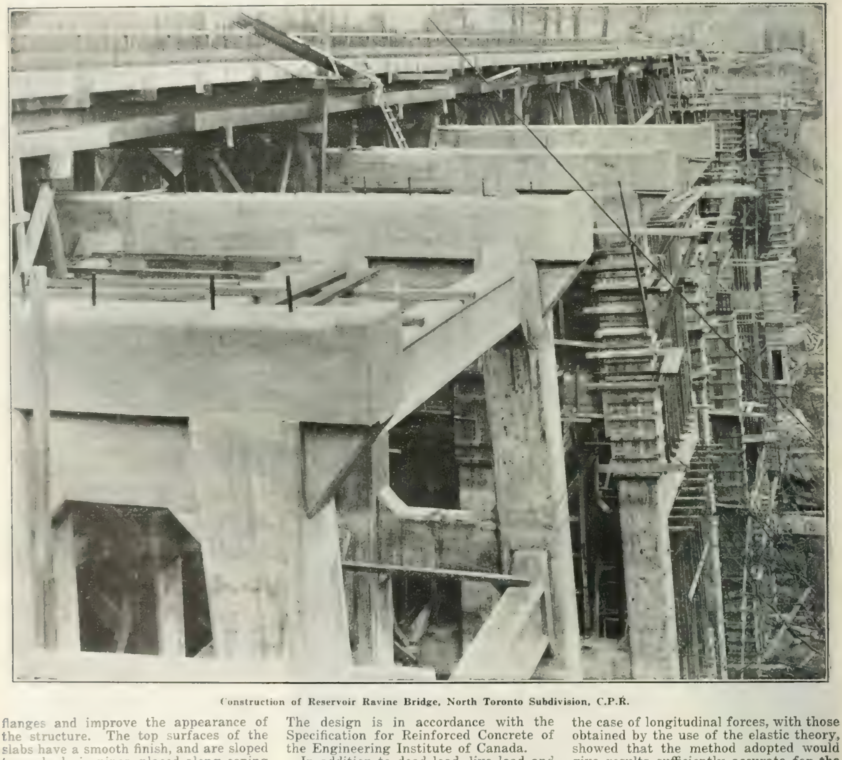


Bridge over Toronto Belt Line Ry. Ravine, North Toronto Subdivision, C.P.R.

Bridge over Toronto Belt Line Ry. Ravine, North Toronto Subdivision, C.P.R.

Continuous piers have been used instead of individual pedestals, as is customary for steel viaducts. These, together with the very stiff caps, made each bent as one unit. The columns are thoroughly bonded to the piers, by the recesses and the rods in tops of same, which correspond to the reinforcing rods in the columns.

In designing the columns, rectangular and octagonal sections were considered. The rectangular section was adopted, as the most suitable to resist the great bending moment that the columns would be subject to. The columns are reinforced with longitudinal rods anchored into the concrete by ¾ in. diameter bands. On account of the unusual size of these columns, these bands were made in sections, so that [illegible] bars would be thoroughly anchored into the body of the columns. These bands were not considered to act as hooping, owing to their rectangular shape. The tower bracing consists of struts reinforced to resist the bending moments due to their own weight, and the various horizontal forces acting on the tower. In order to improve the appearance, and reduce the weight, the vertical faces of the longitudinal struts were given a [illegible]. The longitudinal and transverse struts are arranged alternately. At an intermediate



Construction of Reservoir Ravine Bridge, North Toronto Subdivision, C.P.R.

points, bending moments, due to transverse forces, will then be practically zero, where the moments caused by the longitudinal forces are maximum. Sliding surfaces for the main slabs are provided by ½ in. steel bearing plates on caps of the bents; the plates are held in position by 1½ in. dowels. As these plates are continuous over the caps of the bents, they strengthen the caps against stresses produced by longitudinal forces on the bridge.

Each track is supported by two premoulded simple T beams. The end brackets on these slabs do not bear on the caps, but are kept clear by the steel bearing plates which they overhang. They are intended to strengthen the horizontal flanges and improve the appearance of the structure. The top surfaces of the slabs have a smooth finish, and are sloped towards drain pipes, placed along coping blocks and between the tracks.

The ballast is held in position by the coping blocks, which were premoulded in sections and anchored to the slabs by 1 in. dowels. After the erection of the slabs and coping blocks, the surfaces in contact with the ballast were waterproofed with a membrane type of waterproofing. This was laid continuously from abutment to abutment, the gaps between slabs being reinforced by additional layers of felt and mastic.

The sidewalks are composed of premoulded T shaped slabs, supported on brackets projecting out from the main slabs. The flanges of the sidewalk slabs fit into a horizontal groove in the coping blocks, which are heavy enough to counteract any tendency of the T beams to overturn. One-inch dowels hold these slabs in position on the brackets. The hand-railing consists of premoulded concrete posts, and three rows of 2 in. pipe.

The bridges are designed to carry Cooper's E-50 loading, with an impact allowance of .90 — 300/300 L.L., where L.L. = live load and L. = loaded distance in feet. Where stresses are produced by the loading of more than one track, L. is multiplied by the number of tracks. The design is in accordance with the Specification for Reinforced Concrete of the Engineering Institute of Canada.

In addition to dead load, live load and impact, the towers had to be designed to resist stresses due to traction and wind. A traction force equal to 9% of the wheel load was assumed to act at the rail level. This coefficient of traction was derived from diagram in Mr. Blumenthal's paper on Traction Stresses (Can. Soc.C.E. Transactions, Vol. 24, Part 2). A wind load of 30 lb. a sq. ft. on exposed surfaces of train and slabs, and a similar load on 1½ times the vertical projection of towers was assumed.

Bending moments in columns, due to dead load of struts, were included in calculations. While this is usually neglected in steel structures, it became necessary here, owing to the great weight of the struts. These latter moments, and also the moments due to traction, were calculated by the elastic theory—the equations being solved by the area moment method. Fig. 2 indicates how these equations were developed. The application of this theory, however, for the calculation of moments, due to transverse forces, became extremely involved, owing to the shape of the bents. For this reason, points of inflection were assumed as shown in fig. 1. Comparison between results obtained by similar assumptions, in the case of longitudinal forces, with those obtained by the use of the elastic theory, showed that the method adopted would give results sufficiently accurate for the purpose. Stresses in columns, including being moments when one span only was fully loaded, were calculated, but found to be below maximum shown on stress sheet.

Traffic was maintained on both bridges on temporary wooden trestles, erected on the north side of the old main line track. This was contemplated from the very first for bridge 1.8, as the spans of the existing bridge were so arranged, that to build a concrete trestle and keep clear of existing steelwork would be impracticable. At bridge 0.9, however, it was found that if the new bridge was laid out with 34 ft. tower and 36 ft. intermediate spans, there would be no interference with existing steelwork, and traffic could be maintained on the old bridge. This arrangement of spans was, therefore, adopted for both bridges. However, when excavation was started, it was found that the condition of existing masonry would not permit excavation for new piers to be carried down to the required depth, without endangering the safety of traffic. It was, therefore, considered advisable to build a temporary wooden trestle for this bridge also, rather than attempt to support masonry pedestals on these steep side hills.

Plant at Bridge 1.8.—A plant for storage and mixing was installed at each end of the bridge, and one at the slab yard, about a quarter of a mile east of the bridge. The stone and sand were piled in the open about 25 ft. from the mixer. They were stored on plank bottoms, to prevent admixture of earth. The cement was stored in three sheds, having capacities of five carloads each. They were built of dressed lumber, and dressed with ready roofing paper. The floors were kept about 8 in. clear of the ground, in order to make the sheds damp-proof. Each carload was piled separately; there being a space of at least one foot all around each pile. The various materials were wheeled in barrows to the mixers. Stone and sand were measured by barrow loads. One bag of packed cement was considered 1 cu. ft. Water barrels were filled from the city line, through 2 in. pipes, and the water was measured with pails. At each end of the bridge, a 75 ft. hoisting tower was erected, from which concrete was conveyed to the various piers and towers by spouting. At the slab yard, the concrete was wheeled in buggies along a trestle, built on a level with the tops of forms, and dumped directly into the forms.

Bridge over Reservoir Park Ravine, North Toronto Subdivision, C.P.R.

Plant at Bridge 0.9.—At this bridge only two storage and mixing plants were installed; one at the west end of the bridge and one at the slab yard, half a mile east of the bridge. At the slab yard, materials were stored and handled in the same manner as at bridge 1.8. The plant at the bridge site, however, was entirely different; the stone received here was too large and had to be crushed and screened to 1 in. size. Between the storage pile and the mixer, a gyratory crusher, belt connected to a gasoline engine, was mounted on a platform about 10 ft. high. This crusher was fed from the storage pile, by a 1-yard grab bucket and derrick. The crushed stone dropped through the floor of the platform to an inclined screen, which screened out all particles ¼ in. and less. The stone was then delivered from the crusher to an elevated stone bin, with an inclined bottom, located directly above the hopper of the mixer, which was set up on a foundation about 4 ft. above the ground. The flow of the stone, from stone bin to hopper, was regulated by a steel plate gate, and the hopper was graduated to receive the correct quantities of stone. The screenings from the crusher were used mixed with the sand. The sand was stored on plank platforms as at bridge 1.8, and delivered from there to the elevated bin adjacent to the stone bin and handled in the same way as the stone. The cement was stored in a shed of similar construction to those at bridge 1.8 and was delivered to the mixer by the derrick. No hoisting tower was used at this bridge, for conveying the concrete. It was wheeled in dump cars, running on a narrow gauge track, on a trestle constructed at the track level along the bridge. The concrete was dumped into hoppers at various points along the deck of the trestle and delivered from there to piers and towers by metal chutes connected to the hoppers.

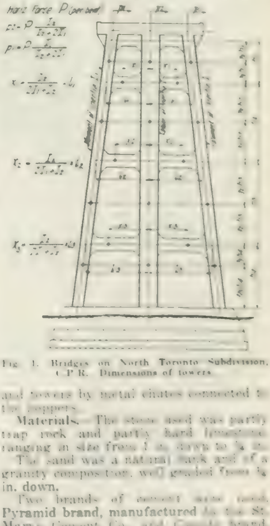


Fig. 1. Bridges on North Toronto Subdivision, C.P.R. Dimensions of towers.

Materials.—The stone used was partly trap rock and partly hard limestone ranging in size from 1 in. down to ¼ in.

The sand was a natural bank sand of a granity composition, well graded from ¼ in. down.

Two brands of cement were used, Pyramid brand, manufactured by the St. Marys Cement Co., and Canada brand, manufactured by the Canada Cement Co. They were fairly slow setting cements; averaging about [illegible] hours for initial set, and about 5½ hours for final set. While the cement was being unloaded from the cars, one bag in every 20 was opened and a small sample taken from it. These small samples were mixed into one composite sample for each car. (One car contained an average of [illegible] bags.) These samples were then forwarded to the testing laboratory, in Montreal. [illegible] which [illegible] that cement had not [illegible] in transit. Each carload of cement was stored separately in sheds, given a number corresponding to number of sample and held until the inspector was notified that the test had proved satisfactory. All cement used was in conformity with the C.P.R. Cement Specification, 1912.

The forms were treated with one application of petrolatum and neutral oil, mixed in the proportion of one of petrolatum to two of neutral oil, or until a creamy consistency existed. After the forms were fabricated, all holes and large cracks were filled with putty, all knots and putty fillings were then shellaced. The above mixture was then applied on inside of forms, with a whitewash brush; the neutral oil penetrated about ¼ in. into the wood, leaving a thin waxy film of petrolatum on the surface. The forms, thus treated, did not warp, as wind and moisture did not cause the grain of the wood to rise. A number of the forms were used as often as eight times, and all that was necessary, after each stripping, was to dust or sweep them off with an old rag or broom.

Heating.—In November, when the temperature dropped to 40° F., heating of the materials was commenced. A live steam jet was introduced into each water barrel, which kept the water nearly to the boiling point while the mixer was running. Sand and stone were heated by perforated steam pipes, placed under sand and stone piles. For the very cold weather, the steam was kept on night and day. The temperature of the concrete as it left the mixer was about 55° to 60° during the very coldest weather. For the main track slabs, concrete was poured in as low a temperature as 25° F. After pouring of concrete, the tops of slabs were covered with tar paper, kept about 6 in. clear of the surface of concrete, a layer of straw was then packed around the centre form, and the whole covered with tarpaulins. The sidewalk slabs and coping blocks were protected in a similar manner to the main slabs. The hand-rail posts were cast in a shed heated by a stove.

Bents were housed in from top to bottom with ⅞ in. tongued and grooved boards. This housing was built about 3 ft. away from the forms and steam pipes were run into this space. As an auxiliary to the steam heat, a battery of 4 coke burning salamanders were placed on the ground. With these precautions, concrete was poured at a temperature as low as 10° F., and the space around the forms could be kept at a temperature of about 50° F. Heat was maintained for at least three days after pouring was completed.

The longitudinal struts were also housed in, and a steam line run along each side near the bottom of the housing. The bottoms of the housings for struts were packed with straw; the tops were covered with tar paper clear of concrete, on this was placed a packing of straw and the whole covered with tarpaulins.

Excavation was started during the middle of Aug., 1917. The soil encountered was generally a hard blue clay; in some cases coarse sand. Before any concrete was placed, each foundation was subjected to a loading test at both ends. An ordinary table having four 3 x 3 in. legs was used for this purpose; the table was loaded with cement bags filled with sand, the total load corresponding to 4 tons a sq. ft.

Piers.—Concrete in the piers was poured in 3 consecutive runs as follows: The footing course was poured in the open excavation. Before this had a chance to set, large boulders and stones from the old pedestals, broken up to one man size, were imbedded in the top surface in 3 rows and about 3 ft. apart; thus a good bond was obtained with the next course. After the footing course had taken its final set and forms were erected for the pier proper, the surface was thoroughly scraped and slushed with water, until all signs of laitance had been removed. The concrete was now poured for the vertical portion of pier. After the top surface of same had been treated in the same way as the footing course, concrete was finally poured for the batter course of the pier.

For recesses of columns, templets in the shape of a box, with proper number of holes spaced to receive the anchor rods, were placed and fastened in position to the forms of the batter course. After the last batch of concrete was poured, the anchor rods were inserted in the holes, and driven to the right depth in the wet concrete. The forms of the piers were stripped after two days and the exposed surfaces rubbed with carborundum stones.

Details of towers are shown in fig. 3, and illustrations show clearly the details of forms. In erecting the forms, great care was taken not to have any parts braced to, nor allow any to come in contact with, the trestle carrying traffic, so as to avoid disturbance of concrete while it was setting. The concrete was poured from strut to strut, the brackets at the end of

Fig. 2. Bridges on North Toronto Subdivision, C.P.R. Method of calculating moments in towers.

each strut forming hoppers to receive concrete. At every construction joint, trap doors had been arranged in the column forms, in order to permit removal of all laitance and thoroughly to clean the surface before any new concrete was poured. The concrete in the column forms was spaded by long handled spades, and the outsides of the forms were beaten with wooden mallets, to free any air. A good smooth surface, with very few air pockets, resulted therefrom. The column forms were stripped after 4 or 5 days in warm weather, and after a week or 10 days in cold weather. The strut sides were stripped after 7 days in warm weather and after 2 weeks in cold weather. The bottoms of the struts were not stripped until absolutely necessary, and never before 3 weeks in warm weather and 4 week in freezing weather. All surfaces of towers were rubbed down with carborundum stones.

Details of slabs are shown in fig. 4 and details of forms in fig. 5. Forms were made collapsible. A new bottom, however, was made for each slab. After assembling of forms, one end was left open until all reinforcing bars were properly placed and wired together. Bars were supported on premoulded dovetailed concrete blocks 1⅞ in. thick, which made suspending wires unnecessary, thus avoiding obstructions to levelling off top surface of slabs. On slabs, only the exposed surfaces of outer slabs were rubbed down with carborundum stones.

Erection of main slabs of bridge 0.9 was started on Feb. 22 and completed on April 10, 1918. On bridge 1.8 erection started April 11 and the last slab was placed on June 1, 1918. The longest slab weighs 56 tons.

As the 100-ton wrecking crane did not have the reach required for placing these heavy slabs, a special scheme of erection had to be devised. This is shown in fig. 6 and illustrations. At the slab yard, one end of the slab was lifted on to a freight car truck, the other end suspended from the crane. The slab was thus pushed ahead by the crane on to the bridge. Two timber trusses, specially constructed for the purpose, were placed far enough apart to permit the slab to be lowered down to the bents. The end of slab resting on the track was then hitched to a trolley, which was running on rails on top chord of trusses. The derrick was then moved ahead, until the slab had reached the position for lowering down to rollers on caps. After the slab was on rollers, it was moved sideways on them to its final position. When all slabs of one span were erected, the erection trusses were moved forward by the crane to the next span and same operation repeated.

The actual cost per cubic yard of concrete in the various parts of the structure at bridge 1.8, North Toronto, was as follows, per cu. yd.:

	Per cu. yd.
Piers.	
Forms, including labor, overhead and contractor's commission	$1.35
Concrete—Materials	3.94
" Freight for sand, stone and cement	0.87
" Labor	1.61
" Incidentals, overhead and commission	0.98

Cost of erection of slabs, per cu. yd.	[illegible]
	$[illegible]

The average cost of materials used, and the average rates of wages were as follows:

Materials.	
Lumber	$[illegible] per M
Stone	$[illegible] per ton
Sand	$0.[illegible] per ton
Cement (including bags)	$[illegible] per bl.

Wages.		
Carpenters	$0.[illegible]	an hour.
Carpenters' helpers	.40	an hour.
Laborers	[illegible]	an hour.
Engineers on mixers	.35	an hour.
Concrete finishers	[illegible]	an hour.

The work was carried out under the direction of J. M. R. Fairbairn, Chief Engineer; P. B. Motley being Engineer of Bridges. J. H. Barber was engineer in charge of construction, with A. H. Munson as assistant; while the necessary investigations, calculations and details were worked out by the writers. The contractors for bridge 1.8 were Wells & Grey, Ltd., and for bridge 0.9 the Dominion Construction Co., both of Toronto.

The foregoing paper was read before the Engineering Institute of Canada recently.

Regarding the item, heating of towers, the average cost of $4.19 per cu. yd. As, however, only about three-fifths of the towers required heating, the actual cost per cu. yd. was approximately $7.

Additional illustrations will be found on pages 114, 115 and 116.

Birthdays of Transportation Men in March.

Many happy returns of the day to:—

W. G. Annable, General Passenger Agent, Canadian Pacific Ocean Services, Lt., Montreal, born at Ottawa, Mar. 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.

Jas. Balkwill, Division Superintendent, Canadian Division, Michigan Central Rd., St. Thomas, Ont., born in Southwold Tp., Ont., Mar. 8, 1870.

Sir George Bury, ex Vice President, C.P.R., Montreal, born there, Mar. 6, 1866.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

H. S. Carmichael, Passenger and Freight Manager, Canadian Pacific Ocean Services, Ltd., London, Eng., born at Glasgow, Scotland, Mar. 7, 1874.

F. G. J. Comeau, District Freight Agent, C.P.R., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., and member of Government Food Consumption Control Committee, Montreal, born there, Mar. 22, 1871.

A. E. Cox, General Storekeeper, Canadian National Rys., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Senator N. Curry, Chairman, Canadian Car & Foundry Co., Montreal, born in King's County, N.S., Mar. 26, 1851.

C. C. Curtis, Manager, Cape Breton Electric Co., Sydney, N.S., born at Battle Creek, Mich., Mar. 27, 1883.

C. T. Delamere, acting Engineer of Construction, Eastern Lines, C. P. R., Montreal, born at Brainerd, Minn., Mar. 18, 1881.

H. G. Dring, General Passenger Agent, C.P.R., London, Eng., born at Easton, Northamptonshire, Eng., Mar. 8, 1881.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., Montreal, born there, Mar. 4, 1876.

Frederick Elliott, President Victoria Navigation Co., Ltd., Thurso, Que., born at Montreal, Mar. 8, 1858.

M. P. Fennell, Jr., Secretary-Treasurer and Comptroller, Montreal Harbor Commissioners, Montreal, born there, Mar. 13, 1885.

W. R. Fitzmaurice, Superintendent, Division 2, Maritime District, Canadian National Rys., Campbellton, N.B., born at Bedford, N.S., Mar. 19, 1870.

C. Forester, Superintendent, London Division, Ontario Lines, G.T.R., London, born at Wanstead, Ont., Mar. 5, 1876.

R. A. Gamble, General Yardmaster, Winnipeg Terminals, C.P.R., born at Dublin, Ireland, Mar. 1, 1876.

J. Halstead, Division Freight Agent, C.P.R., Calgary, Alta., born at Bracebridge, Ont., Mar. 2, 1877.

R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Hayes, Vice President, Traffic, Canadian National Rys., Toronto, born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, Engineer, Maintenance of Way, Canadian National Rys., Toronto, born at Truro, N.S., Mar. 14, 1870.

J. I. Hobson, Treasurer, Canada Steamship Lines, Ltd., Montreal, born at Guelph, Ont., Mar. 30, 1872.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Prince Rupert, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, Engineer, Maintenance of Way, Eastern Lines, C.P.R., Montreal, born at Chicago, Ill., Mar. 7, 1873.

J. M. McKay, Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, born at Tiverton, Ont., Mar. 13, 1868.

Brigadier-General H. H. McLean, K.C., M.P., ex-President, St. John Ry., St. John, N.B., born at Fredericton, N.B., Mar. 22, 1855.

M. Magiff, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., Mar. 24, 1852.

Sir Donald D. Mann, ex Vice President, Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

H. H. Melanson, Passenger Traffic Manager, Canadian National Rws., Toronto, born at Scadouc, N.B., Mar. 9, 1872.

J. V. Murphy, General Agent, C.P.R., Portland, Ore., born at Bowmanville, Ont., Mar. 5, 1885.

European Railway Development and Plans.

The experiences of the war have revived interest in Great Britain, as well as in other parts of Europe, in a number of transportation projects which have been prominently before the public at different times during the last half century. The operation of a train ferry service between Richborough and Southampton, on the English side of the English Channel, and Calais, Dunkirk and Dieppe, on the French side, showed the advantage of having a means by which freight and passenger cars could be transferred between the two countries, but it also emphasized the discomforts of the cross-channel passage. The experience directed attention to the projected tunnel from Dover to Calais, so warmly advocated by the late Sir Edward Watkin, formerly chairman Southeastern Ry. of England, and also a director of the Grand Trunk Ry., the preliminary construction operations on which were stopped many years ago by the British Government. Present-day advocates of the tunnel claim that its construction would be a further link in the chain binding the British and French peoples together. This project is linked up with a plan which it is reported is being perfected in Paris, for the operation of a through passenger train service from Paris to Athens, a route which, it is stated, will ultimately be developed into one to Bagdad, on the Euphrates River. With the channel tunnel completed, the route would be from England to Bagdad.

Another continental suggestion is the boring of a tunnel underneath the Strait of Gibraltar. A railway from the African portal would link up the French and Spanish colonies there with the Cape to Cairo projection, and so give through rail connection to South Africa.

Within the borders of the British Isles there is another project revived, viz., that of a tunnel between Ireland and Scotland; others who advocate a tunnel between Rosslare, Wexford County, Ireland, and Fishguard, Wales; while there are even some bolder engineering spirits than the rest, who propose to reconstruct the traditional St. Patrick's Causeway between center Wales and Ireland.

Finally, within the borders of England itself attention is being directed to the building of light railways to open up remote areas, or connect with the regular lines small towns lying off the main routes. A number of light railways were built in England and Ireland as long ago as the middle seventies, but none of them were ever really successful and most of them were finally, after a period of bankruptcy, absorbed by the trunk lines with which they connected. Subsequently an association for the promotion of the construction of light railways was formed, which had for several years as its head the late Sir Charles Rivers Wilson, at one time President Grand Trunk Ry. The work now proposed to be done is to be under the charge of the Minister of Reconstruction, the capital cost of the railways being met partly by the British Government and partly by the county authorities. The first line being built under the new plans is in Yorkshire.

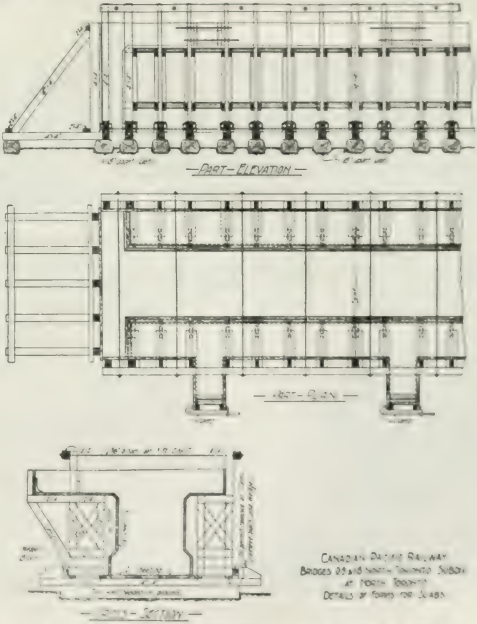

Fig. 5. Bridges 0.9 and 1.8, North Toronto Subdivision, C.P.R. Details of forms for slabs.

Employes of the various express companies operating in Canada, are organizing themselves for a better service campaign, with the object of inducing better care in checking and handling of material, and of securing greater co-operation with other shipping agencies and the public.

Government Control of Railways in Great Britain.

Lord Claude Hamilton, presiding at a meeting of the East London Ry. Co. in London, Eng., Feb. 2, is reported to have said that a deputation of the chairmen of the eleven great railway companies of England had waited upon Right. Hon. Andrew Bonar Law, the government spokesman, to elicit, if possible, the government's intention regarding railways at the close of the war. The delegation learned, according to Lord Claude, that the government considered itself absolutely pledged that government control of railways would continue for two full years after the declaration of peace. Mr. Law also informed the deputation that the question of the future management of the railways was receiving the earnest attention of the government, but that no final decision on the subject had been reached.

Sir George McLaren Brown, European General Manager, C.P.R., is reported to have said in an interview in Montreal recently that he thought there would be government regulation of railways in Great Britain comparable to the authority of the Board of Trade, but not incompatible with private ownership. The railways had done splendidly during the war. Not only had they aided France with men and rolling stock, but they had done more business in spite of that depletion during the war, than in years prior to it.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have kept the paper have a continuous record of the Board's proceedings. No other paper has done this.

[illegible]. Jan. 8.—Authorizing C.P.R. to operate [illegible] at Peterborough, Ont., subject to conditions as to speed, ringing of locomotive bells, etc.

[illegible]. Jan. 7.—Authorizing Dominion Foundries & Steel, Ltd., to build private crossing over Toronto, Hamilton & Buffalo Ry. Graselli spur.

[illegible]. Jan. 7.—Relieving C.P.R. from providing further protection at crossing near milepost 81, Macleod Subdivision, Alta.

27999. Jan. 9.—Approving plan of changes in additional protection at west connection of interlocking plant at crossing of G.T.R. spur by Campbellford, Lake Ontario & Western Ry. (C.P.R.), Cobourg, Ont.

[illegible]. Jan. 8.—Approving agreement between Bell Telephone Co., Dec. 19, 1918, and Ravenscliff Telephone Co., Muskoka District, Ont.

LIFTING OF SLAB AT FAR END OF DERRICK FOR REMOVING OF ROLLERS.
60 TONS CAPACITY
CPR
18'-4" Tn - 2'0" C/C
Note for moving Truss
This End of Erection Truss to be lifted by Derrick on temporary Trestle for End support by Slabs & pushed forward
- ELEVATION SHOWING ERECTION TRUSS & 100 TON -
- DERRICK IN POSITION FOR LOWERING OF SLABS -
36'-0"
34'-0"
36'-0"
Slabs to be erected as numbered in Cross Section
First Nº1 Slab to be lowered to rollers on Cap of Bent provided for moving of slab horizontally to its right position End of slab near derrick will then be lifted to allow rollers and roller plates to be removed.
At other end, End Lifting Tackle is to be used for jacking as shown in sketch above Slabs 2 & 3 will then be placed in same manner
Slab Nº4 however can be lowered directly to its final position with erection Truss placed as shown

28001. Jan. 8.—Authorizing Canadian Northern Ry. to cross highway between Secs. 9 and 10, Tp. 54, Range 23, west 4th Meridian, Alta.

[illegible]. Jan. 9.—Authorizing Canadian Northern Ontario Ry. to build spur for Bate, McMahon & Co. near Todmorden, Gloucester Tp., Ont.

[illegible]. Jan. 9.—Authorizing C.P.R. to build spur for Melchers Gin & Spirits Distilling Co., Berthier Parish, Que.

[illegible]. Jan. 7.—Approving Michigan Central Rd. [illegible] appliance at crossing by G.T.R. at Canfield, Ont., necessitated by building of [illegible] and crossover track.

[illegible]. Jan. [illegible]—Approving C.P.R. plan of re[illegible] at crossing with G.T.R., Komoka, Ont.

28006 to 28009. Jan. 14.—Approving Bell Telephone agreements with Fordwich Rural Telephone Co., Dec. 27, 1918, Huron and Perth Counties, Ont.; Oro Telephone Co., Dec. 23, 1918, Simcoe County, Ont.; Korah Base Line Telephone Co., Dec. 31, 1918, Algoma District, Ont.; Springbank Telephone Co., Dec. 27, 1918, Huron and Wellington Counties, Ont.

28010. Jan. 13.—Approving location and plans of Esquimalt & Nanaimo Ry. station at Cassidys, Vancouver Island, B.C.

28011. Jan. 14.—Authorizing Canadian Northern Saskatchewan Ry. to cross highway between n.w. ¼ Sec. 35, Tp. 25, and s.w. ¼ Sec. 2, Tp. 26, west 3rd meridian.

28012. Jan. 9.—Ordering G.T.R. forthwith to appoint night and day watchmen at crossing of Kipling Ave., New Toronto, Ont., to attend exclusively to that crossing.

28013. Jan. 14.—Authorizing C.P.R. to build spur for Kaslo Concentrating Co., Kaslo Subdivision, B.C.

28014. Jan. 14.—Authorizing Canadian Northern Ontario Ry. to build spur for Nepean Sandstone Quarries, Ltd., at Rock Farm, Nepean Tp., Ont.

28015. Jan. 14.—Authorizing C.P.R. to build spur for C. Cunningham, Kaslo Subdivision, B.C.

28016. Jan. 14.—Approving revised location of Grand Trunk Pacific Branch Lines Co.'s station at Lydden, Sask.

28017. Jan. 10.—Authorizing Canadian Northern Ry. to remove siding serving the Sandstone Brick Co. at Prince Albert, Sask.

28018. Jan. 15.—Authorizing Saskatchewan Highways Department to build highway crossing over C.P.R. and surveyed road in south half of Sec. 35, Tp. 31, Range 22, west 2nd meridian.

28019, 28020. Jan. 15.—Authorizing Canadian Northern Saskatchewan Ry. to cross highways between Secs. 26 and 23, and Secs. 14 and 15, Tp. 24, Range 8, west 3rd meridian.

28021. Jan. 15.—Authorizing Saskatchewan Highways Department to carry highway across C.P.R. on surveyed road north of Sec. 2, Tp. 33, Range 22, west 2nd meridian.

28022, 28023. Jan. 16.—Authorizing G.T.R. to rebuild bridges carrying its tracks across small stream at two points, Markham Tp., Ont.

28024. Jan. 17.—Authorizing City of Edmonton, Alta., to build highway across the Edmonton, Yukon & Pacific Ry., carrying Connors Road across track to connect with Strathcona Road.

28025. Jan. 17.—Authorizing Crowsnest Southern Ry. to remove spur serving Adolph Lumber Co., near Mott, B.C.

28026 to 28036. Jan. 15.—Authorizing Canadian Northern Saskatchewan Ry. to cross 11 highways at points in Saskatchewan.

28037. Jan. 15.—Authorizing Saskatchewan Highways Department to build highway crossing over C.P.R. north of Sec. 17, Tp. 9, Range 11, west 3rd meridian.

28038. Jan. 15.—Authorizing Canadian Northern Ry. to cross highway between n.w. ¼ of Sec. 2 and s.w. ¼ of Sec. 11, Tp. 28, Range 29, near Alsask, Sask.

28039. Jan. 16.—Authorizing C.P.R. to build second track to connect station tracks with locomotive house tracks across Laliberte and Bridge Sts., Quebec, Que.

28040. Jan. 15.—Authorizing Canadian Northern Ry. to build spur for Jack Pine Fuel Co. in n.e. ¼ of Sec. 30, Tp. 28, Range 19, west 4th meridian, Alta.

28041. Jan. 13.—Ordering G.T.R. to build new station at St. Agapit, Que.

28042. Jan. 17.—Relieving C.P.R. from providing further protection at crossing near Welsh, Ont.

28043. Jan. 16.—Ordering that maintenance of transfer track between the Canadian Northern Ry. and C.P.R. at Baintree, Sask., be paid, half by each company.

28044. Jan. 22.—Approving British Columbia Electric Ry. standard freight mileage tariff C.R.C. 132, effective Feb. 1.

28045. Jan. 21.—Dismissing complaint of Universal Importing Co., Montreal, against refusal of C.P.R. to divert carload of beans ex s.s. Chicago Maru from Victoria Wharf, to New York.

28046. Jan. 21.—Dismissing complaint of John Barrett, Montreal, that C.P.R. refuses to sell monthly commutation books containing less than 55 tickets between Montreal and Hudson Heights, Que.

28047. Jan. 22.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Monarch Metal Co., Hamilton, Ont.

28048. Jan. 17.—Ordering Canadian Northern Ry. to establish mixed train service with baggage and express to run daily, except Sunday, between Yarker and Napanee, Ont.

28049. Jan. 21.—Ordering C.P.R. to improve facilities for loading grain at elevators at Readlyn, Sask.

28050. Jan. 22.—Authorizing Canadian Northern Ry. to remove its station agent at Nutana, Sask., and to close agency there.

28051. Jan. 22.—Authorizing G.T.R. to remove spur serving A. H. Waite, Oro Tp., Ont.

The Canadian Railway Troops' Work on the Western Front.

By Corporal Herbert Forder.

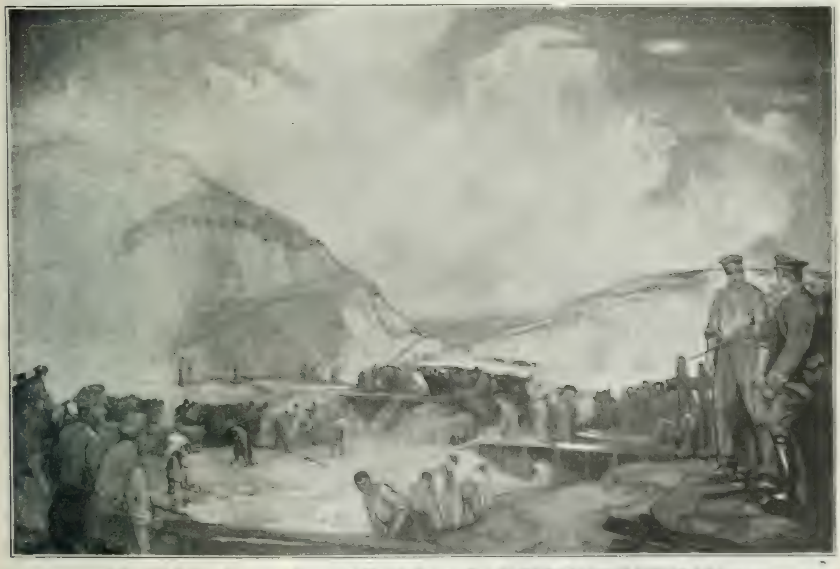
One of the most remarkable features of this war is the record of the Canadian Railway Troops. You can imagine the Frankenstein of war not unlike a monstrous human being. The brain is General Head Quarters, the heart is G.H.Q. Railway Troops; the arteries and veins are the endless lines of track supplemented by the roads department and the mechanical transport which take the place of capillaries, or smaller veins on the surface of the war god; the stomach, liver and kidneys are the Army Service Corps producing and distributing nourishment; the battlers are the blood corpuscles fighting along the veins and arteries; the lungs are the Red Cross, the Army Medical Corps, the hospitals, convalescent homes and rest camps, cleansing and renewing the blood; the nerves are the engineers with their wires, telephones and wireless, overhead, along the tracks and underground. The morale of the army is its soul or spirit, dependent upon its general condition of health. Keep that in mind and you will see the importance of the work of the Railway Troops. When the body is attacking or being attacked the outcome hangs in no small degree upon the unbroken transportation of nourishment to every part and more particularly to the part in danger.

The Imperial War Office gave the building and maintenance of these arteries and veins to the Canadian Railway Troops, now numbering 14 battalions, under the headquarters command of Brigadier-General J. W. Stewart, C.M.G. The first battalion to carry on this work was the Canadian Overseas Railway Company, all skilled railway men with high rates of pay, recruited from Canadian railways. This company put in some splendid work at Dickebusch in April and May, 1916. The units and details were recruited in Canada and shipped to the Canadian Railway Depot in England, where they were drilled and trained till a battalion was formed, or they were sent as drafts to augment the strength of battalions already in France.

These troops were armed and equipped in the same manner as their military cousins, the Engineers. They carry the Webb equipment, rifle, bayonet, ammunition and gas mask. Their own mechanical and mule transport are responsible for their tools. A square red patch with a square box painted square between the shoulders of the tunic is their distinctive badge; the same being the cause of many a witty remark and much profane comment on the part of these strenuous troops. At the beginning they were composed of specially recruited officers and men with railway experience. Later the ranks were filled up with Canadian casualties. Quite a number of these recruits wore the blue shoulder straps indicating that they were men of the first contingent. Sometimes they wore two, three and even four gold stripes, speaking worlds of praise for our modern surgery and hospital system, while bearing mute [illegible] to the stamina and spirit of these peerless soldiers.

As far as possible the officers were selected from men with railroading careers behind them. Advancement by merit was often rapid. In the 4th, for instance, was a young officer, Lieutenant L——, a Canadian, whose home is in Puyallup, on Puget Sound. He came from Canada with the rank of corporal and reverted to the ranks according to the rule on arrival in France. He was made full corporal two weeks later, a sergeant in six weeks, and in three months was sent up for his commission. Another lieutenant, an experienced railway man, was found digging a latrine in the honorable capacity of a sapper. A general, walking over the job, recognized him, called him out, shook hands, and sent him up for his commission on the spot. There were more promotions from the ranks of the Canadian Railway Troops than in any other branch of the service. That was one of the secrets of their wonderful efficiency, for they fulfilled the Napoleonic maxim and "make them out of mud."

At time of writing (shortly before the armistice was signed) they had laid something over 2,000 miles of track, almost equally divided between standard and narrow gauge. The standard gauge branched everywhere from the main French lines, alleviating congestion which had become chronic, releasing the central arteries of traffic for the business which



A Canadian Railway Construction Company at Work in France. From the Painting by Leonard Richmond, R.B.A.
This decorative painting, done for the Canadian War Memorials and which is now being exhibited at the Canadian War Memorials Exhibition at the Royal Academy, London, Eng., deals with railway construction in France under [illegible]. is keeping France the least injured of the allies outside her frightful battle grounds, maintaining the farms, the mines, the credit and the industry of La Belle France. From these tracks, immediately behind the lines, stretched out a veritable cobweb of narrow gauge, feeding the guns, the troops, the trenches, and carrying the wherewithal to every sector of this complicated war machine. The power on the narrow gauge was mostly petrol motor, aided by a number of dinky locomotives of about 15 tons. The cars on the light track were nearly all open, while the ammunition trucks were of special build with a sunken hold in the center.

Canadian engineers working a quarry for road making material, on the Western Front. Canadian Official War Photograph. Copyright reserved.

When the Canadian Railway Troops were at work on standard gauge lines they were similar to any civilian gang at work. But when laying narrow gauge, sometimes right across No Man's Land, and often under fire, they were armed and ready with a machine gun squad for each company, stretcher bearers and a Red Cross sergeant. This was the most dangerous kind of work, for the enemy guns were generally trained on any spot where rail-laying activities were noted. It was particularly dangerous when an advance had been made and our lines of steel had to be extended over the conquered territory; for, then, the enemy strove furiously to hamper "consolidation" and rained shells on us.

To illustrate what happened when it was necessary to build in the wake of an advancing army, I shall tell of the events under the German guns at the first battle of Cambrai. The astonishing victory of General Byng on Nov. 20, 1917, gave the army under his command a vast amount of shattered terrain, from Bullecourt to Villars, 26 miles across. Over this ground the cobweb of steel was immediately spun. The night we started work was bitterly cold and frosty. The hoar frost hung like a mantle of crisp wool over every living and inanimate object. The Fifth C.R.T. had the job and D. Co., in advance on 20 little cars, dropped off at midnight about a mile from the slag heap at Hermes. The chug-chugging of the petrol motors ceased, only the bellow of the big guns near at hand made the night hideous.

A momentary chaos was reduced to a semblance of order as the C.R.T. moved from the steep embankment under a multitude of burdens—stores, canteen and quartermaster's tools, tents, grub, a blacksmith's shop, an orderly room, officers' tents, field kitchens, and blankets. Tent floors wriggled in grotesque contortions through the black drop curtain of the night. Dawn broke upon a camp in the being, the tents standing above circular holes, making a 3 ft. shelter with a surrounding bank to afford some protection from shrapnel.

The men secured a breakfast of hot tea, bacon, bread and butter, jam and hard tack, and, as they ate, they took a keen first survey of their new location. Just above them on the ridge was a cemetery buried in foliage. A large brown cross and the eternal figure of "The Man of Sorrows" dominated the view. Behind them were rolling ridges of red soil, ploughed, harrowed and hacked by shell fire. On the far horizon to the right was Bourlon Wood, a sepia blanket laid over the loins of a white horse. To the centre was Fontaine Noyelles, with its red roofs and one tapering grey spire, then L'Escaut straggling between its rows of poplars. Their speculations were broken by the ascending scream of a high velocity shell.

"Krrupp" came the report—a geyser of earth rose and fell 200 yards away. Fritz was seeking that big gun battery beyond the last ridge. Again, and once more came the scream and the thud of shells. The Hun was distributing his punches like a drunken man in a bar-room.

"Brraap!" and up went a section of the mule transport.

"Brraap!" A hut held by an Imperial Labor Battalion was demolished and scattered like chaff on the storm wind. "Stretcher bearers on the double!" came the cry.

So D. Co. gobbled its last morsel of bacon, tipped up the final drain of tea, and silently and sadly proceeded to move camp. Once more the circus act was repeated. A thousand pieces of material were hauled across the ridges and along the hollows on the stalwart shoulders of grunting and cussing sappers. Three times that day they moved to escape destruction. By nightfall they had made a fairly safe pitch near a disused trench line and several old German dugouts. In the meantime, of course, nothing had been done in the matter of tracklaying. But the following morning reveille sounded at 6.30, and at 7, with dawn breaking clear, they were off to lay the first mile of the narrow gauge.

D. Co. was split up into its component platoons, nos. 13, 14, 15 and 16. Sixteen was put at grading, Fifteen at laying out ties, rails, bolts and spikes, Fourteen at bolting and spiking. Thirteen, "the mechanical gang," were put at cutting rails, laying frogs, points and switches. The ground was good just here, despite the enemy bombardment. The surveyors had done their work well. We decided that D. Co. could lay a mile of track a day. A. Co., coming along behind, would unload ballast and attend to the lifting and lining of the track. B. and C. Cos. were working on another three miles across the Demicourt Road.

The morning was clear and sparkling blue and the enemy's observation balloons seemed quite near. The sappers bent to their tasks, however, and paid no attention. Snatches of song drifted by on the morning breeze and spike mauls rang lustily against the steel. The songs they sang were not the songs you have heard at home. They were all comic with a queer and tantalizing twist—railway songs that helped along the work and that had something of the swing of the deep-sea "chanties."

Here is a verse and chorus for sample, led by Corporal D——, the comedian and football center of D. Co.:—

"One day our Uncle Sammy, he had a war with Spain,
Not all the boys in blue were in the battle slain,
They were not killed by bullets. Oh! not by any means,
For most of them that died, were killed by pork and beans."

Chorus -
Stung right! Stung right! S-T-U-N-G.
Stung right! Stung right! Easy mark was me.

Oh! when the war is over and once again I'm free,
There'll be no more "Trips around the world" for me.

That was the metal of their morale. After four years of war they were laughing at the worst Fritz could do—and many of them were twice and thrice wounded veterans.

In the meantime the enemy observation balloons above L'Escaut had given the tip to the batteries in Bourlon Wood. "Brraap," "Brraap," "Brraap!" big stuff came reaching out for the track. A pelting shower of earth, stones, and shrapnel fell among the men at work. Platoon by platoon they "downed tools," and ducked for the Imperial advanced trenches. No one was caught that time. The cooks made tea in the trenches, and the men ate their lunch of bully beef, cheese, bread and butter and jam. After half an hour of this Fritz turned his attention to the howitzer batteries in the sunken road, so D. Co. sallied out and to work again. By five o'clock the first mile was down. All the guns had gone to supper. The little cars were humming down the track and the tired troops sprang aboard and off they went for "home."

But the day was not over yet. Half a mile towards Hermes they met a "blowout." A high velocity shell from the northern sector of the German lines had tossed the track into a junk pile. The tired troops looked at the mess with disgust. "Well, guess we're in for it," said a sergeant. "One platoon can attend to this job though." The choice fell on No. Thirteen. "Might have known it!" growled the men as they unloaded their tools again. "Always unlucky! Let's have our number changed."

The other three platoons went on. The men of Thirteen started to work with a will. Broken rails were unbolted, the spikes drawn, and the twisted mess flung over the embankment. The shell hole was next blocked and filled with dirt from outside the ditch. Spare ballast was scraped up and new ties were inserted. Mauls and wrenches were then applied to the task of tightening up. Rails had been carried from up the track, and in a jiffy the track was repaired. Three rails in 23 minutes, gauged, lined and ballasted! Thirteen followed their comrades with the knowledge of a job well done.

It was a happy crowd that swarmed round the hot mulligan dixies that night—a gang of big school boys, ages running from 19 to 57, tired but happy and hungry as wolves in view of a solid meal. To make things complete, the orderly corporal arrived with arms full of mail. The great big event in every Tommy's life was the mail—parcels with toothsome candies, fruit cakes, cigarettes, books, tobacco, socks, handkerchiefs, letters from mother, father, sweetheart, wife and dear, sweet bairns.

Shells, wounds, cold, hunger, hardship, the grisly paw of death ever near, the fretful sergeant and the haughty officer, and a month's pay lost on the Crown and Anchor board—all were forgotten. The man who received a letter or a parcel hurried away, a glad light in his eyes, a warm glow in his heart, for he has come to "the end of a perfect day."

But this was not the end, not on this particular night. The "Last Post" had just blown and the boys were all beneath the blankets and a rosy glow worm in the dark was the cigarette of each tired and contented sapper. Suddenly overhead sounded the unmistakable organ hum of a big Fritzy plane. "All lights out" was given by three blasts on the sergeant-major's whistle. The droning of the motors came very near and the troops held themselves still in breathless suspense, for this was not the first time they had met hell from German aircraft. The sound died away. Then out of the vast and silent sky came "brraap" and bellow upon bellow of aerial torpedo.

The men rushed from their tents in their night clothes. Half a mile away, the station at Villers was ablaze. Petrol tanks were flaming into the dark in vast flashes of flame and smoke. The warehouse was on fire. "Fall in" sounded. The C.R.T. sprang into their clothes. Tools were snatched up and off they went. When they reached the gate, or the station, they saw thousands of French civilians leaving their little homes and flying to the open fields or the nearest dugout. Old women, old men, young women and children in every article of night attire were scurrying away from the dreaded air raid. Wherever possible the sappers helped them along and told them "Fritzy part tout de suite" and, as though supporting their strenuous western optimism, the anti aircraft opened a terrific barrage. The big "blopping" of the Archies was broken by the racket of the machine guns.

The station was like a scene from Dante's "Inferno"—only more so. Grotesque mushrooms of black smoke blotted out the moon and stars. Red, purple and yellow flames played in fantastic wreaths along the avenues of hell. Little figures rushed hither and yon like manikins in torment. And every minute a hot shell exploded with a dull, far-off roar amid the conflagration. Two petrol tanks had been destroyed and an ammunition train blown up. A Red Cross clearing station had been struck, and the huge warehouse levelled with the tracks. Everywhere writhing blue and gold snakes of petrol marked the path of danger. As they died out and flickered into blackness, the sappers rushed in, regardless of the hot shells, ready to blow up at every point any second, and began to clear away the mounds of smoking debris. This was part of their work.

A hospital siding, with two rails blown clear away, was repaired. The crater was filled in, new steel laid on new ties and the whole line spiked and bolted up in half an hour. The men toiled like ruddy fiends in the afterglow of hades. A Red Cross train from the main track was shunted into the new siding. It contained the bodies of two Red Cross nurses with their delicate white hands folded meekly over their courageous hearts in death.

The men of the C.R.T. by this time had reached the wreckage of the ammunition train. It looked as though some monstrous upheaval of nature had tossed it into a forest of twisted girders, hurling shreds of timbers and the burnt skeletons of wagons, tipped in weird gestures of destruction. The sappers tackled it with a cheer. From the south side a wrecking crew of French engineers were removing the large pieces with a powerful wrecking crane and windlass. The worst of the junk was located about a vast crater made in the center of the main line by an aerial torpedo.

Dawn broke with the work still being carried on. Carloads of ballast were shot into the cavity. As the grade was made level the new steel was laid, and the wrecking train moved up and hauled away the awful junk pile. In the meantime a company of C.R.T.'s had rolled all the hot shells off the track. And as they toiled at this dangerous task, protecting their hands with wet cloths and gunny sacks, they kidded one another a little:

"Look out there, Bill. That blinking one is going up!"

"Aw! Quit yer kidding. I don't want a Blighty one. I'm due for a Paris leave." And the lad would go on rolling the hot shell down the track.

"I wonder some guy wouldn't come round with a drink of rum. Gee! I'm all in," says one.

"All you need is something to warm your cold feet," replies his pal, in spite of the obvious fact that both their boots were burning on the hot track.

"Hell! I wonder them French Fillies don't come through with a bottle of Vin Blank?" queries another.

"Close it, you dud!" says the next one

Rapid Railway Construction in France. Building an Embankment for a Broad Gauge Railway. British Official Photograph taken on the British Western Front. Copyright reserved.

"You make a noise like a lamb."

By 9 a.m. the great northern road was clear. The new rails were fast and straight. The immense traffic of the Chemin de Fer du Nord rolled on towards the battle lines and tired Canadian Railway Troops sought their blankets for a game of "shut eye" till 2 p.m., when the work up under the guns would begin again.

And so the days and months went by. First it was a case of laying narrow gauge right up under the guns, with every kind of shell plopping around. Then, if they were lucky, it was standard gauge away back; which meant Y.M.C.A. concerts and lectures, sports, baseball and football, maybe some boxing, and all "the mental and moral pabulum" which has built our splendid morale.

No one has heard the history of the C.R.T. when the German advance last spring swept through the Lys salient. The Portuguese Division retreated, after four days and nights of gas shelling, when human flesh and blood could stand no more. Merville and its three all-important bridges over the canal were left undefended. Into this breach the general in command plunged three companies of the 11th C.R.T., the only available troops during those momentous hours. This was a strategic point of the utmost importance, for, if it fell, Lillers would be in danger and the whole British line from Arras to the sea threatened by a flanking and rear attack. These troops held the bridges with machine guns, bombers and riflemen till the Jocks and the Australians came up on either flank of the retreating Portuguese.

A little later, when the line was bending at La Bassee, Bethune, Locon, three battalions of the C.R.T., the third, the fifth and the seventh, were held in reserve, thus releasing Imperial battalions for the front lines. The fourth and the sixth fought hand to hand battles with the Hun in the Cambrai salient in Nov., 1917. The first day the sixth lost their field kitchens, their equipment and their tools. The second day they went after Fritz and took some of his field kitchens before Bourlon Wood. The scrap the sixth put up was largely instrumental in checking the German waves before Marcoing and Gouzeaucourt. And again the sixth was caught in Velu wood during the spring advance in 1917, and again they fought their way clear of the surrounding Huns.

The C.R.T. are the "handy men" of the British front. They have tackled everything from railroading to strafing the Boche, from taking up ammunition to bringing out the wounded—from laying and running the narrow gauge to shooting down enemy aircraft with their Lewis guns. (The 11th shot down a German plane in the apple orchard at Merville.)

The Railway Troops have played an important, and a most strenuous, part in the campaign now waging which, we are convinced, is going to end the war. I am writing this at a point 40 miles in advance of the positions we held two months ago—and the C.R.T. have laid steel all along that broad slice of reconquered territory! It has been perhaps the most rapid bit of railroading the world has ever seen.

To show how great the hazard has been, I want to tell of the last advance of our victorious armies before Arras and along the valley of the Scarpe, when two platoons were sent up to repair a narrow gauge line under fire. They relaid 123 shell breaks in six days. They had to live in dugouts. Each night the enemy put over every kind of shell, "Rubber heels," "Coal boxes," "Whizzbangs" and bombs from his aircraft. The Hun was doing all in his power to delay the advance by shelling and bombing our arteries of traffic.

The first morning out the C.R.T. lined up in the square before the station, near the quivering bodies of four disemboweled horses, while members of the Veterinary Corps were busy shooting these poor "Long Faced Pals" to save their pitiful sufferings. The Red Cross were busy taking away dead and wounded Tommies. A 12-inch shell from a long-range naval gun had dropped on a ration-train of the Army Service Corps with frightful consequences. The second morning the Boche blew up a motor lorry in a Mechanical Transport park near by. The third morning he smashed a corner of a cemetery; and bricks, gravestones, shrapnel, rubble and dead bones fell among them. The sixth morning the Hun got four of their transport mules, wounded the transport cook, and killed two Imperials in horse lines quite close to the C.R.T.

Nights were made hideous by every kind of explosion common to these duels of the big guns. When these two platoons finished their job they were congratulated on parade by the general commanding the division. The morale of these troops at such a time of intense nervous strain is shown by the fact that "the clink," or guard tent, standing directly under the range of the German guns, was never dug in or sand-bagged. On the fifth morning one of the defaulters, waiting a court-martial for a few hours A.W.L., was struck by a flying brick on the ankle while busy shaving. He calmly picked up the brick, while shell pieces were rattling down all around him, walked over to the nearest dugout and said:—"Look at that! Jerry tried to give me a free hair cut." Then he proceeded to finish his shave while the earth went reeling and vibrating to the ceaseless impact of exploding shells, any of which may have meant the end of all things for him.

During this last great advance the 5th —in which I am a humble unit—have leap-frogged their companies along the narrow gauge and at this time of writing are actually connecting up our lines with German steel beyond Lille. You see a dozen little cars behind a petrol motor, or a Baldwin dinky locomotive rolling along chock and block with troops going up; ammunition, kits, tents, grub, then more railway material, then ballast from the slag heaps of mines. The farther the line stretches the busier it gets. Truly the veins of the War God are Canadian in structure, Canadian in skill and Canadian in spirit.

The names of some of our commanding officers are household words in France—General "Jacky" Stewart, Colonel Griffin, D.S.O., Major Purdee with his Artemus T. Ward brand of humor and his Champion Baseball Team, Major Adjutant "Bimbo" Sweeny, Major Grant, Major Harrison in charge of the 11th at Merville—these are only a few. There are hundreds unknown to fame, but deserving of the highest honors, kind-hearted, modest gentlemen from every province, doing their duty as they see it from day to day.

The keynote of the Railway Troops is efficiency. It is only by maintaining a high grade of efficiency that the work can be done, and the success this branch of the service has achieved is something that Canada may well prize.—Maclean's Magazine.

Railway Rolling Stock Orders and Deliveries.

The Canadian Copper Co. has received a steel snow plough from Canadian Car & Foundry Co.

The Timiskaming & Northern Ontario Ry. has received a steel snow plough from Canadian Car & Foundry Co.

The C.P.R. is going to build 30 all steel tourist cars and 20 all steel baggage cars, both 73½ ft. long, at its Angus Shops, Montreal.

Canadian National Rys., as announced in our last issue, have ordered 750 steel frame box cars from National Steel Car Co. Following are the chief details:—

Length inside	36 ft.
Width inside	8½ ft.
Height inside	8 ft.
Door openings	5 ft.
Trucks	Simplex
Journal boxes	McCord
Bolsters	Simplex
Side bearings	Balanced type
Draft gear	Twin type
Roof	Inside metal roofing
Brakes	Westinghouse 812, automatic, with K-1 triple valves.

Canadian National Rys. have ordered 550 composite service coal cars and 500 steel underframe flat cars from Eastern Car Co., as mentioned in our last issue. Following are the chief details:—

Coal Cars.

Length inside	36 ft. 4½ in.
Width inside	9 ft. 3 in.
Height inside	5 ft. 2½ in.
Trucks	Simplex
Axles	5½ x 10 in.
Journal boxes	McCord
Brake beams	M.C.B. 2
Draft gear	Cardwell friction, latest type
Brake	Westinghouse 1210, with K2 triple valves
Capacity	50 tons

Flat Cars.

Length	41 ft.
Width over side sills	8 ft. 10 in.
Width over floor	9 ft.
Width over stake pockets	9 ft. 7⅝ in.
Trucks	Simplex
Journal boxes	McCord, 5 x 9 in.
Brake beams	Simplex 2
Draft gear	Twin type
Brakes	Westinghouse 812, with K-1 triple valves
Capacity	40 tons

Canadian National Rys. have ordered 250 Hart-Otis ballast cars, 500 stock cars, 150 refrigerator cars from Canadian Car & Foundry Co., as mentioned in our last issue. Following are the chief details:—

Ballast Cars.

Length over end sills	36 ft. 8 in.
Width over side sills	8 ft. 9 in.
Length inside as hoppers	20 ft. 10 in.
Length inside as gondolas	34 ft. 8 in.
Width inside	8 ft. 8 in.
Draft arms	Metal built up type
Draft gear	Friction type
Journal boxes	McCord, 5½ x 10 in.
Capacity	50 tons

Stock Cars.

Length inside	36 ft.
Width inside	8½ ft.
Height inside	8 ft.
Draft gear	Tandem
Journal boxes	4¼ x 8 in.
Trucks	Simplex
Brake beams	M.C.B. 2
Springs	M.C.B. class G
Capacity	30 tons

Refrigerator Cars.

Length inside	36 ft.
Width inside	8 ft. 2 in.
Door fixtures	Cam arrangement
Insulation	La Fleur
Trucks	Simplex
Journal boxes	McCord
Brake beams	M.C.B. 2
Brakes	Westinghouse, with K2 triple valves
Capacity	40 tons

These refrigerator cars are similar to the last supplied, and will be equipped with brine tanks and the latest device for retaining brine, to meet the American Railway Association's specifications. The underframe will be of wood with steel draft arms.

Mainly About Railway People Throughout Canada.

Albert G. Albertsen, who has been appointed General Agent, Passenger Department, C.P.R., Minneapolis, Minn., was born at Copenhagen, Denmark, Dec. 31, 1887, and came to Canada in 1904. He entered transportation service in Apr., 1908, since when he has been, to Nov., 1909, passenger clerk, Thomas Cook & Sons; Nov., 1909, to July, 1910, Travelling Agent, International Mercantile Marine; July, 1910, to Mar., 1911, passenger and ticket clerk, Pacific Mail Steamship Co.; Mar., 1911, to May, 1912, City Passenger Agent, C.P.R.; May, 1911, to Jan., 1916, Travelling Passenger Agent, C.P.R.; Jan. 1916, to Feb. 15, 1919, City Ticket Agent, C.P.R., all at San Francisco, Cal.

William E. Allison, who has been appointed Assistant General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, was born at St. Eugene, Ont., Aug. 1, 1886, and entered C.P.R. service in Feb., 1905, since when he has been, to Jan., 1909, clerk in General Baggage Department, Montreal; Jan., 1909, to Mar., 1910, chief clerk, same department, Montreal; Mar., 1910, to Nov., 1911, Travelling Baggage Agent, Montreal; Nov., 1911, to May, 1912, General Travelling Baggage Agent, Winnipeg; May, 1912, to Jan., 1916, District Baggage Agent, Calgary, Alta.; Jan., 1916, to Feb., 1919, Assistant General Baggage Agent, Montreal.

Mrs. W. H. Ardley, wife of the Comptroller, G.T.R., died at Montreal, Feb. 6, following a short illness and subsequent operation for appendicitis, after which peritonitis developed.

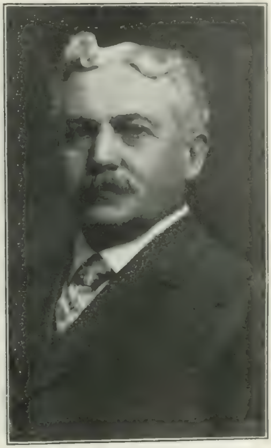
Frederick Barker Atkinson, Claims Agent, Canadian Government Rys., who died at Levis, Que., recently, was born there Aug. 26, 1852, and after several years in private business, entered C.G.R. service Oct. 1, 1901, and up to his death acted as Claims Agent for the I.C.R. in the Province of Quebec.

O. E. Barker, who has been appointed Chief Dispatcher, Canadian National Rys., Saskatoon, Sask., was born at Montreal, Sept. 20, 1873, and entered railway service Dec. 4, 1890, since when he has been, to Jan., 1898, agent and operator, C.P.R., at various points; Jan. to June, 1898, agent and operator, Minneapolis, St. Paul & Saulte Ste. Marie Ry.; June, 1898, to Mar., 1903, agent and operator, C.P.R., at Regina, Sask., Calgary, and Medicine Hat; Alta.; Mar., 1903, to Jan., 1911, dispatcher, C.P.R.; Jan., 1911, to Sept. 10, 1915, in private business; Sept. 10, 1915, to Nov., 1916, dispatcher, Canadian Northern Ry., Fort Rouge, Man., and Rainy River, Ont.; Nov., 1916, to June, 1917, General Yard Agent, C.N.R., Fort Rouge, Man.; June, to Nov. 27, 1918, dispatcher, C.N.R., Fort Rouge, Man., and Saskatoon, Sask.; Nov. 27, to Dec., 1918, acting Chief Dispatcher, C.N.R., Saskatoon.

M. B. Beasley, who died in Toronto, Feb. 22, was father of H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., and H. H. Beasley, Purchasing Agent, Toronto Ry.

E. W. Beatty, K.C., President, C.P.R., has been elected Chancellor of Queen's University, Kingston, Ont. To mark his recent appointment as President of the C.P.R., he was the chief guest at a dinner given in his honor by the Board of Trade at Thorold, Ont., Feb. 3, where he was born.

William C. Blake, whose appointment as Divisional Accountant, Canadian National Rys., Winnipeg, was announced in our last issue, was born at Liverpool, Eng., Nov. 28, 1865, and entered transportation service in 1878, with E. H. Wood, cartage agent for the London & North Western Ry. and the North Staffordshire Ry., and afterwards European Agent, Grand Trunk Ry., in England. He came to Canada in 1889, and was, to Jan. 1, 1903, in Traffic Auditor's office, serving in the freight, statistical and freight claims departments, G.T.R., Montreal; Jan. 1, 1903, to Dec. 1, 1910, statistical clerk, Audit Department, Canadian Northern Ry., Winnipeg; Dec. 1, 1910, to Dec. 1, 1918, chief clerk to General Auditor, same road, Winnipeg.



W. H. Grant,
General Tie Agent, Canadian National Railways.

Walter Pratt,
Manager, Sleeping, Dining and Parlor Car, Hotel and News Services, Canadian National Railways.

C. B. Brown, Chief Engineer, Eastern Lines, Canadian Government Rys., Moncton, N.B., is convalescent after several weeks illness, and has returned to duty.

Sir George McL. Brown, European General Manager, C.P.R., left for England, via New York, Feb. 11, after a short visit to Canada.

Fred J. Buller, whose appointment as Local Treasurer, Eastern Lines, Canadian National Rys., Toronto, was announced in our last issue, was born at [illegible], Ont., Jan. 30, 1875, and entered transportation service in Sept., 18[illegible], since when he has been, to Oct., 1896, messenger, Canadian Express Co.; Nov., 1896, to June, 1899, clerk, same company, Toronto; June, 1899, to July, 1901, clerk and relieving cashier, Dominion Express Co., Winnipeg; July, 1901, to Dec., 1902, clerk and bookkeeper, General Superintendent's office, Canadian Northern Ry., Winnipeg; Dec., 1902, to Nov., 1906, Cashier, same road, Toronto; Nov., 1906, to Jan., 1919, Cashier and Paymaster, same road, Toronto.

Sir Guy Calthrop, who died in London, Eng., Feb. 23, of influenza, was, since 1917, Controller of Coal Mines for Great Britain, and prior to that was General Manager, London & North Western Ry. of England. In 1908 he was General Manager of the Caledonian Ry. of Scotland, and in 1910, General Manager of the Buenos Aires & Pacific Ry. of South America. He was created a baronet in 1918.

E. J. Chamberlin, formerly President, G.T.R. and Grand Trunk Pacific Ry., who is spending the winter in California, is resigning from the various directorates with which he has been associated for several years, owing to his prolonged absence from Canada.

Frederick H. Clendenning, Division Freight Agent, Steamship Lines, C.P.R., Vancouver, B.C., who was transferred for service with the British Ministry of Shipping (Canada) recently, was born at Montreal, Nov. 9, 1881, and entered transportation service Aug. 1, 1898, since when he has been, to June 30, 1902, junior clerk, Fourth Vice President's office, register clerk, and stenographer, successively, C.P.R., Montreal; July 1, 1902, to Mar. 31, 1903, stenographer and freight clerk, Commercial Agent's office, New York Central and Hudson River Rd., Montreal; Apr. 1, 1903, to Jan. 31, 1904, stenographer, rate and tracing clerk, General Freight Department, C.P.R., Vancouver, B.C.; Feb. 1, 1904, to June 30, 1906, chief clerk, City Freight Office, C.P.R., Victoria, B.C.; July 1, 1906, to Aug. 31, 1908, chief clerk, District Freight Office, C.P.R. and Esquimalt & Nanaimo Ry., Victoria, B.C.; Sept. 1, 1908, to Aug. 16, 1909, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt & Nanaimo Ry., Victoria, B.C.; Aug. 17, 1909, to Mar. 31, 1911, Assistant General Freight Agent, C.P.R., Vancouver, B.C.; Apr. 1, 1911, to Jan. 31, 1914, District Freight Agent, C.P.R., Vancouver, B.C.; Feb. 1, 1914, to Nov. 1, 1918, Division Freight Agent, Steamship Lines, C.P.R., Vancouver, B.C.

N. P. Dalziel, formerly Assistant Comptroller, Canadian Northern Ry., Toronto, and latterly Assistant Chief Inspector, Shell Branch, Imperial Munitions

Board, Ottawa, left for Great Britain Feb. 8, excepting to return to Canada in April, when he will assume his duties as Managing Director of Offer, Dalziel & Co., Ltd., which was incorporated under the Dominion Companies Act Feb., 1918, with wide powers to act as engineers, financial agents, etc.

Elzear Louis Desjardins, whose appointment as Superintendent, Division 1, Quebec District, Canadian National Rys., Levis, Que., was announced in a recent issue, was born at St. Jean Port Joli, Que., Aug. 17, 1859, and entered Government railway service, Aug. 1, 1876, since when he has been, to Nov. 1, 1876, ballast pit operator, Intercolonial Ry., Amqui, Que.; Nov. 1, 1876, to Apr. 1, 1878, agent, I.R.C., Sayabec, Que.; Apr. 1, 1878, to June 1, 1879, night operator, I.R.C., St. Flavie, Que.; June 1, 1879, to May 30, 1880, train baggage master, I.R.C., Levis, Que., and Halifax, N.S.; May 30, 1880, to Feb. 20, 1898, dispatcher, I.R.C., Riviere du Loup, Que.; Feb. 20, 1898, to May 1, 1912, Chief Dispatcher, I.R.C., Levis, Que.; May 1, 1912, to Feb. 1, 1918, Assistant Superintendent, District 1, Montreal and Mont Joli, Canadian Government Rys.; Feb. 1 to Dec. 1, 1918, Superintendent, District 5, Transcontinental Division, C.G.R., Edmundston, N.B.

G. E. Drummond, President, Drummond, McCall & Co., Ltd., Montreal, died in England, Feb. 18, while on a business trip. He was formerly a director of the Canadian Car & Foundry Co.

James Edward, who has been appointed Division Freight Agent, G.T.R., Montreal, first entered G.T.R. service as operator and agent on the Ontario Lines, and later entered the traffic department, being appointed agent, Great Eastern Fast Freight Line (Central Vermont Ry.), in 1892. He was afterwards Contracting Freight Agent and Travelling Freight Agent, G.T.R., Montreal, and in 1904 was appointed Travelling Freight Agent, at Moncton, N.B.; Commercial Agent there in 1911, and from 1913, Division Freight Agent, Ottawa.

H. J. Fuller, President, Canadian Fairbanks-Morse Co., has been elected a director of the Shawinigan Water & Power Co., vice Sir M. Mitchell Thomson, deceased.

Mrs. John Galbraith, widow of the late Dean of the Applied Science Faculty, Toronto University, died in Toronto, Feb. 7, after a long illness.

R. Falconer Gauld, Auditor of Pay Rolls, C.P.R., Montreal, died there Feb. 18, and was buried at Halifax, N.S., Feb. 20.

G. B. Gordon, who died at Nanaimo, B.C., Feb. 3, as the result of a shock due to an accident at a railway crossing, was born in Whitby, Ont., in 1840, and went to Winnipeg in 1875, where he was engaged as assistant engineer on C.P.R. construction under the Dominion Government, afterwards farming in Southern Manitoba for some years, removing to British Columbia in 1917.

A. L. Graburn, who has been appointed General Fuel Agent, Canadian National Rys., Toronto, was born in Quebec Province, May 18, 1870, and entered railway service Feb. 27, 1885, since when he has been, to Apr., 1888, clerk, C.P.R., Winnipeg; May, 1888, to June, 1890, clerk, Chicago Great Western Ry., St. Paul, Minn.; July to Sept., 1890, assistant foreman, Chicago, St. Paul, Minneapolis & Omaha Ry., St. Paul, Minn.; Oct., 1890, to Sept., 1891, clerk, C.P.R., Winnipeg; Oct., 1891, to May, 1899, accountant, Northern Pacific Ry., St. Paul, Minn.; June, 1899, to May, 1900, Shop Superintendent, Great Northern Ry., Great Falls, Mont.; June, 1900, to Aug., 1906, Shop Superintendent, Great Northern Ry., St. Cloud, Minn.; Sept., 1906, to Dec., 1907, in railway supply business, St. Paul, Minn.; Jan. to Nov., 1908, special accountant, Chicago Great Western Ry., St. Paul, Minn.; Nov., 1908, to Sept., 1915, Mechanical Engineer, Canadian Northern Ry., Toronto; Sept., 1915, to Jan., 1919, Assistant Superintendent of Rolling Stock, Canadian Northern Ry., Toronto.

R. P. Ormsby,
Secretary, Canadian National Railways.

H. G. Foreman,
Assistant Treasurer, Canadian Northern Railway System.

W. H. Grant, whose appointment as General Tie Agent, Canadian National Rys., Toronto, was announced in our last issue, was born at Acton, Ont., Dec. 8, 1858. He commenced railway construction work under Donald D. Mann in 1882, and with the exception of eight years spent in Winnipeg, Calgary and British Columbia, in organizing the accounting department of P. Burns & Co., has since been continuously engaged in railway construction work with D. D. Mann and later with Mackenzie, Mann & Co., Ltd. He was serving under D. D. Mann on the latter's contracts on the construction of the C.P.R. main line through the prairies and British Columbia mountains, and on the construction of 75 miles of the Manitoba & Northwestern Ry. main line, and its Russell and Rapid City branches. He had charge of track laying on 40 miles of the old Winnipeg & Hudson Bay Ry., and of the construction of a section of the C.P.R. short line through the State of Maine, under Mackenzie, Mann & Co. From 1889 to 1902 he was Superintendent of Grading and Bridging, Rainy River Rd.; 1902 to 1907, Manager of Construction, Halifax & Southwestern Ry.; 1907 to 1915, Manager of Construction, Canadian Northern Ry. lines east of Port Arthur, Ont.; 1915 to the date of his present appointment, Tie and Timber Agent, Eastern Lines, and during the war acting General Storekeeper, Canadian Northern Ry., Toronto.

Grant Hall, Vice President, C.P.R., was the principal speaker at the Canadian Railway Club dinner in Montreal recently.

Fay Edward Hartshorn, whose appointment as Assistant Superintendent, Montreal Division, Quebec District, Canadian National Rys., Joliette, Que., was announced in a recent issue, was born at West Stewartstown, N.H., July 21, 1877, and entered railway service in Dec., 1898, since when he has been, to Feb. 1, 1902, operator and assistant agent, Maine Central Rd., at various points; Feb. 15, 1902, to July 6, 1905, operator, same road, Bangor, Me.; July 6, 1905, to Nov. 20, 1911, dispatcher, same road, Bangor, Me.; July 19 to Nov. 1, 1912, operator, various points, Montreal Division, Canadian Northern Ry.; Nov. 1, 1912, to July 1, 1913, operator, same road, Joliette, Que.; July 1, 1913, to June 1, 1914, relieving dispatcher, same road, Joliette, Que.; June 1, 1914, to Oct. 23, 1916, dispatcher, same road, Joliette, Que.; Oct. 23, 1916, to Dec. 23, 1918, Trainmaster, same road, Joliette, Que.

John J. Harty, President, Canadian Locomotive Co., Kingston, Ont., died at the Savoy Hotel, London, Eng., Feb. 23, from pneumonia, following influenza. He left Canada Jan. 29, to secure foreign orders for locomotives, and developed bronchitis en route, influenza following. He was born in 1875 and graduated in medicine from Queen's University, Kingston, in 1897, but did not practise. When his father, Wm. Harty, bought out the old locomotive works at Kingston in 1900, J. J. Harty became Secretary, and on the reorganization of the company was elected Vice President, and in 1918 was elected President. "Jock," as he was familiarly known, took a very active part in sports during his college career, was a good rugby player and excellent in hockey. Afterwards he became interested in lake racing and was a motor boat enthusiast. Three years ago he had the fastest craft on Lake Ontario. He sat in Kingston City Council for several years.

Walter Hately, whose appointment as Assistant General Freight Agent, Canadian National Rys., Winnipeg, was announced in our last issue, was born at Brantford, Ont., Mar. 5, 1887, and entered railway service in March, 1904, since when he has been, to Aug., 1908, clerk, local freight office, G.T.R., Hamilton, Ont.; Aug., 1908, to Sept., 1909, accountant, Superintendent's office, G.T.R., Toronto; Sept., 1909, to Oct., 1913, clerk, Freight Tariff Bureau, G.T.R., Montreal; Oct., 1913, to Oct., 1915, clerk, Freight Tariff Bureau, Canadian Northern Ry., Winnipeg; Oct., 1915, to Jan., 1919, Chief of Tariff Bureau, Canadian Northern Ry., Winnipeg.

Chas. R. Hosmer, a C.P.R. director, was reported on Feb. 20 to be making satisfactory progress at the Royal Victoria Hospital, Montreal, where he underwent an operation.

George Gladstone Hall Hutton, whose appointment as Superintendent of Agriculture and Animal Industry, Department of Natural Resources, C.P.R., Calgary, Alta., was announced in our last issue, was born in Ontario, Feb. 18, 1878, and from 1906 to the date of his present appointment, was Superintendent of the Dominion Experimental Station at Lacombe, Alta.

Howard G. Kelley, President, G.T.R. and G.T.P.R., who left Montreal for England, towards the end of January, will probably return before the end of March. Before leaving, he stated that the Chairman, A. W. Smithers, M.P., will not make his usual annual visit to Canada this year, owing to his parliamentary duties.

J. Edgar LePage, whose appointment as Division Freight Agent, Canadian National Rys., Quebec, Que., was announced in our last issue, was born in Canada, Mar. 7, 1882, and educated at Rimouski College and at Laval, Que., and was awarded the Prince of Wales prize. He entered railway service in May, 1902, since when he has been, to Feb., 1912, successively telegrapher, freight clerk, station agent, and freight agent, Montreal-Levis Division, Intercolonial Ry.; Feb., 1912, to June, 1915, Travelling Freight Agent, I.R.C., and National Transcontinental Ry., Montreal; June, 1915, to Jan. 27, 1919, Division Freight Agent, and District Passenger Agent, Canadian Government Rys., Quebec, Que.

Hon. W. M. Martin, Prime Minister of Saskatchewan, has also been appointed Minister of Railways, in the re-arrangement of portfolios made recenitly.

Allan Stanley McLean, who has been appointed Superintendent of Hotels, Canadian National Rys., Winnipeg, was born at Walkerton, Ont., Dec. 5, 1871, and entered Canadian Northern Ry. service in Sept., 1910, since when he has been, to Mar., 1911, clerk, Hotel Department, Winnipeg; Mar., 1911, to Dec., 1917, Manager, Prince Arthur Hotel, Port Arthur, Ont.; Dec., 1917, to Dec., 1918, Assistant General Superintendent of Hotels, Winnipeg. Prior to entering Canadian Northern Ry. service, he was, between 1899 and 1910, clerk, Dufferin Hotel, St. John, N.B.; and Queens Hotel, Montreal; and Manager, Corona Hotel, Montreal, and Kings Hotel, Regina, Sask.

S. J. McLean, one of the Railway Commissioners for Canada, addressed the Canadian Club at Toronto, Feb. 10, on the Board of Railway Commissioners' work.

G. E. McCoy, who has been appointed Master Car Builder, Eastern Lines, Canadian National Rys., Moncton, N.B., was born there, Jan. 8, 1886, entered government railway service Oct. 16, 1900, and served an apprenticeship in the shops and drafting office. He was appointed assistant chief draftsman in charge of car work in 1915, and in 1916 Assistant Master Car Builder at Moncton, N.B., which position he held to the date of his present appointment.

G. E. McCoy,
Master Car Builder, Eastern Lines, Canadian National Railways.

A. McCowan,
Master Car Builder, Western Lines, Canadian National Railways.

Henry Hilaire Melanson, whose appointment as Passenger Traffic Manager, Canadian National Rys., Toronto, was announced in a recent issue, was born at Scadouc, N.B., Mar. 9, 1872, and entered Government railway service Nov. 18, 1889, since when he has been, to Aug., 1892, clerk in Mechanical Department, Intercolonial Ry.; Aug., 1892, to Dec., 1899, clerk in Passenger Department; Dec., 1899, to Mar., 1901, chief clerk, Passenger Department; Mar., 1901, to May, 1905, General Baggage Agent; May, 1905, to Nov., 1909, chief clerk, Passenger Department; Nov., 1909, to May, 1913, Assistant General Passenger Agent; June, 1913, to June, 1917, General Passenger Agent; June, 1917, to Jan. 1, 1919, Passenger Traffic Manager, Canadian Government Rys., all at Moncton, N.B.

Richard W. Moore, who has been appointed District Car Foreman, Prairie District, Canadian National Rys., Saskatoon, Sask., was born at [illegible], Ont., Oct. 20, 1882, and entered railway service in July, 1906, since when he has been, to Feb., 1908, car repairer, Grand Trunk Pacific Ry.; Feb., 1908, to Oct., 1913, Car Foreman, G.T.P.R., Melville, Sask.; Oct., 1913, to Feb., 1914, Car Foreman, G.T.P.R. Rivers, Man.; Feb., 1914, to Nov., 1917, Car Foreman, G.T.P.R., Fort William, Ont., and continued with Canadian Government Rys., when that section of the road was taken over; Nov., 1917, to Jan. 15, 1919, General Car Foreman, Western Lines, C.G.R., Cochrane, Ont.

Sir Augustus Nanton, director, C.P.R., Winnipeg, has been elected President, Winnipeg Electric Ry., and President of the Western Bond Dealers Association of Canada.

R. E. Newcomer, whose transfer from the position of Trainmaster, G.T.R., London, Ont., to that of Trainmaster, G.T.R., Brantford, Ont., was announced in our last issue, has resigned and returned to Wabash Ry. service at St. Louis, Mo. Before leaving the district, he was presented by his associates with a travelling bag and equipment.

T. P. Phelan, President Canada Railway News Co., Toronto, who was operated on for gall stones, at Johns Hopkins Hospital, Baltimore, towards the end of January, and who suffered subsequently from influenza, was reported Feb. 27 as convalescing satisfactorily.

F. H. Phippen, K.C., formerly General Counsel, Canadian Northern Ry., left Toronto for Vancouver at the middle of February, expecting to be away 1 month.

B. A. Pottle, Car Inspector, Portland Terminal Co., who was accidentally killed at Portland, Me., Feb. 21, through being struck by a shunting locomotive, was formerly a C.P.R. yard [illegible] at Toronto.

Walter Pratt, who has been appointed Manager, Sleeping, Dining and Parlor Cars, Hotels and News Service, Canadian National Rys., Toronto, was born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870, and entered railway service Oct. 1, 1884, since when he has been, to June, 1887, clerk, Audit Department, C.P.R., Winnipeg; June, 1887, to May, 1889, in Purchasing Department, and cashier, Treasury Department, C.P.R., Winnipeg; June, 1889, to Oct., 1891, in Engineering Department, C.P.R., Winnipeg; Nov., 1891, to Feb., 1892, chief clerk, Purchasing Department, C.P.R., Winnipeg; Mar., 1892, to Dec., 1894, accountant, Dining Car Department, C.P.R., Winnipeg; Jan., 1895, to Dec., 1896, Sleeping and Dining Car Agent, C.P.R., Winnipeg; Jan., 1897, to May, 1902, Superintendent, Sleeping and Dining Cars and Hotels, C.P.R., Winnipeg; June, 1902, to Feb., 1910, Superintendent, Sleeping, Dining and Parlor Cars and News Department, Canadian Northern Ry., Winnipeg; Mar., 1910, to Jan., 1911, Superintendent, Sleeping, Dining and Parlor Cars, Hotels and News Department, same road, Winnipeg; Feb., 1911, to Dec., 1918, General Superintendent, same department, C.N.R. System, Winnipeg.

Augustine V. Redmond, whose appointment as District Engineer, Central District, Canadian National Rys., Winnipeg, was announced in our last issue, was born at Kingston, Ont., May 16, 1879, and graduated from Queen's University, Kingston, in April, 1903, with the degree of B.Sc. He entered railway service in May, 1903, and was to Dec., 1903, engaged on concrete construction on the C.P.R.; Jan., 1904, to July, 1905, leveller on location surveys, Grand Trunk Pacific Ry.; Aug., 1905, to Oct., 1907, transit man and acting engineer in charge of location surveys, District E., National Transcontinental Ry.; Jan. to Oct., 1908, Resident Engineer on location and construction, Canon City pipe line, Canon City, Col.; Oct., 1908, to Oct., 1909, Resident Engineer, District E, National Transcontinental Ry.; Oct., 1909, to May, 1915, District Engineer, District E, N.T.R.; June to Sept., 1916, Resident Engineer, District 2, Transcontinental Division, Canadian Government Railways, Cochrane, Ont.; Oct., 1916, to Mar., 1917, acting Division Engineer, Transcontinental Division, C.G.R., Cochrane, Ont.; April to May, 1917, Resident Engineer, District 2, Transcontinental Division, C.G.R., Cochrane, Ont.; June 1, 1917, to Jan., 1919, Division Engineer, Transcontinental Division, C.G.R., Cochrane, Ont.

Miss Lois Reid, only daughter of Sir William D. Reid, formerly President, Reid Newfoundland Co., was married recently at St. John's, Nfld., to Lieut.-Col. H. N. Niven of the 25th Cavalry, Indian Army.

W. J. Robider, who was appointed General Master Car Builder, C.P.R., recently has taken up his residence at 367 Elm Ave., Montreal, where he has been joined by his wife and daughters, from Savannah, Georgia.

Leslie Greeley Roblin, who has been appointed Master Mechanic, Prairie District, Canadian National Rys., Saskatoon, Sask., was born in Prince Edward Island, Mar. 24, 1864, and entered railway service July 14, 1885, since when he hs been, to Nov., 1886, wiper and helper, C.P.R., West Toronto, Ont.; Nov., 1886, to Apr., 1892, locomotive fireman, C.P.R., West Toronto and Havelock Ont.; Apr., 1892, to May, 1893, locomotive man, C.P.R., London, Ont.; May, 1893, to Jan., 1894, locomotive fireman, C.P.R., London, Ont.; Jan., 1894, to Aug., 1905, locomotive man, C.P.R., Toronto and London, Ont.; Oct., 1905, to Dec., 1907, acting Locomotive Foreman and Road Foreman of Locomotives, C.P.R., London. Ont.; Jan., 1908, to Feb., 1911, District Master Mechanic, C.P.R., London, Ont.; Feb., 1911, to May, 1915, District Master Mechanic, C.P.R., North Bay, Ont.; June, 1915, to Dec. 31, 1918, General Master Mechanic, Western Lines, Canadian Government Rys., Cochrane, Ont.

Frederick A. Rutherford, whose appointment as Trainmaster, G.T.R., London, Ont., was announced in our last issue, was born at Parkhill, Ont., Sept. 16, 1877, and entered G.T.R. service Jan. 18, 1894, since when he has been, to July, 1894, assistant to agent, Aylmer, Ont.; July, 1894, to July, 1900, telegraph operator, at various points; July, 1900, to Jan., 1908, dispatcher, London, Ont.; Jan., 1908, to Mar., 1914, Chief Dispatcher, London and Stratford, Ont.; Mar., 1914, to June, 1917, Trainmaster, Battle Creek, Mich.; June, 1917, to Feb. 1, 1918, Trainmaster, Durand, Mich.; Feb. 1, 1918, to Jan., 1919, Inspector of Transportation, Montreal.

J. G. Rutherford, C.M.G., appointed recently as a member of the Board of Railway Commissioners, was entertained to dinner by a number of friends at Calgary, Alta., towards the end of January, and presented with an oak table. Special mention was made of his work in the west, where he was Superintendent of Agriculture and Animal Industry, Department of Natural Resources, C.P.R., for some time.

Edward Fitzgerald,
Deputy Chairman, Canadian Advisory Board, Hudson's Bay Company, and latterly Assistant General Purchasing Agent, C.P.R.

Harvey Walter Sharpe, whose appointment as Master Mechanic, Quebec District, Canadian National Rys., Quebec, Que., was announced in a recent issue, was born at Campbellton, N.B., Dec. 6, 1869, and entered railway service, Sept. 1, 1883, since when he has been, to Aug., 1884, messenger, Intercolonial Ry., Campbellton, N.B.; Aug., 1884, to June, 1886, apprentice helper, I.R.C., Campbellton, N.B.; Nov., 1886, to Feb., 1890, fireman, I.R.C., Campbellton, N.B.; Feb., 1890, to Nov., 1912, locomotive man, Canadian Government Rys., Montreal; Nov., 1912, to Dec., 1918, District Master Mechanic, C.G.R., Levis, Que.

Vivian G. Snell, who has been appointed Division Freight Agent, G.T.R., Stratford, Ont., entered G.T.R. service in 1895, in the Transportation Department, and later entered the Traffic Department, becoming agent, National Despatch-Great Eastern Fast Freight Line at Montreal; 1905 to 1910, Contracting Freight Agent, G.T.R., Montreal; 1910 to 1913. Soliciting Freight Agent, Montreal; 1913 to 1914, City Freight Agent, Montreal; 1914 to Jan. 31, 1919, Commercial Agent, Moncton, N.B.

Cerdic Steeves, whose appointment as General Boiler Inspector, Eastern Lines, Canadian National Rys., Moncton, N.B., was announced in our last issue, was born at Hopewell Cape, N.B., July 6, 1874, and entered Government railway service Oct. 18, 1890, since when he has been, to Jan. 1894, apprentice, Intercolonial Ry.; Jan., 1894, to Aug., 1902, boilermaker, I.R.C.; Aug., 1902, to Apr., 1907, flanger and tryer out, I.R.C.; Apr., 1907, to Sept., 1913, Boiler Inspector, I.C.R.; and Sept., 1913, to Jan., 1919, General Boiler Inspector, Eastern Lines, Canadian Government Rys., all at Moncton, N.B.

Joseph A. Sutton, who has been appointed District Fuel Agent, Canadian National Rys., Cochrane, Ont., was born at Moncton, N.B., Apr. 12, 1894, and entered railway service Dec. 14, 1911, since when he has been, to Aug., 1913, stenographer, Mechanical Department, Canadian Government Rys., Moncton, N.B.; Aug., 1913, to June, 1915, secretary to Engineer of Bridges, C.G.R., Moncton, N.B.; June, 1916, to Sept., 1917, chief clerk to Division Engineer, C.G.R., Cochrane, Ont.; Sept., 1917, to Jan., 1919, Fuel and Tie Accountant, Western Lines, C.G.R., Cochrane, Ont.

George Mitchell Thomas, whose appointment as District Freight Agent, Canadian National Rys., Hamilton, Ont., was announced in our last issue, was born at Dundas, Ont., Apr. 21, 1876, and entered transportation service in Aug., 1898, since when he has been, to 1903, in office, chief clerk, on the road, and Soliciting Agent, for Beaver Line Steamships, afterwards owned by Elder, Dempster & Co., and in 1903, taken over by the C.P.R. as the nucleus of its Atlantic steamship service; Apr., 1903, to Feb. 1, 1919, travelling Freight Agent, Canadian Government Rys., all at Toronto.

S. G. Tiffin, whose appointment as Assistant General Freight Agent, Canadian National Rys., Montreal, was announced in our last issue, was born at Hamilton, Ont., and entered railway service Apr. 1, 1886, since when he has been, to May, 1888, clerk, Local Freight Office, G.T.R., Stratford, Ont.; May, 1888, to July, 1890, secretary to Superintendent, G.T.R., Stratford, Ont.; July, 1890, to May, 1891, secretary to General Manager, Chicago and Grand Trunk Rd., and Detroit, Grand Haven & Milwaukee Ry., Detroit, Mich.; May, 1891, to Oct., 1892, chief clerk to General Agent, same roads, Saginaw, Mich.; Oct., 1892, to Nov., 1893, Travelling Freight Agent, Commercial Express Fast Freight Line, Rockford, Ill.; Nov., 1893, to Feb., 1898, Travelling Freight Agent, Wisconsin Central Ry., Milwaukee, Wis.; Feb. to Nov., 1898, Wisconsin Agent, North Shore Despatch Fast Freight Line, Milwaukee, Wis.; Jan. 1899, to Nov., 1900, Wisconsin Agent, Reading Despatch Fast Freight Line, Milwaukee, Wis.; Nov., 1900, to May, 1910, Travelling Freight Agent, Intercolonial Ry., Toronto; May, 1910, to Aug., 1913, General Agent, Intercolonial Ry., Toronto; Aug., 1913, to Feb., 1914, Division Freight Agent, Canadian Government Rys., St. John, N.B.; Feb., 1914, to June, 1915, Division Freight Agent, C.G.R., Montreal; June, 1915, to Jan., 1919, Assistant General Freight Agent, C.G.R., Montreal.

R. C. Vaughan, Assistant to President, Canadian National Rys., Toronto, and Mrs. Vaughan, spent a short time at Atlantic City, at the end of February.

William Dryden Waddell, whose appointment as chief accountant, Canadian Northern Ry. System, Toronto, was announced in our last issue, was born at Waterford, Ireland, Aug. 7, 1887, and entered Canadian Northern Ry. service Nov. 30, 1908, since when he has been, to Nov., 1916, clerk in Accounting Department, and Nov., 1916, to Jan. 1, 1919, chief clerk, same road, Toronto.

Robert James Scott Weatherston, whose appointment as Division Freight Agent, G.T.R., Ottawa, Ont., was announced in our last issue, was born at St. Thomas, Ont., Jan. 27, 1878, and entered G.T.R. service July 4, 1893, since when he has been, to Dec. 31, 1901, clerk in Transportation Department, Hamilton, Ont.; Jan. 1 to July 22, 1902, clerk in Traffic Department, Hamilton, Ont.; July 23, 1902, to May 10, 1903, Soliciting Freight Agent, Hamilton, Ont.; May 11, 1903, to June 17, 1906, Soliciting Freight Agent, Toronto; June 18, 1906, to May 31, 1907, Travelling Freight Agent, Ottawa, Ont.; June 1, 1907, to Oct. 31, 1911, chief clerk to Division Freight Agent, Hamilton, Ont.; Nov. 1, 1911, to Jan. 31, 1919, Division Freight Agent, Stratford, Ont.

Thomas Wilford White, who has been appointed District Engineer, Western District, Canadian National Rys., Edmonton, Alta., was born at Clinton, Ont., Nov. 29, 1880, and entered railway service in June, 1889, since when he has been, to Oct., 1899, junior clerk, Manager's office, C.P.R., Winnipeg; Oct., 1899, to Apr., 1900, junior clerk, engineer's office, C.P.R., Winnipeg; Apr., 1900, to June 1901, chairmanand rodman, Western Lines, C.P.R.; Sept., 1901, to Apr. 1905, rodman, etc., Western Lines, Canadian Northern Ry.; Apr., 1905, to Apr., 1906, instrument man and inspector on bridge construction, Western Lines, C.N.R.; Apr., 1906, to Dec. 31, 1918, Assistant Engineer, chiefly engaged on bridge construction, Western Lines, C.N.R.

Machine Tool Equipment for Leaside Shops, Canadian National Railways.

The Canadian National Rys. invited tenders recently for the following machine tools, etc., for its Leaside shops, Toronto:—

1	34 x 10 x 20 in. Universal milling machine	belt driven
1	16 in. x 6 ft. Tool-room lathe	belt driven
1	Heavy duty double end axle lathe	motor driven
1	48 in. x 48 in. x 15 ft. 4-head planer	motor driven
2	Turret lathes, 2¼ x 24 in.	belt driven
2	26 in. x 8 ft. engine lathes	belt driven
4	18 in. x 6 ft. engine lathes	belt driven
2	36 in. vertical drills	belt driven
2	25 in. vertical drills	belt driven
1	6 in. radial drill	motor driven
1	Beaudry or Fairbanks hammer	motor driven
1	18 in. wood worker	belt driven
1	72 in. horizontal boring machine	motor driven
1	84 in. vertical boring turning drill	motor driven
1	72 in. planer type surface grinder	belt driven
1	24 in. Morton draw cut shaper	belt driven
1	set 54 in. throat punch and shear, heavy duty	motor driven
1	22 ft. tube rumbler	belt driven
1	Lincoln welding set, suitable for 550 volts, 3 phase, 25 cycles.	
1	Mephisto welder, suitable for 550 volts, 25 cycle, to be mounted on castors.	

Toronto University, Applied Science Building.—The Engineering Building used for many years by the Applied Science Faculty, Toronto University, and which has always been an eyesore on account of its ugliness, will, it is said, be pulled down, the Ontario Government having decided to provide $350,000 for the erection of an electrical engineering building to take its place.

Traffic Orders by Board of Railway Commissioners.

Interswitching at Brandon.

28063, June 27. Re application of Canadian Northern Ry. for an order amending order 14606, Aug. 21, 1911, providing for interswitching at Brandon. Upon hearing what is alleged in support of the application, the C.P.R. consenting; and upon the recommendation of the board's Chief Traffic Officer; and upon its appearing that clause 2 of order 14606 conflicts with clause 7 of the General Interswitching Order 252, Oct. 28, 1918. it is ordered that order 14606 be amended by striking out the words and figures "eight dollars ($8)" in the eighth line of clause 2 and substituting therefore the words and figures "twelve dollars ($12)."

Rates on Agricultural Lime or Stone Dust.

28073. Feb. 5. Re application of Henderson Farmers' Lime, Ltd., Woodstock, Ont., for suspension of proposed increase in rates on agricultural lime or stone dust from Kirkfield, Ont. Upon reading what has been filed in support of the application, and upon its also appearing that a similar advance in rates on the same commodities is proposed from Beachville, Ont., it is ordered that G.T.R. supplement 16 to Tariff C.R.C. no. E-4024, and the cancellation of item 195 in C.P.R. supplement 14 to Tariff C.R.C. no. E-3551 be suspended pending hearing at a date to be fixed by the board.

Commodity Rates on Cheese.

28088. Feb. 13. Re application of Montreal Board of Trade for suspension of proposed cancellation of commodity rates on cheese to Montreal by C.P.R., G.T.R. and Canadian National Rys.. Upon reading what is filed in support of the application, it is ordered that Supplement 3 to C.P.R. Tariff C.R.C. no. E-3383, Supplement 5 to G.T.R. Tariff C.R.C. no. E-3411, and Supplement 1 to Canadian Northern Ry. Tariff C.R.C. no. E-1121 be suspended pending a hearing of the matter on a date to be fixed by the board.

Canadian National Railways Tariffs.

28089. Feb. 10. Re application of the Canadians National Rys., under the amending Act 7-8 Edward VII, sec. 11, chap. 51, for approval of a bylaw enacted by the Canadian Northern Ry. directors, Jan. 10, 1919, authorizing B. E. Perry, Assistant General Freight Agent, Montreal, and W. Hately, Assistant General Freight Agent, Winnipeg, to prepare and issue freight tariffs, and H. H. Melanson, Passenger Traffic Manager, Toronto, R. F. MacLeod, Assistant to Passenger Traffic Manager, Montreal, R. L. Fairbairn, General Passenger Agent, Toronto, and R. Creelman, Assistant Passenger Traffic Manager, Winnipeg, to prepare and issue passenger tariffs, in the districts specified in the bylaw, in respect of tolls upon freight and passenger traffic of every description, to be charged by Canadian National Rys. upon its railways or any part thereof. Upon recommendation of the board's Chief Traffic Officer, it is ordered that the bylaw be approved.

Rates on Live Poultry.

28090. Feb. 11. Re application of J. H. Warrington, of Cornwall, Ont., and others for a reduction in class rating on carload [illegible] on shipments of live poultry. Upon reading the application and what is alleged in support thereof, and on behalf of the Canadian Freight Association, and upon the recommendation of the board's Chief Traffic Officer, it is ordered that the application be dismissed.

Rate on Second Hand Rails.

28111. Feb. 18. Re complaint of the St. Lawrence Pulp & Lumber Corporation against rate of $23.07 a gross ton on second hand rails from Matapedia, Que., to Vancouver, B.C., published in Canadian Freight Association Tariff C.R.C. 12, effective April 22, 1918, as excessive and unjust, and requesting reparation on shipments made subsequent to April 9, 1918, to the basis of rate of $14.79 a gross ton from Montreal to Vancouver, published in Canadian Freight Association Tariff C.R.C. 6, effective Mar. 9, 1918, expiring April 9, 1918, with the addition of the customary arbitrary of $1.12 a gross ton from Matapedia to Montreal. Upon hearing the complaint at Ottawa, Dec. 17, 1918, in the presence of counsel for the Canadian Pacific and the Grand Trunk Railways, the complainant being represented, and what was alleged, and upon reading the further written submission filed on behalf of the C.P.R., it is ordered that thec omplaint be dismissed.

Changes in Passenger Fares.

The following changes went into effect Feb. 1, between stations in Eastern Canadian Passenger Association territory, Quebec, Levis, Megantic and west, including Canadian National Rys. via Canadian Northern lines, Intercolonial Division, Quebec, Levis, and west, and Transcontinental Division, Quebec and west.

The ordinary one month round trip fares were increased to the basis of 10% less than double the one way fare. Any fraction of 5c less than 2½c is waived by the carrier, and every 2½c and up [illegible] considered as 5c by the carrier. The basis in effect previous to Feb. 1 was 16 2/3% less than double the one way fare.

Also effective Feb. 1, the charge for 1,000-mile tickets was made [illegible], instead of $25 as theretofore. The former price for a mileage book was the same as the mileage basis of the return fare, and since the new return fare is [illegible] a mile, the price of mileage books was raised to correspond.

Tariffs covering the foregoing were filed with the Board of Railway Commissioners, and are also open for the public's inspection, during office hours, at all ticket offices. As these are special tariffs lower than the standard, they do not require the board's affirmative approval. They were filed on three days' notice and remain in effect until they are superseded or are disallowed by the board.

The basis for one month round trip fares mentioned above also became effective on all other Canadian railways on Feb. 1, that is, on the western lines as well as those in E.C.P.A. territory. Mileage books are not issued on lines west of Port Arthur or Armstrong, Ont.

The Canada Steamship Lines' Traffic Department advises Canadian Railway and Marine World, Feb. 24, that it has not decided whether it would join with the railways in advancing fares between Quebec and Montreal and between Montreal and Toronto.

Canadian Locomotive Co., Kingston, Ont.—Consequent on the death of J. J. Harty, in England, F. G. Wallace, of Pittsburg, Pa., heretofore Vice President, has been elected President, and [illegible] K.C., of Kingston, has been elected Vice President.

Payment of Transportation Charges on a Cash Basis.

The Canadian Railway War Board issued circular 97 Feb. 3, superseding circular 86 and supplements thereof.

Effective Mar. 1, 1919, the collection of transportation charges (including demurrage and storage charges) by railways operating in Canada, for services rendered, shall be on a cash basis, and, effective as of that date, credit accommodations then in existence which may be in conflict with the following regulations shall be cancelled:

1. Tickets shall be sold only for cash in advance of service. Baggage charges are subject to the same rule as tickets, except c. o. d. baggage and storage charges, which must be paid in cash before delivery.

2. In cases where the enforcement of this rule with respect to freight will retard prompt movement or delivery of the freight or the prompt release of equipment or station facilities, carriers will be permitted to extend credit for not exceeding seven days after receipt for shipment of a consignment, if it be prepaid, or after delivery at destination if it be a collect consignment (see clause 6) provided the consignor, if it be a prepaid consignment, or the consignee, if it be collect, file a surety bond; either individual (not connected with the business for which credit is requested) or corporate surety company or bank guarantee, in an amount satisfactory to the treasurer or other properly designated officer of the carried. The form of such bond shall be as per form attached, conditioned upon and providing for payment of all charges within seven days after forwarding or delivery of the freight. Upon receipt and acceptance of such bond a carrier may accept and forward prepaid consignments or may deliver collect consignments in advance of payment of all charges thereon, to the amount covered by the bond. Failure to pay such charges within the time prescribed will automatically cancel such credit.

3. Treasurers or other properly designated officers of individual carriers are required to arrange and conduct all matters relating to such credits. They shall designate the amount and accept or reject the surety offered. Bonds may be required and accepted for individual consignments, or blanket bonds may be accepted from individual shippers or consignees, to cover all of their consignments for a given period. The period of credit in such cases shall, however, be limited to seven days on each shipment as herein prescribed. Where shipper or consignee so desires, one bond may be taken out to cover two or more points. The name of each point and proportion of amount of bond applicable to each point, however, must appear in bond.

4. Premiums on all bonds and all expenses incident thereto shall be borne by the applicant for credit to whom the accommodation is granted.

5. Cheques within the instructions issued by the individual railways to their agents will be considered as payment in cash. At points where there are no banking facilities or where firms have no accounting office, arrangements may be made, subject to the carrier's treasurer or other duly authorized officer, whereby representative of shipper or consignee may settle by giving the carrier's agent a sight draft on shipper or consignee. Remittance of draft, in these circumstances, attached to expense bills, to treasurer, or other designated officer of carrier, will be accepted as cash. Where acceptance of draft as cash as herein provided is arranged, shipper or consignee, as the case may be, shall absorb the amount of exchange on such draft.

6. In computing the credit period the following will govern—

(a) Prepaid shipment. Credit period shall be computed from time shipper is notified of amount due the carrier covering transportation of the shipment or shipments concerned.

(b) Collect consignment. Credit period shall be computed from time consignee is advised of charges due or time goods are made available for delivery, whichever may be the later.

(c) In either instance where notice of charge due is mailed shipper or consignee, as the case may be, shall be held to have been notified at 7 a.m. following date of mailing.

7. Transportation charges on freight placed in storage, either on property of carrier or in private warehouses, on order of shipper or consignee, after arrival at ultimate destination, are due and payable when such freight is placed in storage. If charges are not collected from the warehouse company, they should be collected from the consignee, under the terms of this circular, or immediately succeeding the time of the placement in storage and not after final delivery to consignee.

8. In the handling of cars in connection with "industrial" railways, delivery shall be considered to have been accomplished and transportation charges due—

(a) When cars are placed upon sidings or team tracks of so-called plant facility industrial railroads, either those connecting directly with the road haul carrier or those located on terminal switching lines.

(b) When placed on interchange tracks with industrial railroads.

(c) Under the provisions of paragraphs (a) and (b), cars will also be considered as delivered when constructively placed as provided by demurrage rules.

(d) The provisions of paragraph (a), (b), and (c) do not apply to "common carrier" industrial railways so long as in good faith deliveries are promptly made by them to consignees and the trunk line carrier's agent is furnished with adequate information with respect to such deliveries so as to permit the prompt rendition of the freight bills.

9. In case of any question as to accuracy of charges, bills must be paid as rendered and claims presented for alleged errors. This will not prevent adjustments by agents of obvious error. An obvious error is one on which both railway agent and shipper or consignee are agreed and which may be corrected without further investigation. In circumstances where the carrier's representative is unable to recognize the inaccuracy claimed by shipper or consignee prior to settlement, the ruling embodied in the first sentence of this paragraph shall govern.

Agents are required to revise their bills properly before presenting for payment, but there is no objection to the consignor or consignee checking the bills and paying charges on the corrected basis, providing the practice is not abused and they proceed in good faith with a revision of the bill, both for undercharges and overcharges. Consignor or consignee should make the change in red ink and the tariff authority for the change should be indicated upon the bill.

In the event of settlement being made on corrected bill and the correctness of the consignors or consignee's action is not apparent to the railway representative, due bill for the deducted amount shall be rendered promptly and credit period of seven days allowed on the supplementary bill, computed from time of service or mailing, as prescribed in clause 6, paragraph (c) hereof.

10. Freight consigned "to order" or "to, order notify" shall be delivered only upon surrender to the agent of the carrier of the original bills of lading for such freight and the payment of the freight charges thereon as hereunder provided. Provided, however, if such bill of lading be lost or delayed, the freight may be delivered in advance of surrender of the bill of lading upon receipt by the agents of a certified cheque for an amount equal to 110% of the invoice, or upon receipt of surety bond, either individual or corporate, acceptable to the Treasurer or other properly designated officer of the carrier in an amount for twice the amount of the invoice.

11. In the event of cancellation of credit by one carrier for failure to pay transportation charges within the prescribed credit period, the carrier cancelling credit shall immediately notify other railways concerned, who shall make similar cancellation. Similar notice shall be given as between carriers in the event of the cancelled credit being re-established.

12. The foregoing regulations shall apply to shipments delivered to and received from consignors and consignees by cartage companies, as well as to shipments handled direct between consignor and consignee and carrier.

13. Until otherwise ordered, these regulations shall not apply to transportation service rendered departments of the Dominion Government; nations allied with Canada in war; the various Provincial Governments of Canada; the counties and municipal governments; transportation and authorized cartage companies.

14. Advice of the foregoing regulations shall be given promptly to all to whom credit accommodations are now given to the end that the regulations may be put into effect at the time specified with as little inconvenience as possible.

Postponement of Regulations.

The board issued the following circular Feb. 28:—This will confirm telegraphic notices issued to member lines Feb. 27, reading as follows:—

1. "Referring article 2, circular 97. Where literal application of terms of circular with respect to cash collection of transportation charges would involve undue delay to traffic, or congestion of facilities, account holding shipments, either collect or prepaid, until cash actually in hands of railways, carrier's agent should apply to treasurer or other duly authorized officer of railway for authority to grant 48 hours credit without bond."

2. "Although majority of the larger railway patrons have arranged to comply with terms of board's circular 97, board is informed that in certain localities, notice of cancellation existing credits and establishment credits pursuant to circular was late in reaching public from railways, sufficient time not having been allowed for shippers to provide bonds. It is suggested that in such circumstances, with a view to minimizing inconvenience to public, account change of methods, arrangements should be made

for continuation of present credits for reasonable length of time, but not later than June 1, 1917, to permit shippers and consignees to procure and file bonds. Acknowledge."

While the period during which present credit arrangements may continue in effect has been extended to June 1, 1919, it is on the understanding that railway representatives, shippers and consignees, will proceed in good faith with the completion of arrangements under the terms of circular 97, so that the entire system will be in condition for inauguration at all points throughout the country not later than the date mentioned.

Canadian Transportation Men, Engineers, Etc. in the War.

C.P.R. Employes in the War.—Since the outbreak of war, 9,629 C.P.R. employes joined the army. Of these 842 are dead, 1,844 were wounded and 1,108 have been re-employed. The company is employing 1,557 soldiers who were not previously in its service, so that it has given work to 2,665 returned soldiers.

The Timiskaming & Northern Ontario Railwaymen's Patriotic Association, up to Nov. 30, 1918, contributed $96,872.37 to the Canadian Red Cross and the Canadian Patriotic Funds, exclusive of personal subscriptions made direct by members of the commission and employes.

PERSONAL NOTES.

Lieut.-Col. H. L. Bodwell, C.M.G., D.S.O., who died of pneumonia at St John, N.B., when returning from the front, recently, was born at Ingersoll, Ont., Oct. 13, 1881, and educated at the Royal Military College, Kingston, Ont. He was one of the engineers on the construction of the Grand Trunk Pacific Ry., and later was an instructor in civil engineering at the Royal Military College. In 1907 he was appointed Resident Engineer of the Canton-Hankow Ry., at Kwong Tung, China, and later returned to Canada, where he was for some time on railway construction with Foley, Welch & Stewart. On the outbreak of war he enlisted, was wounded at St. Eloi in Apr., 1916, awarded the D.S.O. in Sept., 1916, appointed Assistant Director of Light Railways in Dec., 1916, and was subsequently made a Companion of the Order of St. Michael and St. George, and also awarded the Croix de Guerre by the French Government. The official notice in the London Gazette stated that he directed, with great competence and sustained energy, and carried to a successful completion, in the minimum of time, in spite of conditions of working which were often difficult, the construction and putting into operation of a new system of 60 kilometers of railway, which greatly facilitated the supply of the French troops.

Col. J. S. Dennis, C.M.G., Chief Commissioner of Colonization and Development, C.P.R., and Canadian Commissioner with the Siberian Expedition, has, it is said, been placed in charge of the united Canadian and British Red Cross organizations for this expedition.

Major A. deCourcy Meade, M.C., who was killed in a motor accident near Drogheda, Ireland, recently, was formerly engaged on railway construction in Western Canada. He enlisted in 1914, and went to France early in 1915, and was there continuously until after the signing of the armistice.

Brigadier General J. W. Stewart, formerly of Foley Bros., Welch & Stewart, railway controctors, Vancouver, B.C., and who was appointed Director of Transportation in France and Flanders towards the end of the war, has been made a Companion of the Order of the Bath, in recognition of his work in connection with railways during the war.

Major W. G. Swan, who received the Distinguished Service Order recently, also holds the French Croix de Guerre, and has been mentioned in dispatches twice. Prior to entering the army, he was on the Canadian Northern Ry. engineering staff at Vancouver, B.C., as Division Engineer in charge of construction from Steveston to Hope. He enlisted in the 131st Battalion, and on arrival overseas he was transferred to the Railway Troops, being for 20 months with the Imperial Army, and later being transferred to the Canadians.

Capt. J. A. Tuzo, who was killed in action in German East Africa in the early part of 1918, was born in England in 1874, and came to Canada in 1897, and was engaged in mining in Yale District, B.C., for about 8 years, and later took up railway work in the U.S. and in British Columbia. In 1907 he was Resident Engineer, Spokane, Portland & Seattle Ry., and 1910 was Resident Engineer, Kettle Valley Ry., Midway, B.C. On the outbreak of war he returned to England and received a commission in the Imperial Army.

Railway Finance, Meetings, Etc.

Canadian Northern Rolling Stock Co.—There has been deposited with the Secretary of State at Ottawa duplicate original of a lease dated Jan. 2, made between the company and the Canadian Northern Ry., covering certain rolling stock, there being attached to the lease an assignment to the Pennsylvania Co. for Insurance on Lives and Granting Annuities.

Elgin & Havelock Ry.—A meeting of the shareholders of the company was called to be held at Halifax, N.S., Feb. 17, to ratify an agreement for the sale of the company's railway in New Brunswick to the Dominion Government, and for the transaction of other business in connection with the winding up of the company's affairs.

Grand Trunk Pacific Ry.—An issue of G.T. Pacific Ry. bonds, guaranteed by the Dominion of Canada, was placed on the Canadian market Jan. 29. The issue, which amounts to $5,2[illegible], was authorized in 1914, bearing interest at [illegible], and is redeemable in 1962. The issue price was 75.37, yielding [illegible]. The issue is reported to have been entirely taken up on the day of issue, 80% being taken by Canadian institutions. This is the first time the G.T.R. or the G.T. Pacific Ry. has made an offering of securities on the Canadian market.

Michigan Central Rd.—There has been deposited with the Secretary of State at Ottawa an agreement dated Dec. 31, 1918, made between [illegible] Carstensen and others, the Guarantee Trust Co. of New York, and the Michigan Central Rd., relating to the Michigan Central Rd. Equipment Trust of 191[illegible].

North Shore Ry.—The New Brunswick courts have ordered the sale of seven parcels of land owned by the North Shore Ry., as successor to the old Beersville Coal & Ry. Co., in connection with the action brought by G. W. Fowler against the company. The sale is fixed for Mar. [illegible], at Kent Jct. station, N.B. The lands seized under the order are those sold to the Beersville Coal & Ry. Co. for a right of way by P. Beers and wife; W. Stevens and wife; E. Ogden; T. Burgess; G. Reed; R. N. Reed, and J. F. Irvine.

Quebec & Saguenay Ry.—The Quebec Savings & Trust Co., acting as trustee for the holders of two issues of the company's bonds, is offering for sale by tender, to Mar. 4, the company's railway from the junction with the Quebec, Montmorency & Charlevoix Ry. to Nairn Falls. The first is of $3,[illegible] 1st mortgage bonds, dated Jan. [illegible], 1911, and the second is of $2,[illegible] 1st mortgage bonds dated Mar. 20, 1912, the whole of both issues being held by the Quebec Ry., Light, Heat & Power Co. The minimum price is $[illegible], and the railway will be delivered to the purchaser free and clear of all charges, encumbrances or claims. The purchase price is to be paid 20% at the time of making the offer and the balance on the execution of the deeds.

Tobique Valley Ry. Extension Co.—A meeting of shareholders has been called to be held at Andover, N.B., Mar. 4, to receive the annual statement of accounts, to elect directors, to make a call of 10% on the capital stock, and to transact other business. J. W. Niles is Secretary. The company was formed some years ago under a New Brunswick charter to build a line from Plaster Rock, the terminus of the Tobique Valley Ry., extending from Andover to Plaster Rock, and operated by the C.P.R., to Riley Brook, and other points in the interior of the country. Plaster Rock is also a station on the National Transcontinental Ry., at mileage 165 from Moncton.

Canadian National Railways Construction, Betterments, Etc.

General Betterments, Extensions, etc.—As stated in Canadian Railway and Marine World for February, it is said that the Dominion Government has consented, subject to parliamentary approval, of an expenditure of at least $50,000,000, and possibly $60,000.000, this year, of which $20,000,000 will be required for rolling stock already and about to be ordered, and possibly the expenditure under this head will be increased to $30,000,000. Betterments, extensions, etc., will probably require at least $20,000.000, and possibly $30,000,000.

While no definite figures are yet available, ministers gave some general particulars in the House of Commons recently in the debate on the speech from the throne. The Finance Minister said on Feb. 25:—"To give an idea of the amount of money which will be involved in the programme which I have outlined, it will be sufficient to say that it is estimated that there will be required $35,000,000 for rolling stock and material such as steel rails. In addition to that, a sum exceeding $20,000,000 will be needed for railway extensions and more than $10,000,000 for betterments and improvements. The government lost no time in taking up these important plans, which are useful and advantageous from the national standpoint in adding to our national railway plant and equipment, and which will, at the same time, provide employment for thousands of men."

The Minister of Public Works said on Feb. 26:—"I am speaking from memory, and did not expect to be asked about this railway question particularly. There is provision, as I recollect it, of about $10,000,000 for the construction of branch lines in the west. I think that this expenditure for the west will be pretty well confined to lines already partially constructed. Many of these lines have been graded and are only waiting for the rails. In general terms, the idea is to extend those lines already under construction, but, in addition, very large sums are to be expended on betterments over the whole government system. This will distribute the money all over the country and will provide employment."

President D. B. Hanna is reported to have said at Ottawa, Feb. 4:—"The Canadian National Rys. management has in contemplation a programme of construction, betterments and augmentation of motive power and rolling stock, which will give employment to some fifteen thousand men, and will involve an expenditure of many millions of dollars."

Since the above was put in type, Canadian Railway and Marine World has been advised that the total appropriations required for the Canadian National Rys. this year, for rolling stock, betterments, extensions, etc., will be about $60,000,000. The rolling stock will be added to, so as to provide for a daily train service both ways between Montreal, Toronto and Vancouver, and for the demands caused by increased freight and passenger traffic over the whole system. There will also be an extensive programme of betterments from coast to coast, and a number of extensions will be built in the west.

On the Eastern Lines, the Halifax ocean terminals construction will be proceeded with, as fast as circumstances will permit. Some second track will be built from division points in both directions. A number of passing tracks will be extended, and new ones built, and yards will be enlarged. There will be a large expenditure for renewal of bridges, to accommodate the heavier locomotives which will be operated. A number of passenger and freight stations will be enlarged, a number of section houses will be built, also a number of workmen's houses at divisional points, to better employes' living conditions. Some locomotive houses will be enlarged to accommodate larger locomotives, water supply stations will be improved and a number of coal handling plants and ice houses will be built. The National Transcontinental Ry. shops at St. Malo, Que., will be equipped and opened.

On the Western Lines, very similar general work of betterments to that on the Eastern Lines will be done. A considerable number of section houses and workmen's houses will be built. Terminal facilities generally will be improved as business necessitates. There will be an extensive construction programme on the Western Lines, track will be be laid on over 200 miles of lines already graded, and some extensions will be graded and laid with track, making about 350 miles of new track to be laid. The rails for these branches will be taken from the main line, where they will be replaced by heavier rails, making a total of about 700 miles of track to be laid altogether.

A large amount of ballasting and bridge filling will be done over the entire system, both Eastern and Western Lines.

In addition to the large orders already placed, and to be placed, for rolling stock, orders will have to be given for a very large amount of material, including some 50,000 tons of steel rails, some millions of ties, and considerable quantities of track bolts, plates and spikes, piling and bridge timber. It is expected that the works outlined above will give employment to some 15,000 men.

Intercolonial Ry.—The Sydney, N.S., Board of Trade, on Feb. 4, heard a deputation from the Farmers' Association, asking co-operation in endeavoring to secure the building of a railway into Sydney via East Bay. The matter will, it is said, be brought before the House of Commons by members, and the Farmers' Association and the Board of Trade will forward resolutions of approval.

The Halifax Board of Trade at its recent annual meeting passed a resolution favoring the building of a second track from Moncton, N.B., to Halifax, N.S.

A Fredericton, N.B., press report states that among the appropriations to be asked from Parliament at the current session will be one for $800,000 for improvements on the old Canada Eastern Ry., between Fredericton and McGivney Jct., in order to make it suitable for the operation of trains into St. John, over the St. John & Quebec Ry. The work to be done on the section of the line referred to will include a reduction of gradients and curvature, and the laying of heavier rails. Surveys were reported to be in progress Feb. 11.

It is also reported that it is contemplated to erect in a near future a new bridge over the St. John River at Fredericton, at an estimated cost of $1,000,000. Boring operations for testing for foundations were reported to have been started Feb. 17.

National Transcontinental Ry.—Mayor Lavigeur, on returning to Quebec, Feb. 11, from Toronto, was reported to have said D. B. Hanna President Canadian National Rys., informed him that the N.T.R. shops at St. Malo, Quebec, will be opened within six months.

A press report states that it is contemplated to build a line from Montreal via Cartierville to La Tuque, Que., which is on the St. Maurice River, and on the National Transcontinental Ry.'s main line, mileage 583 from Moncton, and is the terminus of a Canadian Northern Ry. branch

Canadian Northern Ry.—The temporary bridge to carry the company's traffic, etc., over the St. Charles River, at Quebec, was opened for traffic Feb. 7. It is expected that the new steel bridge will be opened for traffic in May. The Dominion Bridge Co. is the contractor.

An Ottawa press report of Feb. 18 stated that the company's shops at Rideau Jct., Ottawa, will be closed before long, and that new shops will be erected on the north bank of the Rideau Canal, within the city limits. A site of over four acres is reported to have been secured for this purpose.

President D. B. Hanna is reported to have said in an interview at Ottawa, Feb. 4, that this year's work on the C.N.R. will include the laying of 85 lb. steel rails on many portions of the main lines, where traffic is heavy, notably between Port Arthur and Winnipeg. The Goose Lake line, for 40 miles between Hanna and Wayne, in the Drumheller coal-bearing region, would be double tracked as soon as possible, and later the whole line to Calgary will be double tracked.

We are officially advised in regard to the Hanna-Medicine Hat line, that the starting point is at Bonar, the first siding east of Hanna, and its terminus at Medicine Hat, 144 miles. Grading has been completed from Bonar to the Red Deer River, approximately 59 miles, and 3 miles of track have been laid from Bonar. It is proposed to lay rails on the completed grading to the Red Deer River. Grading will be continued from the Red Deer River toward Medicine Hat, and possibly some track will be laid this year. The line has an easy gradient and curvature. The track will be of 80 lb. steel. The W. J. Cowan Co., Winnipeg, had the contract for the grading of the first seven miles, and the W. J. Dutton Contracting Co., Winnipeg, had the contract for grading from mileage 7 to to 59. It is expected to start construction on the bridge across the Red Deer River at an early date.

The British Columbia Premier is reported to have stated recently that President D. B. Hanna had advised him of the early starting of construction on the Kamloops-Vernon branch line. This will mean taking the present line from the north side of the South Thompson River across the river into the City of Kamloops and southwards through the Grand Prairie locality. At present the line parallels the North Thompson to the Y across the South Thompson from Kamloops, proceeding for that point westward across the North River bridge to the coast. We were advised in January that the bridge across the Thompson River at Kamloops had been completed, and that the grading of the line into Kamloops would be gone on with this year.

Tenders have been asked up to Mar. 15 for the excavation and lining of the Rosebud Valley tunnel, on the proposed revision of the line in the vicinity of mileage 334.00, Calgary Subdivision. The proposed tunnel is on the line from Saskatoon to Calgary, and is situated between Benyon, mileage 330.4, and Rosebud, mileage 339.00.

Railway Tribute to Ex-Premier.—On Feb. 22, when the late Sir Wilfrid Laurier was buried, all work was suspended on the railways throughout Canada for one minute. Representative officials of the various railways attended the funeral at Ottawa.

Government Control of British Railways.

London press dispatch, Feb. 28, by British wireless service:—Publication of the government's transport bill, which has been introduced in Parliament, shows that it will give the Minister of Transport complete control over every conceivable form of land transport. The bill provides that complete management of the railways of the United Kingdom is to be conducted by the state for two years, partly to enable the government to make the railways pay dividends, and partly to facilitate the movement of men and material during the period of reconstruction. Complete power is given to the Minister, during the two years, to settle all railway rates and charges, salaries and wages and conditions of employment, and to make any alterations in the policy of the roads and accounts that he may deem advisable. The Minister is authorized to purchase various kinds of railway companies by agreement or by compulsion. Under these provisions he could purchase, in whole or in part, any railway, light railway, street car company, canal, inland waterways or harbor and dock undertakings during the first two years of the ministry.

The Hamilton Railway Location and Terminals Question.

The following report was approved at Ottawa by the Privy Council Jan. 30:—"The committee of the Privy Council, after having duly considered the appeal of the City of Hamilton, dated Dec. 18, 1918, against orders 27843 and 27857 of the Board of Railway Commissioners, and having heard the appellant in support thereof, on Jan. 22, have come to the conclusion that as the circumstances under which said orders were issued have been altered by the signing of the armistice, the matter should be referred to the Board of Railway Commissioners for the reconsideration of the said orders, and for any further action in the premises which, under present conditions, it may now deem advisable."

One of the orders in question authorizes the Toronto, Hamilton & Buffalo Ry. to expropriate some city property for the extension of its Kinnear yards, and the other authorizes the company to lay four additional tracks across Selby Ave. In connection with these matters, certain city property was to be leased to the T. H. & B. Ry. temporarily.

G. A. Mountain, Chief Engineer, Board of Railway Commissioners, was in Hamilton, Jan. 29, and following days in consultations with R. L. Latham, Chief Engineer, T. H. & B. Ry., and N. Gray, City Engineer, upon the various matters involved. In the course of an interview, he is reported to have said that the proposition to be dealt with was one of the most difficult he had ever had. The carrying out of the recommendations of the Fye-Cauchon report would mean the complete tearing up of the eastern section of the city. It calls, for instance, for the abolition of the Ferguson Ave. cross town line, the elimination of the T., H. & B. Ry. through line in the south end of the city and the wrecking of two stations. A number of manufactories, with big investments, would have to be transferred to new locations. This means the expenditure of millions of dollars. Upon the completion of Mr. Mountain's report on the situation the board will fix a date for the rehearing of the matters covered by the two orders.

In the meantime the city council has made application to the Ontario Legislature for authority to build a line from the T. H. & B. Ry. in lot 29, con. 4, of Saltfleet Tp., northerly to the Grand Trunk Ry., Northern and Northwestern Division in lot 29 or 30 broken front concession of Saltfleet Tp., and to authorize the council to pass bylaws, with the assent of the ratepayers, to provide the funds necessary for the construction and operation of the line; and further to authorize the passing of a bylaw for the expenditure of $15,000 to complete the filling in of Sherman inlet, between the T. H. & B. Ry. belt line and the G.T.R. Northern and Northwestern Division.

A special meeting of the civic railway committee was called for Feb. 21 to consider a proposed application to the Board of Railway Commissioners to approve plans for the extension of streets extending up the side of the Mountain, east of Sherman Ave.

Reported Sale of National Steel Car Company.

It was reported on the Toornto Stock Exchange, Feb. 25, that negotiations had been completed for the purchase of the National Steel Car Co.'s plant at Hamilton, Ont., by the American Car & Foundry Co., and that it would be operated for the handling

A New York press despatch of Feb. 25 said: "Information circulated in the financial district today to the effect that negotiations are being carried on between the American Car & Foundry Co. and the National Steel Car Co. of Hamilton, Ont., for the acquisition of the latter by the former attracted considerable attention. When an officer of the company was asked to deny or affirm the report he refused to comment upon it, saying that he might have a statement to make on the matter in the course of a few days. This was interpreted in some quarters to mean that a deal is on, but has not been completed as yet."

The Hamilton Spectator said on Feb. 26: "Sir John Gibson, the President, has stated day after day that no deal had been closed whereby the control of the local company had changed hands. Today he stated that there was 'no change in the situation.'"

A Hamilton press despatch of Feb. 27 said: "Sir John Gibson today confirmed the report that negotiations for the purchase of the National Steel Car Co., by the American Car & Foundry Co., were in progress, but he declined to say anything further."

A New York press despatch of Feb. 27, said that the purchase had been concluded.

Moose Jaw, Sask., wants the C.P.R. to build an hotel there.

Consolidated Railway Act.—The first bill introduced in the Senate at Ottawa this session is "An act to consolidate and amend the Railway Act," which has been under consideration by parliament for several sessions.

The Canadian Engineering Standards Association has been incorporated under Dominion law by Sir John Kennedy, Prof. R. F. Ruttan, R. J. Durley and H. H. Vaughan of Montreal. The objects are to coordinate the various producers and users for the improvement and standardization of engineering materials and the general adoption of standards in connection with engineering structures, materials, etc.

Canadian Pacific Railway Construction, Betterments, Etc.

Betterment Work for 1919.—We are officially advised that the betterments to be made on the system during this year include the following:—Tie renewals, bridge work, locomotive turntables, ballasting, ditching, tile drains, etc., tie plates and rail anchors, station and building work and erecting section dwelling houses, laying sidings and yard tracks, terminal and other improvements, water supply, pipe lines, tanks, etc.; automatic signals and interlocking plants; fencing, repairs and renewals; telegraph work, renewals and improvements; additional plant for British Columbia lake and river steamboats, and other miscellaneous work.

Repairs and renewals of bridges covers, in addition to ordinary maintenance, the putting in of heavier spans between Guy St. and Green Ave., Montreal, as well as a large amount of new culverts and culvert extensions. New turntables will be constructed at various points. The ballasting, ditching, tile draining, tie plates and rail anchors will be largely improvements of present tracks. The station building work will include a number of minor stations, and additions and improvements of old stations, as well as new platform and other work; also some new freight sheds and freight shed facilities. About 38 dwellings are to be built as section and dwelling houses for the accommodation of employes, in order to attract a good type of labor. The siding and yard tracks to be laid will be additions to present yard accommodation at various congested points. The water supply and pipe lines will include a number of steel tanks, new pipe lines and some pumping machines, as well as dam and other work. Automatic signals will be installed between Guelph Jct. and Galt, Ont., and interlocking plants at Walkerton, Ont., Saskatoon, Sask., will be renewed. In addition to the ordinary fencing repair work, there will be some new fences put up, and some additional tree planting for snow protection. The miscellaneous work will cover a large amount of small work in renewing floors, roofs, skylights, piping, boiler and other work at a large number of locations all over the system. The telegraph work will include a new copper wire line from Halifax to Winnipeg, and from Toronto to Windsor, Ont., as well as dispatcher telephones, together with the usual renewals and improvements.

The British Columbia lake and river steamship work will include maintenance and general repairs, as well as the purchase of a new tug for the coast service, and a transfer barge for lake service.

Grant Hall, Vice President, made a trip of inspection of the company's lines east of Montreal recently, during which he looked into various matters connected with the construction programme for 1919. A. D. MacTier, Vice President, Eastern Lines, was in London, Feb. 18, and Hamilton, Feb. 20, looking into similar matters.

Employes Houses at Fredericton.—A press report states that the company proposes to build 30 new houses at Fredericton, N.B., for its employes.

Ontario District.—We are officially advised that there is no foundation for recent press reports that the C.P.R. has under consideration plans for electrifying its line between Toronto and Windsor, Ont.

Manitoba District.—A press report states that among the betterments which will be carried out during this year at Fort William, Ont., will be the paving of the large stock yards with concrete for permanency and the placing of new ties and steel in different parts of the yards. At Raith, a few miles west of Fort William, the company will build a large coal handling plant, and it is said that new ties will be laid on a considerable portion of the right of way from Fort William west.

Tenders were received to Feb. 28 for the construction of reinforced concrete culverts, arches, slabs and piles at various points on the division.

British Columbia District.—In reference to the proposal to build a new pier at the Vancouver ocean terminals, we are officially advised that the special committee appointed to consider the company's needs at the port recommended the construction, when traffic might demand it, of two more ocean piers. The one now recommended to be built is the first of these. No decision has yet been announced as to its size, design or exact location. (Feb., pg. 75.)

Freight and Passenger Traffic Notes.

The New York Central Rd. has been ordered to stop all its trains both incoming and outgoing, on flag at Westmount station, Que.

Grand Trunk Pacific Ry. freight and passenger officials, also those connected with its steamship lines on the Pacific, had a conference at Edmonton, Alta., Feb. 9 to 12.

The C.P.R. informed the Montreal Board of Trade's Transportation Bureau Feb. 14, that all embargoes against the shipping of freight in transit for orders had been removed.

The Great Northern Ry.'s time table, showing service proposed between Guichon and Sumas, via Coldbrook, and to Vancouver, B.C., was approved by the Board of Railway Commissioners, Jan. 25.

As showing the development of passenger traffic on the Edmonton, Dunvegan & British Columbia Ry., and its subsidiary lines, on the arrival of the train at Edmonton, Alta., Feb. 12, there were over 300 passengers on board.

The Canadian Northern Ry. has been ordered, by the Board of Railway Commissioners, to establish a mixed train service, carrying both baggage and express, daily except Sunday, between Yarker and Napanee, Ont.

The relaxation of the war time limitations of the Food Board, enables the railway companies to restore to former fullness the dining car menu. It is reported that the a la carte dining car service is to be restored on the United States railways Mar. 1.

The Delaware & Hudson Rd. has commenced running a sleeping car containing 7 compatrments and 2 drawing rooms on its Montreal-New York trains, which leave the C.P.R. Windsor St. station, Montreal, at 8.10 p.m., and the Grand Central Terminal in New York at 7.45 p.m. daily.

Two C.P.R. sleeping car conductors were sentenced to 10 days in jail, and a further term of six months in default of paying $500 fines at the Fort William Assizes, Feb. 13, on three charges of wrongfully dealing with sleeping car fares. The accused pleaded not guilty to theft, but guilty to the lesser charge of accepting secret commissions.

The Canadian Pacific Ry. announces that stop-over privileges for not exceeding 10 days are permitted, on application to conductor and deposit of tickets with agent at stopover station on through limited tickets between U.S. points, reading over C.P.R., at the following points: Banff and Lake Louise, Alta; Field, Glacier, Revelstoke, Sicamous and Penticton, B.C.

An embargo on the shipment of all grain consigned to the terminal elevators at Port Arthur, Ont., was reported to have been put into effect Feb. 16. All the Canadian Northern Ry. elevators at Port Arthur are full, and it was estimated that there were 700 cars of grain on the Canadian National Railways east of Winnipeg. The embargo, which does not affect C.P.R. lines, is not expected to be lifted until the spring.

Mrs. E. Slade, Quebec, brought an action in a Quebec court against the Pullman Co. for $2,000 damages for injuries to the health of her minor daughter alleged to have been caused by the negligence of the company's servants, while the girl was on a journey. The judge found that satisfactory proof was not furnished that the injury to the girl's health was caused by an open ventilator which the conductor refused to close, and the action was dismissed with costs.

The C.P.R. is reported to have purchased the site of Evangeline's house at Grand Pre, N.S., on the Dominion Atlantic Ry., which it operates, and will maintain it as a public park. The site is the scene of Longfellow's poem, Evangeline, and is the second of the scenes of Longfellow's poems to be utilized by the C.P.R. for tourist attractions. This other is at Desbarats, Ont., on the Sault Ste. Marie line, where a representation of Hiawatha is occasionally given by Indians during the tourist season.

The Canadian National Rys. has adopted, ratified, and made its own, in every respect as if the same had been originally filed and posted by it, all passenger tariffs, rules, notices, concurrences, traffic agreements, divisions, authorities, powers of attorney, or other instruments whatsoever, filed with the Interstate Commerce Commission and Board of Railway Commissioners for Canada, by the Canadian Northern Ry. (all lines), Canadian Government Rys. (all lines), Halifax & South Western Ry., or filed by their agents, prior to Mar. 1, the beginning of its possession. It has also adopted all supplements or amendments to any of the above tariffs, etc., which have been heretofore filed with said commissions by the above-mentioned lines or their agents.

Passenger Meetings.—Owing to present conditions affecting railways in the United States, it is not likely that it will be practicable for the Niagara Frontier Summer Rate Committee to meet in the near future, as in former years. The question of holding meetings of the Great Lakes and St. Lawrence River Rate Committee, and the International Waterlines Passenger Association, is under consideration.

St. John & Quebec Ry. Financing.—The action brought by the New Brunswick Government for the recovery of certain funds belonging to the St. John & Quebec Ry., which a royal commission found to have been improperly applied, came before the New Brunswick Court of Appeal Feb. 14, on a motion to dismiss. Judgment was reserved.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines, Ltd.—For changes in directorate and officials, see Marine Department, farther on in this issue.

Canadian National Rys.—E. P. MALLORY, heretofore chief clerk to Assistant Vice President, Canadian National Rys., has been appointed Statistician in the Assistant to President's office.

EWART B. WALKER, formerly of Chapman & Walker, Ltd., Toronto, and who has been employed by the Canadian Northern for some time in electrical work, has been appointed Electrical Engineer, Canadian National Rys. Office, Toronto.

J. B. SMITH has been appointed Chief Dispatcher, Canadian National Rys., Ottawa, Ont.

R. FYFE, heretofore Scale Inspector, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Scale Inspector, Western Lines, Canadian National Rys. Office, Winnipeg.

J. SCHOFIELD, heretofore Architect, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Architect, Western Lines, Canadian National Rys. Office, Winnipeg.

O. E. BARKER has been appointed Chief Dispatcher, Saskatoon, Sask., vice A. MacRae, transferred.

H. R. ARTHUR has been appointed Trainmaster, Saskatoon, Sask., vice D. W. Mahoney, transferred.

W. F. MILLER has been appointed Car Foreman, Trenton, Ont., vice — Walsh, who has been absent for some time on sick leave, during which time W. Dadswell was acting Car Foreman there.

R. W. MOORE, heretofore General Car Foreman, Western Lines, Canadian Government Rys., Cochrane, Ont., has been appointed District Car Foreman, Prairie District, Canadian National Rys. Office, Saskatoon, Sask.

T. W. WHITE, heretofore Inspecting Bridge Engineer, Canadian Northern Ry., Winnipeg, has been appointed District Engineer, Canadian National Rys., Edmonton, Alta.

J. BIRSE, heretofore Master Mechanic, District 3, Transcontinental Division, Canadian Government Rys., Fort William, Ont., has been appointed Assistant Master Mechanic, Central District, Canadian National Rys. Office, Sioux Lookout, Ont.

G. H. HEDGE, heretofore General Master Mechanic, Western Lines, Canadian Northern Ry., Winnipeg, has been appointed Works Manager in charge of Fort Rouge and Transcona Shops, Canadian National Rys. Office, Winnipeg.

The Sleeping, Dining and Parlor Car, Hotel and News Department is under the management of WALTER PRATT, Manager, Toronto, and A. S. McLEAN is Superintendent of Hotels, with office at Winnipeg. The train service is divided into three districts, with Superintendents, as follows: Lines east of Montreal, Superintendent, E. CAMERON, Halifax, N.S.; lines west of Quebec and Montreal to Port Arthur and Cochrane, Ont., Superintendent, EUSTACE SMITH, Toronto; lines west of Port Arthur and Cochrane, Ont., to Vancouver, B.C., Superintendent, J. M. GRIEVE, Winnipeg.

E. CAMERON has been appointed Superintendent of Sleeping, Dining and Parlor Cars, vice F. W. ROBERTSON, transferred. Office, Halifax, N.S.

JAMES F. COLEMAN has been appointed Assistant Superintendent, Sleeping, Dining and Parlor Cars. Office, Halifax, N.S.

J. O. Apps.
General Agent, Mail, Baggage and Milk Traffic, Canadian Pacific Railway.

J. E. LePage.
[illegible] Canadian Northern Ry., Quebec, Que.

S. D. [illegible] has been appointed Supervisor, Sleeping, Dining and Parlor Cars, Halifax, N.S.

JOHN A. McISAAC has been appointed Assistant Supervisor, Sleeping, Dining and Parlor Cars, Halifax, N.S.

S. R. CAIRNS has been appointed Inspector, Sleeping, Dining and Parlor Car, Hotel and News Department on all eastern lines. Office, Ottawa, Ont.

H. B. NEVIN has been appointed Inspector, Sleeping and Dining Car Department, Eastern Lines, Canadian National Rys., Toronto.

W. C. POTTS has been appointed Inspector, Sleeping and Dining Car Department, Eastern Lines, Canadian National Rys., Toronto.

J. W. KIMBALL has been appointed Superintendent, Boarding Car Department, Western Lines. Office, Winnipeg.

A. S. McLEAN, heretofore Assistant Superintendent of Hotels, Canadian Northern Ry., Port Arthur, Ont., has been appointed Superintendent of Hotels, Canadian National Rys. Office, Winnipeg.

F. H. KINNEAR, heretofore Assistant Purchasing Agent, Department of Railways and Canals, Ottawa, Ont., has been appointed chief clerk to General Purchasing Agent, Canadian National Rys., Toronto.

H. T. RAWLINGS, heretofore Chief Clerk to R. C. Vaughan, Assistant to President, Canadian National Rys., Toronto, has been appointed Lake Forwarding Agent and Fuel Inspector, with office at Rockefeller Building, Cleveland, Ohio, effective April 1.

L. E. PRATTE, of the Legal and Claims Department, Canadian Government Rys., has been appointed Claims Agent, Levis, Que., vice F. B. Atkinson, deceased.

ORANGE H. CLARKE, heretofore Western Counsel, Canadian Northern Ry., Winnipeg, has left the service. W. W. EVANS, heretofore Solicitor, Canadian Northern Ry., Winnipeg, has taken over, for the present, the duties performed heretofore by Mr. Clarke, and is acting for the Canadian National Rys.

The General Claims Department, Winnipeg, has been merged with the Legal Department there under W. W. EVANS, Solicitor; and A. E. MACDONALD, heretofore General Claims Agent, Winnipeg, having been appointed acting Superintendent, Dauphin, Man., as announced previously.

H. A. STUART, heretofore City Freight Agent, Winnipeg, has been appointed Division Freight Agent, Brandon, Man., vice R. M. MILLIKEN, transferred.

R. M. MILLIKEN, heretofore District Freight Agent, Canadian Northern Ry., Brandon, Man., has been appointed Division Freight Agent, Canadian National Rys., Regina, Sask., vice W. A. Whyte, transferred.

B. E. MARSALES, heretofore District Freight Agent, Canadian Northern Ry., Calgary, Alta., has been appointed Division Freight Agent, Canadian National Rys., Saskatoon, Sask., vice J. M. [illegible], whose appointment as Assistant General Freight Agent, Winnipeg, has been announced previously.

W. A. WHYTE, heretofore District Freight Agent, Canadian Northern Ry., Regina, Sask., has been appointed Division Freight Agent, Canadian National Rys., Calgary, Alta., vice B. E. Marsales, transferred.

C. H. HICKIE, heretofore Cashier and Paymaster, Western Lines, Winnipeg, has been appointed Local Treasurer, lines west of Port Arthur, Ont., Canadian

Northern Ry. System. Office, Winnipeg.

P. J. FARLEY, heretofore Assistant Paymaster, Western Lines, Winnipeg, has been appointed Paymaster, lines west of Port Arthur, Ont., Canadian Northern Ry. System. Office, Winnipeg.

L. C. GROOM has been appointed Auditor, Canadian Northern Ry. Land Department. Office, Toronto.

A. E. FIELD has been appointed Land Commissioner, Canadian Northern Ry., Western Lines. Office, Winnipeg.

Canadian Pacific Ocean Services, Ltd. R.S. ELSWORTHY, heretofore General Agent, Passenger Department, C.P.R., Minneapolis, Minn., has been appointed General Agent, C.P.O.S., Ltd., Chicago, Ill.

H. M. MacCALLUM, heretofore General Agent, Passenger Department, Chicago, Ill., has been appointed General Agent, Passenger Department, Toronto, vice I. E. Suckling, resigned.

R. E. ELSWORTHY, heretofore General Agent, Passenger Department, C.P. R., Minneapolis, Minn., has been appointed General Agent, Passenger Department, C.P.O.S., Ltd., Chicago, Ill., vice H. M. MacCallum, transferred.

Canadian Pacific Ry.—J. O. APPS, heretofore General Baggage Agent, has been appointed General Agent, Mail, Baggage and Milk Traffic, and his former position has been abolished. Office, Montreal.

W. E. ALLISON, heretofore Assistant General Baggage Agent, has been appointed Assistant General Agent, Mail, Baggage and Milk Traffic, Eastern Lines, and his former position has been abolished. Office, Montreal.

H. H. BOYD, heretofore Superintendent, Vancouver Division, British Columbia District, Vancouver, has been appointed Assistant Chief Mechanical Engineer. Office, Montreal. This position has been vacant since Mar., 1918, when W. H. Winterrowd was promoted to Chief Mechanical Engineer.

J. J. HORN has been appointed Superintendent, Kenora Division, Manitoba District, vice J. L. Jamieson, transferred. Office, Kenora, Ont.

J. L. JAMIESON, heretofore Superintendent, Kenora Division, Manitoba District, Kenora, Ont., has been appointed Superintendent, Vancouver Division, British Columbia District. Office, Vancouver.

C. H. FOX, returned recently from active service, has been appointed Division Engineer, Regina, Sask., vice M. Mackenzie, transferred.

H. R. MILES, heretofore Assistant Engineer, Montreal, has been appointed Division Engineer, Lethbridge, Alta., vice J. K. Yorston, transferred.

J. K. YORSTON, heretofore Division Engineer, Lethbridge, Alta., C. H. LARSON and J. R. PAGET, have been appointed locating engineers, Western Lines.

R. SINCLAIR, heretofore Trainmaster, Field, B.C., has been appointed Bridge and Building Master, Moose Jaw, Sask., vice J. McFadyen, decesead.

J. S. BRANSTON has been appointed agent, Moose Jaw, Sask., vice J. Cavanagh, transferred.

J. CAVANAGH, heretofore Agent, Moose Jaw, Sask., has been appointed acting agent, Outlook, Sask.

W. E. PIMLOTT has been appointed acting District Storekeeper, Saskatchewan District, Moose Jaw, vice I. G. Trudel, transferred.

F. G. BANNISTER, heretofore District Storekeeper, British Columbia District, Vancouver, has been appointed District Storekeeper, Alberta District. Office, Ogden, Alta.

I. G. TRUDEL, heretofore District Storekeeper, Saskatchewan District, Moose Jaw, has been appointed District Storekeeper, British Columbia District, vice F. G. Bannister, transferred, as reported in our last issue. Office, Vancouver.

D. O. WOOD, Assistant Export and Import Agent, Toronto, who was loaned to the British Ministry of Shipping (Canada), and occupied the position of Superintendent of Inland Transportation, at Montreal, for a considerable portion of the war, has returned to Toronto and resumed his duties with the company.

J. G. McNAB, heretofore District Freight Agent, Vancouver, B.C., has been appointed acting Division Freight Agent, Steamship Lines, Vancouver, B.C., vice F. H. Clendenning, transferred for service with the British Ministry of Shipping (Canada). Office, Vancouver, B.C.

G. S. BEER has been appointed City Passenger Agent, Toronto.

W. H. POLLEY has been appointed City Ticket Agent, Toronto.

H. W. Sharpe,
Master Mechanic, Quebec District, Eastern Lines, Canadian National Railways.

E. OFFICER has been appointed Travelling Passenger Agent, Calgary, Alta.

L. R. HART, heretofore General Agent, Passenger Department, Buffalo, N.Y., has been appointed General Agent, Passenger Department, Boston, Mass., vice E. F. L. Sturdee, transferred.

G. O. WALTON, heretofore City Passenger Agent, New York, has been appointed General Agent, Passenger Department, Buffalo, N.Y., vice L. R. Hart, transferred.

A. G. ALBERTSEN, heretofore City Ticket Agent, San Francisco, Cal., has been appointed General Agent, Passenger Department, Minneapolis, Minn., vice R. S. Elsworthy, transferred to Canadian Pacific Ocean Services' service.

E. F. L. STURDEE, heretofore General Agent, Passenger Department, Boston, Mass., has been appointed General Agent, has been appointed General Agent, Passenger Department, Seattle, Wash., vice E. E. Penn.

E. E. PENN, heretofore General Agent, Passenger Department, Seattle, Wash., has been appointed General Agent, Passenger Department, Portland, Ore.

A. P. VILLAIN has been appointed City Ticket Agent, San Francisco, Cal.

H. GATJE has been appointed Travelling Passenger Agent, San Francisco, Cal.

G. H. HUTTON, heretofore Superintendent, Dominion Experimental Farm, Lacombe, Alta., has been appointed Superintendent of Agriculture and Animal Industry, Department of Natural Resources, vice J. G. Rutherford, C.M.G., who resigned on his appointment to the Board of Railway Commissioners, as announced previously. Office, Calgary, Alta.

Grand Trunk Ry.—J. L. KENNY, formerly Division Signal Foreman, Belleville, Ont., and during the war, in active service with the 4th Canadian Railway Troops, has been appointed Supervisor of Signals, vice E. L. Dyson, assigned to other duties. Office, Montreal.

H. R. McLENNAN, heretofore Chief Dispatcher, Brantford, Ont., has been appointed Trainmaster, Districts 20 and 21, London Division, Ontario Lines, vice R. E. Newcomer, resigned. Office, Brantford, Ont.

W. K. ROGERS has been appointed Chief Dispatcher, Districts 20 and 21, London Division, Ontario Lines, Brantford, Ont., vice H. R. McLennan, promoted.

JAS. EDWARD, heretofore Division Freight Agent, Ottawa, Ont., has been appointed Division Freight Agent, Montreal, vice G. T. Pettigrew, resigned.

R. J. S. WEATHERSTON, heretofore Division Freight Agent, Stratford, Ont., has been appointed Division Freight Agent, Ottawa, Ont., vice Jas. Edward, transferred.

V. G. SNELL, heretofore Commercial Agent, Moncton, N.B., has been appointed Division Freight Agent, Stratford, Ont., vice R. J. S. Weatherston, transferred.

R. H. WEBSTER, heretofore Travelling Freight Agent, Moncton, N.B., has been appointed Commercial Agent there, vice V. G. Snell, promoted.

H. B. GIBSON, heretofore chief clerk, Commercial Agent's office, Moncton, N.B., is reported to have been appointed Travelling Freight Agent there, vice R. H. Webster, promoted.

R. CAPSON, heretofore in Assistant General Freight Agent's office, Canadian Government Rys., Moncton, N.B., is reported to have been appointed chief clerk, Commercial Agent's office, G.T.R., Moncton, N.B., vice H. B. Gibson, promoted.

Grand Trunk Pacific Ry.—J. H. GROAT, heretofore Chief Dispatcher, Biggar, Sask., has been appointed Assistant Superintendent there, vice C. B. Thompson, transferred.

C. B. THOMPSON, heretofore Assistant Superintendent, Biggar, Sask., has been appointed Assistant Superintendent, Edmonton, Alta., vice S. A. Milner, who has returned to train service at Rivers, Man.

J. T. B. FOOTE, heretofore chief clerk, Fort Garry Hotel, Winnipeg, is reported to have been appointed Assistant Manager there.

Kettle Valley Ry.—ANDREW McCULLOCH, heretofore Chief Engineer and acting General Superintendent, has been appointed Chief Engineer and General Superintendent. Office, Penticton, B.C.

Michigan Central Rd.—C. L. SINGER is reported to have been appointed District Passenger Agent, St. Thomas, Ont., vice S. H. Palmer, retired.

The Canadian Railway War Board's Work.

Advancing Demurrage Charges.—While the practice of advancing demurrage charges, which have accrued on loaded cars in transit, against the freight for collection from consignee at destination, has objectionable features, it is considered the only practical method of securing payment of such charges, and should therefore be recognized by all railways as a proper lien against the traffic. In order to bring about uniform method of handling advanced demurrage charges, on Canadian railways, it is suggested that the following regulations be made effective by Canadian lines, immediately:—

"Cars containing freight, the billing for which calls for the collection or car demurrage charges which have accrued on connecting lines will not be accepted from connections unless the charges are guaranteed by such connections and notation to that effect made on billing or transfer, in which case the charges may be shown as 'advances.'

"Car demurrage charges accruing at loading stations must be collected or guaranteed by shipper (in writing) before shipping instructions are accepted, or car forwarded. If charges are guaranteed by shipper notation to that effect must be made on billing.

"Car demurrage charges accruing en route, or at frontier points, due to reconsignment, awaiting necessary customs papers, or other reasons for which the shipper or consignee is responsible, may be billed forward as 'advances,' and if connecting line demands it, be guaranteed and notation to that effect made on billing."

Carload Traffic Arriving Ahead of Billing.—Considerable inconvenience is experienced, by both consignees and the railways, due to less than carload traffic arriving at destination ahead of billing, due, on many occasions, to billing and shipments becoming separated at transfer or other stations enroute and held awaiting location of shipments. In order to overcome this difficulty as nearly as possible it is suggested that railways issue the following instructions in the matter: "When way bills covering less than carload shipments become separated from the freight, they shall be promptly mailed to billed destination by the agent at junction, transfer, or other station."

Continuation of Organization. — The Canadian Railway War Board, made necessary by the war, in order to centralize the control and co-ordinate the effort of Canada's railways, is among the new things likely to remain to give service in time of peace. It has been decided to extend the term of its activities indefinitely. It retains for the time being the name under which it has become known. It continues as a voluntary, rather than compulsory, association of railway managements, thus preserving what has had to be sacrificed in some countries in order to obtain even a semblance of co-ordination, to wit, the useful features of competition between the various great groups of railway workers; competition protecting the esprit de corps of employes, the alertness of executive officers and the enterprise of the directorates; placing no road directly or indirectly under the power of its competitor; promoting rivalry as to the quality of service and the welfare of the respective territories served, but without permitting, amid such rivalries, old time anxieties for tonnage to overtax the facilities of any one carrier, or to lead to indirect or uneconomic routings of goods. The Canadian Railway War Board looks forward to receiving the continued generous support of the shipping and travelling public, without which its efforts heretofore or in the future could come to nothing.

Diversion of Private Tank Cars.—On occasions it is necessary to divert tank cars of private ownership, for the purpose of transferring contents of cars, which have developed defects enroute, preventing loaded movement to destination. It is objectionable to owners to have their cars diverted by the railways in any circumstances, but particularly so when this is done without advice from the railways of action taken. In order that owners or lessees may be informed as to such diversions, and to guard against improper handling of diverted cars, after arrival at destination, it is suggested that the following regulations be put into effect at once by Canadian railways:—

"1. The diverting road must promptly notify both consignor and consignee, as shown by the slip or other way bill covering the empty car, or if this information is not shown, notify car owners as shown by Boyd's Tank Car Circular 6M, giving new destination and terminating railway in each case. Furnish to the agent of the terminating line, at the destination of the transferred load, a copy of the original slip bill or way bill, on which the empty tank was moving, showing clearly that the car has been moved out of route in an emergency.

"2. The agent of the terminating line at such destination must, upon release of the car, promptly rebill and forward same to its original destiuation, unless otherwise instructed by the owner or owner's authorized represetnative."

Goods for War Relief Societies. — Referring to circular 67, May 1, 1918, providing for free carriage of goods for account of certain war relief societies and supplement 2, Jan. 10, 1919, extending the authority for such free carriage to April 1, 1919. The board is now advised that the free carriage of such goods will not be required after April 1 next and member lines are directed to cancel any regulations they have in force calling for handling of goods free of charge for account of war relief societies, including those named in circular 67, effective as from that date.

Handling of Freight Between Canadian and U.S. Lines.—Pending issuance of further instructions, the following regulations will govern the handling of freight cars between railways operating in Canada and between Canadian and United States roads, in so far as the several points covered are concerned:—

1. Regulations issued by this board restricting use of Canadian owned cars to movement between points in Canada have been cancelled and such cars may be used in international as well as domestic service.

2. The arrangements made with the U. S. Railroad Administration provide for prompt return to Canada, either loaded or empty, of all Canadian freight cars received in the U.S. As all U.S. railways are working under joint regulations and conditions, it would obviously cause delay and confusion in the return of Canadian equipment from the U.S. were we to insist upon cars being sent back on home route, or direct to owning road; therefore, Canadian cars will be accepted from U.S. roads regardless of class or railway ownership, at any junction point between the U.S. and Canadian lines, such cars, after receipt by the latter, to be forwarded promptly, either loaded or empty, to the owning line, by the most direct available route. In the event of excessive movement of empty cars via a particular junction point or points, under the foregoing arrangement, the line concerned will promptly notify this board, giving full report of the circumstances so that remedial measures may be adopted.

3. Freight cars owned or controlled by U.S. lines must be promptly loaded to any point in the U.S. or to a junction point with a U.S. line, or sent empty to any U.S. railway via the nearest junction point.

4. Car ownership regulations and methods will continue to govern the handling of Canadian cars on Canadian railways and the following adaptation of the American Railroad Association Car Service rules 1 to 4 inclusive will apply:—

(Note— Where the term "foreign car" is used hereunder it is understood that reference is made to such cars of Canadian ownership only, article 3 covering generally the handling of U.S. owned cars in Canada.)

(a) A foreign car received under load may be forwarded to destination.

A foreign car may be loaded in local service in the direction of the home road, or may be moved once, loaded or empty, locally, in an opposite direction from the home road if to be loaded in accordance with the following: A railway receiving a loaded car from an industrial railway or a shipper must require that such car be routed in accordance with these regulations.

(b) A foreign car belonging to a direct connection may be loaded via any route so that the home road shall participate in the freight rate, or must be returned to the home road.

(Definition of direct connection.—All lines interchanging cars at a common point, or within switching limits, either over their own rails or through intermediate line or lines, or via car ferry, or float, within such switching limits shall be considered direct connections under these rules.)

Unless otherwise arranged between the interested carriers, empty cars belonging to direct connection, for which loading in accordance with these rules is not available, must be returned to owner at point at which received.

(c) A foreign car belonging to other than direct connection must be

(1) loaded via any route so that the home road shall participate in the freight rate.

(2) In absence of loading as per clause (1), it must be loaded to a point on direct route to home road.

(3) In absence of suitable loading it must be sent empty to the owning road via the most direct available route, or via route arranged for the movement by the interested carriers.

(d) It is desirable in the interests of efficient maintenance of equipment and for other equally important reasons, owners' cars should be kept in service on home rails to the greatest possible extent; therefore, such cars should be used in preference in the handling of local traffic, and foreign cars supplied, where it is possible to do so, for the carriage of shipments to off line points.

The foregoing regulations outline a general policy for railways operating in this country, and are subject to modification by the issuance of special instructions as may be necessary from time to time, applicable to specific classes of equipment, traffic or districts.

Notations on Way Bills.—Notations on way bills made with lead pencil soon become indecipherable, therefore, it is suggested that railways in issuing instructions covering the making of alterations in way bills should stipulate that lead pencil must not be used for this purpose.

Reduced Passenger Fares for Soldiers. Complaint having been made to the Minister of Railways in connection with the cancellation of reduced passenger fares for soldiers, the matter has received further consideration by the board's passenger traffic section, and it has been arranged that the privilege whereby members of the Canadian Expeditionary Force were granted round trip tickets, at rate of single fare, for the round trip, when visiting their homes, etc., upon production of certificate showing they were actually on the strength of the Canadian Expeditionary Force, which was cancelled at the end of 1918, is to be restored until September 30, 1919. Arrangements have been made with the Militia Department covering the details of the methods under which reductions are to be granted.

Seats on Locomotives for Brakemen.—Representations have been received from members of the Train Service Employees' Organization, with respect to the provision of suitable seating accommodation in locomotive cabs, for front end brakemen on freight trains, who are required to ride on the locomotive. It is realized that in the case of some types of locomotives, particularly the larger power, it is impossible, on account of cab width limitations, and the narrow space between the fire box and the side of the cab, to install seats of the dimensions suggested by the employes. It is the opinion of the board, however, and member lines are hereby requested to arrange accordingly, that convenient and comfortable seats should be provided, commensurate with the possibilities of complying with such a request, according to the locomotive cab conditions above mentioned.

Use of U.S. Open Topped Cars.—The provisions of the board's circular 64 and supplement 1 thereof, prohibiting the use of certain classes of United States owned open top cars, for return loading to the owners, or in direction thereof, are cancelled.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaskan Railway.—The United States Congress was asked Feb. 8 for an appropriation of $13,800,000 to complete the construction of the government railway in Alaska, which the Alaskan Railroad Commissions estimate will take three years to accomplish. This appropriation includes $4,000,000 of the original estimate of $35,000,000 for the construction of the road and a deficiency appropriation of $9,800,000 representing the increase in the cost of practically everything that is necessary for the work. It is estimated that the road can be finished for $44,800,000. While work was never stopped, it was slowed down materially by the war, which drew thousands of men out of the territory and cut off the supply of steel.

Alberta & Great Waterways Ry.—Five miles of track was reported to have been laid to the edge of the Clearwater Valley, at the end of January. The erection of the bridge across Hanging Stone Creek was then reported to be in progress. About 12 miles more track has to be laid before the line will reach its terminus at McMurray. (Feb., pg. 79.)

Athabasca & Grande Prairie Ry.—The Edmonton, Alta., Bulletin, referring to the application to the Dominion Parliament for the incorporation of a company with this title, states the route of the projected railway is from Solomon station on the Canadian Northern and Grand Trunk Pacific Railways, in the Jasper Pass, about 8 miles east of the Brule mines, to the junction of the Muskeg with the Smoky River, and thence to Dunvegan on the Peace. Whatever purpose there is in the proposal relates to rail connection between the C.N.R. and the high grade coal deposits at the Grande Cache at the exit of the Smoky River from the mountains. The distance from the railway at the mouth of the Solomon River with the Grand Cache is about 80 miles. The direction is northwesterly along the base of the mountains. Construction is quite feasible, but what the grade may be, in default of actual survey, is unknown. As the Hay and Baptiste Rivers are to be crossed on the way to the Muskeg River, which is to be followed down its course to the coal area, there may be some stiff grades. The continuation of the line from the Grande Cache to Dunvegan is said to be only camouflage. There would be no sound purpose in its construction, but the section from near Brule to the Grande Cache will come sometime. (Feb., 79.)

Dolly Varden Mines Ry.—The British Columbia Legislature is being asked to extend the time within which this projected railway from the company's wharf, at Arctic Arm, to the Dolly Varden and Wolfe mining claims in the Kitgault Valley of northern British Columbia may be built.

When the bill was before the legislature Feb. 10, it was resolved, after discussion, that the petition of the Taylor Engineering Co., by A. J. Taylor, and the company's petition be referred to a select committee to enquire into all the allegations contained in the petitions and to report its findings and recommendations to the house. The character of the allegations were not disclosed. (Dec., 1917, pg. 470.)

English Valley & Hudson Bay Ry.—The Dominion Parliament is being asked to extend the period within which the company may build its projected railway from Brereton station, Man., on the National Transcontinental Ry., mileage 1,735 from Moncton, to the English River, Ont., between the eastern boundary of Manitoba and the 94th meridian of longitude. H. A. Stewart, Toronto, is solicitor for the company. (Oct., 1917, pg. 393.)

Essex Terminal Ry.—The Dominion Parliament is being asked to extend the time within which the company may build its authorized branch line from Ojibway to Pelton, Ont., 7 miles, and connect the same with the Michigan Central Rd., the Pere Marquette Ry., and the Windsor, Essex & Lake Shore Rapid Ry., or any of them. (Jan., pg. 26.)

Grand Trunk Pacific Ry.—W. P. Hinton, Vice President and General Manager, returned to Winnipeg, Man., Feb. 14, after a trip of inspection over the company's lines. He is reported to have said at Edmonton, Feb. 8, that there was not much chance of the company undertaking any branch line construction this year. Labor and material were too high to warrant the large expenditures necessary. While there was still an ample field for railway expansion, it would unduly hinder the future to build branch railways at present prices. At Calgary, on Feb. 12, the construction of a spur track along Fifth Ave. to open up industrial sites was discussed, and a plan will be laid before the city council at an early date. At Regina, Feb. 13, the question of a union station and matters affecting the building of an hotel were taken up. Mr. Hinton is further reported to have said that the arrangement for running through Saskatoon, on the C.P.R. tracks, using that company's station and yard facilities, was found to be very satisfactory all round, although the increased length of line was between 4 and 5 miles. At Winnipeg Mr. Hinton gave out the following statement:—"In view of the fact that the government's policy as to the nationalization of the Grand Trunk Pacific has not yet been stated, we are marking time in our construction plans for the coming year." (Feb., pg. 79.)

Grand Trunk Ry.—Local reports state that considerable extensions and improvements are to be made at the company's yards at York, near Toronto, and that plans have been prepared. It is also reported that part of the work now done at the Mimico yards will be transferred to York. When the Mimico yards were laid out, some years ago, the York yards were almost closed down, the train crews removing to Mimico. The increase in traffic is reported to be so great as to necessitate the reopening of the yards at York.

The work of strengthening the bridges on the line between Palmerston and Owen Sound, Ont., is reported to have been completed.

A press dispatch states that work was started Feb. 20 on a 3,000,000 bush. grain elevator at the G.T.R. terminals at Portland, Me. The company has two elevators there already.

A recent press report stated that plans had been prepared for removing the company's yards east of London, Ont., contiguous to Highbury Ave., and that work would be started on laying out 25 tracks there. Superintendent Forrester is reported as stating that the company was connecting up some tracks at the point mentioned; that there had been some talk about the other matter, but that nothing had been decided and that no plans had been prepared. (Jan., pg. 26.)

Greater Winnipeg Water District Ry. At a meeting of the Great Winnipeg Water District Commission, Feb. 6, the question of applying to the Manitoba Legislature for authority to operate the railway, built for construction purposes, as a regular freight and passenger line, was laid over for further consideration. The idea behind the project is that Dominion and Manitoba subsidies could be obtained and the line put in such a condition that it would command a better price if it was decided to offer it for sale. It was suggested that the question of the future of the line should be decided by a vote of the electors of the district. (Mar., 1918, pg. 98.)

High River, Saskatchewan & Hudson Bay Ry.—The Dominion Parliament is being asked to extend the time within which the company may build this projected railway from any point in Tps. 25 to 28, Range 1, West 4th Meridian, Alta., to Saskatoon, Sask., to the Saskatchewan-Manitoba boundary between Tps. 52 to 56, and thence to a junction with the Hudson Bay Ry. at Pas, Man., under construction by the Dominion Government. (See High River & Hudson Bay Ry., Jan., 1917, pg. 20.)

Kettle Valley Ry.—Clearing up operations are reported to be in progress at the rock slide at Petain, on the Coquihalla section of the line, upon which traffic has been suspended temporarily. Work is also in progress between Jessica and Portia, widening cuts and otherwise improving the roadbed. The matter referred to above is not expected to be reopened until the summer, traffic being carried meanwhile via Spences Bridge and Merritt. (Feb., pg. 79.)

Lacombe & Blindman Valley Ry.—The Premier of Alberta stated in the legislature recently that the government had been obliged to take over this line, and that an extension must be built with as little delay as possible.

We are officially advised that the line is built and track laid between Lacombe and Bentley, approximately 20 miles, and is graded for 15 miles further, to within 1½ miles of Rimby, the projected terminus. The portion between Lacombe and Bentley is being operated for freight and passenger traffic, a service of three trains a week being provided. Steam locomotives are being used for normal operation, and an internal combustion motor car for summer vacation service. The motive power comprises one 51-ton 2-6-0 mogul type locomotive; one 20-ton dinkey locomotive, and one 20-ton motor railway car of 100 h.p., equipped with Hill-Shaw oil transmission, fitted with couplers and air brakes, for hauling a light train of standard equipment. This car will accommodate 24 passengers and has a compartment for baggage. The line is being operated by F. T. Ames as Superintendent, under the direction of H. Warnar, Railway Engineer for Alberta. (May, 1918, pg. 186.)

Magdalene River Valley Ry.—In order to allow of the reduction of the gradient on the location of the present projected line of this railway on lot 37 of St. Maxime du Mont Louis, the Quebec Legislature is being asked to authorize a change of location on about 4,500 ft., of which 2,500 ft. are in the Magdalene River Seigniory, northly to a location at least 350 ft. from the east bank of the Magdalene River. (Feb., pg. 79.)

Medicine Hat, Alta.—The Medicine Hat City Council is applying to the Alberta Legislature for the confirmation of a bylaw leasing to Joseph B. Swan the right of way for a railway spur in the city, and granting him an option to purchase the spur track and right of way. (Jan., pg. 26.)

Medicine Hat Central Ry.—The Alberta Legislature is being asked to incorporate a company with this title to build a railway from Coutts, on the International Boundary, northeasterly, crossing the C.P.R. Lethbridge-Weyburn line near Foremost, and the C.P.R.'s Crowsnest line at Whitla or Winnifred, thence to Ajax on the South Saskatchewan River, and on to Medicine Hat, and thence northeasterly to the Alberta-Saskatchewan boundary, approximately due east of Hilda post office, Alta., the total length of the line being approximately 200 miles. Laidlaw, Blanchard & Co., Medicine Hat, Alta., are solicitors for applicants.

Pacific Great Eastern Ry.—The British Columbia Premier, in the course of a speech at Vancouver recently, is reported to have said that as soon as the frost is out of the ground work on the extension of this railway will be started. An adequate sum for this purpose will be included in the estimates to be submitted to the legislature, on which the government will draw from time to time as construction proceeds. (Feb., pg. 79.)

Quebec & Ungava Ry.—The provisional directors named in the application to the Quebec Legislature for the incorporation of a company with this title are Viscount Templeton, London, Eng.; the Earl of Clarendon, London, Eng., and Pickering, Ont.; B. Spring Rice, Burwash, Sussex, Eng.; E. S. Homewood, London, Eng., and H. C. Thomson, London, Eng. Lord Templeton was connected with the Atlantic, Quebec & Western Ry. or some of its associated enterprises, which failed. The company desires to have power to build a railway from Seven Islands, on the north shore of the St. Lawrence River, in Saguenay County, northerly to Lake Menihak, thence westerly or northwesterly to the most suitable harbor between the mouth of Big River and Nastapoka Sound on Hudson Bay, with branch lines. The applicants ask power to acquire and develop water powers, timber limits, fishery rights, and conduct various other business within the territory to be opened up by the line. See St. Felicien & Ungava Ry. (Feb., pg. 80.)

Quebec Central Ry.—We are officially advised that contracts have been let to the Sherbrooke Construction Co. for masonry and other work, and to the MacKinnon Steel Co. for the steel construction for car shops and other buildings for the company at Newington, Que. The work which had then been done, and the further work proposed to be done in connection with these shops was fully described in Canadian Railway and Marine World, Sept., 1914, pg. 397. A plan of the layout was also given. The general holding up of railway work resulting from war conditions prevented the continuance of the work at that time, and the company is now taking up the programme of improvements, the conditions being again favorable. April, 1916, pg. 139.)

St. Felicien & Ungava Ry.—The provisional directors named in the application to the Quebec Legislature for the incorporation of a company with this title are Viscount Templeton, London, Eng.; the Earl of Clarendon, London, Eng., and Pickering, Ont.; B. Spring Rice, Burwash, Sussex, Eng.; H. C. Thomson, London, Eng.; J. T. Ross, Quebec. The applicants ask for power to build a line from St. Felicien, St. John County, to Lake Mistassini, thence to Lake Nichikun to Lake Petitsikapau, or by an alternative route between the same points. The applicants also ask for power to acquire timber limits, water powers and fishery rights, and to develop the same, and to carry on other businesses within the territory reached by the line. (See Quebec & Ungava Ry.)

St. John & Quebec Ry.—It was reported in Fredericton, N.B., Feb. 5, that notice had been served on the Nova Scotia Construction Co., calling for the completion of the Gagetown-Westfield section of the line by June 15. At the end of 1918 it was reported that there were about 7 miles to be completed, and that ballasting had not been started on the 30 miles on which track had been laid.

A Fredericton report of Feb. 7 states that the steel bridge work on the extension has been completed and that the Canadian Bridge Co.'s erecting gangs have returned to Walkerville, Ont. It has been decided to put in only a temporary span on the highway bridge over the Nerepis, owing to the high cost of steel. The concrete abutments for the bridge are completed and will be utilized for the temporary span. It is estimated that the work to be done will cost about $100,000. One of the most important pieces of work is the widening of the Nerepis bridge embankment, which C. O. Foss, Chief Engineer, is quoted as stating will be done by the company's own forces on the unit basis. Tenders for installing a number of loading platforms on the extension have been called for. (Feb., pg. 80.)

Railway Construction for Saskatchewan.

At the Saskatchewan Legislature's closing sitting, Feb. 5, an address to the Governor General was adopted which included the following paragraph:—The early announcement by the Dominion Government of its railway policy, in order that the uncertainty now surrounding the railway situation in Saskatchewan be removed and that the Provincial Government and other authorities may, if necessary, make suitable arrangements for the required facilities."

The resolution and terms of the address were discussed at several sittings before being adopted. Under the legislature's railway building plan the province guaranteed Canadian Northern Ry. and Grand Trunk Pacific Ry. securities, either directly or through subsidiary companies, for the purpose of building certain branch lines within the province. There has been some construction on a number of these lines, while nothing has been done on others. The taking over of the Canadian Northern Ry. by the Dominion has affected the situation with regard to its lines, and the Saskatchewan Legislature desires to have the situation cleared up, so that railway accommodation may be provided at points where it is required.

Re-employment of Railway Men.—The Canadian Railway War Board's Winnipeg office is reported to have announced that railway employes from western points who enlisted in the Canadian Expeditionary Forces, as they are being discharged are being reinstated in the positions they held at the time of enlistment, or in equivalent positions, provided they are physically fit to do the work required. When they are not physically fit efforts are being made to provide them with positions which they are capable of filling. The railways have given orders that, where new employes are being taken on, returned soldiers are, in every case, to be given the preference.

The Prince Edward Island Aerial Transport Co. has been incorporated under the Dominion Companies Act, with office at Charlottetown, P.E.I., and authorized capital of $[illegible], to manufacture and deal in aeroplanes, balloons, airships and flying machines of all kinds, to establish aerodromes, etc., to establish and maintain lines of regular services of aircraft of all kinds, and to carry on business as carriers of passengers and goods by air, sea, river, canal or otherwise, in Canada and elsewhere. The provisional directors are: L. A. David, K.C., and other Montrealers.

Among the Express Companies.

The Canadian Northern Ex. Co. has closed its office at Bears Pass, Ont.

The Canadian Northern Ex. Co. has closed its office at Moscow, Ont.

F. V. Clare, heretofore agent, Canadian Ex. Co., Moose Jaw, Sask., has been appointed route agent, Winnipeg, vice F. Sails, resigned.

J. T. Madigan, heretofore chief clerk to Superintendent, Canadian Ex. Co., Toronto, has been appointed route agent, Hamilton, Ont.

R. J. Timpson, heretofore stenographer, has been appointed chief clerk to Superintendent, Canadian Ex. Co., Toronto, vice J. T. Madigan, promoted.

H. W. Lennox, heretofore chief clerk, Ottawa, Ont., has been appointed agent, Dominion Ex. Co., there, vice G. Parker, whose appointment as Superintendent, Eastern Division, Toronto, was announced in our last issue.

William Walsh, General Superintendent of Stables and Street Equipment, Dominion Ex. Co., Toronto, who died there Dec. 2, 1918, left an estate of $29,478.55. The residue, after payment of bequests of $5,000 and $2,000 to a step-sister and step-brother, respectively, was left to the widow.

An act passed by the Saskatchewan Legislature recently, for the taxation of certain companies, provides that every express company shall pay $150 for each city in which it transacts business; $50 for each town, and $10 for each office in any other place with a population of 200 or more.

W. C. Muir, General Superintendent, Canadian Northern Ex. Co., will probably remove his office from Winnipeg to Toronto in the spring. No announcement has been made as to the extension of the Canadian Northern Ex. Co.'s operations over the Intercolonial, National Transcontinental and Prince Edward Island Railways, but it is probable that this will occur before many months are over.

George Parker, whose appointment as Superintendent, Eastern Division, Dominion Ex. Co., Toronto, was announced in our last issue, was born at Ottawa, Ont., Jan. 6, 1876, and entered the company's service Oct. 19, 1892, since when he has been, to Apr., 1904, successively, clerk, station foreman, cashier and chief clerk, Ottawa; Apr. to Dec. 31, 1904, route agent, Ottawa; Jan. 1, 1905, to Dec. 31, 1918, agent, Ottawa.

The American Railway Ex. Co. has filed with the Interstate Commerce Commission, an application to increase the rates applying to or from all its offices and those of the Canadian, Canadian Northern and Western Ex. Co.'s in the U.S., and between its offices and express offices in Canada and Newfoundland, in order to align those rates with the general increases authorized by the Director General of the U.S. Railroad Administration.

Railway Lands Patented.—Letters patent were issued during January respecting railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Alberta & Great Waterways Ry.	6.27
Calgary & Edmonton Ry.	117,633.92
Canadian Northern Alberta Ry.	190.00
Canadian Northern Ry.	3,199.00
Canadian Pacific Ry.	15.02
Qu'Appelle, Long Lake & Saskatchewan Rd & Steamboat Co.	68,781.88
Total	189,646.69

Electric Railway Department

Ottawa Electric Railway Refused Increases in Suburban Fares, by Board of Railway Commissioners.

Sir Henry L. Drayton, Chief Commissioner, Board of Railway Commissioners, gave the following judgment Feb. 10:—The applications of Westboro Police Village and Nepean Township, for an order disallowing the Ottawa Electric Ry.'s proposed tariff C.R.C. 5, published and filed to become effective Nov. 18, 1918, were heard jointly in Ottawa on Nov. 18, 1918, and Dec. 2, 1918. At the close of the hearings further statistics were to be filed. These have since been filed, and the matter is now ripe for adjudication. At the hearings the City of Ottawa intervened, as well as certain property owners, in support of the applications of Westboro and Nepean for the disallowance of the tariff. The tariff complained of provides, inter alia, for fares on the following basis:—

Cash Fares Between 6 a.m. and 12 Midnight.

	Adults	Children under 10
Within zone 1, 2, 3 or 4......	5 cents	3 cents
Between zone 1 and zone 2 or 3	10 "	6 "
Between zone 1 and zone 4...	15 "	9 "
Between zone 2 and zone 3...	15 "	9 "
Between zone 2 and zone 4...	10 "	6 "
Between zone 3 and zone 4...	20 "	12 "

Between 12 midnight and 5.30 a.m., double the above fares.

Special Tickets.

Between zone 1 and zone 2 or 3.....3 tickets 25c
Between zone 1 and zone 4.........2 tickets 25c

Workmen's Tickets.—Good only within zone 1, from first morning trip until 7.30 a.m., and between 5 and 6.30 p.m: Thirty-three tickets $1; eight tickets 25c.

School Children (under 14 years of age).—Good only between 7 and 9.30 a.m., 11.30 a.m. and 1.30 p.m. and 3.30 and 5 p.m.: Forty tickets $1. One ticket for each zone travelled.

Sunday.—Seven tickets 25c. One ticket for each zone travelled.

Limits of Zones.

Zone 1—Within municipal limits of City of Ottawa and beyond to the Experimental Farm and to Cloverdale Ave. on Rockcliffe line.

Zone 2—West of zone 1, to and including McKellar.

Zone 3—East of Cloverdale Ave. to and including Rockcliffe Rifle Range.

Zone 4—West of McKellar, to and including Britannia-on-the-Bay.

This tariff was suspended by the board's order 27830, and the old tariff still remains in force and effect. The new tariff would radically change the fare basis. As matters now stand, to give an extreme illustration, a passenger is carried from Britannia-on-the-Bay to the rifle range, involving a movement of 11.70 miles, for a fare of 5c. It is obvious that if the company was operating only for such a distance and at such a rate, its operation could not continue; the return is not compensatory, the actual cost of operation is much greater. On the other hand, under the company's proposal, for the same trip a fare of 20c would have to be paid, an increase of 300%. The old rate, approximating 0.43c a mile, becomes approximately 1.71c. This again, heavy as the increase is, would be well below the recognized standard mileage rates were this company a radial company, and not really an urban system with feeders.

Another movement, not so extreme, but still long, is that from Britannia-on-the-Bay to the corner of Rideau and Charlotte Sts., 8.68 miles. Under the proposed tariff the old rate of 5c now applicable would become 15c, and the return per mile of 0.576 would be increased to 1.72c.

The company has filed statements which clearly establish that the operation of the extension to Britannia, standing by itself, is not remunerative. If the operation of this line can be so considered, it is clear that the company is entitled to an increased remuneration for the service it performs on it. The determination of this issue is attended with difficulty. The company operates in Ottawa under agreement with the city dated June 28, 1893. The company's franchise expires Aug. 13, 1923. The rates which the company desires to put into effect in each zone, are the rates reserved by the agreement, paragraph 46 of which reads:—

> "46. No higher fare than 5c shall be charged for the conveyance of one passenger from one point to another on the said line, and branches thereof, within the present city limits, and for children under 10 years of age no higher fare than 3c shall be charged except between the hours of 12 o'clock midnight and 5.30 a.m."

It will be observed that the contractual fare limitation applies merely to the limits of Ottawa as then constituted. Ottawa's boundaries in 1893 were, on the east, at the material point, viz., on the line running to the rifle range—Riverside Terrace, the city limits practically ending with the grounds of Government House, Lisgar Road, and Maple Lane. These easterly boundaries have not been extended. The other material boundary is to the west. Along the line of Somerset St., where the cars run, this boundary was Bayswater Ave., the general western boundary being the C.P.R. right of way up to Somerset St., when a jog was made to the west and the line continued up Bayview Road north. On July 27, 1907, the city's western boundary south of the G.T.R. and north of Caroline Ave. was extended to Holland Ave. On Dec. 19, 1907, the city was again extended to the north of the G.T.R. and south of Scott St. to the present westerly city limit. The route to Britannia ran through the territory covered by this annexation. The new western city boundary resulting from this annexation is described in the evidence as the division line between Lots 33 and 34 in the 1st Concession, Ottawa Front, of Nepean Tsp., along the company's line to Britannia. This new boundary is some 2,000 ft. west of Holland Ave. The city's westerly boundary was squared off by the annexation of Feb. 4, 1909, which extended part of the city lying north of Caroline Ave., and south of the G.T.R. tracks to the prolongation of the westerly boundary of the territory annexed Dec. 19, 1907.

The section of the Ottawa agreement above set out, confined as it is to the old city boundaries, does not apply to the territory covered by these annexations. The company, in a further agreement of April 8, 1895, made with the city, contracted to build, equip, and operate the line to the Experimental Farm. The resolution of the city council of April 1, 1895, adopted by the agreement and referring to the branch to the Experimental Farm, reads:

> "2. That the company be bound to have a line of railway fully equipped and in operation from the city to the Experimental Farm, before the end of the present year (1895), and that the company be allowed to charge only city rates for any passenger from any point within the city limits to the Experimental Farm (or any intermediate point), and the same rates from the farm (or any intermediate point) to any part of the city."

The route to the farm, as provided in the agreement relating to it, was not followed, and the line as today operated to the Experimental Farm runs from the Britannia line south along Holland Ave. to and along Carling Ave., and thence to the Experimental Farm. The company does not seek to raise the rates to the Experimental Farm; it is included in zone 1, the company admitting that the rates of fare are governed by agreement, and are not sought to be advanced. In like manner the territory annexed Dec. 16, 1907, which consisted of the former Village of Hintonburg, is, as far west as Holland Ave., included in the same zone. Here again rates are covered by the agreement of May 11, 1895, the company's agreement with Hintonburg containing the following provision:

> "37. No higher fare than 5c shall be charged for the conveyance of one passenger from one point to another on the said line and branches thereof within the present and any future limits of the Village of Hintonburg, and from thence to any point within the present limits of the City of Ottawa or to the Experimental Farm, and for children under 10 years of age no higher fare than 3c shall be charged, except between the hours of 12 o'clock midnight and 5.30 a.m."

The principle on which the company has constructed its first zone, makes it applicable, not only to Ottawa as constituted in 1903, but as extended on the east to Cloverdale and on the west through the former Municipality of Hintonburg to Holland Ave. I am of the opinion that this zone in any event cannot stop at Holland Ave. On the other hand, it must be continued to the present existing city limit. The company's agreement with Hintonburg limits the rate to 5c, not only within present and future limits of the village, but from it to any point within the then (1907) limits of the City of Ottawa, or to the Experimental Farm. Hintonburg was to get Ottawa rates. On the evidence Hintonburg's westerly limit was not Holland Ave., but was the division line which now constitutes the westerly city limit already described. In any event, bound as the company is by its Hintonburg agreement, zone 1 ought to extend to the present westerly city limit, which coincides, as stated, with the limit of the old Municipality of Hintonburg. It is clear that the company's operations to the Rifle Range on the east, past the easterly city limit, and to Britannia on the west, past the westerly city limit, are not in any way bound by municipal agreements, and are not subject to municipal rate limitations.

Mr. Proctor, who appeared for Ottawa, urged that as the company's general operations showed a good return, that notwithstanding the loss on the extensions, the board ought to level up rates, having regard, doubtless, to expenses on the one hand and profits on the other; and that when increasing fares on the extensions the city rates should be reduced to a more reasonable basis. Such action is not open to the board. The city, as well as the company, is bound by the agreement. In my opinion, Mr. Proctor's argument that the effect of the municipal agreement is only to provide that the company cannot charge more than a certain amount, and that the board can reduce it, is not tenable. The main-c party and the company agreed that rates should not be higher than the amount stipulated. As between the city and the company, rates within the amount stipulated are accepted and are just and reasonable. The company has the right to charge them.

Following the board's practice, notwithstanding the city's agreement, on a proper case being made out for reduction, generally speaking, the board's jurisdiction would enable it to reduce the rate. The scheme of the act is that rates shall be just and reasonable, and if under an agreement the carrier is getting more than a reasonable rate, beyond question the board ought to reduce that rate; and, conversely, if the agreement has not reserved a rate just and reasonable, and discrimination has resulted, it is the duty of the board to increase it. While, therefore, under the general rule, effect could be given to Mr. Proctor's contention, no such action can here be taken, because the Dominion Parliament, whose legislation absolutely binds the board, has confirmed the agreement. Section 2 of the Dominion act of 1894 provides:—"The agreement between the said companies and the Corporation of the City of Ottawa, dated June 28, 1893, and set out in schedule B to this act, is hereby ratified and confirmed." The board's general jurisdiction is bound by this special act. The same question was considered by the board having reference to the Crowsnest Pass agreement in the Increase in Passenger and Freight Tolls Case, reported in 22 Can. Ry. Cas. 49. Similar effect was given to municipal agreements in Hamilton Radial Electric Co. v. Hamilton et al., 23 Can. Ry. Cas. 114.

I now deal with the Britannia-on-the-Bay service. The evidence shows that this line commenced its operations May 24, 1900; that the company charged an extra fare beyond Holland Ave. for three or four years; and that the company then exacted the extra fare only for the winter months, and in 1908 abandoned the extra fare altogether. Operations have since been carried on subject to the company's general tariff applicable to Ottawa. The extension to Britannia was authorized by the Dominion Act of 1899, c. 82, which provides that the company may, as an extension of its present railway, construct and operate a railway from some point on its present railway, in Hintonburg or Nepean, to some point at or near Bells Corners, in Nepean Tsp. Mr. Proctor contends that the operation of this line is purely optional on the company, and that as it is optional the company is not in a position to come to the board for relief; that the company is not in a position to say that service must be given, and that the board should therefore allow a just and compensatory rate. If this principle be adopted, the result would be that when the line would be remunerative, that is, during the summer, a service would be given and no service at all in the spring, autumn or winter. While this result would work little or no inconvenience to those living in Ottawa, who would be able to get out to the Britannia summer resort when they desired to go, for the single fare. It would work a direct hardship on all residents on the line, Westboro and west. Relatively a very considerable population (although insufficient to support the car service at the present rates) is served the whole year round by the line. Its operations ought to continue. The wording of the act, as I view it, does not relieve the company from its duty to operate. The wording is usual. No railway act of incorporation provides that the railway shall be built. Permission is simply given to build and operate, but when once the line is built and the company is solvent and can operate, the statutory duty to operate applies. In any event, if the line is not to be run regularly and with a proper service, the only alternative would be its complete abandonment and removal. No railway company should be permitted to operate a line for a given short period of the year only, and decline to operate it for the remainder, when against public interest.

Rates of fare not being determined, it becomes necessary to ascertain the company's position having regard to Dominion control. The company's original incorporation is an act of the old Province of Canada, 1866, c. 16. No reference is made in the statute to any regulative tribunal or general act, but the directors of the company are given power and authority to "make, amend, and repeal, and re-enact all such bylaws, rules, resolutions, and regulations as shall appear to them proper and necessary, touching ....the fares to be received for passengers and freight transported over the railway, or any part thereof, the intervals of time in running each car, the time within which, on each day, the cars shall run, the speed of running the same...."

The railway at this time being entirely local, jurisdiction over it after Confederation rested in the Ontario Legislature, and that legislature amended the act of incorporation by its statute, c. 45, in 1868. Under this act a number of clauses of the Railway Act of the old Province of Canada were made applicable. No clause made applicable, however, covers the regulation of fares and tolls. The measure of public control over railway fares, provided by the Railway Act in force at the time of the company's incorporation and when this amending act was enacted, and being Consolidated Statutes of Canada, 1859, c. 66, is contained in the following provisions:

> "118. The legislature of this province may from time to time reduce the tolls upon the railway, but not without consent of the company, or so as to produce less than 15% per annum profit on the capital actually expended in its construction; nor unless, on an examination made by the Commissioners of Public Works, of the amount received and expended by the company, the net income from all sources, for the year then last passed, is found to have exceeded 15% upon the capital so actually expended."
>
> "151. The by-laws of every railroad company regulating the tolls to be taken on such road, in the special act respecting which a provision has been inserted that such railroad should be subject to the provisions of any general act relating to railroads, shall be subject to the approval of the Governor in Council, and no bylaw of any railroad or railway company in this province by which any tolls are to be imposed or altered, or by which any party other than the members, officers, and servants of the company are intended to be bound, shall have any force or effect until the same has been approved and sanctioned by the Governor in Council."

As already pointed out, sections of the Railway Act incorporated do not include the above provisions. On the other hand, they are expressly excluded, the special act providing that no other clause, except the clauses mentioned, shall apply. As a result, under the two special acts of 1866 and 1868, the whole question of fares to be charged for both passengers and freight transported was left to the regulation of the directors' bylaws. No parliamentary or other public regulation was provided.

In 1892, the company contemplating its extension across the river into Hull, an act was passed by the Dominion Parliament, c. 53, which contains the declaration to the effect that the company's undertaking is declared to be a work for the general advantage of Canada. The usual effect of the declaration is to give the Parliament of Canada full jurisdiction over the company and its undertaking, and to make the Dominion Railway Act in its entirety applicable. This result is, however, qualified by a provision that:

> "The operation of so much of the company's line of railway as may be within the Province of Ontario by any new or additional powers covered by this act, shall be subject to the statutes of Ontario in force from time to time in relation to street railways, and the operation of so much of the said line of railway as may be within the Province of Quebec by any new or additional powers conferred by this act, shall be subject to the statutes of Quebec in force from time to time in relation to street railways."

This act again makes specific sections of the Railway Act applicable. In view of the well known effect of the declaration of the general advantage of Canada, it is difficult to account for this action, unless the incorporators desired the specific reference, or the intention was to exclude the company and railway from unnamed sections, and among others the sections empowering the board to regulate fares. All doubt, however, which might arise as to whether or not the board had jurisdiction under the Railway Act to regulate the company's tolls was removed by the subsequent act of the Dominion, 1894, c. 86. Sec. 7 of this act declares the company's lines to be works for the general advantage of Canada, and the Ottawa Electric Ry. Co. to be a body corporate, subject to the legislative authority of the Parliament of Canada. This absolute declaration would also appear inconsistent with the exceptions reserved in favor of provincial jurisdiction in the statute of 1892.

A further act of the Dominion, however, 1899, c. 82, was also passed on the company's petition, this act being the act already referred to as authorizing the construction of the Britannia line. For some reason which is not at the moment apparent, again, certain sections of the act were made specifically applicable, sec. 3 of the statute reading:

> "Sections 90 to 172, both inclusive, of the Railway Act, and such of the other sections of the said act as are applicable, shall apply to the company with respect to the said extension."

In view of the declaration contained in the act of 1894, the company in all its operations was subject to the provisions of the Railway Act. The provisions of the act of 1899, making specific sections of the act applicable, does not of necessity, in view of the circumstances, relieve the company from the operation of the act generally. The promoters of the legislation may have desired, and parliament may have enacted the specific sections merely for greater certainty. The board ought not to find the provisions of the act of 1894 repealed by implication without some very strong reason. The apparent inconsistency now considered in my opinion is not sufficient. Sec. 5 is of special importance, in that parliament thereby recognizes as continuing the provisions of the act of 1892 and which reserves a limited provincial control. In 1899 parliament thus treats as existing, and legislates on the supposition, rights reserved to the provinces by the act of 1892.

I am of the opinion that all these special acts have to be read together, and that they should be so read as to give effect, where possible, to the provisions of all. I therefore find that the company is under the control of the Dominion Parliament and subject to the provisions of the Railway Act, subject to the exception made in the statutes of 1892. The result, therefore, is that the actual operation of the company's line in Ontario, by any new or additional powers conferred by the act of 1892, is subject to the statutes of Ontario in force from time to time in relation to street railways. The new and additional power granted by this act, and having reference to operation, is the authority which has since been exercised by the company to operate the railway by the force and power of electricity. As a result, subject to the modifications worked by the Dominion acts of 1892 and 1899, the company and its railway, apart from the electrical operation, are subject to the board's jurisdiction, and the electrical operation of the railway only is subject to provincial law. As a result, I find that the board is properly seized of the present case.

Under the Railway Act, the same company may have different rates on different parts of its system, where traffic and operating conditions and construction costs are dissimilar; for example, railway tolls are justifiably higher in a mountainous district, where cuttings and grades are heavy, and as a result the cost of construction and operation is greater than in other districts. Again, the tolls may be greater where traffic density and diversity differ. Rates on a branch or lateral line may be justified, although higher than those of a main line, with greater traffic and although owned by the same company. Almonte Knitting Co. v. C.P.R. and M.C.R.R., 3 Can. Ry. Cas. 441.

These considerations apply to railways which give a measured service, and receive a measured rate, reasonable and just for the service rendered. No case has heretofore arisen requiring consideration as to whether or not such principles can be applied to a city street railway, although possessing an outside feeder, and which does not give a measured service for a measured rate, but on the other hand applies a flat rate to all using its facilities, and without regard to the actual value of the service rendered, for which a particular fare is paid. The conditions applying to the tolls and tariffs of the railway systems of the character contemplated by the Railway Act, and considered in the board's past decisions, are so different to the conditions surrounding the operation of the Ottawa Electric Ry., that previous decisions of the board are easily distinguishable. In the case of a measured service, finding as I do that the service on the branch line of itself is not at the present remunerative, the company's other tolls would in such case be subject to reduction, in case the revenues of the branch were increased, and the company's general revenue from transportation greater than it ought to enjoy.

The Britannia line forms part of the company's general investment. As previously stated, the line was constructed in 1899 and operated on and after May 24, 1900. In 1899 the company's capital was $814,000, its funded debt $310,000, and its current liabilities $107,553. In 1900, while the capital was the same, the funded debt was increased to $500,000 and current liabilities reduced to $50,436. In the absence of exact information on the point, it would appear that the construction of the line was financed, at least in part, by the addition of the funded debt. The stock issue and funded debt remained constant until 1903, at which time the capital was increased to $995,700 and the current liabilities reduced to $33,601. In 1905, the capital issue was again increased, amounting as it then did to $998,200, while the current liabilities amounted to $120,566. In 1908 the capital was increased to $1,247,700, and the current liabilities then amounted to $210,394. In 1912 the capital had increased to $1,876,900, and the current liabilities were $136,909. The funded debt still remained at $500,000. It will be observed that the construction of the Britannia line caused no particular change in the capital account, but that account has varied quite as sharply as when the line was built. The investment became, and is, part and parcel of the company's general investment in its transportation undertaking.

The company, in support of its application, shows that, in view of greatly increased cost of operation, conditions have changed, and urges that increased fares have become necessary. Undoubtedly all costs have greatly risen. War conditions have brought about abnormal conditions. Transportation companies have been injuriously affected to a very marked degree. The Ottawa Electric Ry. has suffered from general increased costs, in common with other companies and business concerns. Some of these increased costs, at any rate, were more marked during the period of active hostilities than they are today. I now consider the effect of the active war period on the company.

The year ended June 30, 1913 (the date as of which the company has to make its statutory return), may, as I think, be looked upon as normal. The last return made to the Railways Department is for the year ended June 30, 1918. A perusal of the reports filed with the department shows that during this period the company maintained its position, having regard to both its balances and dividend payments. While there was no new issue of stock, the mileage operated increased from 47.7 miles to 52.82 miles. The funded debt in 1913 was $500,000; in 1918 it had been reduced to $410,000. In 1913 the company's reserves were $210,000; in 1918 they were $558,076. As against this, the company's current liabilities in 1913, of $520, grew to $400,056 in 1918. This increase in current liabilities, in the absence of any increase in funded debt or capital, may well be accounted for by the fact that the company's return of cash spent in construction and equipment, less deductions, which it made in 1913, amounted to $2,725,778, while the total returned in 1918 had increased to $3,370,368, an increase of $644,500. In 1913 the company commenced its operations with a surplus of $203,500, and after paying the usual dividends and interest, as well as $69,000 transferred to contingent account, increased its surplus by $13,259. In 1918 the year's operations commenced with a surplus of $47,589. The company paid the usual dividends and its interest charges, and transferred $110,000 to depreciation reserve, but decreased the surplus it commenced the year with by $29,929. The results of the respective years' business differ but slightly. In so far as surpluses are concerned, 1913 has the advantage to the extent of $43,188, while in 1918 transfers to other accounts exceeded 1913 by $41,000.

In so far as the company's balance sheet is concerned, admittedly an increased floating debt has the drawbacks inherent to such liabilities. Nevertheless, the railway property operated has increased over 10%. The funded debt has decreased $90,000; the reserve, apart from any consideration of specific depreciation reserves, or the contingent account, has increased $348,076. On the other hand, the increase in current liabilities is $399,536, and the surplus remaining on hand at the end of the year decreased $186,831. To recapitulate, the company's returns support the following conclusions as to changes worked in the company's position between 1913 and 1918:

Decrease in funded debt	$ 90,000
Increase in reserve or surplus . . .	348,076
Increase in construction and equipment account.	644,590
	$1,082,666
Increase in current liabilities . . .	$ 399,536
Decrease in yearly balance . . .	186,831
To balance	496,299
	$1,082,666

In other words, after maintaining a 15% dividend and all interest on its funded debt, the company's returns show it to be $496,299 better off on June 30, 1918, than it was before the war. Another method of estimating the company's prosperity is that afforded by the operating ratio, which expresses the percentage of operating expenses to receipts. The company's annual reports to its shareholders gives the operating ratio for the calendar year 1899, at 57%. The same return is made for 1900, but as at that time a special charge was made for the Britannia service, the effect of the Britannia operation without the payment of fares cannot be illustrated. For the calendar year 1901, with fares charged on the Britannia line, a percentage of 63% is shown, dropping to 60% in 1902, and in 1904 rising again to 62%. It was about this period that the company carried passengers on the Britannia line without an extra fare, during the summer. For the calendar year 1905 the ratio was shown as 59 2/5%. Some time in 1908 the company ceased making any extra charge on the Britannia line. The operating ratio in 1908 was 66 2/5%; in 1909, 63½%; in 1912, 57 1/5%; in 1913, 60 2/5%; and for the calendar year 1917 the operating ratio had dropped to 56 4/5%.

The company, however, since the last return was made to the government, has been obliged to make a large increase in its wage account. The evidence shows that the wage increase, calculated on the actual payments for Sept. and Oct., 1918, and compared with the same months of 1917, amounted to an increase of 28%, while the total expenses showed an increase of 30%. It is, of course, impossible to deny the grave effect of the increase, but the company is, on the other hand, in receipt of increased revenues. It no longer sells 6 tickets for 25c. As a result of the change in the rate basis, which under its contract the company was able to make, the average fare paid per passenger has increased from 4.19c to 4.71c, an increase of 0.52c. If the company's volume of traffic is maintained, this increased revenue will go a long way in recouping increased expenses. The returns of Sept. and Oct., 1918, are undoubtedly disappointing, but these months cannot be considered characteristic—the influenza epidemic was then at its height—not only were many people ill and unable to be about, but those who could, were urged to keep out of street cars and all crowded places.

Much has been said of the London and Port Stanley and the Hull Electric cases. They do not apply. The circumstances were, and are, entirely different to those of this case. London was netting less than 2% on its original investment, and the Hull Co. operating without profit.

It is undoubtedly in the public interest that railway companies should be prosperous, and their operation remunerative. With impoverished companies, service always suffers, and the rails, rolling stock, and equipment rapidly deteriorate.

Happily, in the present case, the company has been, and is, prosperous and well managed, the plant well maintained, and perhaps the best service in the country afforded. All of this is in the best interest of the public; it is also in the best interest of the company, whose careful and efficient management has resulted in large dividend earnings, as well as a proper service.

As a result of the view I take of the general issue, it is unnecessary to discuss the line to the Rifle Range in any detail. It is hoped and expected by many that costs will shortly decrease. However this may be, the company has failed to show that it requires increased revenues. I would disallow the suspended tariff.

The foregoing judgment was concurred in by Deputy Chief Commissioner Nantel and by Commissioners McLean, Goodeve and Boyce.

Winnipeg Electric Railway Report, Meeting and Changes in Directorate.

The outstanding feature of the Winnipeg Electric Ry.'s annual meeting, held at Winnipeg, Feb. 12, was the retirement of the four non-resident directors, Sir Wm. Mackenzie, Sir Donald Mann, D. B. Hanna, and R. J. Mackenzie, the election of Sir Augustus Nanton, heretofore Vice President, as President, and of A. W. McLimont, heretofore General Manager, as Vice President and General Manager.

Sir Augustus Meredith Nanton,
President, Winnipeg Electric Railway.

The annual report was presented as follows and adopted.

Gross earnings from operation		$3,588,723.09
Operating expenses, before charging depreciation		2,412,226.47
Net operating revenue		1,176,496.62
Miscellaneous income		44,931.65
[illegible] available for fixed charges, etc.		1,221,428.27
From which the following deductions are made:		
[illegible]	[illegible]	
[illegible]	[illegible]	
[illegible]	[illegible]	
[illegible]	[illegible]	
[illegible]	[illegible]	
[illegible]	[illegible]	
		[illegible] 644.19
Net income, available for depreciation		[illegible]

The gross income for 1918 shows an increase of $249,713.20 over 1917, but increased wages and operating expenses have swelled the operating charges, so that for 1918 the net income shows a decrease of $63,845.57 from 1917.

During 1918 great difficulties were encountered. The prevalence of the influenza epidemic was responsible for a large loss in revenue, and in May the company's motormen and conductors went out on a sympathetic strike, with the city fire brigade, tying the service up for several days. The motormen and conductors were granted a board of conciliation, which awarded to them very large increases of wages dating from Oct. 1, 1918. A similar result ensued from a board of conciliation appointed at the request of the shop and track men. The increased wages thus awarded, together with higher wages paid in all departments, and increased cost of materials, made a very large addition to operating costs. On the other hand, your directors are glad to be able to report that the jitney competition, which this company had to endure so long, and which was a source of much financial loss to it, has been eliminated. The Public Utilities Commission, upon the company's application, made an order providing for a temporary increase of fares, effective on Nov. 1, 1918. Application for a permanent increase of fares is now before the commission.

Unless further unforeseen adverse conditions have to be contended with, the outlook for 1919 is much brighter, and more hopeful than for a number of years past. With the return of peace, business is gradually resuming its normal activity, and provision is being made by the management to take advantage of the increased business which is looked forward to.

Sir Wm. Mackenzie, who was in the chair, and who had been President from the company's inception, announced his intention of retiring from the board, and also that Sir Donald Mann, D. B. Hanna and R. J. Mackenzie would retire.

Sir Augustus Nanton, Vice President, referred to the great service rendered to the company by Sir Wm. Mackenzie and expressed regret at his retirement, and said:—"Sir William has been President of the company practically since its inception. Today the citizens of Winnipeg can be proud of the fact that they have an electric railway second to none on the American continent, due to the great energy, ability, and farsightedness of Sir Wm. Mackenzie and his associates. Sir William fathered the establishment of water power plants on the Winnipeg River and the Winnipeg Electric Ry. Co.'s line was the first long distance power transmission line in Canada. The introduction of the electric railway transportation system has given rapid transportation to outlying districts of Winnipeg and has increased the value of suburban properties."

The following directors were re-elected: Sir Augustus Nanton, F. Morton Morse, G. V. Hastings, J. D. McArthur, Hugh Sutherland. The following were elected directors to fill the four vacancies mentioned above: G. W. Allan, K.C., M.P., W. R. Bawlf, W. J. Bullman, and A. W. McLimont. This constitutes a completely resident board, all the directors living in Winnipeg.

At a meeting held subsequently, Sir Augustus Nanton was elected President, and A. W. McLimont, Vice President and General Manager. F. Morton Morse was re-elected Secretary, and Lawrence Palk was re-elected Assistant Secretary.

Electric Railway Employes' Wages.

The Brantford Municipal Railway Commission has, according to a press report, been asked by the street railway men's union for a rearrangement of schedule of hours, so that they will work on a 9-hour day basis, with pay at the same rate as now paid for 12 hours.

A. W. McLimont,
Vice President and General Manager, Winnipeg Electric Railway.

The Montreal Tramways Co.'s employes on Feb. 1 negotiated with the company's officers for a further increase of wages, a 9-hour working day and better conditions as to holidays, clothing and some other matters. The present wage scale is for different periods of service, 31c, 33c, 35c and 37c an hour, and it is reported that the men are asking that these rates be increased to 43c, 45c, 48c and 50c an hour. Several meetings have been held.

The Quebec Public Utilities Commission, in a report to the legislature, calls attention to the fact that "the lack of definite authority to compel public utilities to enter into co-operation arrangements with one another, subject to mutual service and proper compensation, is not in the public interest, and, it is respectfully suggested, should be given by amendment to the law."

Advances in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—The voting upon the bylaw in North Vancouver recently resulted in the overwhelming majority of 482 to 90 in favor of the new agreement. As a result of this, the company receives an extension of its franchise to sell light until 1925, and in return give the North Vancouver people a 7c commutation fare, with transfer, to Vancouver city lines. The city fare in North Vancouver remains at 6c.

The 1919 city council has taken office in Vancouver. The new bridges and railways committee recommended that the mayor sign the 6c fare bylaw, which was passed last July. The mayor, however, still refuses to sign. The B.C. Electric Ry. has declined to continue franchise negotiations and has notified the city of this, and that it will rely upon the public utilities commission to deal with fares.

The Vancouver City Council passed a resolution, Feb. 7, cancelling the existing agreement authorizing the B. C. Electric Ry. to collect a 6c fare on its cars, at the expiration of the 9-month period dating from July 8, 1918, viz., April 8, 1919.

Alderman Porter, now Mayor of Victoria, said in the course of his recent election campaign that, if elected, he would take up immediately the 6c fare issue with the B.C.E.R. and press it to a satisfactory conclusion. A special meeting of the newly-elected city council, presided over by Mayor Porter, was held toward the end of January, to deal with the proposed agreement between the city and the company. It was agreed that a delegation should meet the company without delay. The council authorized the committee to come to terms with the company along lines much simpler than the list of conditions submitted to the company in the early part of December, during Mayor Todd's term of office. At a meeting of the city council, held the last week in January, it was decided to abandon the original 14 demands and to ask only three main concessions from the company, in return for permission to charge a 6c fare with transfer privileges, in place of the existing straight 5c fare. These conditions are:

1. That the company put into effect a fare schedule, making the regular fare on all lines 6c, with transfer privilege, 6 tickets being sold for 35c; special tickets for children under 12, good at all hours, and for school children, during school hours, to cost 25c for a strip of 10; children under 5 to be carried free.
2. That the same rates for electric lighting be in force in Victoria as in Vancouver. This would probably make the rate per kilowatt 6c, abolish meter rent, and make the minimum 50c a month.
3. That the company maintain the strip of roadway between the rails and a strip of 18 in. on either side of the track.

Whatever agreement the city reaches with the B.C.E.R., the council stipulated that it should be binding for at least a year, or until such time as a public utilities board is appointed, when the question will be re-opened.

The question of regulating jitneys was brought up at the same meeting of the council, but no definite action was decided on.

A Victoria press dispatch of Feb. 18 states that A. T. Goward, Local Manager B.C.E.R. there, had notified the city council that, with a few minor amendments, the company would accept the proposal for a temporary arrangement of the terms of the franchise drawn up by the city recently.

The Vancouver, Fraser Valley & Southern Ry. and the Vancouver & Lulu Island Ry., two lines operated by the B. C. Electric Ry., put in effect Feb. 1 a new standard freight mileage tariff, authorized by the Board of Railway Commissioners.

Hamilton Radial Electric Ry.—After a period of considerable electioneering activity, a new mayor and several other members of council were elected for Burlington, Ont., Feb. 3, with the result that on Feb. 5, the H. R. E. Ry. resumed service between Hamilton and Oakville, 21.46 miles. The agreement with the Burlington council as to fares to be charged supersedes for a year the provision in the original franchise, and provides as follows:—

Workman's ticket for 12 trips, good for one week, Burlington to Hamilton terminal and return, $1.50, and to Sherman avenue, $1.20.

Hamilton commutation tickets, to and from Hamilton, good for 26 trips within 6 weeks, $4.50 each, or a rate of 35c for return trip.

Transient tickets, one way 25c, return 45c.

School tickets to be sold at the same price as formerly.

Ratification of this agreement is to be made by the company, the Burlington council and the Board of Railway Commissioners, and the proceedings in connection therewith are in progress. A full schedule put in effect Feb. 20 provides for an hourly car service from 6.10 a.m. to 11.10 p.m. every week day, and from 9.10 a.m. to 10.10 p.m. on Sundays; while there is a service from Burlington to Hamilton at 6 and 7 a.m., the regular hourly service starting from Oakville at 7.30 a.m. and continuing to 10.30 p.m., except on Sunday, when the last car to Hamilton leaves at 9.30 p.m. There is a car leaving Oakville for Burlington at 11.30 p.m. (daily) and another at 12.30 a.m. (daily except Sunday), and on Sundays only a car from Oakville to Burlington is run at 10.30 p.m.

London St. Ry.—The London, Ont., Chamber of Commerce committee appointed to investigate the service-at-cost plan for streets railways and other matters relating to the London St. Ry. met Feb. 14, when Mr. E. P. Fredericks, of the Association of Holders of Public Utility Securities, Toronto, was heard again on the subject, he having addressed the whole chamber at an earlier date. At this committee meeting he explained the plan in more detail and submitted a draft copy of a proposed bylaw, which might be applied to London, and he also answered queries by members of the committee. The company's annual report was informally discussed by the committee, but no action was taken.

At another meeting on Feb. 17, members of the committee took up the service-at-cost plan, and after some expressions to the effect that it was apparently quite an experiment in most places, and in view of the fact that they had not received replies to enquiries sent out in regard to it, they again deferred any definite action. The mayor expressed himself as against the plan.

The company's application for increased fares, as set for in a letter to the mayor, dated Feb. 5, asking an increase to 5c cash, or 6 tickets for 25c, was taken up by the city council's no. 1 committee on Feb. 19. In that letter the company's president asked the city council to consider whether it would care to buy the property, as provided in the bylaws, without waiting until the expiration of the franchise in 1925. Ex-Alderman H. B. Ashplant, an admitted socialist, claiming to represent the real investors in the property, asked to be heard, and presented figures compiled from the company's reports for the past five years, aiming to show that the property had been built up on earnings, and that whereas capital was entitled to get out only what it had put in, without any return in the meantime, the company did not therefore need to increase its fares. After consideration by the committee, it was decided to recommend that the city council employ an independent auditor, familiar with street railway work, to investigate and report on the company's position. The company had previously expressed perfect willingness to have such an investigation made by any independent, competent authority.

Nipissing Central Ry.—A Cobalt, Ont., press dispatch of Feb. 19 says that over $8,000 was lost in 1918 in operating this line, which is owned by the Province of Ontario and operated by the Timiskaming & Northern Ontario Ry. Commission. The report also stated that some of the officials had been interviewing local authorities to ascertain their opinions as to a 25% increase in passenger fares.

Ottawa Electric Ry.—The Board of Railway Commissioners' judgment, refusing to allow the company to advance passenger fares on its suburban lines, is given in full on another page of this issue.

The Board of Railway Commissioners passed order 28,120, Feb. 25, disallowing the Ottawa Electric Ry.'s tariff C.R.C. 5, pubilshed and filed, to become effective Nov. 18, 1918.

Attempt to Cancel Montreal Tramways Co's Franchise Defeated.

A bill having for its object the amending of the City of Montreal's charter was introduced into the Quebec Legislature recently by G. Myrand. The petitioners named in the preamble were A. Goyette, J. A. Vaillancourt, L. Dubois and J. M. Savignac, who alleged that public opinion was manifestly in favor of the repeal of secs. 2 to 24 of chap. 24 of the statutes of 1918, creating an administration commissioner not elected by the people for the city, and of sec. 28, chap. 60 of the statutes of 1917, appointing a commission to draw up a contract for the tramways franchise between the City of Montreal and the Montreal Tramways Co.; and of sec. 75, chap. 84 of the statutes of 1918, ratifying such franchise contract. The preamble further alleged that public opinion was evidently in favor of not having any franchise and exclusive privileges and any modification of such franchise and privileges already existing in connection with any public utility company being granted in Montreal otherwise than by the direct representatives of the electors of the city, nor of their coming into force until they had been ratified by a referendum or by a vote of the majority of the electors. The sections of the measure provided for the repeal of various portions of the acts mentioned, and the insertion of sections providing for the governing of the city after April 1, by the mayor and aldermen then in office, instead of by the commission, defining their duties, etc. Sec. 10 provided for the repeal of sec. 28 of chap. 60 of the statutes of [illegible] appointing a commission to draw up a franchise agreement between the Montreal Tramways Co., and sec. 11 provided for the insertion of an article in chap. 58 of the act of 62 Vict., enacting the second allegation of the preamble.

The bill was read a second time and referred to the private bills committee for consideration. The hearing before this committee was begun Feb. 18, when the sections proposing to do away with the present commission governing the city were thrown out by 32 to 2. There was considerable discussion on the two sections affecting the tramways franchise, and further discussion was postponed. The final sections of the bill were dealt with in the committee Feb. 19, when they also were defeated, only two members voting in their favor.

At a meeting of the city council Feb. 3, Alderman Bedard submitted a motion asking that the council support the bill, but after a discussion the motion was referred to the legislative committee by a vote of 12 to 5. A report of the legislative committee recommending the council to support the measure was considered at a meeting of the council Feb. 10, Mayor Martin and Alderman Shaw only voting against it, the remaining 17 aldermen present voting for it.

Negotiations for Purchase of Ottawa Electric Ry. by the City.

Ahearn & Soper, Ltd., wrote the Mayor of Ottawa towards the end of January as follows:—"Your favor of Dec. 13, 1918, advising us that the board of control would be pleased to have us place a price upon the street railway property, was received upon the eve of the civic elections at which the question of the city owning and operating the street railway was submitted to the ratepayers. Pending an expression by the ratepayers, we postponed replying to your communication, believing that an adverse opinion would render further negotiations unnecessary.

"It was our desire, as stated to your board, that the franchise should be renewed, and we have only decided to make a recommendation to the traction company's shareholders because of the refusal by your board to consider a renewal of the franchise and because of the expressed wish of a majority of the Ottawa ratepayers at the recent municipal election that the city should own and operate the road.

"Therefore, subject to approval by the shareholders of the Ottawa Traction Co., and to acceptance by the City of Ottawa on or before May 1 next, we will agree to assign to the corporation all the street railway properties at a price equal to par for the Traction Co.'s stock, which consists of 56,307 shares of $100 each. The corporation to assume the unexpired portion of the franchise and such liabilities of the company as may exist at the date of the corporation taking possession of the property. Payment to be made by the corporation by any one of the following options:—1. Cash. 2. 5-year 5½% City of Ottawa bonds. 3. 10-year 5½% City of Ottawa bonds. 4. 20-year 5½% City of Ottawa bonds. 5. 30-year 5½% City of Ottawa bonds.

"The price submitted is in accordance with your letter of Dec. 4. You wrote: 'You will understand that if the company fixes a price, it must be a real price. There is no room under the circumstances for any haggling. The price would either have to be accepted or rejected.'

"In our reply of Dec. 6 we wrote: 'We are fully in accord with your view as expressed above. The price to be named will be explicit and final.'

"The terms of this letter are without prejudice to the price of the street railway assets if assumed by the city at the termination of the company's franchise."

The city's board of control then asked for further information as to the liabilities to be assumed by the city should the offer be accepted, to which Ahearn & Soper replied as follows:—

"The financial liabilities of the company today are: Bonds, 4%, $400,000; current loans, $370,000. The bond issue is being reduced by drawings from time to time. Current loans vary according to the needs of the company's business.

"The business will be conducted during the period of the option in accordance with the company's established practice. No large capital expenditures are planned for the next three months, and we are advised by the acting Secretary-Treasurer that the item current loans will be approximately $350,000 on May 1.

"The company's dividends at the rate of 5% a year will not be exceeded during the period of the option. The company will permit inspection of its books and properties by your representatives."

The city council authorized the board of control to engage engineering, financial and legal assistance in connection with the matter, and it was announced subsequently that Thos. Bradshaw, Finance Commissioner of Toronto, had been retained in this connection.

Hydro Electric Railway Project from Toronto to Niagara Falls Revived.

The dispute between the Hamilton Radial Electric Ry. and the Town of Burlington and adjacent municipalities respecting fares, which has been fully dealt with in previous issues, and also in this one, revived the question of railway construction under the Ontario Hydro Electric Ry. Act. As a result the Hamilton city council decided to resubmit to a vote the bylaw which was defeated Jan. 1, 1917. Some discussion took place as to whether the bylaw should be amended in any way before resubmission, but Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, stated it would have to be resubmitted as it was originally. Hamilton ratepayers are asked to vote Mar. 15 on the question whether or not the city council shall enter into an agreement with the Hydro Electric Power Commission of Ontario, for the construction and operation of an electric railway from Toronto to Niagara Falls, Ont., under the provisions of the Hydro Electric Railway Act of 1914, and amendments thereto. The bylaw sets forth the route of the projected line, the total construction cost, the apportionment among the various municipalities interested, the annual cost to be provided by the municipalities, and all other matters necessary to the carrying out of the agreement. A very full summary of the agreement was given in Canadian Railway and Marine World, Jan., 1917, pgs. 26 and 27, when the bylaw was submitted originally. Of the 16 municipalities interested in the Toronto-St. Catharines section of the line, only three—Hamilton City, Nelson Tp. and Saltfleet Tp., voted against the bylaw, while all the eight municipalities interested in the Welland-Bridgeburg line voted in favor of the bylaw.

One-Man Cars Authorized for Saskatchewan.

At its 1913 session, the Saskatchewan Legislature added the following as sec. 237 of its Railway Act:—"Every street car shall be in charge and under control of at least two competent men, a motorman and a conductor." Since that time the desire of the municipalities and companies operating electric railways to give the fullest possible service to the public, brought about the adoption of one-man cars on the less frequented lines, and on other lines during hours when travel was at its lowest. War conditions, with the consequent increased cost of labor and materials, further accentuated the desire of the railway managements to increase the number of one-man cars operated, in order that full service might be given and the lines kept on a paying basis. With the direction that at least two men should be in charge of every car, electric railways in Saskatchewan were not in a position to take any steps towards its adoption on their lines.

In 1917, the legislature was asked to amend the act by authorizing municipalities to pass bylaws authorizing the operation of one-man cars within their limits, and a bill was introduced and rereferred to a special committee. The municipalities of Regina, Saskatoon and Moose Jaw were represented before the committee, and favored its adoption, but owing to the attitude of labor organizations, the committee did not make a report, and the session ended without any action being taken. The matter, however, was not allowed to drop by representatives of the three electric railways in the province: the Regina Municipal Ry., the Saskatoon Municipal Ry. and the Moose Jaw Electric Ry., with the result that a bill was introduced at the legislature's recent session, and after passing through its earlier stages was referred to the standing committee on railways. This committee met representatives of the companies, the municipalities and others interested on Jan. 28, and on Jan. 29 reported the bill without amendment. It was given its final reading Jan. 30, and was assented to Feb. 5. By its final section it is to come into force May 1. The act adds a new section to the Railway Act, numbered 237a, as follows:—

"The council of any city or town may pass a referred bylaw declaring that the preceding section shall cease to apply to any street railway, tramway or electric railway operating within the municipality; and from the time when such bylaw comes into force the said section shall cease to apply to the operations of any such street railway, tramway or electric railway, whether within or without the municipality, until repealed as hereinafter provided.

(2) The council of any city or town shall also have power to pass a referred bylaw repealing any bylaw passed in ac-

cordance with the preceding subsection. and after such repealing bylaw comes into force the said section 237 shall again apply to every street railway, tramway or electric railway operating within the municipality.

"(3) Every bylaw provided for by this section shall receive the assent of the majority of the persons voting thereon.

"(4) The persons qualified to vote upon any such bylaw shall be the persons whose names appear on the last revised voters' lists of the municipality.

"(5) All the provisions of The City Act or The Town Act, as the case may be, respecting bylaws requiring the assent of the electors shall, in so far as they are not inconsistent with the provisions of this section, apply mutatis mutandis to the proceedings upon a vote under the provisions of this section."

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Geo. Kidd, General Manager, is reported to have informed the Point Grey municipal council, Feb. 4, that if the authorities of the two municipalities interested would get together and open up the Alma Road through, and place it in good condition for laying track, the company would lay the track and operate its cars from Kerrisdale to Fourth Ave. and return, provided that no action be taken by landowners in the district. The matter is under consideration. (Dec., 1918, pg. 505.)

Grand River Ry.—We are officially advised that the new construction between Preston and Hespeler, Ont., consists of a revision of 2 miles of the branch line between those towns. Each spring the high water of the Speed River floods the roadbed, making necessary the closing down of operations for anything from 3 to 10 days at a time, with consequent damage to roadbed. It was thought best, in order to overcome these conditions, to relocate the line above all highwater marks, at the same time reducing gradients and curvature. On the new location there will only be 3 curves, whereas on the present line in the same distance there are 9, varying from 3 to 8 degrees each. The heaviest gradient on the new location will be 0.40%, and the sharpest curvative 4 degrees. The revision work starts at mileage 0.7 from Preston and connects with the present line at George Forbes & Co.'s mills at Hespeler.

The company owns Idylwild Park, on a stretch of the Speed River, which is equipped with a dancing pavilion, refreshment booths, baseball diamonds, swings, etc. A road from the new line to the park will be provided.

The work of clearing and fencing the new route is being proceeded with and the grading will be started as soon as weather permits. The overhead work will be of catenary construction, with a 7/16 steel messenger, using 3/0 copper trolley insulated for 1,500 volt operation. All the work is being done by the company's own forces, under the supervision of F. H. Midgley, Resident Engineer. (May, 1918, pg. 211.)

Levis Tramways Co.—A bill for the incorporation of the Levis Tramways Co. is being considered by the Quebec Legislature. The petitioners are Senator Raoul Dandurand, S. H. Ewing, J. A. Ewing, of Montreal; E. A. Macnutt, Westmount, and J. C. Blouin, who are to be provisional directors. The office is to be in Levis, and the authorized capital is to be $1,500,000, which may be divided by the directors into ordinary and preferred stock. The company is being incorporated to acquire the railway owned by the Levis County Ry. Co., as it now exists, and to operate thereon any kind or kinds of cars by electricity or otherwise in the City of Levis, the parish of St. Romuald d'Echemin, the village of Bienville, and the town of Lauzon; and it may also acquire all the Levis County Ry.'s other property, with all rights, agreements, franchises, etc., with all amendments to the same. Further alterations in the terms of the agreements with municipalities may be made by mutual consent. The applicants ask authority to extend the present railway in Levis, and in or between any of the various municipalities of the counties of Levis, Bellechasse, Dorchester and Beauce, subject to agreements with the municipalities, for periods not exceeding 40 years; and authority to build branches not exceeding 15 miles in any one case, from the main line. The applicants also ask power to enter into agreements for extending the line as far as the Quebec Bridge, and over the same, and also on the north shore of the River St. Lawrence, and to connect at some point with the Quebec Ry., Light, Heat & Power Co.'s electric railway.

The new legislation means a reorganization of the present Levis County Ry. Co., with more extensive powers, and a new title.

Moose Jaw Electric Ry.—The Moose Jaw, Sask., City Council was informed by the company, Jan. 28, that until the city decided to take over the company's line, or to render it such help as would enable it to operate, the company did not see fit to take any responsibility for any part of the repairs of the Fourth Ave. bridge. The matter was referred for consideration to the works committee. (Dec., 1918, pg. 505.)

Saskatoon Municipal Ry.—A press report states that the Saskatoon, Sask., city council contemplates making some extensions to the city's electric car lines during this year at an estimated cost of $46,000. (June, 1917, pg. 244.)

St. Thomas St. Ry.—The question of the repavement of Talbot St., one of the streets on which the St. Thomas St. Ry. operates, is before the City Council. The railway is not a paying proposition, and it is reported that the ratepayers will be asked to vote on the question of continuing to operate it, before the repaving matter is settled. It was reported, Feb. 19, that it would take about $75,000 to repair and improve the line to meet traffic conditions.

Sudbury-Copper Cliff Suburban Electric Ry.—The Ontario Legislature is being asked to amend the company's act of incorporation, by authorizing an increase in the capital stock from $250,000 to $500,000, and by empowering the company to sell its unissued ordinary shares. (Aug., 1917, pg. 324.)

Toronto & York Radial Ry.—The switch connecting the company's Metropolitan Division and the Grand Trunk Ry. at Aurora, Ont., was reported to have been opened for traffic Feb. 2. The object is to give the T. & Y. R. R. access to the factories in the western end of the town. (Jan., pg. 40.)

Toronto Suburban Ry.—The City of Toronto is asking the Ontario Legislature to confirm a city bylaw passed Mar. 5, 1917, requiring the company to construct and operate lines upon certain streets in Ward 7, north of Dundas St., on or before Oct. 1, 1917, and to declare that the city had authority to pass such a bylaw. (Aug., 1918, pg. 348.)

Electric Railway Notes.

The Hydro Electric Power Commission of Ontario has received a double end, double track, snow plough from Canadian Car & Foundry Co.

The Montreal & Southern Counties Ry. has asked tenders for two 50-ton electric locomotives equipped with four 175 h.p. box type interpole 600 volts meters.

The Fort William, Ont., utilities committee has directed A. L. Farquharson, Manager of the municipal railway, to make a report on capital charges against the railway and to suggest of what charges, if any, the railway should be relieved.

The City of Niagara Falls, Ont., application to the Board of Railway Commissioners, for an order directing the Niagara, St. Catharines & Toronto Ry. to lay its rails down the center of Queen St., and to construct a new crossing at intersection of Queen St. and Erie Ave., has been dismissed.

The matter of the price to be paid by the City of Toronto for the Toronto and York Radial Ry.'s Metropolitan Division came before the Ontario Railway and Municipal Board, Feb. 4, and on the company's application that it was impossible to get certain important witnesses, the hearing was postponed to Feb. 25.

The Toronto City Council has retained I. F. Hellmuth, K.C., to deal with the city's case in the Toronto Ry. appeal against the fine of $24,000 imposed for non-compliance with the Ontario Railway and Municipal Board's order to place 100 additional cars in service by Jan. 1, 1918, which is scheduled to be heard by the judicial committee of the Imperial Privy Council shortly.

The Hamilton City Council's street railway committee had a conference with the Dominion Power & Transmission Co.'s General Manager, Feb. 17, with reference to a general improvement of the service given by the Hamilton St. Ry. The basis of the conference was the recent report of the city's special railway committee, which will be considered by the company's officers, and a further conference will be held at an early date.

At a recent public meeting in Edmonton, Alta., complaints were made as to the service given on the Edmonton Radial Ry. The city council took up the matter a few days thereafter and turned it over to the Utilities Committee for consideration. The committee, after discussing the complaints, referred the whole matter to Superintendent [illegible] and the commissioners, with power to make whatever remedies they deem to be necessary having regard to the suggestions made by the South Side Community League.

Service at Cost.—Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, in speaking at Hamilton recently, declared himself in favor of "service at cost." In answering a question as to rates on the proposed hydro electric railway from Burlington to Hamilton, he said that "the operation would be at cost" and that "he did not think there would be any serious competitor to a quick, efficient radial service provided at cost to the people."

Acquisition of Portion of Toronto & York Radial Railway by City of Toronto.

On Feb. 25, the arbitration proceedings before the Ontario Railway and Municipal Board, to determine the amount to be paid by the City of Toronto, for the Toronto & York Radial Ry.'s franchise, property, etc., on Yonge St., within the city limits, were adjourned indefinitely, it being announced that the city and the company had arrived at a settlement. Particulars of the arrangement are given in a report to the City Board of Control, dated Feb. 21, by R. C. Harris, Works Commissioner; T. Bradshaw, Finance Commissioner, and W. Johnston, City Solicitor, in which it is stated that they had been negotiating with the T. & Y. R. R. for 22 months, for the acquisition by the city of the portion of the company's Metropolitan Division within the city limits. With the report they submitted an agreement between the company and the city, providing for the acquisition by the city of all the company's rights, franchises and privileges, within the limits of the city, the company having executed the agreement, which is held in escrow, pending execution by the city. The principal points of the agreement are as follows:

The city to pay $590,000, for the company's rights, franchises and privileges within the present limits of Toronto, and other property and assets as per schedule attached to the agreement, which includes all the company's track and appurtenances, overhead work, etc., on Yonge St. within the city limits, from Farnham Ave. to the north city limits, 3.394 miles, and all sidings and switches, making a total of 4 miles of track, together with the 8 local motor cars now operated within the city.

On the completion of the agreement, the company is to cease operating its cars over the portion of Yonge St. within the city limits, and is to establish a terminal station, abutting Yonge St., at or near the north city limits.

The company may establish receiving and forwarding stations, within the city limits, upon sites to be agreed on between the company and the city's Works Commissioner. A piece of land in the North St. Lawrence Market, on which the company may erect a building, may be used as one of such stations, for which the company shall pay a rental of $2,000 a year and taxes, for a 5-year period, renewable. Until the city acquires the Toronto Ry., the city is to provide cars to carry the company's package, freight and express goods, between the company's terminal, at the north city limits, and a terminal station to be established by the company on the west side of Yonge St., between Farnham and Woodlawn Aves. The city to consent to the Toronto Ry. carrying, during the term of its franchise, the T. & Y. R. R.'s package, freight and express goods, and the city is to permit the Toronto Ry. to take the city's cars, used for the Toronto & Y. R. R.'s package freight and express goods, from that company's terminal, between Farnham and Woodlawn Ave., to and from the T. & Y. R. R.'s receiving and forwarding stations. When the city acquires the Toronto Ry., it is to furnish and operate cars to transfer the T. & Y. R. R.'s freight and express goods, from the terminal station at the north city limits, to the company's receiving and forwarding stations in the city, the transferring of such freight and express to be done by the company's employes. The company is to pay the city monthly, for carriage of package freight and express goods, the depreciation and maintenance charges upon cars provided by the city exclusively for such carriage, and interest at 6% a year on their cost, the actual cost of conductors and motormen, and the actual cost to the city of electric power used in the carriage fo goods, but no charge is to be made for power from midnight to 6 a.m. Should the city in the future operate any car line to points of contact with the company's Mimico and Scarboro divisions, the provisions of the agreement relative to carriage of package freight and express goods shall apply to those divisions also.

Until the city acquires the Toronto Ry., it is to permit the T. & Y. R. R. to use 6 pins on cross arms, fastened to the city poles, on Yonge St., between Farnham Ave. and the north city limits, to carry two 500,000 circular mils electric power cables, and 4 telephone wires, for the company's use in the operation and dispatch of cars on its railway outside the city limits, the company to pay the city 30c a year per pin per pole. After the city acquires the Toronto Ry., the city shall continue to carry the telephone wires to the company's dispatching office on Yonge St., at the same rental, but the power cables are to be then removed by the company.

The company is to give the city, for 6 months from the agreement becoming effective, a lease of its car barns and premises on Yonge St., south of St. Clair Ave., together with such machinery and fixtures as the company shall not require for the remainder of its system, the city to pay $1 therefor.

The city officials say in their report that if the agreement becomes effective, it will enable the city to lay its rails at the city gauge, and operate a car line from a short distance south of Farnham Ave. to the north city limit, which means that in 1921, after the acquisition of the Toronto Ry., the city will be in a position to give a through service without transfer. The officials strongly recommend that the city approve the agreement and join in application to the Ontario Legislature to ratify it. They also recommend that they be authorized to apply for legislation to enable the city to raise funds, without submitting a bylaw to the ratepayers, and to do everything necessary to enable the city to construct and operate a civic railway on North Yonge St., at the earliest date possible.

The company originally asked the city for $2,250,000 for its franchise rights, property, etc., within the city, but as shown above, has agreed to cacept $590,000 and the package freight and express goods rights as outlined.

Edmonton Radial Ry. motormen and conductors have evidently been making complaints of the noisy and boisterous conduct of young people on the cars going to and from the East End Park, as the City Solicitor's department is looking into the matter with a view of taking steps to protect the employes and the general public.

The Vancouver, B.C., City Council received notification, Feb. 10, that the British Columbia Court of Appeal had sustained Justice Gregory's judgment in favor of the constitutionality of the bylaw eliminating jitney traffic in the city.

Hamilton Radial Electric Ry.—A press report says that at the Dominion Power & Transmission Co.'s annual meeting in Hamilton, Ont., Feb. 24, it was stated that the Hamilton Radial Electric Ry. deficit for 1918 was $53,000.

Hamilton St. Ry.—A report submitted by the city treasurer to the Hamilton, Ont., City Council recently showed that the receipts of the Hamilton St. Ry. for the three months ended Dec. 31, were $188,003.70, against $201,748.21 for the same three months in 1917. The city's percentage and mileage for the three months was $16,920.26.

Ottawa Electric Ry.—The annual report for the calendar year 1918 of the Ottawa Traction Co., which owns the Ottawa Electric Ry. Co.'s stock, appears in full on page 105 of this issue.

St. John's (Newfoundland) St. Ry.—The Reid Newfoundland Co. is reported to have advised the St. John's, Nfld., City Council that the St. John's St. Ry. earned $52,257.80 during 1918, against $48,617 for 1917. The number of passenger carried during 1918 was reported to be slightly in excess of 1,000,000.

Toronto Civic Railway.—

	1919		1918

Jan.......	$588,923	$88,338	$562,707	$84,406

Winnipeg Electric Ry.—The Winnipeg City Treasurer reporting to the city council Jan. 31, stated that the Winnipeg Electric Ry. earnings for 1918 were $2,163,389.35. The city percentage on this at 5%, is $108,169.46, in addition to which the city receives $20 for each of the 317 cars in use, bringing the total receivable by the city to $114,5009.46. This amount, the city treasurer stated, was $8,009.46 in excess of the amount placed in the city estimates for 1918. The car earnings for December were $240,075.95, the largest for the year; while May, with car earnings of $158,219.80, was the lowest.

Quebec Railways Bonds and Interest.—Article 6474 of the Quebec Railway Act deals with the powers of railway companies, and sec. 16, as it stood in the Revised Statutes of 1909, authorized the companies to borrow money not exceeding the legal rate of interest, and that the bonds to be issued should be in currency or in sterling. In 1911 this section was amended by authorizing the issue of bonds in francs, or in the currency of any country, in addition to currency or sterling. A bill is before the legislature having for its object the striking out of the words "legal rate," and inserting in lieu thereof the words "seven per cent."

Toronto Railway Co's Annual Report.

Following are extracts from the report presented at the annual meeting in Toronto, Feb. 5.

The operations for the year do not show the usual increases, the main reason for such condition being the higher wages paid to employes and to the high cost of materials.

The gross earnings were		$6,526,302.37
Charges for operating, maintenance, etc., including judgments and fines given against company but still unpaid, other than injuries and damages		4,509,651.33
Net balance from operation		$2,016,651.04
Distributed as follows:—		
Dividends paid	$480,000.00	
Bond interest, etc.	138,660.47	
War and provincial government taxes	75,155.27	693,815.74
Payments to city:		
Percentage on earnings	$1,046,495.24	
Pavement charges	98,817.20	
General taxes	155,953.74	1,301,266.18
Balance carried forward		21,569.12
		$2,016,651.04

The earnings, which amounted to $6,526,302,37, show an increase of $234,543.31 over 1917. The various charges against the earnings for operation, maintenance, etc., include provision for judgments and fines given against the company but still unpaid. The payments made to the City of Toronto amounted to $1,301,266.18, which amount when compared with payments made during 1917, shows an increase of $114,234.86.

The large increase in wages granted to employes in June, 1917, was paid throughout the year. Notwithstanding that this increase was granted under a binding agreement which does not expire until June, 1919, the employes asked for a war bonus of from 11c to 16c an hour, to date from Oct. 1, 1918. The government, at the request of the employes, appointed a conciliation board, which awarded an increase of 2½c an hour to employes in their first six months service and 2c an hour to all other employes covered by the agreement.

The eighth drawing of the company's currency and sterling bonds, under the terms of the mortgage deed, took place on June 21. The company draws annually during the last 10 years of its franchise, 5% of the amount of bonds issued, thus reducing during the 10 years mentioned, the outstanding bonds to 50% of the original issue, and all bonds so drawn are to be redeemed on or after the 31st day of August following the date of drawing, from which date no interest is payable on bonds so drawn. There has been drawn to date a total of $1,819,466.64.

At a meeting of directors held immediately after the close of the annual meeting on Feb. 6, 1918, it was deemed advisable to increase the number of directors from 7 to 9, when a bylaw was enacted accordingly, which was confirmed at a special meeting of shareholders on May 6, 1918, on which date Hugh Mackay, K.C., of Montreal, and H. H. Pitts, of Ottawa, were elected directors.

The directors declared out of the accumulated surplus earnings 4 quarterly dividends of 1%, all of which were paid on the several dates set for payment.

Revenue Statement for Year 1918.

Gross earnings		$6,526,302.37
Operating, maintenance, etc., including judgments and fines given against company, but still unpaid, other than i. & d.	$4,509,651.33	
Interest on bonds, etc.	138,660.47	
Percentage on earnings	1,046,495.24	
Pavement, taxes	329,926.21	6,024,733.25
		$ 501,569.12

Profit and Loss Account, Dec. 31, 1918.

Balance from 1917 (all re-invested in company's property)	$5,543,683.55
Surplus earnings after payment of all expenses, interest, taxes, etc.	501,569.12
	$6,045,252.67
Dividends, 4 of 1% each on paid-up capital	$ 480,000.00
Balance carried forward	5,565,252.67
	$6,045,252.67

Comparative Statement.

	1918	1917
Gross income	$6,526,302.37	$6,291,759.06
Operating, maintenance, etc.	4,509,651.33	3,815,277.82
Net earnings	2,016,651.04	2,476,481.24
Passengers carried	166,510,326	158,087,984
Transfers	63,176,397	62,301,636
Percentage of charges, etc., to passenger earnings	71.7	61.5

The directors, all of whom were reelected, are as follows:—Sir Wm. Mackenzie, President; Hon. Frederic Nicholls, Vice President; Sir Henry M. Pellatt, Hon. C. P. Beaubien, Geo. H. Smithers, E. R. Wood, Hugh Mackay, K.C., H. H. Pitts, Frank W. Ross.

Mainly About Electric Railway People.

Capt. F. D. Burpee, Superintendent, Ottawa Electric Ry., who has been overseas since early in the war, was expected to return to Ottawa by the end of February.

Sir Rodolphe Forget, President, Quebec Ry., Light, Heat & Power Co., died at Montreal, Feb. 19, after a long illness. He was born at Terrebonne, Que., Dec. 10, 1861, and during the greater part of his business life was associated with transportation companies. He was connected with Sir Herbert S. Holt in the present organization of the Montreal, Light, Heat & Power Co., and also with his uncle, the late Senator L. J. Forget, one time President, in the electrification of the Montreal St. Ry., now the Montreal Tramways Co. He was, at one time, President of the Richelieu & Ontario Navigation Co., now part of Canada Steamship Lines, Ltd., and was, for many years, a director of the Toronto Ry. Co. He was also associated with the Quebec & Saguenay Ry., a partially constructed road, which was acquired by the Dominion Government recently, and incorporated in the Canadian Government Rys. He was elected to the House of Commons as member for Charlevoix, Que., in 1904, and also for Montmorency, Que., in 1911, holding both seats until 1917, when he resigned owing to poor health. He was made a Knight Bachelor Jan. 1, 1912.

A. H. Foster, heretofore Manager, Guelph Radial Ry., has been appointed Manager, Brantford Municipal Ry., at Brantford, Ont.

Jas. D. Fraser, a director and Secretary-Treasurer, Ottawa Electric Ry., who died Dec. 17, 1918, left an estate valued at $131,931.97, including real estate, $9,700; mortgages, $28,150; war loan and other bonds, $43,045; bank and other stocks, $45,445. After leaving $1,000 to the County of Carleton Protestant Hospital, of which he was a director, and dividing his household effects equally between his three sisters and his late brother's widow, he left the residue as follows: One fifth to a sister, one tenth each to two other sisters, three tenths to his late brother's widow, for life or widowhood, with reversion to her children, and three tenths to his late brother's children.

Capt. F. R. Glover, who returned from France after two years service with the C.E.F., and has for the last year acted as Superintendent of the Military Police in British Columbia under the Military Service Act, is reported to have returned to his position as General Executive Assistant, British Columbia Electric Ry., Vancouver.

J. W. Hagenah, of Chicago, who was acting for the City of Toronto, in connection with the arbitration proceedings respecting the value of the Toronto & York Radial Ry., Metropolitan Division's franchise within the city, has been notified that his services are no longer required, the city having decided to secure another expert.

G. F. Henderson, K.C., has been elected a director of Ottawa Electric Ry. Co., Ottawa Traction Co. and Ottawa Car Manufacturing Co. to succeed the late Jas. D. Fraser.

A. W. McLimont, heretofore General Manager, Winnipeg Electric Ry., has been elected Vice President, succeeding Sir Augustus Nanton, elected President. He also retains his title as General Manager. He was born at Quebec, Que., and was for some time in the Bell Telephone Co.'s service. He was subsequently Electrical Engineer for the Public Service Commission of the First District, New York, N.Y.; Vice President and General Manager, Michigan United Rys.; General Manager and Treasurer, Chicago and Milwaukee Rd.; Vice President and General Manager, San Francisco-Oakland Terminal Ry., and Vice President and General Manager, Georgia Power Co. He has also served for the General Electric Co. in the construction and operation of electric systems in Brazil, the Argentine Republic, Peru, Costa Rica and Mexico. He was appointed General Manager, Winnipeg Electric Ry., in Sept., 1917.

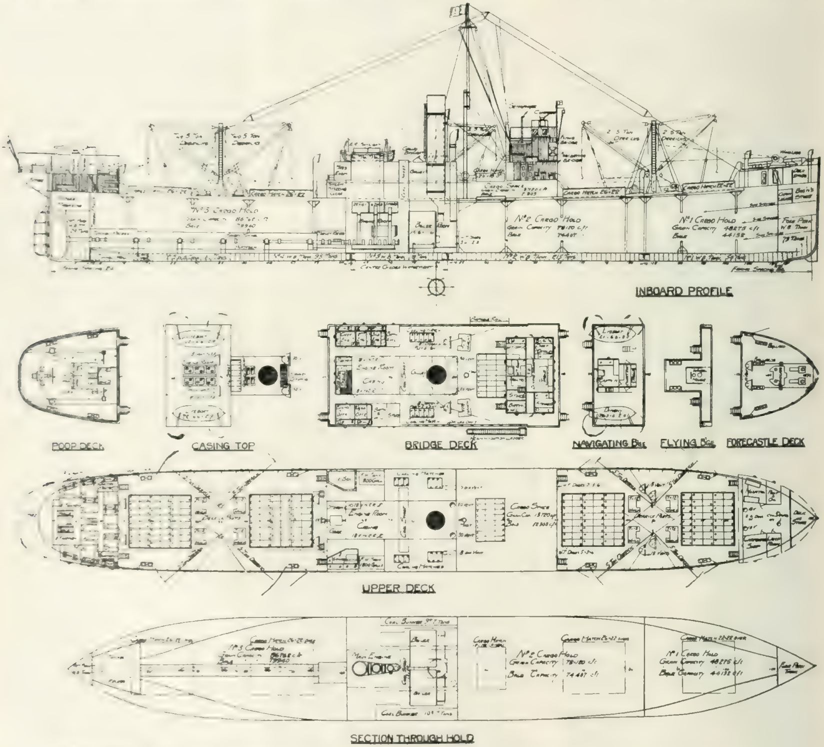
Sir Augustus Nanton, heretofore Vice President, Winnipeg Electric Ry., has been elected President, succeeding Sir Wm. Mackenzie, who did not seek reelection. He was born at Toronto, May 7, 1860, and educated at the Model School there. He became a junior partner in the brokerage firm established by E. B. Osler (now Sir Edmund Osler), in 1884, and was sent to Winnipeg to establish a branch office, where he remained. He was President of the Board of Trade there, in 1898; President of the Winnipeg Stock Exchange and Manitoba Cartage Co.; Director Winnipeg Electric Ry., Dominion Bank, and several other industrial, financial and insurance companies. He was Managing Director of the Alberta Ry. and Irrigation Co., to the time of its absorption by the C.P.R., of which company he is a director, and he was Receiver, representing the English bondholders, Manitoba & Northwestern Ry., in 1898. He was created a knight bachelor June 4, 1917.

R. Robertson, chief dispatcher, Niagara, St. Catharines & Toronto Ry., died at St. Catharines, Ont., Feb. 15, aged 44, after a short illness.

E. F. Seixas, heretofore Manager, Niagara, St. Catharines & Toronto Ry., who was appointed General Manager and Official Representative, Monterey Ry., Light & Power Co., recently, left St. Catharines, Ont., Feb. 17, to assume his new duties at Monterey, Neuvo Leon, Mexico.

Marine Department

Specification for 4,300-ton Steel, Screw, Cargo Steamships for Canadian Government Merchant Marine Ltd.



Plans of steel, screw cargo steamship, Canadian Voyageur, 4,300 tons d.w., for Canadian Government Merchant Marine, Ltd.

The Marine Department, in pursuance of the Dominion Government's shipbuilding programme, has ordered 45 steel screw cargo steamships, aggregating 263,850 tons d.w. Of these, 6 are of 4,300 tons d.w. each, the orders having been divided as follows:—Canadian Vickers, Ltd., Montreal, 2; Wallace Shipyards, Ltd., Vancouver, 2; Port Arthur Shipbuilding Co., Port Arthur, Ont., 2. Orders for 2 steamships of 4,350 tons d.w. each have been given the British American Shipbuilding Co., Welland, Ont.

Canadian Vickers, Ltd., laid the keel for department contract 1, builder's yard no. 66, June 10, 1918, and launched her Nov. 25, 1918, when she was named Canadian Voyageur. She left Montreal Dec. 11, 1918, under her own steam, for Quebec, where she was completed, and sailed thence Jan. 21, 1919, for Halifax, arriving at the latter port Feb. 4, after a difficult voyage owing to ice conditions in the St. Lawrence.

Other keels have been laid as follows:—Contract 4, Wallace Shipyards, Ltd., builder's yard no. 100, Oct. 1, 1918; contract 5, Wallace Shipyards, Ltd., builder's yard no. 106, Nov. 15, 1918.

A technical description of the 4,300-ton steamships was published in Canadian Railway and Marine World for August, 1918. Following are the complete hull specifications for the first one of this type, the Canadian Voyageur, built by Canadian Vickers, Ltd.

1. Dimensions:

Length between perpendiculars	320 ft.
Breadth moulded	44 ft.
Depth moulded	25 ft.

2. Erections:

Poop, about 41 ft. long by 7½ ft. high.
Bridge, about 96 ft. long by 7½ ft. high.
Forecastle, about 34 ft. long by 7½ ft. high.

The height in each case being measured from top of beam to top of beam.

Sheer forward, 8½ ft.; aft, 4 ft. 1½ in.

3. General Description.—The vessel to be constructed by the builders to plans approved by Classification Society, in accordance with this specification and to a general arrangement plan, approved and signed by the purchasers before the work is commenced.

4. Accommodation for saloon, captain, officers, engineers, engineers' mess room, steward, pantries, bathroom, w.c.'s, storeroom, with usual lockers, galley, etc., to be in accordance with general arrangement plan. Seamen and firemen berthed aft under the poop, with separate mess rooms. Two closets for seamen and firemen; washroom with shower baths, as required by British Board of Trade Regulations. Paint and oil room, carpenter's shop and deck stores under forecastle. Hospital with two cot beds under forecastle. Gunners to be accommodated in wood house under bridge.

To have a straight stem and elliptical stern. Engines to be placed about amidships. To be rigged with one mast amidships. The vessel to have an estimated gross deadweight of about 4,300 tons, with Lloyd's summer freeboard, which will allow of a mean draft of about 21 ft. 2 in. in salt water.

5. **Engines.**—To be fitted with engines built by Goldie & McCulloch, Galt, Ont., and boilers built by Canadian Vickers, Limited, or as may be approved. Cylinders 25, 41, 67 in., stroke 45 in.

6. **Boilers.**—Two in number, of the multitubular type, of steel, 15½ ft. diameter by 11½ ft. long. Working pressure 180 lb. per sq. in. All in accordance with specifications and plans. Boilers to work under forced draft.

7. **Speed.**—The vessel to be capable of a speed of not less than 11½ knots, in fully laden condition, at a draft of approximately 21 ft. 2 in. mean, in sea water.

8. **Plans, etc.**—The builders are to supply the owners with the following as soon after completion of the vessel as possible:—Photo prints of the general arrangement plan, cargo capacity plan, also ballast pipe plan, showing ballast pump suctions, air and sounding pipes, and Downton type pump connections. Docking plan to be provided. A sheet showing the deadweight capacity at various drafts, the cubic content of each cargo space, and the capacity of each bunker and water ballast tank.

9. **Tonnage.**—Care is to be taken to ensure a reduction of 32% for propelling space and a proper allowance for crew space, as prescribed by regulations. Spaces under bridge deck and forecastle to be exempted from tonnage if possible.

10. **Class and Certificates.**—The vessel to be constructed in accordance with plans approved by Classification Society, the builders paying all classification and certificate fees. Vessel to be classed 100 A1 at Lloyd's. The following certificates to be supplied if required:—Classification of hulls and engines, freeboard, anchors and cables test, life saving and fire appliances, lights and fog signals, compass certificate, tonnage certificate.

11. **Hull.**—Steel and iron work: The scantlings, quality of materials, and workmanship to be in accordance with Lloyd's 100 A1 class, and the vessel is to be built under their special survey. Material to be of steel, all to be of the best ship quality.

12. **Stem.**—To have a straight stem of rolled steel bar to Lloyd's requirements, with scarphs efficiently fitted.

13. **Stern frame** of cast steel, in one piece, to be of scantlings, as required by Lloyd's rules. Heel of rudder post to be raised above line of keel. Connection to heelplate and transom to be efficiently and satisfactorily made. Gudgeons of stern frame to have lignum-vitae or steel bushing.

14. **Rudder** of the single plate type, according to approved plans. Rudder frame being of forged steel, with arms shrunk to main piece. Rudder stock to be forged steel. To have at least 5 pintles fitted. Pintles of steel, fitted in gudgeons with taper and secured by nut and check pin. Brass liners to be fitted on rudder pintles. Locking head to be fitted on upper rudder pintle. Rudder trunk to be of sufficient size to allow of the easy shipping or unshipping of the rudder. To have a quadrant of sufficient size, properly keyed to the rudder head. The rudder stuffing box to be fitted in halves, of cast iron with hardwood chocks. Horizontal coupling to be fitted on rudder.

15. **Shell Plating.**—Thickness of shell plating to be according to Lloyd's approved midship section and profile plans, plates being scarphed and overlapped. The edges and butts of outside strakes of shell plating to be planed. Plates to be joggled at builders' option. Shell plating around hawse pipes to be doubled or increased in thickness, as approved by Lloyd's. Eyeplates to be fitted on the stern for lifting the rudder and propellers.

16. **Deck and tank top plating** to be joggled, or beams and reverse frames joggled at builders' option.

17. **Keels.**—To have a flat plate keel with butts overlapped.

18. **Keelson.**—Center keelson formed of plates and angles and made watertight according to approved midship section and profile plans.

19. **Frames** to be of channel steel, or bulb angle, amidships, in accordance with approved midship section and profile plans. Frames to be joggled at builders' option. Frames joggled from 25 to 145.

20. **Double Bottom.**—To have a cellular double bottom, fitted right fore and aft in accordance with plans approved by Lloyd's Society, being divided sectionally for water ballast, having all the necessary piping and valves, so arranged that each compartment may be filled and pumped out independently. Tanks under machinery space to be divided fore and aft so that each side can be used separately. To have a sufficient number of manhole doors fitted where necessary and made watertight. Manholes to be fitted with stud bolts and gasket. To have the necessary air and sounding pipes fitted to each section of the ballast tanks, with a doubling plate under each sounding pipe. All air and sounding pipes to have deck pieces neatly fitted to deck, and to be cased in with wood in the holds. To be led up inside frames if possible. All suction pipes in tanks to be of cast iron and lead bends securely fastened, and to have cast iron rose boxes at the end of the pipes. Center suction pipes to tanks, and wing suctions to be as approved by Lloyd's. No. 2 tank to be entered from boiler room. Fore and aft peaks arranged to carry water ballast; to have the necessary air and sounding pipes and to be pumped out by connection to the tank suctions.

21. **Watertight bulkheads** to be in number and position as shown on plan. All to be constructed of steel, with scantling and stiffening, as approved by Lloyd's Society. If required, forward side of boiler room bulkhead to be cleaded with 1½ in. wood on face of stiffeners and ventilated by 2 goosenecks on fore side of casing on upper deck. Provision to be made on bulkheads for shifting boards.

22. **Riveting.**—To be in accordance with Lloyd's requirements. Rivets to be of mild steel.

23. **Deck plating** to be in accordance with approved midship section and profile plans. Deck plating to be joggled at builders' option. Upper deck of steel. Forecastle deck of steel. Bridge deck of steel.

24. **Bulwarks.**—3½ ft. high. To be fitted between the poop and bridge and bridge and forecastle and suitably stayed. Stays to be riveted to bulwark and main rail. To have a sufficient number of water ports and scuppers to comply with the British freeboard tables. Steel bulwarks 3 ft. 3 in. high to be fitted across front and 12 ft. alongside of bridge deck. Mooring pipes of cast iron to be fitted in bulwarks where shown on general arrangement plan. Opening in bulwarks to be of ample area and to have 2 rods across, no ports to be fitted.

25. **Bollards and fairleads** of cast iron, securely through bolted, the number and position being as shown on the general arrangement plan. Extra pair of bollards on poop. Fairleads on forecastle and poop to have rollers. Small bollards and fairleads on bridge deck.

26. **Hawse pipes,** of cast iron, one on each bow, of sufficient size and strength to suit stockless anchors, with deck pieces fitted with plate slide covers on the forecastle deck.

Engine room to be arranged with a view to obtaining the 32% allowance off the gross tonnage for propelling space.

28. **Floors** to have floor plates fitted in accordance with approved midship section and profile plans, having the usual water courses to allow water to pass freely to the pumps.

29. **Beams** spaced as per plan.

30. **Caulking.**—Shell, tanks, deck, bulkheads, etc., to be planed or chipped and caulked in the usual manner.

31. **Hatches.**—All coamings of hatchways on deck to have cope iron moulding riveted on the top edge, with angle iron rest inside. The hatch corners to be square web plates of sufficient strength shipped into strong shoes riveted on inside of coaming.

	Length	Breadth.
No. 1, fore hatch	22 ft.	22 ft.
2, main hatch	26 ft.	22 ft.
3, bridge deck hatch	12 ft.	18 ft.
4, after main hatch	26 ft.	22 ft.
5, after hatch	26 ft.	22 ft.

Bunker hatches as shown on plan. A sufficient number of wrought iron cleats to be riveted on the outside of the coamings, and flat bars for securing the tarpaulins with wedges. The hatch covers on weather decks to be of spruce. 2½ in. thick, with iron handles for lifting. No. 1 hatch covers to be 3 in. thick. Hatch webs to have lifting gear. Strong bridles to be supplied to each hatch with hooks.

32. **Chain lockers** to be fitted of steel or wood, at builders' option, securely built, and of sufficient size to hold the cables, and kept well up, so that the cables will run out easily.

33. **Bunkers.**—All available space in engine and boiler room (consistent with obtaining 32% reduction for propelling space off the Board of Trade measurement for gross tonnage) to be arranged for bunkers. Plan of bunkers to be submitted to owners' representative for approval. Center coal shoot to be provided. Bunkers to be coated with Canadian Vickers bitumastic enamel. Two watertight doors to be arranged on boiler room bulkhead, so that aft end of no. 2 hold can be used for reserve bunker.

34. **Engine and Boiler Casing.**—Casing enclosing the engine and boiler space, as shown on general arrangement plan. Steering engine placed in the after end of the engine casing open to the engine room.

35. **Engine and Boiler Seating.**—The girders under tank top in engine and boiler room to be arranged to Lloyd's requirements. Thrust seating of ample strength. Thickness of tank top under boilers to be increased as per Lloyd's requirements.

36. **Pillaring** of solid round bar or built section at builders' option, in accordance with approved midship section and profile plans. Pillars to be reeled for shifting boards.

37. **Engine Room Skylights.**—To be strongly made of steel, and the top to be made in flaps, fitted with circular lights to lift up, with strong iron quadrants. Strong beam for lifting cylinder covers, etc. Small skylight for the galley, having steel frames and steel or wood flaps. Rods to be fitted on top of engine room skylight for fastening flaps.

38. **Shaft Tunnel** as per approved plan, built of steel plates and increased in thickness under hatches in lieu of wood sheathing. A 9 in. ventilator to be fitted on top of tunnel escape and carried up to weather deck. Thrust recess to be in engine room, and passage built at one side into tunnel. Plank platform fitted for engineers. Ring bolts fitted at after end to assist in drawing tail shaft. Portable plate in tunnel recess bulkhead to withdraw tail and shaft. Tunnel escape trunk fitted at aft end of tunnel.

Canadian Government Merchant Marine, Ltd., steel screw cargo steamship, Canadian Voyageur, 4,300 tons d.w.

39. **Ventilators** to pass British Board of Trade rules and Lloyd's requirements. Hold vents to be 18 in. diameter.

40. **Panting Arrangements.**—The hull to be stiffened where and as required by Lloyd's rules to prevent panting.

41. **Bilge keels**, 10 in. deep, to be fitted for about 120 ft. amidships, of 10 x ⅝ in. plate and 6 x 4 x 10/20 or 7/16 T bar, 3 x ¾ flat bar on edge of bilge keel.

42. **Stringers.**—To have panting and deck stringers in accordance with plans approved by Lloyd's Society.

42. **Scuppers.**—As necessary on each side. Scuppers to be also fitted on bridge, and deck houses where necessary. Wash ports for freeing as required.

44. **Rails.**—Bulwark rail to be formed of 7½ x 3 in. bulh angle.

45. **Watertight Doors.**—The stokehold bulkhead to have a cast iron sliding door fitted on each side, and worked with a rod and wheel from the boiler room platform; a watertight door also to be fitted to the tunnel. All doors to be operated from deck level.

46. **Poop.**—A full poop to be fitted aft, being about 41 ft. long. Crew berthed in poop in separate rooms as shown on general arrangement plan.

46a. **Gun Seating.**—Arrangements to be made for mounting one 4.7 gun aft on poop, complete with firing platform, magazine, ammunition trunk and hoisting gear. Gun on top of poop deckhouse at center of ship. Platform to suit. Structure in way of guns to be suitably stiffened. Hatch on ammunition trunk to be hinged cover.

47. **Bridge** to be fitted amidships, being about 96 ft. long, as shown on general arrangement plan. Accommodation for officers and engineers, baths and w.c. in sidehouses on bridge deck. Deck house at fore end, containing dining saloon, wireless room, chief officer's room, steward's room, pantry and bath and w.c. Deck house on upper bridge, containing captain's room, with stairway to dining saloon below. Small chart house at fore end of captain's room.

48. **Forecastle.**—To have a topgallant forecastle about 34 ft. long, arranged as shown on general arrangement plan.

49. **Painting.**—The whole of the steel and iron work of the vessel to have 2 coats inside of best red lead and 3 coats outside of good oxide paint. Steel work on deck and inside bulwarks to be painted and neatly finished. Berths to be tastefully painted and varnished. Midship accommodation to be enamelled where required. Steel work in stores and accommodation to be cork cemented; 1 coat anti-corrosive, 1 coat anti-fouling.

50. **Cementing.**—Inside of ballast tanks and peaks, to be coated with cement wash. Tank top under E. & B. to be coated with Vickers bitumastic enamel 1 in. thick. The shell to be coated with a mixture of Portland cement and sand, in double bottom tanks under machinery space and in tank wing bilges. The remaining spaces in double bottom to have a triangular fillet of cement at the seams only, other parts to be coated with a good cement wash.

51. **Tanks.**—Two fresh water tanks of 1,800 gall. capacity each, having manhole door in each tank, to be strongly built, having necessary hand pump, stays, plug, filling and air pipes, and washed out with cement. To be placed in the bridge.

52. **Cargo battens** of 2 in. spruce to be fitted as shown on midship section. Battens to be hung in cleats and not bolted to frames. No sparring under bridge or forecastle.

53. **Ceiling** of spruce, 2½ in. thick, laid over tank limbers, being portable as required. Ceiling laid on flanges of wing brackets. Ceiling in bunkers to be of spruce, 2½ in. thick, caulked and payed. Tank top plating under hatches increased 0.08 inch in thickness in lieu of ceiling.

54. **Galley.**—Placed in position shown on general arrangement plan. Galley furnishings to be to satisfaction of owners' representative. Door to be in halves. To have a dresser, seat, locker, shelves, etc. Floor to be cemented and tiled. Wrought iron grating pan rack. Range to be 6 ft. long with 1 fire and 2 ovens, complete with firing tools.

55. **Decks.**—Where wood decks are fitted, they are to be reasonably free from dead knots, sap and shakes, and securely fastened with galvanized iron bolts and

nuts, carefully dowelled. To be thoroughly caulked, payed, scraped, and planed smooth. Poop deck to be of 5 x 3 in. British Columbia fir; deck over saloon and engineers' and officers' accommodation to be of 5 x 2½ in. B.C. fir. The beams to be extended to the ship's sides, and fitted with B.C. fir, forming boat decks. The deck over the saloon to form the upper bridge, and to extend to ship's side. All to be caulked and payed.

Captain's House.—Chart house top to be of 5 x 2½ in. B.C. fir, carried full width of captain's house, wings extended to form flying bridge. Steel decks inside of accommodation to be covered with 2 in. flooring deals, caulked and payed with pitch.

56. **Deck Fittings.**—To have all necessary cleats, ring and eyebolts.

57. **Ladders.**—To have two ladders fitted at the poop front, at each end of the bridge, front of forecastle, and to the upper bridge, formed of steel, having wrought steel treads, and iron hand rails, also ladder to be fitted in the fore and after peaks. Ladders to flying bridge of hard wood. Ladders to upper bridge to be fitted portable. Accommodation ladder of pitch pine to be fitted complete with grating of hardwood. Fittings for both sides of ship. Iron ladder to be formed at one end of the hatch to each hold, the rungs spaced about 11 in. apart. One shore gangway.

58. **Rail Stanchions.**—To have rails fitted all around, and across the poop and forecastle, formed of stanchions with 3 rods. Bridge deck rails to be formed of 3 rods, and upper bridge and flying bridge rails 3 rods. Rails to be portable in way of the bunker hatches on bridge. Pine cleading across front and forward sides of navigating and flying bridges. Rails and stanchions to be galvanized. Top rods ⅞ in., others ¾ in. Steel bulwark across front of bridge deck and extended aft to fore side of accommodation ladder gangway. Double half ovals on top to form rail. Portable rails in way of cargo hatch, hinged stanchions, chains and screws.

59. **Lamp locker** to be arranged where shown on plan; built of steel, with all usual and necessary fittings.

Cold storage to be fitted with refrigerating plant if desired, to be arranged at aft end of bridge. All work in connection with refrigerating plant will be charged extra.

60. **Name, etc.**—Name on bow and stern, port of registry of stern, and draft marks on stem and stern to be cut in and painted. The official freeboard disc and deck mark to be also cut in and painted.

61. **Bilge Pumping Arrangement.**—5 in. Downton type pump in steering gear space to be fitted in lieu of hand pumps, as required by Lloyd's rules. Steam suctions to be fitted to draw from the hold wells and engine room well, and tunnel well, to be of diameter and thickness as required by Lloyd's rules.

62. **Steam Winches.**—To have 11 horizontal steam winches of approved make, with cylinders 7 in. diam. by 12 in. stroke, and all necessary pipes and fittings as usual. All clutches to be on square shafts, not keyed. All the winch steam pipes to be of steel or iron, exhaust pipes to be of galvanized steel and led to exhaust tank, and where on deck to be supported on wrought iron chocks and strongly and neatly covered with iron plating or angle bars, but to be carried alongside coamings or casings where practicable. Steam top valve to be arranged so that forward and after winches may be used separately or together. Stop valve at forward winch to shut off steam from windlass when winches are working.

63. **Windlass.**—To have a patent steam windlass of approved make, with quick warping ends, securely through-fastened to the deck plating. Bow stoppers and lashing screws to be fitted for stockless anchors. Steam pipe of steel or iron, being a continuation of winch steam pipe. To exhaust overboard, through galvanized wrought iron pipes; change cock on windlass exhaust pipe to take steam over either side of ship. To be bedded on B.C. fir planks 10 x 3¾ in.

64. **Steering Apparatus.**—Steam steering engine, by an approved maker, to be fitted in after end on engine casing, and connected by shafting and gearing to a stand and wheel amidships. Steering engine to be placed athwartships, with drum on aft side of casing, and connected with quadrant on rudderhead by all necessary rods, chains, blocks, etc. To have separate exhaust to main condenser, and up waste pipe. Spring buffers to be fitted to relieve strain on steering gear. A strong screw gear is to be fitted aft, with teak wheel of suitable diameter, to be easily connected or disconnected to rudderhead. Open rail and stanchions round quadrant, hardwood grating in way of wheel.

65. **Electric Lighting Installation.**—A complete installation of electric lighting to be fitted, comprising in all about 120 16-c.p. lamps, including 5 6-light clusters and 4 navigating lights. The whole installation to be of the very best description, and to conform to Lloyd's requirements for a ship of this class. A continuous current, 10 k.w., steam driven generating set of 110 volts, capable of supplying the necessary current for the whole installation, to be supplied. Metal filament lamps to be fitted in accommodation spaces and cabins, elsewhere carbon filament lamps to be fitted. Standard compass and telegraphs to be fitted with electric light. The lamps and fittings throughout to be of best quality. All lamps screw socket pattern.

66. **Switchboard.**—A main switchboard, complete with instruments and switches, fuses, etc., mounted on a slate panel, to be fitted in engine room. Wiring to be on the 2-wire (lead and returns) system and to be rubber insulated and lead covered in the accommodation spaces; in engine room, boiler room and up the masts, the wires to be lead covered and armored. The whole system to conform to Lloyd's requirements. Morse lamps to be fitted in approved position. Shipbuilders to arrange for a supply for direct current from main switchboard to double pole switch in wireless room.

67. **Electric Bells.**—One from saloon to pantry, one from captain's room to pantry.

68. **Davits** of sufficient length and outreach to swing the boats clear of the ship's side and to lift them clear of the chocks. To be fitted complete with blocks, falls, etc. Small anchor davit fitted aft for working stream anchor.

69. **Sidelights.**—Where fitted in cabins, through ship's side, to be 9 in. diam. in seamen's and firemen's accommodation; all to have galvanized iron deadlights, and brass frames. All sidelights in deckhouses to be 10 in. diam. with brass frames and no deadlights. Fixed lights in saloon entrance and crews entrance doors. Sidelights across front of saloon to be 12 in. diam.

70. **Wash deck pipes**, of 2½ in. iron, carried well fore and aft, having nozzles at intervals for hose attachment. Three 25-ft. lengths of 2 in. canvas rubber lined fire hose, with couplings and conductor to be supplied.

71. **Saloon Cabins.**—To be arranged as shown on general arrangement plan, panelled with polished wood, neatly and tastefully furnished. Dining table of mahogany, fitted with movable racks, also settees and 2 mahogany sideboards. Mirror in polished hardwood frame. Brass rails fitted on top of sideboards. Six chairs at saloon table. A steam radiator to be fitted, the woodwork being efficiently protected. The bottoms and backs of the settees in saloon and sofa pillows to be stuffed with hair suitably upholstered. To have a set of holland slip covers for the saloon cushions neatly bound at the edges. The saloon floor to be covered with linoleum. Curtains for sidelights in saloon of durable material hung on brass rods. All beds in officers' accommodation to have brass lee rail and spring mattress. Floors cemented.

72. **Pantry** to be fitted where shown on general arrangement plan, having dresser, lockers, plate-racks and brass cup hooks as required. Dresser covered with lead, and to have strong edging in the front, the sink being fitted with plug and chain complete, and to discharge overboard. Supply from sanitary tank, fitted with brass tap and deck filling pipe. Spaces lined with tin for barley, rice and peas, etc. Pantry floor to be cemented.

Cabin and Officers' Accommodation.—Generally to be as shown on general arrangement plan. Rooms to be plainly fitted up in tongued and grooved lining. Ceiling and deck beams in rooms and saloon not to be covered.

73. **Berths, etc.**—Berth for captain, with telescopic bed, having drawers underneath; bookcase, with set of drawers in lower part; wardrobe, small table, sofa, chronometer stand, hat and coat hooks, etc. Bottom, back and sofa pillow in captain's room to be stuffed with hair and covered with Utrecht velvet, and to have a set of holland covers. Floors to be covered with carpet. Curtain for sidelights and for bed, fitted on brass rods. Berth for officers, engineers and steward; each room fitted up with bed, sofa seat, washstand with plug basin, toilet rack, wardrobe, mirror, and hat and coat hooks. The chief officer's and chief engineer's beds to have drawers fitted underneath; these 2 rooms to be also fitted with a separate chest of drawers, desk, wardrobe, and book rack. The berths for the other officers, engineers, and steward to have drawers fitted underneath the beds, but in case where 2 are fitted in one room, a separate chest of drawers also to be fitted. Bed front boards, drawer fronts, toilet rack and washstand tops to be of polished wood. Each berth lighted and ventilated as required by Board of Trade regulations. The bottom of the sofa seats in the officers' and engineers' berths to be stuffed with hair, and covered with repp. Curtains of durable material fitted on brass rods, for all sidelights and beds in the above accommodation, and for sidelights in messroom. The floors of all officers', engineers' and stewards' berths and pantry to be cemented; passage and messroom to be covered with linoleum. Messroom to be fitted for engineers where shown on plan, having cupboard, table, seats, rack for bottles and two glasses and hat and coat hooks. Sparred seat to be formed of wood laths. Bathroom and cistern closet for saloon to be fitted, where shown on general arrangement plan, at a convenient height, the bathroom being furnished with seat, dress hooks, etc. Bath of cast iron with waste

pipe and valve fitted to the shell of the ship. Bath heater to be fitted. Washstand with plug basin, toilet rack and mirror to be fitted in saloon bathroom. Saloon bathroom and w.c. floors to be cemented and tiled. Also baths and w.c.'s, etc., to be fitted for officers and engineers, where shown on general arrangement plan, the floors being cemented. Bath heater jet led into baths. Filling tank for baths to be fitted on top of deck house. Cabins for 3 gunners to be fitted up in temporary wood house under bridge deck.

74. **Chartroom**, to be built of steel, having teakwood doors and fitted with round lights. To have a chart table, set of drawers, sofa seat. Curtains of durable material, fitted on brass rods at the lights. Bottom and back of seat to be stuffed with hair, and covered with repp. Floor to be covered with linoleum.

Wireless cabin to be fitted up to approval. Wood wheel house on flying bridge, fore end open, with glazed wood screen on rail and sliding doors at sides in line with flying bridge wings.

75. **Steam Heating.**—Installation of steam heating to be provided for each living room in amidship accommodation on bridge deck. Heaters to have steam and exhaust regulating valves, the exhausts being returned to exhaust tank in engine room. Steam heating plan to approval of owners' representative. Steam heating to crew space aft.

76. **Water and Trough Closets.**—Closet to be fitted for the saloon, also closets for use of the officers and engineers. Trough closets to be fitted for seamen and firemen, as required by Board of Trade regulations. All soil pipes in connection with water closets to discharge through ship's side, and to be properly fitted to shell of ship with cast iron storm valves. Sanitary tanks for captain's closet; engineers', officers' and crew to be filled through wash deck service pipe.

77. **Speaking Tubes.**—One speaking tube from captain's room to wireless room, one speaking tube from chief engineer's room to engine room, one speaking tube from bridge to engine room, of brass.

78. **Storeroom.**—To have a storeroom as shown on general arrangement plan, having all necessary shelves and bread locker.

79. **Sundries.**—Flag locker; teakwood case for night glass; 2 wood hold ladders; 2 rope side ladders; foot gratings for wheels and chartroom doors; locker for medicines to be fitted in saloon bathroom, with supplies according to British Board of Trade; galvanized iron cage for masthead and stern lights; screens for sidelight lamps; lockers for navigation stores and life belts.

80. **General.**—Plates are to be scarphed, where necessary, butts overlapped, and flanged plates to be fitted, instead of angles, wherever practicable. All materials and workmanship, deck and cabin fittings, furniture, rigging, and outfit as specified herein, to be strong, and of good quality and make, as usually specified to cargo steamers of this class.

Bedding, napery, provisions, wireless installation and refrigerating plant and fittings, fresh water paints, oils and other consumable stores are excluded. All survey fees are to be paid by builders, who are to hand the purchasers the classification certificates. Delivery of vessel to be made as per contract.

Marine insurance, other than war risks, for trial trip, to be paid by builders. All liability on part of builders in respect of this contract shall cease from the date of transfer of the vessel, except as specified in clause 63 of engine specification.

81. **Outfit, Masts and Derricks.**—To have one fitted pole top mast. After flagstaff to be fitted, and masthead and flagstaff to have a truck with sheaves for signal halliards. Steel lower mast plump. Topmast fidded on fore side of lower mast; fitted for wireless. Topmast of p.p. Two steel combined derrick and ventilating posts, with mushroom ventilator tops, to be fitted as shown on general arrangement plan, with derricks, cargo blocks, tipping lifts, and wire runners and hooks as necessary; 10 p.p. derricks in all. Derricks and fittings all to be capable of lifting 5 tons safe load. All necessary smithwork to be fitted on masts and spars, and derricks to be fitted with strong hoops and goosenecks. The necessary crutches, standards, stays and other fittings for derricks to be provided and fitted. Two large cleats for each topping lift tackle. Four steel derrick posts complete. Special stiffening under derrick posts.

82. **Blocks.**—All rigging blocks to have inside bindings.

83. **Standing and Running Rigging.**—Standing rigging as per plan to be of galvanized wire rope, of suitable sizes, and served with Hambroline, say 6 ft. above rigging screws. Running rigging to be of manilla. Derrick topping lifts to be wire tackle with double sheave blocks. Funnel painting boards to be supplied complete, with blocks and tackle.

84. **Boat Sails.**—Each lifeboat to be fitted with a lug sail, as required by British Board of Trade regulations.

85. **Covers.**—The following covers to be supplied:—2 tarpaulins to weather deck cargo hatches, 1 being tarred; 2 tarpaulins for weather deck coaling hatches, 1 being tarred; 1 canvas cover for each boat; 1 canvas cover for binnacle; 1 canvas cover for steering standard; canvas covers for hold ventilators, wire reels, and windlass.

86. **Awnings** to be fitted over flying bridge, navigating bridge and poop deck, with all necessary stanchions, ridge poles and ropes.

87. **Bridge Cloths.**—Weather screens for front of navigating bridge and the usual dodgers.

88. **Anchors and Cables.**—In accordance Lloyd's rules and tests: 3 stockless anchors, 1 stream anchor, 1 kedge anchor, stud chain cable. Wire hawser, with geared winch, instead of stream chain, manilla hawsers as per midship section, approved by Lloyd's. Stream wire and towline, mounted on double purchase reels.

89. **Boats.**—Vessel to be provided with boats fitted to meet requirements of British Board of Trade regulations: One 20 x 6½ x 2½ ft.; one 22 x 6½ x 2¾ ft.; one 22 x 6½ x 2¾ ft.; one dinghy, 20 x 5½ x 2 1/3 ft. All to be constructed of pine and clinker built, having American elm gunwale, copper fastened throughout. Boats to have blocks with falls, spans, guys, etc., complete as per Board of Trade requirements. Lifeboats to be fitted with yellow metal airtight cases, and all boats to have galvanized wrought iron gripes and lashings, galvanized rowlocks, fitted with ¼ in. plate let flush into gunwale, fishback ridge poles with stays, rudder, oars, boat hooks, and outfit as per British Board of Trade regulations.

90. **Compasses.**—One 10 in. standard compass amidships, on top of wheelhouse, with brass rail and access ladders, with stand and binnacle; one steering compass forward, 10 in. card; one 10 in. compass aft, with stand and binnacle. Each binnacle to have lamps, etc., complete. All compasses fitted on vessel to be tested and accurately adjusted by a competent adjuster and deviation cards supplied. All to be in accordance with British Board of Trade regulations.

91. **Sundries.**—1 aneroid barometer; 1 pr. binocular glasses in case; 1 telescope; 1 timepiece for saloon; 1 timepiece for chart room; 1 timepiece for wireless room; 1 sounding machine, Chadburn's or equal.

92. **Flags.**—2 ensigns—red, 3 yards and 1½ yards; 1 house flag to owners' sketch; 1 blue peter, 1 quarantine flag, each 6 x 4 ft., as per British Board of Trade regulations; 1 set commercial code; 1 signal book. All flags to be of bunting. Three Canadian ensigns, 4¼ ft. and 1½ yds.; 1 Union Jack, 3 yds.; 1 burgee with ship's name.

93. **Signal Lamps.**—British Board of Trade regulations: 1 set masthead and sidelights (dioptric lenses) of galvanized iron, 10 x 8. Masthead light on signal pole or fore side of flying bridge, to hinge down semaphore on flying bridge supplied by carpenter. Flash lamp on top semaphore supplied and fitted by shipbuilders. One anchor light, 8 x 6; 2 red globe lamps; 2 black balls; 1 stern light; 1 spare set to be supplied, suitable for burning colza or paraffin. Spare colored slides in brass frames for port and starboard lights.

94. **Oil Tanks.**—Four 25-gall. galvanized iron tanks with taps, etc., complete.

95. **Boatswain's Outfit.**—Each derrick to be supplied with wire guys, topping lift, iron leading block, cargo block, cargo wire and hook; one set tackle and blocks at each mast for lifting derricks; 4 chain hooks; 4 cork fenders and lanyards; 4 wood roller fenders, iron bound, and lanyards; 2 iron snatch blocks; 4 coal gins; 2 crowbars; 1 set of iron relieving blocks for tiller; lifebuoys and belts to meet Board of Trade requirements; 2 coir brooms; 3 paint scrubbers; 2 deck scrubbers and handles; 2 paint scrubbers and handles; 2 mops and handles; 1 grindstone, spindle and trough; 2 scrapers; 1 branding iron with ship's name; 2 marline spikes; 1 padlock to each door where necessary; 2 oil feeders; 1 12 in. bell, with name of the vessel engraved thereon, hung in a wrought iron belfry; bells as per British Board of Trade regulations; 1 6 in. binnacle bell; 1 patent foghorn; 1 megaphone; 1 taffrail log and line with governor, Cherub or equal; 2 log glasses, 14 and 28 secs.; 2 log slates; 1 deep sea lead, reel and line; 1 hand lead and line; signal halliards to each mast; 2 oak buckets; 2 sounding rods and lines; a sufficient quantity of wood wedges for hatches; tightening screws for stockless anchors; keys for all cocks, valves and deck pieces.

96. **Cooking Range and Outfit.**—A first class cooking range to cook for officers and crew, to be supplied and fitted with utensils as follows: 1 galvanized boiler, with steamer; 1 kettle, cast iron, 8 pints; 1 kettle, copper, 8 pints; 2 oval pans, 2 saucepans, 1 oval stew pan and cover, 1 fish pan, 1 gridiron, 2 frying pans, 1 slicer, 1 colander, 1 grater, 1 pepper box, 1 dredger, 1 basting spoon, 1 cook's ladle, 1 tormentor, 1 meat saw, 1 chopper, 1 mincing knife, 1 cook's knife, 1 pudding dish, 1 baking tin, 6 skewers, 1 sea pie tin, 1 poker, 1 rake, 1 shovel.

97. **Outfit, Stores, Lamps, etc.**—1 saloon lamp, 1 engineer's mess room lamp, 1 lamp for each berth, with smoke shades; 1 pantry lamp, 1 chart-room lamp, 1 galley lamp, 1 dark lantern, 2 cargo lanterns, 1 steward's hand lamp, 2 lamps for forecastle, 1 lamp for carpenter and boatswain, 1 lamp for buoys, 1 pair lamp scis-

sors, 1 cabin table bell, 1 long cabin brush, 1 short cabin brush, 1 set shoe brushes, 2 black lead brushes, 1 serving tray, 1 bread tray, 1 corkscrew, 1 filter, 1 knife box, 1 inkstand, 1 plate basket, lined; 1 coffee canister and 1 sugar canister, 1 register box and lock, ship's name printed on; 1 cash box, 2 spittoons, 1 steward's water can, 1 dust pan, 1 toasting fork, 1 knife board, 1 spring balance, 28 lbs.; 4 coir mats, 4 camp stools, 1 tapestry table cover for saloon, 1 American leather cover for saloon, 1 tapestry cover for table in captain's room, 1 American leather cover for the mess room table, japanned jug and receiver for each plug wash basin.

99. **Engineers' Mess Room Stores.**—1 hand brush, 1 hand shovel, 1 inkstand, 1 filter.

100. **Ware and Glass, Cabin.**—2 qt. decanters, 12 small tumblers, 12 large tumblers, 2 salts, 12 meat plates, 10 in.; 12 soup plates, 10 in.; 12 cheese plates, 6 in.; 3 dinner dishes, assorted; 3 cover dishes, 1 water jug, 12 breakfast cups and saucers, 12 teacups and saucers, 1 slop basin, 1 cream jug, 1 butter boat, 1 sugar basin, 12 egg cups, 1 water bottle for each cabin and officer's berth and 2 glasses. All crockery to have Canadian Government badge.

101. **Engineers.**—2 water bottles and glasses, 6 tumblers, 6 breakfast cups and saucers, 6 teacups and saucers, 6 dinner plates, 10 in.; 6 soup plates, 10 in.; 6 pudding plates, 8 in.; 3 egg cups, 1 slop basin, 1 cream jug, 1 sugar basin, 1 butter pat, 1 water jug, 1 salt cellar, 2 dinner dishes, 2 cover dishes. All crockery to have Canadian Government badge.

102. **Electro Plate and Cutlery, Cabin.**—12 table forks, e.p.; 12 dessert forks, e.p.; 12 tablespoons, e.p.; 12 dessert spoons, e.p.; 12 teaspoons, e.p.; 6 egg spoons, e.p.; 2 salt spoons, e.p.; 1 mustard spoon, e.p.; 1 teapot, b.t.; 1 cruet frame, e.p., 6 bottles; 1 soup ladle, e.p.; 3 dish covers, b.t.; 1 soup tureen, b.t.; 12 table knives, white handles; 12 dessert knives, white handles; 1 pair of carvers, white handles; 1 steel, white handle; 1 sugar basin and tongs, e.p.; 1 cream jug, e.p.; 1 small cruet, e.p., with 4 bottles. All to have Canadian Government badge.

103. **Engineers.**—6 table knives, black handles; 6 tea knives, black handles; 6 forks, n.s.; 6 tablespoons, n.s.; 6 teaspoons, n.s.; 6 dessert spoons, n.s.; 1 pair carvers, black handles; 1 steel, black handle; 1 soup tureen and ladle, b.t.; 1 cruet frame, b.m., 4 bottle; 1 mustard spoon, n.s.; 1 coffee pot, b.t.; 1 teapot, b.t. All to have Canadian Government badge.

Anything twice mentioned in this specification to be only once supplied.

Following are particulars of the vessel's various capacities:—

Cargo Hatches Capacities.

No. 1 hatch	1,369	cu. ft.
No. 2 hatch	1,618	"
No. 3 hatch (on upper deck)	120	"
No. 4 hatch	1,618	"
No. 5 hatch	1,618	"
No. 3 hatch (on bridge deck)	540	"
Total	6,883	"

Bale Capacities.

Holds (including hatches)	Between frames	Cu. ft.
No. 1 hold	123-151	44,132
No. 2 hold	84-123	74,407
No. 3 hold	8- 61	79,940
Between upper and bridge decks	84-105	12,303
Total bale capacity (including hatches)		210,782

Grain Capacities.

Holds (including hatches)	Between frames	Cu. ft.
No. 1 hold	123-151	48,275
No. 2 hold	84-123	78,120
No. 3 hold	8- 61	86,762
Between upper and bridge decks	84-105	13,720
Total grain capacity (including hatches)		226,877

Water Capacities.

Tanks (s. w.)	Frames	Cu. ft.	Tons
Fore peak	151-f.p.	2,568	73

Coal Capacities.

Bunker	Frames	Cu. ft.	Tons
Port bunker	68-84	4,106	98
Starboard do.	67-84	4,355	104
Coal shoot	72-74	757	18
Bunker (under bridge deck)	84-105	13,720	327
Port bunker (under bridge deck	69-84	2,730	65
Starboard bunker (under deck	69-84	2,730	65
Total coal capacity		28,398	677

Naval Service Vessels to be Sold.

Following is a list of vessels of various types, utilized by the Naval Service Department for coast patrol and other purposes during the war, for the purchase of which tenders were received to Feb. 20:

Six patrol steamships, named Festubert, Messines, St. Eloi, St. Julien, Vimy and Ypres, built in 1917, by Polson Iron Works, Toronto. They are of iron, and have these dimensions: length 130 ft., breadth 23.5 ft., depth 13.5 ft.; tonnage, 320 gross, 204 register; equipped with fore and aft compound engines of 59 n.h.p.

Forty-five steel steam trawlers, to Class C; length between perpendiculars, 125 ft.; breadth, extreme, 23½ ft.; depth, moulded, 13½ ft.; speed 10 knots; bunker capacity 155 tons; coal consumption, for 10 knots, 9 tons, and for 7½ knots, 7 tons; equipped with triple expansion, surface condensing engine, 61.6 n.h.p., with cylinders 12¾ x 21½ x 35 in.; reversing gear; air, circulating and other pumps; electric lighting, large trawl winch, steam windlass for anchor, bilge syphon, etc.; boiler, Scotch type, 13½ x 10½ ft.; 3 plain furnaces, 180 lb. working pressure under natural draft.

Fifty wooden steam drifters, equal to Lloyd's 100 A1 for this class of vessel. Length between perpendiculars, 84 ft.; breadth, extreme, 18 ft. 3 in.; depth, moulded, 10 ft. 11½ in.; bunker capacity 25 tons, equipped with compound, surface condensing engine with cylinders 12 and 24 in. diar., by 16 in. stroke, 24 n.h.p., for a speed of 9 knots an hour, supplied with steam by 2 Scotch boilers 9 ft. long by 9½ ft. diar., at 140 lb., with plain furnaces and natural draft; air, circulating, feed and bilge pumps working from main engine, duplex donkey pump, injector and bilge syphon; fuel consumption 4½ tons a day.

Steamship Constance, owned formerly by Customs Department, built at Owen Sound, Ont., in 1891, of steel and wood; length 115½ ft., breadth 19½ ft., depth of hold 11.2 ft.; tonnage, 185 gross, 126 register, displacement 400, draft loaded 11½ ft.; equipped with 4½ compound engine, 330 i.h.p., with cylinders 18 and 36 in. diar. by 24 in. stroke, supplied with steam by a single boiler 12 ft. 4 in. by 11 ft. 2 in., at 140 lb. working pressure; bunker capacity 46 tons; average speed 9 knots an hour.

Steamship Curlew, built at Owen Sound, Ont., in 1892, with composite hull; length 116½ ft., breadth 20 ft., depth of hold 11.3 ft.; tonnage, 158 gross, 96 register, 415 displacement, draft loaded 11 ft.; equipped with fore and aft compound engine, 350 i.h.p., with cylinders 18 and 36 in. diar. by 24 in. stroke, and supplied with steam by a single boiler 10 ft. 7 in. by 10 ft. 9 in.; bunker capacity 40 tons; average speed 9 knots an hour.

Steamship Grib, owned formerly by Canadian Whaling Co., Seven Islands, Que., and built in 1907, at Sandefjord, Norway, of steel; length 94.5 ft., breadth 18.7 ft., depth of hold 10.2 ft.; tonnage, 140 gross, 78 net, 185 displacement; draft loaded 10.2 ft.; schooner rigged and equipped with vertical triple expansion engine, 350 i.h.p., with cylinders 11, 18 and 29½ in. diar. by 18 in. stroke, supplied with steam by a single boiler at 100 lb. working pressure; bunker capacity 75 tons; average speed 11 knots.

Steamship Lady Evelyn, formerly owned by Post Office Department; built in Great Britain in 1901, and originally named Deerhound. She is of steel, with bunker capacity of 90 tons; length 189 ft., breadth 26 ft., depth 9½ ft.; tonnage, 483 gross, 192 register; equipped with engine of 1,500 i.h.p. driving a screw; ordinary speed 12½ knots an hour.

Steamship P.V. IV, formerly Martin J. Marran, bought from Seaboard Fisheries, Inc., New York, for $105,000; built in 1911 of wood; length between perpendiculars 149 ft., length over all 160 ft. 10 in., beam 22½ ft., depth of hold 9 ft.; tonnage, 323 gross, 145 net, deadweight capacity 350 tons; draft, light, 12½ ft.; draft, loaded, 14 ft.; equipped with triple expansion engine, with cylinders 12½, 13¾ and 36 in. diar. by 24 in. stroke, 600 h.p., located about 29 ft. from the stern post, and supplied with steam by a single Scotch boiler 12½ by 16¼ ft., at 180 lb., and also with 7 k.w. electric lighting plant; bunker capacity 75 tons; speed about 12 knots an hour, with a consumption of 18 tons a day. There are two hatchways to the hold, one 18 x 12 ft., the other 12 x 9¼ ft.

Steamship P.V. V, formerly Rollie E. Mason, bought from Seaboard Fisheries, Inc., New York, for $105,000; built in 1911, and of similar type to the foregoing; length between perpendiculars 149 ft., length over all 167 ft. 10 in., beam 23 ft., depth of hold 8¼ ft.; tonnage, 323 gross, 145 net, deadweight capacity 350 tons; 2 hatchways, one 17 ft. 9 in. x 11 ft. 11 in., the other 12 ft. x 9½ ft.

Steamship P.V. VI, formerly Leander Wilcox, bought from J. W. Wilcox Co., New London, Conn., for $85,000; built in 1907; length 126 ft., beam 22¼ ft., draft 11 ft., gross tonnage 205; compound engine with cylinders 15 and 30 in. diar. by 23 in. stroke, supplied with steam at 150 lb.; one hold of 150 tons capacity; speed 12 knots; complete equipment, including electric lighting throughout, and hoisting machinery.

Steamship P.V. VII, formerly Roland H. Wilcox, bought from J. W. Wilcox Co., New London, Conn., for $85,000; built in 1911; length 132 ft., beam 22¼ ft., draft 10 ft. 7 in.; tonnage, 247 gross, 119 register; one hold with capacity for 170 tons; bunker capacity 40 tons; speed 12 knots; compound engine with cylinders 15 and 30 in. diar. by 23 in. stroke, supplied with steam by a single ended Scotch boiler 12 ft. by 12 ft. 2 in., at 160 lb.; all complete, including electric lighting througnout, and hoisting machinery.

Steamship Speedy II, owned formerly by Public Works Department, and built in Scotland in 1896 of steel; length 125 ft., breadth 20 ft., depth of holds 10½ ft.; tonnage, 252 gross, 154 net, displacement 420 tons; draft loaded 11 ft.; equipped with 2 triple expansion engines with cylinders 10, 16 and 30 in. diar. by 18 in. stroke (6 cylinders), 500 i.h.p., and supplied with steam by 2 cylindrical marine and return boilers, 9½ by 10 ft., at 200 lb.; bunker capacity 40 tons; average speed 10 knots an hour.

The s.s. Canadian Voyageur's Trip from Quebec to Halifax.

As stated in Canadian Railway and Marine World for February, the steel cargo steamship Canadian Voyageur, the first vessel built under the Dominion Government's shipbuilding programme, which was launched by Canadian Vickers, Ltd., at Montreal, Nov. 23, 1918, completed at Quebec ,and delivered to the Marine Department there Jan. 17, left there Jan. 20, in charge of Capt. R. Aikman, for Halifax, to be delivered there to the Canadian Government Merchant Marine, Ltd., for operation. She was accompanied from Quebec by the Dominion Government icebreaking s.s. Montcalm, the latter being intended to go as far as ice conditions might necessitate. The trip to Halifax took 16 days, owing to trouble with ice. As Jan. 20 is said to be the latest date at which an ocean going vessel ever left Quebec for the sea, the following extracts from the Canadian Voyageur's log will be of considerable interest:

Jan. 20, 10 a.m., left Quebec, 10.50 a.m., started snowing, wind increasing from eastward; 11 a.m., turned ship around; 1.10 p.m., made fast Quebec pier, snowing.

Jan. 21, 9 a.m., left Quebec, following C.G.S. Montcalm; 11.50 a.m., passed Bellechasse; 1 p.m., Crane Island; 2.55 p.m., Lower Traverse; 6 p.m., stopped in heavy ice; 8.20 p.m., full speed ahead; 10.50 p.m., Cape Salmon; midnight, fine, moderate ice.

Jan. 22, 8.45 a.m., Bic Island; 10 a.m., Father Point, C.G.S. Montcalm took off two pilots and Canadian Vickers, Ltd., engineer; 1.50 p.m., Bersimis Point; 5 p.m., stopped in heavy ice; 8 p.m., ice pressing against ship side heavily, dull and overcast.

Jan. 23, 7 a.m., C.G.S. Montcalm broke ice around us; we proceeded, making for north shore; 4 p.m., stopped in heavy ice, wind increasing from eastward; midnight, strong e.n.e. gale with heavy snow.

Jan. 24, heavy easterly gale blowing all day; drifting with ice; 10.30 p.m., cast 48 fathoms, midnight cast 50 fathoms, high easterly gale, blinding snow storm.

Jan. 25, 2 a.m., sighted Portneuf light abeam, sky clearing, cast 28 fathoms; 8.30 a.m., cast 50 fathoms; 10.30 a.m., full speed ahead; 11.45 a.m., stopped and coaled Montcalm alongside; finished coaling 11.45 p.m.; midnight, full speed ahead.

Jan. 26, midnight to 4 a.m., bucking heavy ice; 4 to 5.30 a.m., loose ice; 6 a.m., clear water following north shore; 12.45 p.m., Pointe Des Monts; 4 p.m., heavy ice, light snow; 6 p.m., Carousel Island light; 10 p.m., stopped.

Jan. 27, 5.15 a.m., full speed ahead; 7.40 a.m., West Point light, Anticosti, moderate ice; 10 a.m., bucking heavy ice; 2 p.m., clear, no ice; 4 p.m., heavy slack ice; 8 p.m., stopped in heavy ice.

Jan. 28, stuck in heavy, close packed ice, 5 miles off Table Head, strong north wind with snow flurries, no open water in sight, drifted 3 miles s.e.

Jan. 29, stuck in heavy, close packed ice, 4 miles off Table Head, fine clear weather, light northerly wind, freezing hard, no open in sight, drifted 4 miles s.e.

Jan. 30, stuck in heavy close packed ice, 2 miles off Table Head, fine clear weather, fresh n.w. wind, freezing hard; 2 p.m., ice opening in seams to eastward; 8 p.m., drifting s.s.e.

Jan. 31, stuck in heavy close packed ice, half mile off shoal at Fox Bay, fine clear weather, fresh n.w. wind, drifting to south, ice spreading in seams and cracking slowly.

Feb. 1, stuck in heavy close packed ice, 4 miles off shore, East Point, Anticosti, fine and clear, moderate westerly wind, drifting s.e.; 9 a.m., C.G.S. Montcalm came alongside, took tow line and pointed steamship's head east; 10.10 a.m., full speed ahead, bucking heavy ice, slight westerly wind, snow flurries; 4 p.m., passing snow showers, fresh southwesterly wind, running through slob ice; 10 p.m., encountered heavy ice field; 11.45 p.m., St. Paul's Island light; 3 p.m., proceeded slowly through heavy ice.

Feb. 2, 8 a.m., ice thinning out, light n.w. wind, snowing hard at intervals; 9.35 a.m., passed Glace Bay; 11.20 a.m., Sow Point; 11 a.m., took pilot aboard; 11.20 a.m., anchored off North Sydney, snowing until midnight.

Feb. 3, 8 a.m., fine and clear, light n.w. wind; 11.40 a.m., raised anchor and proceeded; 12.45 p.m., Lowe Point; 3.12 p.m., Scatarie, fresh n.w. wind; 8 p.m., St. Esprit; 10.10 p.m., Cranberry Island, strong northwest wind.

Feb. 4, 1.40 a.m., Country Island; 3.35 a.m., Liscomb; 5.50 a.m., Sheet Harbor; 7.25 a.m., Egg Island; 8.10 a.m., Jeddore Head; 10.10 a.m., Chebucto Head, took pilot; 11.15 a.m., anchored in Halifax harbor, 12 fathoms water, draft 6½ ft. forward, 18 ft. aft.

Feb. 5, light southerly wind, fine and clear, anchored in stream.

Feb. 6, moderate north wind, clear, then overcast, anchored in stream.

Feb. 7, fresh n.n.w. wind, clear, then overcast; 1 p.m., proceeded to no. 4 pier, south side, assisted by tug.

Feb. 8, fresh n.w. wind; lying at no. 4 pier.

Feb. 9, light n.w. wind; lying at no. 4 pier.

Feb. 10, light north wind; commenced taking coal from no. 4 hold to bunkers, lying at no. 4 pier.

Feb. 11, light north wind; shifting coal to bunkers, lying at no. 4 pier.

Feb. 12, fresh north wind; shifting coal to bunkers, lying at no. 4 pier.

Feb. 13, light west wind; shifting coal to bunkers till 6 p.m.

Feb. 14, 8 a.m., left pier 4 and proceeded, with assistance of 2 tugs, to Halifax drydock; 9.30 a.m., in dock; 5 p.m., water pumped out of drydock.

The Canadian Voyageur did not suffer any material damage from the ice, an examination in the drydock showing that only one or two plates had been slightly dented and these were straightened out without any difficulty, and, of course, some painting had to be done.

The Canadian Voyageur took on cargo at Halifax for the West Indies, and was expected to sail about Feb. 28. Her return cargo for Halifax probably will consist of sugar from Demerara and San Domingo.

Toronto Shipbuilders and the Dominion Government Shipbuilding Programme.

A deputation representing the various shipbuilding companies in Toronto, the city council, the board of trade, and other local organizations, waited on the acting Premier and other members of the Dominion Government at Ottawa, Feb. 13, to protest against the position in which Toronto has been placed regarding orders for vessels for the Government Merchant Marine, and urging that the programme be proceeded with, by the placing of further orders, in which a due proportion should be placed in Toronto. The shipbuilders were represented by J. B. Miller, President, and H. G. Miller, Vice President, Polson Iron Works, Ltd.; L. Dahlgren, Vice President and General Manager, and A. C. McMaster, Counsel, Dominion Shipbuilding Co., and Chas. Boone, Vice President, Toronto Shipbuilding Co.

The position was clearly outlined by the representatives of the shipbuilding companies, who referred to the large expenditures they had made in the organization and equipment of their plants, and the prospects held out to them that the yards would be kept busy on government orders. Of the orders placed by the Dominion Government none have been placed in Toronto.

Sir Thomas White, in replying, stated that the government, having placed orders for 45 vessels, had now to consider what its future policy was to be, and it would be the government's duty to take the unemployment question into consideration in reaching a decision whether or not it should place further orders. The cost of construction would also be considered.

Of the three shipbuilding companies concerned, two are builders of steel vessels, and the third is equipped for building wooden vessels. Polson Iron Works has carried out a number of contracts for government vessels of various types, and at present is engaged on the completion of orders for the British Government, placed by the Imperial Munitions Board, and which, it is expected, will be completed by August. The Dominion Shipbuilding Co., which acquired Thor Iron Works, Ltd., and laid out and equipped a large, up to date yard, has built several steel steamships, chiefly for its own account, with a view to chartering, or selling them as occasion arises. It has received no orders from the Imperial Munitions Board. or from the Dominion Government. The Toronto Shipbuilding Co. is equipped for wooden shipbuilding, and has completed contracts for two wooden steamships for the British Government, under orders from the Imperial Munitions Board.

Canadian Fishing & Transport Co. Ltd., has been incorporated under the Dominion Companies Act, with $1,500,000 authorized capital and office at Toronto, to carry on a general fishing and transportation business, and in connection therewith to own and operate steam and other vessels, and other transportation facilities.

Losses on Great Lakes in 1918.—The total of losses on the Great Lakes throughout 1918, was 93 lives and approximately $8,000,000 worth of shipping. The heavy loss of life is accounted for by the foundering of two French mine sweepers, with their crews, during a gale on Lake Superior, Nov. 24.

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Orders for Vessels.—On another page is a complete table showing the number and type of all vessels ordered by the Dominion Government for Canadian Government Merchant Marine, Ltd., together with information concerning contract no., contract date, builders name and address, builders yard no., tonnage deadweight, type, classification, sea speed, price per ton d.w., total price, approximate delivery date, date of laying of keel, date of launching and name of vessel, so far as obtainable. This information will be added to from time to time, as construction progresses, or when any changes take place. This matter has been got together after a considerable expenditure of time, and has been classified and arranged in such a form, that all the information available can be obtained easily and expeditiously by reference to it. Canadian Railway and Marine World is the only medium which has dealt thoroughly with the shipbuilding development throughout the Dominion, and especial pains are being taken to place before its readers accurate and up to date information as to the Dominion Government's actions in connection with the shipbuilding industry in Canada, which means so much for the future of the country. Following is a summary of the orders placed, classified according to builders:—

	No.	Tons each	Total tonnage
British American Shipbuilding Co., Welland, Ont.	2	4,350	8,700
Canadian Vickers, Ltd., Montreal	2	4,300	8,600
Canadian Vickers, Ltd.	6	8,100	48,600
Collingwood Shipbuilding Co., Collingwood, Ont.	4	3,750	15,000
Collingwood Shipbuilding Co., Kingston, Ont.	1	3,750	3,750
J. Coughlan & Sons, Ltd., Vancouver, B.C.	4	8,100	32,400
Davie Shipbuilding & Repairing Co., Lauzon, Que.	2	5,100	10,200
Halifax Shipyards, Ltd., Halifax, N.S.	2	8,100	16,200
Halifax Shipyards, Ltd., Halifax, N.S.	2	10,500	21,000
John L. Mullen Construction Co., Prince Rupert, B.C.	2	8,100	16,200
Nova Scotia Steel & Coal Co., Ltd., New Glasgow, Ont.	2,	2,800	5,600
Port Arthur Shipbuilding Co., Port Arthur, Ont.	4	3,400	13,600
Port Arthur Shipbuilding Co.	2	4,300	8,600
Tidewater Shipbuilders, Ltd., Three Rivers, Que.	4	5,100	20,400
Victoria Machinery Depot, Victoria, B.C.	2	8,100	16,200
Wallace Shipyards, Ltd., Vancouver, B.C.	2	4,300	8,600
Wallace Shipyards, Ltd.	2	5,100	10,200
	45		263,850

Contracts Signed—Dates of Contracts.—Referring to the table published in Canadian Railway and Marine World for February, and repeated in more complete form in this issue, some misapprehension has arisen apparently in the public mind in reference to contract dates given. These dates are those on which the contracts were signed respectively, and as will be seen by the table in this issue, some of the contracts had not been signed up to the date of our latest advice, though orders in council authorizing the giving of the contracts were passed some time previously. Since the publication of the table in our February issue, giving full particulars of contracts which the Marine Department had been authorized by order in council to place, the following contracts have been signed on the dates named.

Contracts 15 and 16, Jan. 24, 1919, Tidewater Shipbuilders, Ltd., Three Rivers, Que., yard nos. 7 and 8, two steamships 5,100 tons d.w. each, at $200 a ton, or $1,020,000 each.

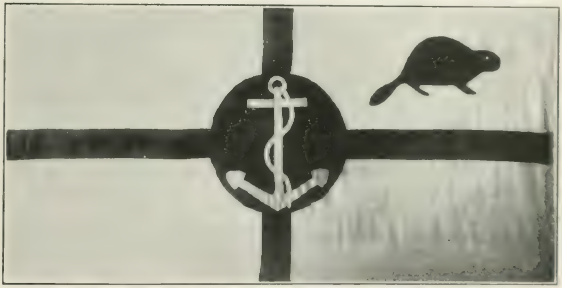
Contracts 29 and 30, Jan. 24, 1919, Victoria Machinery Depot Co., Victoria, B.C., yard nos. 1 and 2, two steamships 8,100 tons d.w. each, at $198 a ton, or $1,603,800 each.

Contracts 44 and 45, Jan. 23, 1919, British American Shipbuilding Co., Welland, Ont., yard nos. 4 and 5, two steamships 4,350 tons d.w. each, at $215 a ton, or $935,250 each.

For fuller details, see table published on another page in this department.

Names of Vessels.—In addition to the names Canadian Voyageur, Canadian Pioneer and Canadian Warrior, given to the first three steamships launched under orders from the Marine Department as shown in Canadian Railway and Marine World for February. the following names have been decided on.

Contract 4, builders yard no. 100, Wallace Shipyards, Ltd., Vancouver, Canadian Volunteer.



House flag, Canadian Government Merchant Marine, Ltd.

The illustration above is from a photograph of the house flag which has been adopted by the Marine Department for vessels of the Canadian Government Merchant Marine, Ltd. The flag is 12 x 6 ft., the design consisting of a Greek cross, with a ball 18 in. diar. in the center, carrying an anchor, and a representation of a beaver in one of the quarters. The cross and ball are blue on a white ground, and the anchor is yellow.

Contract 5, builders yard no. 106, Wallace Shipyards, Ltd., Vancouver, Canadian Trooper.

Contract 10, builders yard no. 62, Collingwood Shipbuilding Co., Collingwood, Ont., Canadian Recruit.

Contract 11, builders yard no. 63, Collingwood Shipbuilding Co., Canadian Signaller.

Contract 12, builders yard no. 64, Collingwood Shipbuilding Co., Canadian Gunner.

Contract 24, builders yard no. 69, Canadian Vickers, Ltd., Montreal, Canadian Ranger.

British American Shipbuilding Co., Welland, Ont., advised us Feb. 10 that it was making some extensions to its building berths, which were necessary before keels could be laid for the 2 steel steamships of 4,350 tons d.w. each, for which it has orders from the Dominion Government. It then expected to have the keel for department's contract 44, builders yard no. 4, laid early in March.

Canadian Vickers, Limited, Montreal, advised us Feb. 19 that the steel cargo steamship, Canadian Pioneer, 8,100 tons d.w., which left Montreal, Dec. 6, 1918, in tow, for Quebec, had been completed there, and was ready for handing over to the Marine Department, subject to a few minor details, which cannot be completed at Quebec owing to climatic conditions.

As stated in Canadian Railway and Marine World for February, the keel of builders yard no. 68, 8,100 tons d.w., was laid Aug. 26, 1918, and it was expected to launch her Jan. 15. Canadian Vickers, Ltd., advised us Feb. 19 that the hull had been ready for launching for about a fortnight, but that it had not been put into the water, owing to the river level being abnormally high, reference to charts showing it to be higher than for the past six years. The vessel will be named Canadian Ranger.

Halifax Shipyards, Ltd., Halifax, N.S.—In an interview given to a Halifax newspaper at the end of January, J. W. Norcross is reported to have stated that the first keel of the four steamships to be built for Canadian Government Merchant Marine, Ltd., will be laid as soon as the material arrives at the yard. The ground is pretty well prepared and it was expected to have all the buildings under erection by Mar. 1. The keel blocks are already laid for two vessels. The company has contracts for 2 steamships of 8,100 tons each, and 2 of 10,500 tons each.

Harbor & Marine Co., Ltd., is stated to be the name of a company which is establishing a plant at Victoria, B.C., to build 2 steel steamships of 8,100 tons d.w. each, for the Dominion Government. The head of this company is stated to be C. J. V. Spratt, of the Victoria Machinery Depot, Ltd., which has a contract for 2 steel cargo steamships of 8,100 tons d.w. each, at $198 a ton. The contracts for these vessels were signed Jan. 24, and the approximate delivery dates are Jan. 31 and Nov. 20, 1920. It is stated that plans for the buildings to be erected on the site of the new shipyard, including mould loft, mill, plate shop, blacksmith shop, building ways and offices, have been completed, and construction was expected to commence towards the end of February. The site selected, at Hospital Point, has been prepared and a wharf built for landing

(Continued on page 155.)

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. Where a contract date is not given the contract had not been signed at the time of our latest official advice.

The following contractions are used in the column giving the type of the vessels to be built: s.d., single deck, 2.d., two decks, 3.d., three decks, lake, lake type, p., poop, b., bridge, f'c's'le, forecastle.

Contract no.	Contract date	Builder	Yard no.	Tons d.w.	Price per ton d.w.	Total price	Type	Classification	Speed, knots	Approximate delivery date	Keel laid	Launched	Name
1	Mar. 4, 1918	Canadian Vickers Ltd., Montreal	66	4,300	$207.	$890,100	S.d., p., b. and f'c's'le	Lloyd's	11	Dec. 31, 1918	June 10, 1918	Nov. 23, 1918	Canadian Voyageur
2	May 22, 1918	" "	67	8,100	180	1,458,000	2.d., p., b. and f'c's'le	"	11	Jan. 31, 1918	July 17, 1918	Dec. 3, 1918	Canadian Pioneer
3	May 18, 1918	Collingwood Shipbuilding Co., Collingwood, Ont.	61	3,750	205.	768,750	Lake, s.d., p., b. and f'c's'le	Brit. Corp.	9	May 1, 1919		Dec. 21, 1918	Canadian Warrior
4	Mar. 15, 1918	Wallace Shipyards Ltd., Vancouver, B.C.	100	4,300	207.	890,100	S.d., p., b. and f'c's'le	Lloyd's	11	Mar. 31, 1919	Oct. 1, 1919		Canadian Volunteer

(Continued from page 153.)

construction supplies, and a temporary yard office and foreshore tracks have been laid down. Mr. Spratt is reported to have announced that construction of the 2 vessels will commence immediately on the arrival of the steel, the keel plates being expected early in March. J. S. Clark is reported to have been appointed Superintendent Engineer.

The Port Arthur Shipbuilding Co., Port Arthur, Ont., as stated in Canadian Railway and Marine World for February, has contracts from the Marine Department for 4 steel cargo steamships, of 3,400 d.w. each, and for 2 of 4,300 tons d.w. each. It laid keels for 2 or 3,400 tons each as follows: Builders yard no 19, Dec. 9, 1918; builders yard no. 20, Dec. 10, 1918. The approximate launching dates for these are about April 15. The company advised us Feb. 19 that it expected to lay keels for 2 more, of 3,400 tons each, about Mar. 15.

Prince Rupert Shipbuilding & Engineering Co., Prince Rupert, B.C. As stated in previous issues, the Marine Department was authorized by order in council to give contracts to John L. Mullen Construction Co. to build 2 steel cargo steamships of 8,100 tons d.w. each at Prince Rupert, B.C., the company having leased the Grand Trunk Pacific Ry.'s shipbuilding and drydock there. The Prince Rupert Shipbuilding Co. has been incorporated under the British Columbia Companies Act by persons interested in the John L. Mullen Construction Co. and others, as stated in Canadian Railway and Marine World for February, and contracts for the 2 vessels have been given to it and were signed Feb. 21.

Tidewater Shipbuilders, Ltd., Three Rivers, Que., has advised us that it has laid keels for two, out of the four, 5,100-ton steel cargo steamships for which it has orders from the Marine Department as follows: Contract 13, builders yard no. 5, keel laid Jan. 8; contract 14, builders yard no. 6, keel laid Jan. 10. It is expected to launch these two steamships about the latter part of August. Contracts 15 and 16, for builders yards nos. 7 and 8, were signed Jan. 24, and keels will be laid immediately after launching builders yard nos. 5 and 6.

Canada Steamship Lines, Ltd., Dividend, Official Changes, Etc.

The Canada Steamship Lines, Ltd., directors, on Feb. 11, declared a quarterly dividend on the common stock, at the rate of 4% for the year, the first quarterly payment to be made Mar. 15. At the same time it was announced that the President, Jas. Carruthers, and another director, J. C. Newman, Manager, McClary Mfg. Co., Montreal, had resigned, being opposed to paying a dividend on the common stock. J. W. Norcross, Vice President and Managing Director, was elected to succeed Mr. Carruthers as President, and retains the title of Managing Director. He stated that the company was in a strong position financially, that a dividend was justified by earnings, and that the 4% rate decided on was an indication of a conservative policy.

C. A. Barnard, K.C., Montreal, and M. J. Haney, Toronto, both directors and members of the executive committee, were elected vice presidents. F. S. Isard, a director and member of the executive committee, also Comptroller, was appointed Director of Finances, and Comptroller. W. E. Burke, a director and Assistant Manager, was appointed Director in charge of Transportation, and a member of the executive committee. H. W. Cowan, a director and Operating Manager, was appointed Director in charge of Operations, and a member of the executive committee.

Mr. Carruthers left Montreal for the Pacific coast some time prior to the directors' meeting referred to above, and before doing so made the following reference to his opposition to paying a dividend on the common stock:—"I cannot admit the propriety of paying such a dividend, for several reasons, and in this attitude have received Mr. Newman's consistent sympathy and support. My principal reason for adopting the attitude described was that I considered the company's best interests were bound up in maintaining the dividend position of its premier capital issue, the preferred stock. In other words, this issue should be strengthened during a period of exceptional earnings, with such a reserve backing that the continuance of the regular rate would be assured for some years to come. My contention is that the disbursement should not be made until there is a strong liquid reserve behind the preferred. It was not the idea of the organizers of the company at its inception that the common should receive anything in the way of dividend until the company had gone thorugh a period of years of experience, which would prove its earning capacity beyond question. In order that my attitude should not prove an embarrassment to the board, and so that the decision to declare the dividend might be considered unanimous, I have decided to resign the presidency and also from the board, and Mr. Newman joins me in my retirement."

Great Lakes-St. Lawrence Tidewater Association.

The Great Lakes-St. Lawrence Tidewater Association is reported to have been organized in Washington, D.C., to urge the enlarged canalization of the St. Lawrence River, with the view of "bringing the Atlantic to the heart of the continent." The U.S. Government is to be asked to take such steps as may seem best and most expeditious, and to co-operate in what Canada is already doing, toward this end. The states said to be represented in the organization are: Wisconsin, Minnesota, North Dakota, Iowa, Illinois, Indiana, Michigan and Ohio.

A correspondent writes us in regard to the foregoing report as follows: "The association's purpose, as stated, is not likely to be fulfilled, as it would appear that engineers have pretty well decided that if the Great Lakes are to be connected with tide water, through the St. Lawrence River, for deep draft vessels, it will not be by enlarging the St. Lawrence canals, but by the use of dams to create a series of basins in the St. Lawrence channel, so as to obviate the need of excavation of the many existing difficult channels other than the canals. Canadians, who believe in making Toronto, Fort William and Port Arthur ocean ports, will no doubt welcome the idea that Washington is waking up to the importance of the St. Lawrence route, and may possibly make up its mind to join with the Dominion Government in utilizing the river for navigation, at the expense of the power barons. Doubtless, if the two governments did join hands on such a rational scheme, the public would get plenty of power and the only losers would be those who have heretofore been permitted to exploit the natural resources of the river largely for their own benefit."

Casualties on the Great Lakes, Etc.

The Canadian Lake Protective Association's bulletin 1 for 1919 to masters of vessels enrolled in the association gives a list of the casualty reports received during 1918 subsequent to the issue of the last bulletin and dealt with at a meeting of the association's committee at Montreal, Feb. 5. Masters and engineers are warned that there is but one authorized set of engine signals, and that, notwithstanding any unauthorized practice to the contrary in some quarters, 2 bells or 2 whistles must be accepted as a signal to go astern, no matter how the engines are turning at the time. If these signals are to be taken as "one to stop", followed by "one to go ahead", there must be a distinctly appreciable pause between them. Non-observance of this rule, or failure to understand it, has led to more than one casualty during 1918, and the same comment has been made upon the record of previous years. Officers will be able to avoid misunderstanding only by using and obeying these signals in the way indicated above.

Canadian Pacific Ocean Services Steamships' Atlantic Terminus.

On Feb. 23 it was reported in Montreal that the C.P.O.S.'s principal steamships would make Portland, Me., their terminus, instead of St. John, N.B., that the C.P.R. would contribute to the building of a new state pier at Portland, and would make connection with its own line over the Maine Central Rd., probably at Newport, Vt.

On Feb. 24, G. M. Bosworth, Chairman, C.P.O.S., was reported to have said to an interviewer: "It is possible that the C.P.O.S. steamships may go to Portland."

Later, on Feb. 24, E. W. Beatty, President, C.P.R., was reported as saying that the company had no such intention at that time.

The American-Canadian Corporation is reported to have been organized under Delaware law, with office at 30 Church St., New York, and authorized capital of $5,000,000, to carry on a general shipping business between North and South America and Europe. It is stated that contracts amounting to $30,000,000 have been placed for the construction of turbine steamships, and that exclusive foreign selling agencies have been arranged with well known Canadian and U.S. manufacturers, and also for the handling of cattle and coal. It is also stated that contracts will shortly be closed for the construction of six passenger steamships of approximately 18,000 tons each, of a similar type to the White Star steamships. Some of the freight steamships said to have been purchased are stated to be of 1918-19 construction, some having been launched recently, and others still on the ways. These are said to have been purchased from the United States Steamship Co., and include the s.s. Tilland, 8,800 tons, and the s.s. Dutton Hall, 9,400 tons, both of which have been chartered for voyages to Greece and Italy. The management will be under Carl O'Ruddy, of the Italian Shipping Co.

Mainly About Marine People.

Andrew A. Allan, formerly of the Allan Line Steamship Co., and at one time, President, Shipping Federation of Canada, died at the Royal Victoria Hospital, Montreal, Feb. 11, aged 58, following an operation for cancer of the throat. He entered the Allan Line service in 1881, and was later elected Vice President. He was elected President of the Shipping Federation of Canada in 1910, and was also Chairman of the Quebec Salvage & Wrecking Co., and of the Marconi Wireless Telegraph Co. of Canada. He was at one time a member of the Montreal Harbor Commission, and was associated with many industrial and financial concerns, and charitable institutions.

Lieut.-Col. William Patrick Anderson, C.M.G., C.E., Chief Engineer, Marine Department, Ottawa, who has applied for superannuation, is taking a holiday at La Jolla, San Diego County, California, and is not expected to return to Ottawa until towards the end of April. He was born at Levis, Que., Sept. 4, 1851, and educated at Bishop's College, Lennoxville, Que., passed the preliminary examination for Provincial Land Surveyor for Quebec in Jan., 1873, and on taking employment exclusively engineering, he neglected to pass the final examination. He was employed in surveying and engineering in the Northwest and Manitoba from 1872 to 1874. He entered the Marine Department in Oct., 1874, as draftsman and assistant engineer, and was appointed permanent Assistant Engineer in May, 1875, and Chief Engineer in Feb., 1880. During his occupancy of that position he had charge of all works executed by the Department, and as General Superintendent of Dominion Lighthouses, all plans of lighthouses, piers, lanterns and illuminated apparatus, were made under his supervision. He is a member of the executive committee of the Geographic Board of Canada, member of the Lighthouse Board of Canada, a councillor of the Institution of Civil Engineers, Eng., a Fellow of the Royal Geographical Society, and was one of the charter members of the Canadian Society of Civil Engineers, of which he was President in 1904. He was connected with the volunteer militia for a long period, and served in the Fenian Raid, and became Lieut.-Col. commanding the 43rd Regiment, in 1888, transferred to the active forces in recognition of services in encouraging rifle shooting, and commanded the Bisley team in 1904. He founded the Canada Militia Gazette, and edited it for two years. During his absence his duties are being discharged by B. H. Fraser, Assistant Chief Engineer.

Hon. C. C. Ballantyne, M.P., Minister of Marine and of the Naval Service, who has been absent from his office in Ottawa since Dec. 24, as stated in Canadian Railway and Marine world for February, is recovering slowly. In addition to being operated on Dec. 30 for appendicitis, which was followed by peritonitis, he developed typhoid fever. At the date of our last advice he was expected to be able to leave the Royal Victoria Hospital, Montreal, by the end of February, and it was stated that he would then probably go to some southern watering place for a few weeks, accompanied by Mrs. Ballantyne. It is expected that he will return to his departmental duties at Ottawa early in April, and also that he will be able to take his seat in the House of Commons.

C. A. Barnard, K.C., Montreal, and **M. J. Haney**, Toronto, directors and members of the executive committee, Canada Steamship Lines, Ltd., have been elected vice presidents.

W. E. Burke, Assistant Manager, Canada Steamship Lines, Ltd., who is also a director, has been appointed Director in charge of Transportation and a member of the executive committee.

E. L. Cousins, Chief Engineer and Manager, Toronto Harbor Commissioners, gave an address before the Hamilton branch of the Engineering Institute of Canada, Jan. 20, on harbor improvements.

H. W. Cowan, a director and Operating Manager, Canada Steamship Lines, Ltd., has been appointed Director in Charge of Operations and a member of the executive committee.

D. E. Eason, heretofore Principal Assistant Engineer, Trent Valley Canal, has been appointed Superintending Engineer, Trent Valley Canal, succeeding A. R. Grant, appointed Superintending Engineer, Welland Ship Canal.

M. J. Haney, director, and **W. E. Burke**, Director and Assistant Manager, Canada Steamship Lines, paid a brief visit to Bermuda during the latter part of January and early in February.

F. S. Isard, Comptroller, Canada Steamship Lines, Ltd., who is also a director and member of the executive committee, has been appointed Director of Finance.

Capt. G. McLeod, a Great Lakes mariner of about 50 years standing, died at Owen Sound, Ont., Feb. 2, after a long illness. For some 20 years, he was in service with the Pittsburg Steamship Co., and retired from active service, on a pension, about five years ago.

B. Myers, who is reported to have been appointed Superintendent of the Cholberg Ship Co.'s shipyard at Vancouver, B.C., has been connected with the shipbuilding industry for 26 years, and was with the Grays Harbor Motorship Corporation, and with the Standifer Construction Co., of Vancouver, Washin.

J. W. Norcross, heretofore Vice President and Managing Director, Canada Steamship Lines, Ltd., has been elected President, and also retains the title of Managing Director, Jas. Carruthers, President, having resigned.

J. F. Paige, General Manager, Port Arthur Shipbuilding Co., Port Arthur, Ont., is recovering from severe inflammation of the optic nerves. He was confined to his home for about three weeks.

S. I. Preston is reported to have been appointed Surveyor of Shipping for Lloyd's Register, at Quebec, Que. He is a native of Glasgow, Scotland, and served his apprenticeship with John Brown & Co., shipbuilders, there. He enlisted with the Campbell Highlanders, and was in the retreat from Mons, and at various other battles in Flanders. He was recalled to industrial life by the Ministry of Munitions, and was, subsequently, Manager, Rose Steel Foundry & Engineering Co., Inverness, Scotland, building drifters and patrol vessels for war purposes. He was appointed a Lloyd's surveyor in Aug., 1918.

W. G. Ross, President, Montreal Harbor Commissioners, gave an address on harbor development, to members of the Board of Trade and other similar organizations, at Vancouver, B.C., Feb. 3.

Thomas I. Thomson, President, Farrar Transportation Co., Ltd., Toronto, and formerly of Collingwood, Ont., died at his home at Owen Sound, Ont., Feb. 9, aged 64.

R. M. Wolvin, Vice President and Managing Director, Halifax Shipyards, Ltd., accompanied by Mrs. Wolvin, sailed from Halifax, N.S., early in February, on the s.s. Aquitania, for England.

British Shipyards Orders. — London cablegram, Feb. 10:—British shipyards have booked orders recently for well over 100 vessels, representing a very large tonnage. This is probably a record. The Ellerman-Bucknall line alone ordered over 50 steamships on the northeast coast. The British India Co. is building 9 large liners; the Cunard 8, the Anchor-Donaldson and Donaldson Bros. 6, Elder and Fyffe 4, Shaw-Savill & Albion 3, Union-Castle, Commonwealth and Dominion Companies 2 each. The shipbuilding outlook is of the brightest, provided labor settles down.

Marine Products, Limited, has been incorporated under the Dominion Companies' Act to carry on a variety of business throughout Canada, among them being power to operate steamship and railway terminals, transportation, warehouse storage and cold storage facilities, yards, freight sheds, freight and passenger stations, tramways and tracks on lands owned by the company, grain elevators, etc.; power to act as vessel agents, wharfingers, warehousemen, forwarders and carriers by land or sea. The company's office is to be in Toronto, the authorized capital is $500,000, and the provisional directors include E. W. Wright, barrister, Toronto.

The Dominion Shipbuilding Co., Ltd., Toronto, incorporated under the Dominion Companies Act, has, by supplementary letters patent, been turned into a public company.

Cargo Steamship Building in Canada for British Government.

Imperial Munitions Board Shipbuilding Department.—As stated in Canadian Railway and Marine World for February, this department's offices were removed from Ottawa, to Drummond Building, Montreal, in January, where the following officials are now located: W. I. Gear, Director of Steel Shipbuilding; W. Lambert, Assistant Director of Steel Shipbuilding; F. T. Green, Representative of British Ministry of Shipping, J. Livingston.

Steamships Under Construction.—The total orders placed by the Imperial Munitions Board for the British Government, covered 43 steel and 46 wooden steamships, and of these, at the time of writing, 13 steel and 1 wooden vessel remain to be launched. On the completion of these orders, which is expected in the spring, the operations of the Imperial Munitions Board, so far as vessel building is concerned, will cease.

Steel Cargo Steamship, War Badger, 3,500 tons d.w., for British Government, immediately after launching by British American Shipbuilding Co., Welland, Ont., Jan. 21.

Steamship Management.—As announced previously, the British Government has assigned all the steamships, which have been built, or are under construction in Canada for it, under orders from the Imperial Munitions Board, to various firms in Great Britain, who act as managing owners on the government's behalf. In our January issue, a list was given of the managing owners, to whom had been assigned the wooden steamships built in British Columbia. Following is a list of all the steamships, both steel and wood, which have been assigned to managing owners, and the names and addresses of the latter, for which we are indebted to the Director of Transports and Shipping, Ministry of Shipping, London, Eng.:—

Steel.

Joseph Chadwick & Sons, Liverpool—War Wasp.

J. Chambers & Co., Liverpool—War Dog, War Power, War Camp.

R. B. Chellew, Truro—War Isis, War Osiris, War Hathor.

E. C. Downing, Cardiff—War Wizard, War Fiend, War Magic, War Fury.

Furness Withy & Co., Halifax—War Karma, War Horus, War Witch.

Glover Bros., London—War Faith, War Joy.

Harris & Dixon, Ltd., London—War Fish, War Dance, War Earl, War Duchess.

Raeburn & Verel, Ltd., Glasgow—War Charger, War Chariot, War Chief, War Noble, War Storm, War Cavalry, War Convoy, War Column, War Company.

J. Robinson & Sons, North Shields—War Weasel, War Badger, War Leveret, War Vixen, War Wallaby, War Wombat, War Racoon.

Tyzack & Branfoot, Newcastle—War Bee, War Taurus, War Hydra, War Timiskaming, War Hamilton, War Algoma, War Halton.

Wood.

Anning Bros., Cardiff—War Mingan, War Radnor, War Quebec, War Sorel, War Sioux, War Nipigon

J. Cook & Sons, Aberdeen—War Sumas, War Cayuse, War Atlin, War Edensaw, War Kitimat, War Ewen.

Easton, Greig & Co., Glasgow—War Haida, War Skeena, War Stikine, War Masset, War Babine, War Camchin, War Nanoose.

H. Fernie & Sons, Liverpool—War Nootka, War Puget, War Yukon, War Songhee, War Selkirk, War Cariboo.

Glover Bros., London—War Huron, War Erie, War Ottawa, War Niagara, War Mohawk, War Seneca, War Gaspe, War Matane.

Hansen Shipping Co., Ltd., Cardiff—War Fundy, War Moncton, War Ontario, War Toronto, War Halifax.

J. Hardie & Co., Glasgow—War Nicola, War Suquash, War Tatla, War Casco, War Chileat, War Tanoo.

R. & J. H. Rea, London—War Tyee, War Comox.

Launchings of Steamships.—Following are particulars of cargo steamships ordered by the Imperial Munitions Board for the British Government, and which had been officially reported as launched up to Feb. 25, giving in each case the date of the launching, the name of the steamship, the name and address of the building company and the deadweight tonnage:—

Steel Steamships.

May 18, 1917	War Dog, Wallace Shipyards North Vancouver, B.C.	4,500
July 9, 1917	War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	1,800
Aug. 19, 1917	War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont.	4,300
Nov. 8, 1917	War Dance, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Mar. 16, 1918	War Camp, J. Coughlan & Sons, Vancouver, B.C.	8,800
Mar. 23, 1918	War Power, Wallace Shipyards, North Vancouver, B.C.	4,600
Apr. 3, 1918	War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
May 8, 1918	War Wizard, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
May 21, 1918	War Bee, Nova Scotia Steel & Coal Co., New Glasgow, N.S.	2,400
May 27, 1918	War Osiris, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
June 8, 1918	War Earl, Canadian Vickers Ltd., Montreal	7,000
June 29, 1918	War Duchess, Canadian Vickers, Ltd., Montreal	7,000
July 20, 1918	War Hathor, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
July 29, 1918	War Charger, J. Coughlan & Sons, Vancouver, B.C.	8,800
Aug. 19, 1918	War Chief, J. Coughlin and Sons, Vancouver, B.C.	8,800
Aug. 21, 1918	War Weasel, British-American Shipbuilding Co., Welland, Ont.	3,500
Sept. 6, 1918	War Witch, Collingwood Shipbuilding Co., Collingwood, Ont.	2,900
Sept. 19, 1918	War Taurus, Polson Iron Works, Ltd., Toronto	3,500
Sept. 28, 1918	War Faith, Canadian Vickers Ltd., Montreal	7,000
Sept. 28, 1918	War Noble, J. Coughlan & Sons, Vancouver, B.C.	8,800
Sept. 28, 1918	War Storm, Wallace Shipyards, Ltd., Vancouver, B.C.	4,600
Oct. 5, 1918	War Horus, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Oct. 15, 1918	War Hydra, Polson Iron Works, Ltd., Toronto	3,500
Oct. 24, 1918	War Fiend, Midland Shipbuilding Co., Midland, Ont.	3,400
Oct. 26, 1918	War Karma, Port Arthur Shipbuilding Co., Port Arthur, Ont.	3,400
Oct. 29, 1918	War Joy, Canadian Vickers, Ltd., Montreal	7,000
Dec. 18, 1918	War Convoy, J. Coughlan & Sons, Vancouver, B.C.	[illegible]
Dec. 22, 1918	War Hamilton, Polson Iron Works, Ltd., Toronto	[illegible]
Jan. 21, 1919	War Badger, British American Shipbuilding Co., Welland, Ont.	3,500
Feb. 8, 1919	War Timiskaming, Polson Iron Works, Ltd., Toronto	[illegible]
Total, 30 steel steamships		[illegible]

Nov. 2, 1918	War Radnor, Three Rivers Shipyards, Ltd., Three Rivers, Que.	3,080
	Total, 45 wooden steamships	138,600

Aggregate deadweight tonnage of 30 steel and 45 wooden steamships launched, 283,400 tons.

Ogden Point Assembling Plant, Victoria, B.C.—It was expected that all the work at this plant would be completed by the end of February, and that the place would be closed down. The last steamship to be equipped with machinery was the War Suquash, which was expected to be ready for sailing during the last week of February. The assembling plant was opened in 1917 to equip the wooden hulls, which were being built in British Columbia, for the British Government under orders from the Imperial Munitions Board. During its operation, 18 of the 27 vessels built in this province were equipped at the plant, the balance being handled at private yards.

The s.s. War Charger, which was reported to have returned twice to Vancouver, B.C., when on her maiden trip across the Pacific, was announced to have arrived safely at Vladivostock, Jan. 27.

J. Coughlan & Sons, Vancouver, B.C.—The s.s. War Noble, 8,800 tons d.w., which was launched Sept. 28, was completed early in February, and sent through the bridges out of False Creek to the ocean, Feb. 13. She underwent her trial runs on Feb. 14. The hull of the s.s. War Company, a sister vessel, is expected to be launched about Mar. 6.

Grant & Horne, Ltd., St. John, N.B.—The s.s. War Fundy, the hull of which was launched from this company's yard Aug. 24, underwent her trial trips Feb. 17. This company has still one hull to launch, to complete the last of the orders for wooden hulls placed for the British Government by the Imperial Munitions Board.

Polson Iron Works, Ltd., Toronto.—The fourth of the 6 six steel cargo steamships of 3,500 tons each, which this company is building for the British Government, under orders from the Imperial Munitions Board, was launched Feb. 8, and named War Timiskaming, by Mrs. R. C. Taylor, Cobalt, Ont. The vessel has the following dimensions: length over all 261 ft., length between perpendiculars 251 ft., beam 43½ ft., depth moulded 22½ ft. She is being equipped with triple expansion, surface condensing engine of approximately 1,256 h.p.

Following the launch of the s.s. War Timiskaming, the sister vessel, which was launched Dec. 21, and named War Aquila, was renamed War Hamilton, by Mrs. H. L. Frost, Hamilton Ont. This change of name was noted in our last issue.

The Navy League is reported to have arranged to have a training ship placed on Thunder Bay, Lake Superior.

The Australian Government's Merchant Marine.

D. H. Ross, Canadian Trade Commissioner in Australia, has reported on the Australin Government's experiment in the ownership of cargo steamships as follows:—

In June, 1916, the Australian Government purchased 16 cargo steamships at a cost of approximately £2,080,000. The first year's operations of this fleet showed surplus earnings of £986,382. A cable was received recently from the General Manager in London that the original cost of the steamships has been paid and that over £16,000 remained to the credit of the vessels. Two of them were torpedoed.

The Australian Government has also controlled the operations of a large fleet of enemy steamships interned in Australian ports at the outbreak of the war, two of which have been torpedoed. While the ruling rates of freight have been demanded by the Australian line of steamships on goods shipped at oversea ports, it is emphasized that they carried exports of Australian wheat and products at considerably less than war rates.

Through submarine action, some of the largest passenger steamships, withdrawn from the Australian coastal trade for transport purposes, have been lost and the water carriage facilities of the Commonwealth are now much curtailed. Quite a fleet of steamships formerly employed in the Australian-New Zealand trade have also been destroyed. The new steamship Avenger, of 15,000 tons, built for the Canadian-Australian Royal Mail Line for the Vancouver trade, was sunk while acting as an auxiliary cruiser.

Australian shipping companies are endeavoring to place orders for a considerable number of passenger and cargo steamships which are urgently required to make the coastal fleet again normal.

Canadian Merchant Service Guild.—Application is being made to the Dominion Parliament, for the creation of a body corporate, under this title, with the object of uniting in one body, captains, pilots and mates, operating out of any port in Canada.

Steamships Built and Registered in Canada for the British Government.

Following is a list of steamships built in Canada, for the British Government, under orders from the Imperial Munitions Board, and which have been completed and placed on the Canadian register in the name of the Shipping Controller, London, Eng., and assigned by him to various managing owners, on government account. The letter following the name of each vessel indicates whether it is of wood or steel.

General Shipbuilding Notes Throughout Canada.

British Columbia Shipbuilding.—The approximate value of shipping launched in B.C. during 1918, is given as $25,000,000, making the total for 1917 and 1918 $32,500,000, and 186,700 tons. At the end of 1918 there were under construction, 5 wooden schooners, 16 wooden steamships and 6 steel steamships, totalling 87,000 tons, and valued at $15,300,000. The shipbuilding industry employed about 6,000 men directly. Further contracts are in hand for 33 wooden and 12 steel steamships, totalling 181,000 tons, and valued at $31,000,000.

Steel Cargo Steamship, General Currie, 3,500 tons, immediately after launching by Dominion Shipbuilding Co., Toronto, Jan. 25, 1919.

Shipbuilding Wages.—Representatives of the boilermakers' and shipbuilders' unions met in Toronto, Feb. 26, for the discussion of wage matters and the preparation of a new schedule, which it is intended to present to all shipbuilding companies on the Great Lakes, Apr. 1.

Royal Commission on Pacific Coast Shipbuilding Dispute. — The Dominion Government has appointed Mr. Justice D. Murphy, of the British Columbia Superior Court; H. H. Watson, financier, Vancouver; and F. W. Welch, Secretary Metal Trades Council, Vancouver, as commissioners to enquire into the differences between J. Coughlan & Sons, shipbuilders, and their employes, with a view to endeavoring to securing a satisfactory working agreement from Feb. 28.

Canadian Chicago Bridge & Iron Co.—It was reported some little time since that this company would establish a shipbuilding plant at Bridgeburg, Ont., and that coaling scows for the United States Navy would be built. It is now said that the U.S. Navy Department has cancelled all such contracts since the armistice was declared.

Canadian Vickers, Ltd., Montreal, is reported to have a contract from some French interests, for the construction of a steel cargo steamship of 8,300 tons d.w. capacity, for the coal and nitrate trade between France and Chili, the vessel to be ready for service in June.

Cholberg Ship Co., Victoria, B.C.—The first of the 9 auxiliary powered sailing vessels which this company is building for Norwegian interests, is expected to be launched during March, or early in April. This first vessel will probably be barquentine rigged, and named Washington. She is being built for H. F. Hansen, Porsgrund, Norway. A similar vessel is also under construction for the same party, and will be named Vancouver. A third vessel, schooner rigged, is to be named Gunn. All vessels are being built for classification in Lloyd's Register, and Det Norske Veritas. The deck machinery, comprising donkey boilers and cargo sail hoisting and anchor windlasses, has all been delivered.

Dominion Shipbuilding Co., Toronto.—The s.s. General Currie, the launching of which was announced in our last issue, is one of six similar vessels to be built by the company for private ownership.

Launching Steel Steam Trawler 13, by Port Arthur Shipbuilding Co., Feb. 8, 1919. Steel Steam Trawler 14, launched a few days previously, shown in background.

The ceremony was performed by Mrs. Edmund Bristol, on behalf of Mrs. Alex. Johnston, wife of the Deputy Minister of Marine. The vessel is of the single deck type, with poop, bridge and forecastle, with steel texas on bridge, with wing deckhouses, chart room and pilot house above, built on the transverse system of construction. There are three decks, main, bridge and boat, arranged on the three island type, and there are four cargo hatches, 22 x 18 ft. She is of the schooner rig, with two pole masts, with steel hull, and classed 100 A1 at Lloyd's for ocean service. The hull is divided by 4 watertight bulkheads and 1 screen bulkhead, and 2 holds, with grain capacity of 151,466 cub. ft. The propelling machinery, placed amidships, consists of triple expansion inverted engine, with cylinders 20, 33 and 54 in. diar. by 40 in. stroke, 1,300 i.h.p. at 87.5 r.p.m., and supplied with steam at 180 lb. by 2 Scotch boilers, each 14½ ft. diar. by 11 ft. long, under forced draft, supplied by John Inglis Co., Ltd., Toronto. The heating surface is 2,730 sq. ft. in each boiler, and there is approximately a consumption of 20 1 10 tons of coal per 24 hr., for a speed of 10.2 knots an hour. The bunkers are arranged to carry 526.75 tons of coal. The propeller is 13¼ ft. diar., and is of cast iron with 4 blades 12 ft. 8 in. pitch. Accommodation for a crew of 35 officers and men is arranged on the bridge and in the poop. The vessel is to be equipped with steam steering gear, 7 x 7 in., and 8 reversible single drum, 2 speed, 7 x 12 in., cargo winches, and anchor windlass 8 x 8 in. She was launched Jan. 25, and is expected to be ready for sea by April 15.

Foundation Co., Victoria, B.C.—It is anticipated that the launch of the first of the 20 wooden steamships under construction for the French Government will take place early in March. The construction of these vessels is divided between the company's two yards. According to the last advice, it was the company's expectation that 8 of the vessels would be launched by Apr. 1, and a second 8 by Aug. 1, and the balance about Nov. 1. The contract calls for the completion of the vessels, ready for sea, by Jan. 1, 1920.

A full description of these was given in our Dec., 1918, issue.

International Shipbuilding Corporation, Ltd., Newcastle, N.B.—As announced in our last issue, a petition for the winding up of this company was heard at St. John, N.B., recently, and an order made, the matter now being in the hands of the liquidators. Under the court's order, tenders are being received for the purchase of a partially constructed 4-masted schooner, 155 ft. keel, 37 ft. beam, 13 ft.

deep, estimated 535 net tons, lying at the company's yard at Nordin, near Newcastle. This vessel is in full frame, with keelsons, assistant keelsons, clamps and 10 strakes of ceiling in place fully fastened, and is also fitted with second stern post and shaft log. She is being built under the American Bureau of Shipping to be classed A1 for 12 years. Tenders are also being received for a quantity of shipbuilding material. The purchaser will have the right to a lease of the shipyard, mill and other buildings and lands, and of the machinery and tools connected with the plant, for the purpose of completing the vessel, at a rental of $200 a month.

Marine Construction Co. of Canada, Ltd., St. John, N.B.—The four-masted schooner Randfontein was launched at this yard, Feb. 4, and christened by Mrs. J. M. Densmore, wife of the designer and superintendent of construction. The keel was laid July 1. She is of similar type to the schooner Dornfontein, which was lost during a flying visit of German submarines to the coast. She is double decked, with a speed of about 8 knots, and is registered A1 for 13 years. Her dimensions are: length, keel, 204 ft.; length over all, 230 ft.; beam, 37½ ft.; depth of hold, 18 ft. She has a deadweight tonnage of 2,200. She is equipped with a 400 h.p. engine and Scotch boiler, which were in position at the time of launching.

Steamship Watuka, built by Nova Scotia Steel & Coal Co., for its coal and iron trade.

The National Shipbuilding Corporation, which took over Three Rivers Shipyards, Ltd., Three Rivers, Que., recently, has been authorized to carry on business in Quebec Province, with its chief place of business in Montreal, and A. H. Chave as its principal agent.

Nova Scotia Steel & Coal Co., Ltd., New Glasgow, N.S.—The s.s. Watuka, which was scheduled to sail with a general cargo for France, early in February, was built at this company's yard at Trenton, N.S., and launched early in December. Her dimensions are: length 248 ft., breadth 35 ft., depth 21 ft. The hull is of steel, and the holds are clear of all beams. The engines and auxiliary equipment have all been made by the company. She is 1,700 tons gross, 1,067 tons net, and has a deadweight capacity of 2,400 tons. Capt. J. B. Mackenzie has been appointed master, and John Somers chief engineer.

This vessel was built by the company for its own coal and iron ore trade. She loaded her first cargo of coal for Newfoundland, and then went to Halifax, taking on cargo for France, making the trip across the Atlantic in 15 days, a very good passage for a vessel of her size, especially during the winter. She is built to Lloyd's highest class, with raised quarter deck, and 4 large hatches serving 2 cargo holds, one forward and one aft, both clear of all stanchions. The propelling machinery consists of triple expansion engine with cylinders 17, 28 and 46 in. diar. by 33 in. stroke, and with uniflex surface condenser. Steam is supplied by 2 Scotch marine boilers 11¾ ft. diar. by 10¾ ft. long, with 2 corrugated furnaces 44 in. diar., for a working pressure of 185 lb. The engines were built by the Nova Scotia Steel & Coal Co., and the boilers by John Inglis Co., Toronto. The officers' and engineers' quarters are on the bridge deck amidships, and the crew are accommodated under the forecastle deck. The vessel is equipped with all cargo discharging appliances, electric lighting and wireless telegraphy.

Pacific Construction Co., Port Coquitlam, B.C.—The second of the 2 wooden steamships which this company is building for Grecian interests was launched Feb. 18, and named Erini. She was subsequently towed round to the company's plant at Industrial Island, where she will be equipped. The first of these vessels, named Antonios, has been equipped at False Creek, and was expected to undergo her trials towards the end of February. These vessels, which were ordered by N. Galanos, New York, are of 2,800 tons d.w. each.

The St. John Dry Dock & Shipbuilding Co., St. John, N.B., is applying to the St. John City Council for the acquisition of the Almshouse water lots. The council has appointed a special committee to deal with the matter.

The Quebec Shipbuilding & Repairing Co. is reported to have decided to build two more four-masted schooners in its shipyard at the Louise docks, Quebec. One of these vessels will be of 2,200 tons, similar to the M. P. Connolly, which was built at the Isle of Orleans plant, and wrecked on her maiden trip early in 1918; and the other will be of 1,240 tons, similar to the Edgewood, built at the Louise docks during 1918.

S. J. Soley, Fox River, N.S., launched the schooner Northcliffe recently, which has since been taken to St. John, N.B., to take cargo for Newfoundland, where she will be loaded with dried fish for Brazil. She is 291 tons net, and is operated for Newfoundland owners by Nagle & Wigmore, St. John, N.B.

Three Rivers Shipyards, Ltd., Three Rivers, Que., has laid keels for the ten 1,500-ton wooden steamships for which it has orders from the French Government.

Victoria Machinery Depot Co., Ltd., Victoria, B.C.—As stated in Canadian Railway and Marine World for February, a press report from Victoria stated that the Foundation Co. was negotiating for the purchase of the Victoria Machinery Depot Co.'s plant, etc. We were advised early in February that the negotiations did not result in any consummation.

Reported Transfer of Shipbuilding from Scotland to British Columbia.

The following cablegram from London, Feb. 3, was published by the Toronto Globe:—"Under the heading 'From the Clyde to Vancouver—Gradual Transfer by Messrs. Yarrow,' the Times announces that this widely known shipbuilding firm intends to diminish the output at its works in Scotstown, near Glasgow, and to increase the production of its smaller works at Vancouver. The main impelling reason appears to be the incessant labor troubles."

The mention of Vancouver was an obvious mistake, as Yarrows, Ltd., plant is at Victoria, B.C., not Vancouver.

A Victoria paper of Feb. 4 quoted Norman A. Yarrow as stating there that the report cabled was without foundation. On Feb. 10 Yarrows, Ltd., wrote Canadian Railway and Marine World from Victoria as follows: "We have no statement to make in this connection, and would also mention that we have made no plans regarding the extending of our plant."

Caution re Mines.—The British Admiralty has issued a general warning to navigators, that a certain number of mines have been sunk without exploding, and it is possible that some of these, lying on the bottom in shoal water may be dangerous. Mariners therefore should arrange, whenever possible, to have a clear depth of at least 6 ft. between the keels of their vessels and the bottom, when in the vicinity of shoal water, or in the approaches to ports and harbors which were subjected to mining operations during the war.

Transatlantic Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with $1,000,000 authorized capital and office at Montreal, to own and operate steam and other vessels, and other navigation facilities, and to carry on a general navigation and transportation business. C. A. Sara, Montreal, is interested in the project, which, it is said, is concerned with British interests.

Pacific Coast Piers Transferred to Canadian National Rys.—The Dominion Government has transferred its dock at Vancouver, between the extremities of Commercial and Salsbury Roads; and its piers 2 and 3, at Ogden Point, Victoria, to the Canadian National Rys., which will operate them in future.

Atlantic and Pacific Ocean Marine.

The Cunard, Anchor and Anchor-Donaldson Lines have opened an office at Washington, D.C., in charge of G. W. Moss and T. J. Stead.

The Canadian Pacific Ocean Services' s.s. Empress of Asia was handed over by the Admiralty, to her owners, at the end of January, after considerable service under war conditions. She is being overhauled and refitted by Wallace Shipyards, Ltd., Vancouver.

With reference to a press report that Canadian Pacific Ocean Services, Ltd., intends building a "palatial" steamship of large tonnage for its Pacific Ocean service with the Orient, we are advised that the vessel will not be completed for about two years.

A Vancouver press dispatch states that the Taiyo Kisen Kaisha has been organized in Japan to establish a steamship line between Japan and North American ports. This, it is stated, is the first independent steamship line to be organized in Japan, to establish a regular steamship service across the Pacific, without a government subsidy, such as is granted to the Nippon Yusen Kaisha, the Osaka Shosen Kaisha and the Toyo Kisen Kaisha.

Maritime Provinces and Newfoundland.

The name of the schooner Jessie L. Fauquier, owned by Fauquier & Porter, Halifax, N.S., has been changed to Avon Queen.

The Dominion Public Works Department will receive tenders to Mar. 18, for repairs to the breakwater pier at Cape Bald, N.B.

The Naval Service Department advises that the wreck of the s.s. John of St. John's, Nfld., is reported adrift in lat. n. 45 deg., long. w. 48 deg. 28', and is a menace to navigation.

The Dominion Steel Corporation is reported to have claims against the British Admiralty, approximating $20,000,000, arising out of the requisitioning of its coal vessels during the war.

The Eastern Steamship Corporation recommenced its Yarmouth-Boston service, Feb. 1, with the s.s. Aranmore, and it is expected that the s.s. Northland will be added to the service about Mar. 1. It is announced that, about Apr. 1, this service will be replaced with vessels plying between St. John, N.B., Eastport, Me., and Boston, Mass.

The s.s. Magdalen, owned by W. G. Leslie, Grindstone Island, Que., while on the marine slip at Dartmouth, N.S., for repairs, was gutted by fire, Feb. 13. She was built at Shelburne, N.S., in 1906, and was screw driven by engine of 28 n.h.p. Her dimensions were, length 98.6 ft., breadth 21.6 ft., depth 8.8 ft.; tonnage, 135 gross, 92 register.

The s.s. Julienne was offered for sale by public auction, as she lay at Campbells' wharf, Halifax, N.S., Feb. 22, by order of the sheriff, as a result of an action in the Exchequer Court, at the instance of John Mitchell. She was built at Southbank on Tees, Eng., in 1914, her dimensions being, length 202 ft., breadth 39 ft., depth 15 ft.; tonnage, 955 gross, 790 net.

A Halifax, N.S., press report states that the great scarcity of seamen that prevailed at that port for some time has disappeared, and that practically two men are offering for every one required, though there is a demand for seamen for sailing vessels for the West Indies and South American ports. It is also stated that the very high wages and the bonuses, paid during the war, have disappeared, the rate for seamen and firemen being about $55 to $60.

The St. John Dry Dock & Shipbuilding Co., which has the contract for harbor development work in Courtenay Bay, St. John, N.B., is stated to be preparing for the season's work, by overhauling a number of the vessels and other equipment, which the former contractors had been utilizing prior to their abandonment of the work. Most of this work is being undertaken at the Driscoll slip, where new boilers are being supplied to the large suction dredge, which the contractors have taken over.

Province of Quebec Marine.

The Public Works Department received tenders to Feb. 25 for the reconstruction of the wharf superstructure, and repairs to the wharf approach, at Vercheres.

Capt. Jos. Bernier, of the St. Lawrence Shipping & Trading Co., Quebec, is stated to have gone to Great Britain to buy steel vessels suitable for the Gulf of St. Lawrence service.

J. G. Scott, President, Quebec Board of Trade, wrote recently to Lord Pirrie, who was born in Quebec, and who is now the head of Harland & Wolff, Ltd., shipbuilders at Belfast, Ireland, and placed before him the possibilities of steel shipbuilding in Canada, and the natural advantages offered by the port of Quebec.

The Quebec Harbor Commissioners waited on the Dominion Government at Ottawa, Feb. 5, in connection with the proposed additional equipment to be provided at the Louise docks, and in the port generally. The chief matter dealt with was the provision of extensive cold storage capacity, to care for the expected increased export of provisions of all classes.

The Quebec Legislature has amended the City of Three Rivers' charter, confirming the city's bylaw respecting the purchase and transfer of certain land to favor the erection of dwelling houses by Canada Steamship Lines, Ltd. In connection with this project, which is being carried out by Tidewater Realties, Ltd., a subsidiary of Canada Steamship Lines, Ltd., the city is authorized to issue bonds for $80,000, bearing interest at 6%, redeemable in 30 years.

The Levis Maritime & Industrial Co., which operates a ferry service with its two steamboats, Champion and Frontenac, between Quebec and the Isle of Orleans, has advised the residents on the island that during the forthcoming season, the ferry service will be carried on by one vessel, the Champion, and that consequently the number of trips will be reduced. It is reported that a new company may be organized to handle the traffic, unless the present company continues the two-vessel service.

Ontario and the Great Lakes.

The Walkerville & Detroit Ferry Co., incorporated in Michgan, U.S., has been authorized, under the Ontario Act respecting mortmain, etc., to acquire and hold lands in mortmain in Ontario.

Canada Steamship Lines, Ltd., expect to reopen navigation on Lake Ontario, about Mar. 1, when it is hoped to sail the s.s. Macassa from Hamilton to Toronto.

The s.s. Compton, owned formerly by the Canada Shipping Co., and which ran on the rocks near the Crossover light, about 5 miles west of Brockville, and was abandoned to the underwriters, is reported to have been sold. It is stated to be the intention to release her as soon as weather and other conditions permit.

The Montreal Transportation Co. has closed its Kingston elevator temporarily. L. L. Henderson, Vice President and General Manager, is reported to have stated that the elevator has been operated at a loss for several years, chiefly owing to the large elevator capacity at Port Colborne. It is probable that the elevator will be reopened in the not distant future.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level for January, as follows:—Superior, 602.26; Michigan and Huron, 580.80; Erie, 572.19; Ontario, 246.09. Compared with the average January levels for the past ten years, Superior was 0.27 ft. above; Michigan and Huron, 0.95 ft. above; Erie, 0.63 ft. above, and Ontario, 0.81 ft. above.

Tenders will be received to Mar. 3 for the purchase of the Public Works Department's steam tug Fashion, as hauled out at the Victoria Island shipyard at Ottawa. She was built at West Bay City, Mich., in 1893, and is equipped with compound engine with cylinders 14 and 24 in. diar. by 13 in. stroke, 24 n.h.p., supplied with steam by a boiler 70 in. diar. by 105 in. long, jet condenser, duplex feed pump and 6 in. propeller. Her dimensions are: length 52 ft., beam 16 ft., draft 7½ ft.; tonnage, 43 gross, 27 register. The hull has been condemned.

Representations are being made to the Dominion Government by the town of Dunnville, the Dunnville Board of Trade and the Haldimand county council, urging the investigation of the advantages of utilizing Port Maitland as the Lake Erie entrance to the Welland Ship Canal, instead of Port Colborne. The canal feeder, whic hnow runs from Port Maitland to Welland, about 18 miles, could, it is claimed, be brought into use by deepening and widening, at a much less cost than the present channel between Port Colborne and Welland, 7 miles, the former channel being through a clay section, and the latter through rock. It is also claimed that the harbor at Port Maitland would be safer during a storm than that at Port Colborne.

British Columbia and Pacific Coast.

The Union Steamship Co. of British Columbia has been authorized to change the name of its steamship British Columbia, to Chilliwack.

The Dominion Public Works Department has awarded a contract for the reconstruction of the dockyard wharf at Esquimalt, to McDonald & Watson, Victoria, for $52,924.07.

The Canadian Robert Dollar Steamship Co. is reported to have purchased the San Francisco sailing vessel Jane L. Stanford, and to have placed her in the lumber trade between Vancouver and the Orient.

The C.P.R. appropriations for this year for the B. C. coast, lake and river steamship work cover maintenance and general repairs, as well as the purchase of a new tug for the coast service, and a transfer barge for lake service.

The enquiry into the loss of the C.P.R. s.s. Princess Sophia, with all passengers and crew, in the Lynn Canal, Oct. 24, 1918, was adjourned at Victoria, Feb. 11, to Feb. 26, when further evidence was to be taken at Juneau, Alaska.

In connection with the loss of the C.P.R. s.s. Princess Sophia in the Lynn Canal, Oct. 25, 1918, when all passengers and were also lost, two actions for damages through loss of life have been entered against the C.P.R., one for $50,000 and the other for $20,000.

The North Vancouver City Council has sold the ferry steamboat North Vancouver no. 1, to B. Gilbert, North Vancouver, for $2,100. It is said that she is to be used as a tugboat. She was built at Vancouver in 1900, and is screw driven by engine of 19 n.h.p. Her dimensions are: length 73.4 ft., breadth 20.1 ft., depth 6.7 ft.; tonnage, 104 gross, 71 register.

The C.P.R. s.s. Princess May, which was completely overhauled and repaired by Yarrows, Ltd., at Victoria, recently, is stated to have been laid up, and it is announced that she will not be operated, at least for several months, and that she is for sale. She was built at Newcastle, Eng., in 188, and was then named Hating. Since she was acquired by the C.P.R. and placed on the B.C. coast run, she has been almost continuously in service, and latterly has been used more or less as a relief vessel.

The steam yacht Stadacona, now at Halifax, N.S., is, according to a Victoria, B.C., report, to be sent to the Pacific coast, to replace the s.s. Galiano, lost recently, in the fishery patrol service. It is also stated that three steam trawlers, named Armentiers, Thiepval and Givenchy, which were used in Atlantic patrol service during the war, will, at the same time, be transferred to the Pacific coast fishery patrol service. It is said that the vessels will leave the Atlantic coast during March, and proceed to Esquimalt via the Panama Canal.

The Cunard Steamship Co. is reported to have made arrangements with the London & South Western Ry. (England), under which Southampton will be a port of call for the company's large passenger vessels plying between America and England.

The return of requisitioned steamships to their respective owners, it is announced, is expected to be completed by Mar. 1. In this connection, a prominent Montreal shipping man is reported to have stated that shipping rates will be considerably lowered immediately the vessels are returned for their owners' operation, and that there will be no difficulty in obtaining tonnage space.

The World's Shipbuilding in 1918.—A London, Eng., dispatch states that Lloyd's summary of mercantile shipbuilding throughout the world, in 1918, shows that the total mercantile tonnage turned out by allied and neutral countries, was 5,447,444 tons, this total never having been approached in any previous year. It is 62% higher than in 1913, the highest previous year, which also included figures from Germany and Austria-Hungary, which, if any, are not included in those for 1918. The United Kingdom launched 301 vessels, totalling 1,348,120 tons, which was about two-thirds of the tonnage launched in 1913. Outside the United Kingdom, 1,565 steamship were launched, totalling 4,099,324 tons, of which Canada, the United States and Japan were responsible for 92%.

Naval Service Qualifications for Masters and Mates.—We are officially advised that the Marine Department, in connection with the time to be served at sea by applicants for masters' and mates' certifigates, has made the following arrangement:—"As a general rule, service performed on naval ships will be accepted as sea service, as qualifying for examination, and will be estimated by the same rules as if performed on merchant vessels. As regards service on naval vesesls counting as officers' service, no fixed rule has been laid down, but every case will be dealt with on its own merits, and the department will be prepared to consider sympathetically the case of any certificated man who left the merchant service during the war, and joined the navy, to see, if possible, that he suffers no disadvantage by his service in the navy."

Vessels Registered in Canada During December, 1918.

In compiling the following lists of vessels registered, steamboats and motor boats, operated by engines of less than 10 n.h.p. are eliminated, as also are sailing vessels of less than 100 tons register.

Dominion Marine Association and Canadian Lake Protective Association Annual Reports, Meetings, Etc.

The Dominion Marine Association's annual meeting was held in Montreal, Feb. 5, the Vice President, W. J. McCormack, Algoma Central Steamship Line, Sault Ste. Marie, Ont., occupying the chair, in the absence of the President, J. T. Mathews, Mathews Steamship Co., Toronto, owing to illness. A letter from the President, regretting his inability to attend, having been read, the representatives present passed a resolution of sympathy.

A letter was read from C. H. Nicholson, Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, inviting general support in a movement for relief from alleged unnecessarily onerous customs requirements in the matter of coastwise clearances and entries. After some discussion, it was decided to write Mr. Nicholson, reporting fairly general satisfaction with existing conditions on the Great Lakes, in respect to the matters mentioned, and asking for particulars of difficulties experienced on the Pacific Coast.

A letter was read from the National Association of Marine Engineers' Secretary, enclosing a proposed wage scale for 1919, and it was decided to reply that individual members had received similar communications, and that as the matter was one for individual action, the association could not deal with it.

Letters were read from the Grain Commission, declining to make any order as to the shovelling charge, on the ground that "shovelling" was not considered to be included in the meaning of the word "handling", as to which the Grain Act confers jurisdiction upon the commission, and also giving notice of intention to take over the trimming, and to hold a conference on that subject this winter. The Secretary was instructed to take the question up with the Lake Carriers' Association, to ascertain its views, and to arrange for a meeting of the new executive committee before the public hearing proposed by the commission.

A letter from N. W. Gowan, patentee of the Gowan safety device for lock gates, recalled previous representations on the same subject, and urged further support from the association. The discussion confirmed the urgent desirability of effective means to prevent lock gates being forced out of miter, and attention was also called to previous requests made by the association for protecting devices, such as spring buffers, at entrances to locks. A. E. Mathews, A. A. Wright and the association's counsel, F. King, were appointed to take these questions up again with the Railways and Canals Department at Ottawa.

A suggestion was made for exchange of circulars between the association and the Lake Carriers Association, and the Secretary was asked to endeavor to arrange for the same.

The executive committee's annual report, as printed farther on in this issue, was presented, and was generally discussed and approved. The Secretary reported verbally that he was in communication with a number of the Public Works Department's district engineers, and hoped to include in next year's report a complete series of statements from them, and from other officers, reviewing public works affecting navigation from the head of the lakes to Montreal.

It was recommended to the incoming executive committee that the next annual meeting be held in Ottawa, and that, as in pre-war days, an effort be made to have a general reunion and dinner, attended by interested cabinet ministers and departmental officers of the inside and outside service.

The following were appointed a committee on aids to navigation: W. J. Bassett, J. W. Greiner, A. E. Mathews, W. J. McCormack, H. N. McMaster, W. H. Smith, J. F. Sowards and Jno. Waller.

The four vacancies in the executive committee, occurring by the expiration of the terms of office of G. E. Fair, L. Henderson, J. F. M. Stewart and J. Waller, were filled by the re-election of Messrs. Henderson, Stewart and Waller and by the election of Lorne C. Webster, Webster Steamship Co., in place of G. E. Fair, retired. The vacancies caused by the retirement of C. B. Harris, W. J. Bassett and A. A. Wright, were filled by the election of W. H. Smith, A. L. Laroque and H. W. Cowan.

W. J. McCormack,
General Manager, Algoma Central Steamship Line, and President, Dominion Marine Association.

A. A. Wright was elected an honorary member of the committee, in recognition of his valuable services ever since the association's formation.

Notices of motion for amendment of the constitution were given as follows: by W. E. Burke, to give the executive committee power to add to its members, and to limit the voting power in general meetings to one vote for each member company; by A. A. Wright, to enable members of the committee to attend and vote by proxy.

The executive committee then met and elected the following officers:—President, W. J. McCormack; 1st Vice President, A. E. Mathews; 2nd Vice President, H. W. Cowan.

The other members of the executive committee for 1919 are:—W. E. Burke, Montreal; L. Henderson, Montreal; A. L. Laroque, Montreal; J. T. Mathews, Toronto; W. H. Smith, Montreal; John F. Sowards, Kingston; J. F. M. Stewart, Toronto; John Waller, Montreal; Lorne C. Webster, Montreal; A. A. Wright, Toronto.

Canadian Lake Protective Association's Annual Meeting.

The Canadian Lake Protective Association's annual meeting was held at Montreal, Feb. 5, after the Dominion Marine Association's annual meeting. The newly elected President of the Dominion Marine Association, W. J. McCormack, occupied the chair.

The Secretary reported verbally that no attempt had been made to compile statistics or prepare a printed report regarding the casualties of 1918, as only three casualty reports had been received since the last bulletin of 1918, issued in September, and because on account of the small number of reports, and particularly on account of the President's illness, no meeting had been called in December to review the year's work. It was considered that no comments of value could be made in a report based upon returns which appeared to be incomplete. Attention was called to the notices sent members in this connection, and particularly to the resolution of the last annual meeting circulated in the printed report of the proceedings of that meeting. Reference was also made to the action of the executive committee at its meeting which had just adjourned, and particularly to the recommendations to be mentioned in bulletin 1 of 1919, requiring members to procure the execution of agreements by masters and engineers on association forms, fresh supplies of which are to be furnished. After discussion and some comment on the general understanding that the season had been without many serious accidents, on resolution moved by Messrs. Henderson and Wright, the committee's action was approved.

W. E. Burke gave notice of motion for amendment of the constitution and bylaws to confer power on the executive committee to add to its numbers, and to enable members to attend and vote by proxy, and also to limit the voting power in meetings of the association to one vote for each member company.

The following were elected unanimously as the committee for 1919. W. J. McCormack, Chairman, Sault Ste. Marie; W. J. Bassett, Toronto; W. E. Burke, Montreal; H. W. Cowan, Montreal; J. W. Greiner, Montreal; L. Henderson, Montreal; A. E. Mathews, Toronto; J. T. Mathews, Toronto; H. N. McMaster, Kingston; W. H. Smith, Montreal; John Waller, Montreal; A. A. Wright, Toronto.

Dominion Marine Association's Executive Committee Report.

The report of the executive committee is once more presented as a brief summary of various items of work which have come directly under the attention of the committee during the year, without regard to the wide field of questions in which the association has been indirectly interested. It was suggested towards the close of the year that the report might properly include some general review of public works in the waters in which the association is interested, together with other matter of a similar nature relating to transportation. But at the late date at which the suggestion was made it was found impossible to arrange for the necessary reports from all the district engineers of the Dominion Public Works Department and it has therefore been determined to allow the report to issue this year in the usual brief form.

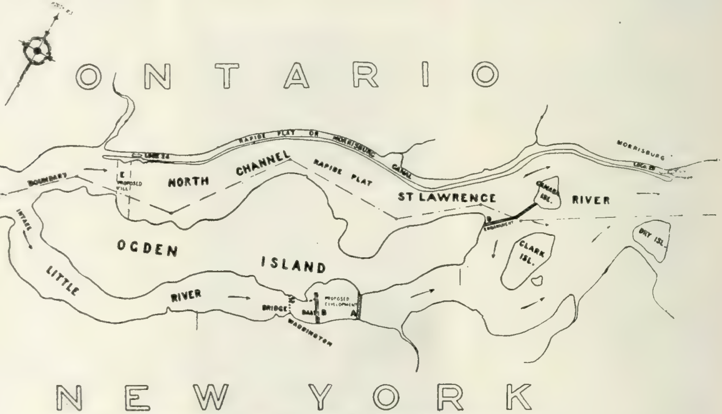
Legislation.—Once more, on account of the exigencies of the war, the Dominion Parliament has confined its attention to questions of pressing importance, excluding controversial matters as far as possible, and the session of 1918 saw no legislation of importance directly affecting shipping interests, other than certain amendments of minor importance to the Navigable Waters Protection Act.

Only two orders in council relating to the Marine Department and of interest to this association adopted in 1917 are published with the 1918 Dominion Statutes. One provides regulations and a tariff of tolls for the use of government wharves and the other prohibits transfer of registry of a British ship from a port of registry in Canada to a port of registry outside of Canada without the written consent of the Minister of Marine.

The bill designed to bring lake carriers under the jurisdiction of the Board of Railway Commissioners, defeated in 1917, was again introduced, in an amended form, by J. A. Armstrong, M.P. for East Lambton, but did not get beyond its first reading and a reference to committee. Leading commercial bodies again filed protests against the proposed legislation and your committee continued the association's opposition until the house adjourned. It is understood that this bill will be introduced again at the coming session and the subject will require further careful attention.

New York & Ontario Power Co.—The proposals of this company were briefly referred to in the report of your committee for 1917. In due course application was made by the company to the International Joint Commission for approval of its plans, and a preliminary hearing, at which this association was represented by counsel, took place at Atlantic City, Aug. 12, 1918. Counsel for the applicants presented some evidence at that session of the commission, and opposition was made by counsel for the Dominion Government, for the State of New York and for this association. The commission then adjourned, in order to examine the location of the proposed works in the River St. Lawrence, and on Oct. 1 met again at Ottawa for final hearing. Your association, with the approval of the Dominion Government, had in the meantime filed a separate answer to the company's application, and your counsel took part in all the proceedings, which at the final hearing lasted four days. Evidence of master mariners was adduced by him on behalf of the association, to substantiate certain contentions against the proposed works as prejudicial to the interests of navigation. The U.S. Government, through its counsel, Judge Koonce, expressed willingness to agree to the plans if the commission were satisfied. Counsel for the Dominion Government opposed, largely on the ground that the consent of the Public Works Department should have first been obtained, and that nothing should be done pending development of a more comprehensive scheme of improvement affecting the whole river; and counsel for the State of New York opposed on general grounds, but particularly with reference to the limitations imposed upon the rights of the applicants by the legislation of New York State under which they claimed title. Certain other public bodies, notably the Conservation Commission of Canada, also appeared in opposition to the scheme. The commission took the matter into consideration and has not yet rendered a decision. Since the hearing P. B. Mignault, K.C., of Montreal, one of the three members of the Canadian section, has been elevated to the Supreme Court of Canada.

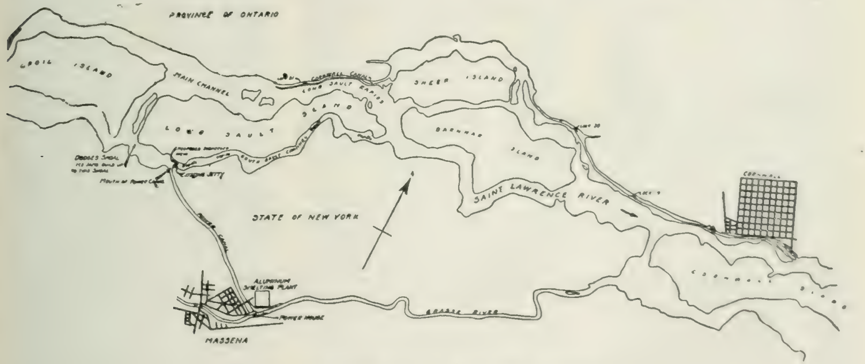
Briefly, the proposals of the company were for the improvement of the Little River and the building of a power house at Waddington, N.Y., with a view to withdrawing down that channel south of Odgen Island some 30,000 cu. ft. a second (alleged to be the natural flow) instead of a present flow of about 6,000 c.f.s. Compensating works to retain levels in the main channel were to consist of a dam from Ogden to Canada Island, the alleged effects of which would be to restrain the flow, and by its backwater effect to conserve or improve the levels in the Rapide Plat, while incidentally it would also do away with the cross current now running between the islands named; and also a submerged weir from Ogden Island under the main channel to a little below the head of the Morrisburg Canal, this weir being designed to maintain levels in the canal. A conflict of evidence arose as to the efficacy of the proposed compensating works and the principal objections raised for the association were: the increased current developed north of Canada Island, probably sufficient to bar upbound navigation; the doubtful results in the already difficult Rapide Plat, and the dangerous menace to present navigation and positive obstacle to future development which would be constituted by the submerged weir if built of a height and a width sufficient to serve its avowed purpose. The accompanying plan No. 1 shows the location of the works proposed.



Plan. 1. New York & Ontario Power Co.'s Proposed Development on St. Lawrence River.

The St. Lawrence River Power Co.—At the session of the International Joint Commission at Atlantic City on Aug. 12, 1918, counsel for the U.S. Government asked for an immediate hearing and special consideration of an application of St. Lawrence River Power Co. for approval of its undertaking in connection with its power plant at Massena, N.Y., alleging as a special reason the urgent desirability of securing an additional supply of aluminum for war purposes from the Aluminum Co. of America, which company would utilize the additional power the applicant company would be able to develop. Strong opposition was made to this request by counsel for the Dominion Government, for the State of New York, and for this association, but an order was ultimately made suspending rules and fixing an early date for hearing at Montreal. With the consent of the Dominion Government, an answer to the application was prepared and filed on behalf of this association and your counsel joined in the general opposition to the proposals at the hearing at Montreal at the end of Sept., 1918.

The plans included a dam or weir completely across the South Sault channel—nominally designed to improve winter ice conditions—and the dredging of the shoal in the St. Lawrence above the intake of the power canal to Massena. The dredging had already been done—with some adverse effect upon levels on the Canadian side; and it developed that the combined effect of the dredging and the dam, alleged to be intended to overcome winter ice conditions and maintain efficiency of the Massena plant throughout the year, would incidentally make about 114,000 h.p. available at the power house at Massena, in addition to the normal amount. The opposition to the undertaking was largely based upon the objection to damming the South Sault, which by the Ashburton treaty was to remain free and open for all time for the vessels of both countries; and the Canadian Solicitor-General argued that parliament alone had the power to act in view of the treaty.



Plan. 2. St. Lawrence River Power Co.'s Proposed Development.

He invited discussion between the two governments with a view to finding a solution that would preserve control of the river.

The commission reserved its decision, and subsequently made an order reserving the general question for later argument and consideration, but declaring the urgent need of the work as a war measure and permitting the building of the proposed dam or weir and its maintenance until the expiration of five years or the termination of the war, whichever should last occur; and providing also a right to apply to the commission within one year of the expiration of the period for an order approving the continuance of the weir on such terms as might then be deemed appropriate. The location of the weir and of the dredging are indicated by arrows in the accompanying plan 2.

Grain Trade: Regulations as to Outturns of Cargoes.—Correspondence early in the year developed the fact that loading elevators would renew their objections to the 1917 regulations. The commission was informed of the willingness of the members of this association to accept a renewal of these regulations, but a general agreement appearing impossible without conference, the commission met all interested parties at Montreal on Mar. 25. The whole question was then argued at length, but the terminal elevators strenuously objected to the agreement of the previous year. In the end the matter was left to the commission, on the general understanding that their decision would be accepted by all parties.

At a meeting of the grain section of this association in Toronto on May 10, on a report of the failure of the commission to take action it was agreed to bill freights in the same way as in 1917 and to make no further allowances than those provided in the regulations then in force, and also to advise the commission of this intention on the part of lake carriers. Notices were sent out accordingly. At another meeting in Toronto on June 12 conditions remained unchanged and members reported that settlements were held back until the announcement of a decision. Further correspondence followed and on June 27 the Grain Commission issued the following letter, signed by its Secretary: "I have to advise that definite arrangements have now been made whereby the Wheat Export Co., Ltd., has agreed to insure against shortage on grain cargoes shipped by them from Fort William and Port Arthur to Canadian ports, under a similar arrangement to that already in force at Buffalo. This arrangement, so far as Canadian ports is concerned, is to be effective as from June 11, 1918, and is intended to remain in force for the duration of the war. The Board of Grain Commissioners is taking the necessary steps towards adjustment of shortages which occurred between the opening of navigation and June 11."

The outturns of cargoes from Fort William and Port Arthur for several periods between June 1 and Nov. 20, 1918, as made up from returns received by the Grain Commission between those dates appear in the tabulated statement which appears as appendix to this report. Doubtless the question will again come before the commission for determination at or before the opening of navigation in 1919.

Allotment of tonnage and control of freights.—In July, 1918, upon invitation from the Lake Carriers' Association and upon instructions from this association, a delegation of three members attended a conference at Cleveland to discuss the subject. Mr. Barnes, representing the U.S. Grain Corporation, addressed the meeting, and Dr. Magill, Chairman of the Canadian Board of Grain Supervisors, also expressed his views. A proposal for complete mobilization of all tonnage, with general submission to the Lake Carriers' Mobilization Committee, received general support, but was declined by the Canadian delegates on the ground that separate mobilization with co-operation would be preferable, and as Canadian owners proposed to take prompt measures to submit their tonnage to proper control in their own country.

On July 30, Dr. Magill called a meeting of shippers, carriers, millers, and others in Toronto and by arrangement Canadian lake carriers met in a separate room at the same time in the same building. Acting independently of the general meeting the carriers discussed the situation fully and, after calling in, in turn, Mr. Stoddart of the Wheat Export Company, Mr. Young of the Lake Shippers Clearance Association and Dr. Magill, and discussing the matter with them separately, resumed discussion in private session and finally adopted the following resolution:

"That Canadian lake carriers, recognizing the obligation imposed on them of furnishing efficient aid to the transportation of the grain crops of Canada and the U.S.A., agree as follows:—That Lake Superior shall be served in preference to Lake Michigan and only surplus grain tonnage sent to Lake Michigan. That Lake Superior wheat shall be served in priority to any other grain. That all tonnage to Duluth-Superior shall be allotted through the U.S. Grain Corporation office there, all tonnage for Lake Michigan ports through the U.S. Grain Corporation office at Chicago, and tonnage to Fort William and Port Arthur through the Winnipeg Chartering Committee, under the same conditions as prevailed in the fall of 1917, but under such instructions as to allotments as may be acceptable to Wheat Export Co. and the Canadian Government, and subject to insurance by the shipper against any grain shortage on outturn, in accordance with the present arrangement in the Buffalo trade. That all unloading at Buffalo shall be directed by the U.S. Grain Corporation office at Buffalo. That the Canadian Lake Carriers will provide tonnage for the grain movement at rates not exceeding basic rates of wheat Lake Superior to Lake Erie, 4c a bush. until Sept. 1, and 4½c a bush. thereafter until Nov. 30, and wheat Lake Michigan to Lake Erie 3½c a bush. until Nov. 30, with alternative and relative rates as follows: To Georgian Bay and Goderich, ½c under Lake Erie rates; to Port Huron, ¼c under Lake Erie rates; to Collingwood, ½c under Lake Erie rate; but terms of discharge at Collingwood to be the same as hereafter provided for discharge at Lake Erie side ports; to side ports other than Buffalo and Port Colborne, including Detroit, same rates as Buffalo, but with special agreement as to discharge, allowing two working days free, but thereafter vessel to receive ⅛c a bush. additional on entire cargo for each running 8 hours or fraction thereof, until fully discharged; to ports of light draft, vessel to be allowed freight calculated on its Buffalo capacity. Other grains than wheat to net the vessel the equivalent of wheat cargo. Freight to Canadian vessels for carriage to U.S.A. ports shall be paid in funds current in U.S.A. and freight to Canadian vessels to Canadian ports shall be paid in funds current in Canada, and Canadian vessels, as much as possible, shall be employed in their customary fall trade routes.”

Appendix.—Summaries of statements issued by the Grain Commission showing outturns of cargoes loaded at Port Arthur and Fort William as shown by returns received during the periods named.

Screenings	4571—1670 tons	4562 1960 tons	....	8 1710 tons	....

On the general question of mobilization the following resolution was adopted:—“That Canadian carriers have given careful consideration to the proposal for mobilization of all their tonnage, either jointly with that of the U.S. lake carriers, or separately, but after full discussion and after having heard the opinions of those interested in the trade from all points of view, have come to the conclusion that they can best serve the prime object of all such proposals, viz., the contribution of the most effective assistance in the present unfortunate situation due to the war, by supporting a continuance of the arrangement which prevailed during the fall of 1917, an arrangement which gave general satisfaction and effectively met all requirements. Canadian carriers are influenced to some extent by the fact that in Canada there is no centralization of vessel management in any one locality and, in consequence, an almost insuperable difficulty would be at once encountered in an attempt to manage the trade through a committee, yet, nevertheless, as already stated, this objection was subsidiary to the main question which was determined with reference to the general satisfaction expressed with the 1917 arrangement.”

Throughout the remainder of the session allotment of tonnage was made in accordance with these resolutions by the Winnipeg Chartering Committee and apparently to the satisfaction of all concerned.

Shovelling Charges at Grain Elevators.—At a meeting of the association's grain section in Toronto early in the summer instructions were given to call the attention of the Board of Grain Commissioners to the charges of $4.35 per 1,000 bush. which certain elevators were then making for shovelling; and to advise the commission of the association's opinion that in view of the limitation now imposed upon the lake freight rate any increase in fixed charges should not be permitted to fall upon the carrier. No action was taken by the commission during the summer, but this item was placed on the agenda paper at a session held at Toronto on Oct. 10, and after argument the board then intimated that the association had made out a good case for the retention of the $4.00 rate and asked elevator representatives to agree to that figure as a maximum at least until the end of the 1918 season. Thereafter certain elevators continued to bill charges at the increased rate, and the board when again appealed to by this association refused action, on the ground that doubt was thrown upon its jurisdiction, the claim being made that “shovelling” was not included in the word “handling”, which is one of the items expressly named in sec. 137-8-9 of the Grain Act, requiring approval of elevator tariffs. The board also suggested that shovelling may be looked upon as part of the duty of those in charge of the ship. This view is not shared by your committee, but if doubt is at all reasonable it would appear that amendment of the statute to expressly include the word “shovelling” should be brought about.

Trimming.—During the year correspondence regarding this subject, including a number of communications from the President of the International Longshoremen's Association, received consideration at meetings in Toronto and in Montreal. The longshoremen's union proposed a new trimming arrangement under their auspices and some investigation was made as to the degree of support their proposal was receiving in the U.S. Early in the season, however, it was decided by your committee to take no action upon this proposal, and when the question was revived at a later meeting it was decided to await developments. In Dec., 1918, the Grain Commission determined to take over the trimming and to make rules and regulations, and a notice of this intention has been sent out intimating that a conference of all interested parties will be called prior to the opening of navigation. The action of the Grain Commission accords with the recommendation of this association made some years ago.

Loading from Private Elevators.—Early in the season the Fort William and Port Arthur Grain Exchange asked the support of the Dominion Marine Association in its petition to the Board of Grain Supervisors for suspension of the rule prohibiting the mixing of grain from a private elevator with any other grain in the same hold of a vessel. A lengthy correspondence developed differences of opinion as to the advisability of the change proposed and at a meeting of the association's grain section in May it was resolved to take no action.

Licenses for Bunker Coal and Supplies.—After the promulgation of regulations by the U.S. War Trade Board requiring ships to procure licenses before taking coal or supplies, an appeal was made on behalf of this association for recognition of its enrolled tonnage on the same basis as that of the Lake Carriers' Association and for their inclusion in a special system providing for a general license for the season to obviate need of constantly repeated application to the U.S. authorities. Correspondence took place with various parties and organizations and early in July the Director of Transportation advised the association of the acceptance of the above proposal. Forms were circulated accordingly and licenses for specified terms were issued to members upon application and proof as required.

Passes for Men at U.S. Lake Ports.—At the opening of navigation in 1918 the U.S. Department of Justice, in pursuance of a proclamation from the President, required that no alien enemies should be permitted to approach within 100 yards of any dock or other water front facility on the Great Lakes, and with the approval of the department the Lake Carriers' Association and the U.S. dock companies worked out a system of identification of officers and sailors. An opportunity being offered, the Dominion Marine Association availed itself of the same system. Copies of forms were secured and circulated, and later, forms of permanent and shore-leave passes, with appropriate application forms were prepared, printed and circulated by this association among its members and were used by ships trading to U.S. ports. In this connection correspondence was also carried on with the U.S. Commissioner of Immigration at Montreal regarding the regulations devised in his department, and local officers of immigration were also consulted in order to co-ordinate the requirements of the Immigration and Justice Departments. The system adopted greatly facilitated the movement of officers and men to and from their ships while in port.

The Military Service Act, 1917, generally and cordially approved in principle and application, was found to press heavily upon shipping interests in many instances, and early in the season an effort was made by your committee to secure some special recognition of the business of lake and river transportation, so that ships might be manned with their full crews without serious delays and might be freed from the risk of losing certificated officers or men on short notice. Interviews were held at Ottawa with the assistants of the Central Appeal Judge and with the Central Public Representative, and much correspondence also took place, in all of which the needs of various classes of vessels were explained and a general ruling was sought that would bring certain officers and men definitely within the exemption clauses of the statute by declaring their services in transportation to be in the national interest.

Later, on resolution of the committee, a request was made for application of the rule adopted in the U.S. whereby all bona fide members of crews received certificates that exempted them from other service so long as they continued to sail. It was pointed out, however, that the statute and its method of operation differed materially in the U.S. and that no fair comparison could be made, and it was determined by the Central Appeal Judge that each case must be dealt with on its own merits. Accordingly a great number of appeals accumulated on the files in the offices at Ottawa; and the justice of the claims in a great majority of these cases was apparently recognized. The mere withholding of a decision served the required purpose and left the men in the work of transportation. No doubt if the war had continued some other arrangement might have been required, but fortunately for everyone a happy solution of the difficulty has arrived. In this connection representations were made to the Department of Commerce and Labor at Washington as to the difficulty experienced in manning ships and the association received cordial assurance that the greatest possible leniency would be exercised in enforcing the U.S. Seamen's Act and that instructions were being issued accordingly.

Pure Water on Ships.—Pursuant to the arrangement made in 1917, the Department of Marine was reminded in Mar., 1918, of its intention to formulate Canadian regulations as to drinking water, compliance with which would satisfy officials in U.S. ports. A committee interviewed officers of the department at Ottawa and it was then agreed that no general regulations were required, as most of the ships affected by the U.S. law had already been equipped with efficient apparatus. It was decided that ships having steam available should adopt one of the approved plants mentioned in association circular 62 of 1917 and that ships without steam, such as many of the river tow barges, would probably have to adopt the alternative course permitted and take water on board from an approved source. The department undertook to prepare and supply forms of certificate for use by local medical health officers proving the water so procured to be satisfactory. These forms, procurable from any collector of customs, after proper signature would be accepted by U.S. port authorities. All this was intimated to members of the association by circular letters and in due course the forms mentioned were made available and were used.

Boiler Inspection.—At the annual meeting in 1918 it was resolved to ask for a less rigid enforcement of the Canadian regulations for computing permissible steam pressure for boilers brought in from the U.S. which were not open for inspection during the whole period of construction. At the first opportunity the subject was discussed with the Chairman of the Inspection Board at Ottawa and it was arranged that the practice of meeting special petitions by granting a reduction of the factor 1.65 in sec. 25 (a) under letter Y of the rules to a figure as low as 0.5 should be made more general, and that steamboat inspectors would receive instructions to make their computations accordingly in cases where no circumstances appeared to exist which would render a more rigid application of the rule advisable. The use of the lower factor gives the desired result.

New Life Jackets.—By circular S. I. 7 issued by the Chairman of the Inspection Board, it was announced that after April 1, 1918, all life jackets must be of special nature and have the board's approval in accordance with the terms of the circular. A committee of this association took the first opportunity to examine the various styles of jackets and witnessed a practical demonstration of their advantages over the form previously in use. The requirements of the board were communicated to all members. The new regulations proved a hardship to owners recently equipped with a new stock of the old style jackets, and it is understood that permission was given later in special cases for installation of enough of the new jackets to supply the crews and the average number of passengers rather than the full complement, on the understanding that further replacements later would be from the approved styles.

Navigation of the Kaministikwia River.—At the annual meeting in 1918 correspondence was read with regard to the regulations governing turning of vessels in this river, fully referred to in the executive committee's printed report for 1917, and after discussion it was resolved that inasmuch as the principle adopted by the government in consultation with this association had now apparently been abandoned in favor of a new and discriminatory plan, application should be made to have the privileges which were now allowed only to package freighters extended to all ships of the same length and to have all ships up to 330 ft. in length permitted to turn with a tug in the portions of the river named. A committee was appointed to interview the authorities at Ottawa and endeavor to have a fair regulation adopted as above. At a later date the committee met at Ottawa and interviewed the proper authorities, explaining the various changes which had taken place and the unfairness of the last regulation, which had been made without consultation with the association and apparently on the recommendation of some individual interest. The committee was favorably received and on the recommendation of the Minister of Marine, an order in council was adopted on Mar. 14, 1918, as follows:—

"Sec. 15 of the special regulations for the government of the harbor of Fort William, Ont., established by order in council of Nov. 7, 1917, is hereby cancelled and the following section is substituted in lieu thereof:—

"Sec. 15. Steam vessels not exceeding 200 tons gross may turn in any part of the Kaministikwia River, McKellar Channel, or the Mission Channel, under their own power, excepting in the immediate vicinity of any bridge crossing said river or channels. Steam vessels exceeding 200 tons gross are prohibited from turning in the local harbor, excepting at the turning basins constructed for that purpose at West Fort above the G.T.P. Ry. bridge, at the confluence of the Kaministikwia River with Mission Channel, at the confluence of the Kaministikwia River with McKellar Channel and at the G.T.P. Ry. turning basin near the mouth of Mission Channel, provided, however, that steam vessels exceeding 200 tons gross, but not exceeding 330 ft. in length, may turn in that section of the Kaministikwia River lying between the bend above the C.P.R. elevator D and the westerly limit of the G.T.P. Ry. dock and in that section of said river lying between C.P.R. slip 1 and elevator C, but the turning of such vessels in the said sections of this river shall not take place without the use of a tug, unless sanctioned by the harbor master."

Customs Clearances at Port Arthur and Fort William.—Considerable correspondence took place with regard to the requirements for double clearances at these ports, and certain complaints were reported on the part of U.S. tonnage. Correspondence followed with the retiring Minister of Railways and Canals, but at the general meeting in February last a modus operandi was reported which seemed to give general satisfaction and no further action was taken.

Shipping Registry at Toronto.—Upon request from the Upper Canada Tract Society for a further grant, and after consideration of reports regarding the use made of the registry established by the society at Toronto, $200 was voted by the general meeting of the association in February last and was paid.

Patrol Service Above Sault Ste. Marie.—Early in the season, with a view to facilitating the passage of vessels through the locks at Sault Ste. Marie, by avoiding congestion at any lock, the U.S. Lake Carriers' Association arranged for a patrol tug, and members of that association agreed that their ships should act upon directions to be given them from this tug. The co-operation of the Dominion Marine Association was sought in this arrangement and at a meeting in Toronto on May 10, 1918, the proposal was approved and it was resolved that Canadian vessels should pay on the same basis as the U.S. lake carriers for the service given. It was also resolved to suggest the distribution of mail by the same boat. Various objections were said to stand in the way of the proposed system of mail delivery, but the patrol tug has performed the duties originally assigned to it with general satisfaction to both associations.

Double Courses in St. Marys River.—A proposal came from the Lake Carriers' Association for adoption of certain double courses in the section of the St. Marys River between Sweets Point and Watsons Reef, and after consideration, your committee determined to ask owners to comply with the request for uniform action. It was arranged to await notice of general agreement on the subject in the Lake Carriers' Association's bulletins, but after further consideration that association advised letting the proposal stand, and no further action has been taken.

Canadian Lock at Sault Ste. Marie.—Considerable correspondence has taken place with reference to the landing facilities for vessels both above and below this lock. Arrangement has been made for additional help in taking lines. Special consideration has been given to the difficulties arising from the new currents developed above the lock, by the opening of the new power canal belonging to the Great Lakes Power Co. and the closing of the compensating dam above the rapids. A number of vessels grounded just west of the north pier, because the current which formerly flowed around the south pier now flowed around that on the northern side of the entrance, nearer the canal and where the approach is narrower. Improvements were suggested by dredging the approach above the power canal so as to reduce the side current and by placing detached buffer-cribs in proper locations. In the meantime the association advised owners by circular how all masters might best avoid danger.

Mullen Coal Dock at Sandwich.—An injunction order having been obtained by certain Sandwich residents against the continued use of the Mullen Coal Dock, an appeal was made by this association to the Marine Department for intervention as a war measure, with a view of making continued operation of the dock permissible. Colonel Anderson, Chief Engineer of the department, visited the locality, and reported upon the situation and before the close of April the Deputy Minister of Marine advised this association that it had now been arranged, as a war measure, to keep the dock in commission.

Aids to Navigation.—On account of the general reduction of expenditures for all purposes other than those connected with the war, it has been impossible for some time to obtain provision for additional aids to navigation except in very urgent cases. The committee having these questions in charge has, for this reason, made no formal list of recommendations to the Lighthouse Board during the past year. Only two meetings of the board have been held, and these have been attended by A. E. Mathews, representing the President. An appendix to this report in its first part mentions the various items affecting the eastern inland division with which the board has dealt during 1918, and it may be noted that the votes for this division amount altogether to only $1,015, of which $750 was for the range in the St. Marys River asked for by this association. The second part of the appendix sets out the other changes effected departmentally, or as the result of the above mentioned decisions of the board or of decisions in previous years.

Several items came directly before your committee and received special attention; notably the change in the position of Snake Island light to Simcoe Island, Lake Ontario—now confirmed by the authorities for various reasons expressly stated, and the dredging of the cross-over cut at the foot of Wolfe Island, delayed for want of a suction dredge, but now promised for the season of 1919. The range lights in the St. Marys River mentioned above were considered at a meeting of your committee in Toronto on May 10, when it was resolved to ask for the establishment of a range on the Canadian shore above Sault Ste. Marie, to mark the turning point for vessels leaving the main channel upbound to make the Algoma Steel Co.'s docks. The U.S. lighthouse inspector had already recommended two spar buoys on that side to mark a shoal in the vicinity. The improvement would obviate need of proceeding above the Vidal shoals to make the turn. This request was considered by the Lighthouse Board at Ottawa on Oct. 31, and after consideration of all the facts the board agreed to establish the range.

As usual, matters requiring immediate attention, including complaints of unlit lights or misplaced buoys, have been dealt with promptly by your officers as occasion arose.

Transportation Under War Conditions.—Under another heading in this report special reference is made to the voluntary submission of all Canadian lake tonnage in the grain trade to control as to allotment by authority acceptable to the Dominion Government and the Wheat Export Co., and to the voluntary fixing of a maximum freight rate in this trade. The purpose and the result of this action was to facilitate to the greatest extent possible the movement of grain for the allies. The Military Service Act bore heavily upon shipping interests and the association was compelled to take action to satisfy the officials in charge of the enforcement of the statute that ships could not be run without certain certificated officers and a certain minimum crew and that transportation was of prime importance in the national interests. A good deal of inconvenience also arose by reason of the pressure of stringent regulations affecting shipping and crews in port, but in all directions there was loyal submission to the requirements of laws designed primarily to further the one great cause, and traffic continued to move with surprising freedom from unusual accidents or delays.

General Business, Membership and Tonnage.—In addition to the special items set out above, the work of the association during 1918 included the usual general correspondence with representatives of various branches of the Governments of Canada and the U.S. and of sister organizations, as well as with members of the association and other parties.

The steam tonnage enrolled in 1918 was 138,458 net registered tons, against 160,417 in 1917; and the barge or sailing tonnage 21,710 net registered tons, against 25,808 in 1917; a total of 160,167 tons, to compare with 186,226 tons in the previous year. This continued decrease appears to be due to the war conditions which removed vessels from inland waters. The understanding is that members have continued to enroll their ships, irrespective of location, but losses and sales have been continuous, and wooden barges of Canada Steamship Lines, Limited, have not been enrolled. A fair comparison with tonnage of previous years is therefore impossible.

Projected Harbor Work for Toronto in 1919.

The Toronto Harbor Commissioners' budget for this year contemplates an expenditure of $3,300,000. It does not, however, mean that all the work covered by this amount will be carried on through the year, but it is anticipated that work will be done involving an expenditure of approximately $2,000,000. Much will depend on general financial conditions, and the opportunities offered for placing the commissioners' bonds on the market. It is intended to continue what is known as the industrial harbor development, in an easterly direction from the point where it now ends between John St. and Spadina Ave., through to York St., and also to reclaim about 90 acres of additional land for industrial purposes, and possibly some park reclamation work in addition. It is also the intention, providing the city's approval is obtained, to top dress and complete the park and amusement areas between Sunnyside and the Humber River, but this cannot be completed for the present, owing to the unfinished condition of the Dominion Government breakwater. Provision will also be made for roadways and sidewalk construction, sewers, etc.

So far as the Dominion Government work in the harbor is concerned, it is expected that some 4,400 ft. of crib work on the western breakwater will be completed, and also the turning basin in the eastern section, thus providing for about 4,000 ft. of dock wall, with concrete superstructure. The circulating channel will also be completed, providing for dockage construction for another 1,800 ft. of wall.

Submarines for Canada.—The British Admiralty has offered, as a gift to the Canadian Naval Service, two submarines, now at Bermuda, and Sir Robert Borden has accepted the offer on behalf of the Dominion Government.

Wireless Telegraph Restriction Modified.

The Naval Service Department announces that all censorship regulations restricting the use of wireless telegraphy to and from ships in the West Atlantic and in the Pacific are now completely removed. All ships will now be permitted to exchange wireless messages anywhere in the Pacific and west of 40° west in the Atlantic; messages may also be exchanged with Canadian commercial coast stations. The previous restrictions forbidding code and cypher message to ships at sea are also eliminated and the wireless service will henceforth resume its pre-war freedom. All restrictions regarding inter-station messages, that is, messages between wireless stations on shore, are also removed.

The regulations limiting the trans-Atlantic wireless service to press and government messages are still in effect, This service will not be thrown open for private messages until the British Government restrictions on this class of business have been removed.

The restrictions regarding amateur wireless stations are still in effect. The Naval Service Department advises that no licenses are being issued for this class of station as yet. It is probable, however, that this regulation will be modified in the near future. In the meantime, any persons desirous of then operating an amateur station should file their application for license with the Naval Service Department. Application forms can be had on application to the Deputy Minister of the Naval Service, Ottawa. Licenses can only be issued to British subjects.

Telegraph, Telephone and Cable Matters.

The C.P.R. will, it is stated, complete the stringing of an additional copper telegraph wire between Halifax and Montreal, during March.

The hearing by the Board of Railway Commissioners of the Bell Telephone Co.'s application for increased rates for telephone service, was concluded at Ottawa, Feb. 21, after 8 days sittings.

Judgment in the Newfoundland Government's claim against the Commercial Cable Co. for taxation for the landing of four cables in the colony, has been given in favor of the Government, by the Newfoundland Supreme Court. The amount to be paid is $112,000 with interest and costs, and is made up by the charges on four cables at $4,000 each per annum from July 1, 1910.

A bill providing for the taxation of certain companies, which has passed the Saskatchewan Legislature, includes every telegraph company and every railway or other company which owns, leases or operates telegraph lines, and carries on a general commercial telegraph business in the province. The tax is fixed at 1% of the gross earnings for the preceding year in case such percentage does not exceed $2,000, but, if on such a basis the tax collectible should exceed $2,000, the maximum tax shall be $2,000. Companies are required to make a return to the Provincial Treasurer, for the purpose of levying the tax.

Charts of the River St. Lawrence, from Pointe des Monts to Father Point, and of Sydney Harbor, have been issued by the Hydrographic Survey, Department of Naval Service.

Canadian Railway and Marine World

April, 1919

Broad Gauge Steel Coal Hopper Cars Built in Canada for Bengal-Nagpur Railway.

The accompanying illustrations show one of 70 steel coal hopper cars for the Bengal-Nagpur Railway, India, which have the following general dimensions:

Length over buffers	41 ft. 3 in.
Length over end sill	37 ft. 1 in.
Length of body inside	35 ft. 0 in.
Truck centers	27 ft. 8 in.
Width over side sill	9 ft. 10½ in.
Height from rail to top of sides	9 ft. 9 in.
Size of hopper door openings	6 ft. 2¾ in. x 3 ft. 3 in.
Buffer height (unloaded)	3 ft. 7½ in.
Wheelbase of truck	5 ft. 8 in.
Journals	5½ ft. x 10 in.
Capacity	100,000 lb.

The center sills are 21 in. deep, and built up of plates and angles, to shape approximating a girder of uniform strength, commonly known as the fish belly type of car center sill. There are web stiffeners as shown in the accompanying illustrations. Heavy cast steel center fillers are placed between these center sills, and bolster, and are riveted thereto through the draft sill and bolster flanges. A heavy bottom cover plate is applied under the bolster extending from side sill to side sill of car.

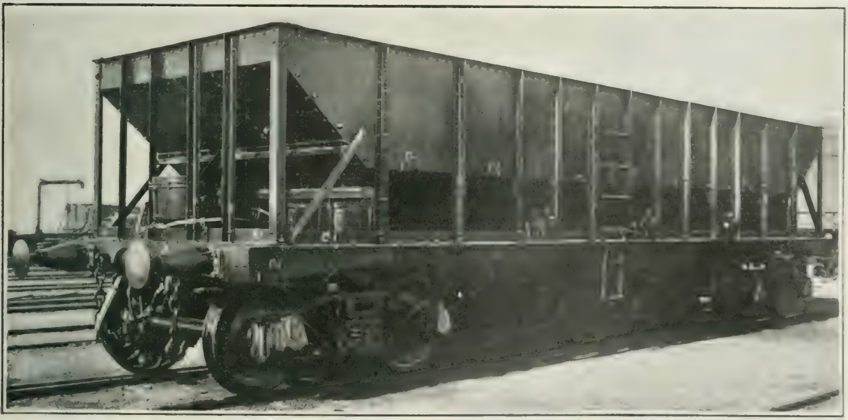
The sides are ¼ in. steel plate, built up into sections, and reinforced by 3 x 3 in. angle side stakes. Sections are spliced together with narrow plates, or bars, on inside of car, and in addition the side stake angle outstanding legs are riveted together as shown in the illustration. This building up into sections is done to facilitate knocking down into convenient sizes for ocean shipment. Side sheets or

The cross ridges are built up of ¼ in. plates, spaced apart and sloped and riveted together at the top by upstanding flanges. The space between the cross ridge plates contains the device for operating the hopper doors.

Transverse bracing and side slope sheet supports are built up with 5 x 3 and 3 x 3 in. rolled steel angles, spaced apart and secured to center and side sills, and side stakes, by structural knees and gussets, all as shown in photograph.

The inside cross diaphragms or girders are located midway between the cross ridges and are built up of plates and angles.

The hopper doors are built up of plates and angles and are operated with



Steel coal hopper car for Bengal-Nagpur Railway.

two center sills per car, extending the length of car between bolsters, each center sill consisting of ⅜ in. web plate, with single flange angles, 4 x 3½ x ½ in.

The draft sills are 15 in. standard rolled steel channels, extending from inside of bolster to end sill. The draft sills are securely attached to the bolster and end sill.

The end sills are 10 in. standard rolled steel channel, secured to draft sills, side sills and buffer diagonal brace, or structural knees and gussets. The end sills are reinforced on top for the side buffers by ¾ in. thick cover plates, and 5 x 3 x ⅜ in. standard rolled steel flange angles.

The buffer diagonal braces are 8 in. rolled steel ship channel, extending from behind the buffers to the bolster and center sill construction.

The body bolsters are built up of heavy flanged plates, reinforced by angles and girder webs are reinforced at the top with 3½ x 3½ in. angles, and at the bottom by the flanged side slope sheet for as much as can be gathered in by rivets spaced as shown in the illustration. Side sills are 5 x 3½ in. angles. Sub side sills are built up of plates and angles, and extend from end sill to bolster, and are connected thereto.

The end construction consists of corner posts of 3½ x 3½ in. angles and end posts of 3 x 3 in. angles, all securely riveted to end of car and end sill construction.

The flooring is built up of ¼ in. plates, and slopes towards the center hoppers at an angle of about 40° from the horizontal. Side slope sheets are inclined from the top of the center hoppers to a point about half way the height of the sides, at an inclination of about 35° from horizontal.

the ordinary chain lifting device.

The side bearings are the latest rocker type.

The forged draw hooks have the shank drawn out to extend beyond bolsters, through railway standard draw bar volute spring, and are secured thereto with 2 in. standard nut and split cotter.

The buffers are the Bengal-Nagpur Ry.'s standard.

The safety chains are of the usual European type.

The screw couplings are made from nickel chrome steel, with an ultimate strength from 145,600 to 168,000 lb. per square inch, and with an elongation in 2 in. of 1[illegible]% minimum to 23% maximum.

The brake equipment consists of the usual vacuum brake quite common with cars on the continent. The system includes two 21 in. detached cylinders, with suitable reservoirs and all necessary fit-

[illegible] so forth. Each [illegible] 2 speed action [illegible].

The trucks are M.C.B. arch bar type [illegible] capacity for 5½ ft. gauge of track, which is the Bengal-Nagpur Ry. standard.

The journal boxes and contained parts and axles are the usual 5½ x 10 in., except for the wide gauge as mentioned above.

The wheels are chilled iron, 37 in. in diameter, and were specially designed for the Bengal-Nagpur Ry.

The bolsters are cast steel, with center plates, side bearing pad and brake adjuster brackets cast integral. The bolsters are M.C.B. design throughout, except they are stronger on account of the wide gauge used by the Bengal-Nagpur Ry.

The cars were designed so as to be readily knocked down into convenient sections for packing and ocean shipment. They were built by the National Steel Car Co., Hamilton, Ont.

Birthdays of Transportation Men in April.

F. G. Adams, Commercial Agent, G.T.R., and Division Freight Agent, Grand Trunk Pacific Ry., Winnipeg, born at St. John's, Nfld., April 6, 1878.

S. S. Anderson, General Manager, Sandwich, Windsor and Amherstburg Ry., Windsor, Ont., born there April 14, [illegible].

W. H. Ardley, Comptroller, G.T.R., and Grand Trunk Pacific Ry., Montreal, born at London, Eng., April 24, 1858.

Jas. Black, Freight Claim Agent, C.P.R., Vancouver, B.C., born near Seaforth, Ont., April 19, 1858.

C. G. Bowker, General Superintendent, Ontario Lines, G.T.R., Toronto, born at Medford, N.J., April 21, 1871.

G. C. Briggs, Supervisor of Buildings, Eastern Lines, Canadian National Rys., Toronto, born at Cockermouth, Eng., April 23, 1886.

A. V. Collins, Travelling Auditor, Canada Steamship Lines, Ltd., Toronto, born at Island Pond, Vt., April 21, 1868.

R. J. Collins, Chief Dispatcher, Edmonton Division, Alberta District, C.P.R., Edmonton, born at Winnipeg, April [illegible].

Sir Henry L. Drayton, K.C., Chief Railway Commissioner for Canada, Ottawa, Ont., born at Kingston, Ont., April 27, [illegible].

W. A. Duff, Assistant Chief Engineer, Canadian National Rys., Moncton, N.B., born at Hamilton, Ont., April 20, 1877.

A. Gaboury, Superintendent, Montreal Tramways Co., Montreal, born there, April 6, 1875.

Lt.-Col. F. A. Gascoigne, D.S.O., Secretary-Treasurer, Canadian Pacific Ocean Services Ltd., Montreal, born at Gosport, Hants, Eng., April 2, 1866.

[illegible] Moncton, N.B., formerly Air Brake Inspector, I.R.C., now Eastern Sales Agent, Galena-Signal Oil Co., born [illegible] N.S., April 23, 1859.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Ude[illegible], Ceylon, April 12, 1875.

V. A. Harshaw, Manager, Fredericton & Grand Lake Coal & Ry., Co., and New Brunswick Coal & Ry. Co., Fredericton, N. B., born at Mono, Ont., April 26, 1865.

J. M. Horn, General Freight Agent, Western Lines, Canadian National Rys., Winnipeg, born at [illegible] Mills, Lanarkshire, Scotland, April 12, 1880.

J. H. Johnston, Superintendent of Bridges and Buildings, Eastern Lines, G.T.R., Montreal, born at Uxbridge, Ont., April 22, 1866.

G. W. Lee, Commissioner, Timiskaming & Northern Ontario Ry., North Bay, Ont., born at Renfrew, Ont., April 15, 1871.

W. E. McGill, Assistant Superintendent, Montreal Terminals Division, Quebec District, C.P.R., Montreal, born at Toronto, April 5, 1884.

J. A. Macgregor, Superintendent, Edmonton Division, Alberta District, C.P.R., Edmonton, born at Dufftown, Scotland, April 5, 1873.

B. R. Marsales, District Freight Agent, Canadian National Rys., Saskatoon, Sask., born at Guelph, Ont., April 13, 1887.

P. Mooney, Assistant General Freight Agent, Eastern Lines, Canadian National Rys., Quebec, Que., born at St. Catherines, Que., April 19, 1871.

Paul J. Myler, President, Canadian Westinghouse Co., Ltd., Hamilton, Ont., born at Pittsburg, Pa., April 24, 1869.

J. H. Norton, Division Freight Agent, Canadian National Rys., Halifax, N.S., born at Shaftesbury, Eng., April 21, 1884.

G. D. Perry, General Manager, Great North Western Telegraph Co. Toronto, born at Whitby, Ont., April 19, 1858.

R. A. Pyne, Superintendent of Motive Power and Car Department, Eastern Lines, C.P.R., Montreal, born at Toronto, April 10, 1874.

Lieut. R. S. Richardson, formerly Superintendent, District 3, Transcontinental Division, Canadian Government Railways, Fort William, Ont., now of No. 13 Light Railway Company, Royal Engineers, British Expeditionary Force, born at Napanee, Ont., April 9, 1865.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, born at North Bridge, Mass., April 21, 1869.

David A. Starr, M.I.E.E., General Manager, Clyde Valley Electrical Power Co., Glasgow, Scotland, born at Halifax, N.S., April 11, 1858.

J. A. Sutton, District Fuel Agent, Canadian National Rys., Cochrane, Ont., born at Moncton, N.B., April 12, 1894.

J. J. Sullivan, Roadmaster, C.P.R., Lauder, Man., born at Fishers, N.Y., April 29, 1866.

G. M. Thomas, District Freight Agent, Canadian National Rys., Hamilton, Ont., born at Dundas, Ont., April 21, 1876.

W. S. Tilston, Chief of Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., April 14, 1877.

C. H. Towle, Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Enfield, Me., April 13, 1878.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal, born at Hope, Ind., April 2, 1884.

W. Woollatt, Vice-President and General Manager, Essex Terminal Ry., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., April 2, 1855.

Canadian Pacific Railway Honor Roll 41.

Anning, Harry	Tuber	Montreal	Died while prisoner
Armit, John W.	Driver	Lethbridge	Wounded
Austen, Charles A	Yard foreman	Kenora	Wounded
Avery, Albert	Car cleaner	Winnipeg	Died of wounds
Axford, William Clyde	Switchman	Brandon	Wounded
Bailey, Joseph	Clerk	Montreal	Killed in action
Baillie, George I.	Apprentice	Montreal	Killed in action
Battle, Albert F.	Helper	Ogden	Killed in action
Beatty, Henry E.	Cashier	Fredericton	Wounded
Beresford, Arthur M.	Clerk	Vancouver	Wounded
Betton, John Richard	Wiper	Kenora	Died of wounds
Booth, Arthur	Wiper	Moose Jaw	Killed in action
Blundell, John	Agent	Two Creeks	Died of wounds
Boyle, Ebenezer A.	Operator	Revelstoke	Died of wounds
Brick, Daniel	Car heater and iceman	Toronto	Wounded
Brown, Andrew Lindsay	Clerk	Broadview	Wounded
Brown, Walter E.	Clerk	Calgary	Wounded
Bufton, Francis Henry	Car Inspector	Toronto	Wounded
Bulger, Richard E.	Apprentice	Ogden	Wounded
Buck, George	Cook	Montreal	Wounded
Busted, Holger	Trainman	Minnedosa	Wounded
Cameron, Wellington	Ass't agent	Alliston	Wounded
Cameron, William J.	Laborer	Owen Sound	Wounded
Campbell, James	Ass't foreman	West Toronto	Died of wounds
Charles, James	Helper	West Toronto	Wounded
Cobb, John	Laborer	Toronto	Wounded
Cochrane, William Kr.	Patternmaker	Winnipeg	Killed in action
Conners, Charles W	Loco. Fireman	Brandon	Presumed dead
Cook, Frederick	Checker	Fort William	Wounded
Copp, William Robert	Agent and operator	West Moncton	Wounded
Cottrell, William D.	Ass't agent	Strassburg	Killed in action
Crawford, William E.	Apprentice	Brandon	Presumed dead
Creffield, Charles S.	Steward	B.C. Coast Service	Wounded
Daley, Dennis	Clerk	West St. John	Wounded
[illegible], Albert J	Car repairer	Toronto	Killed in action
Dowd, Joseph Williard	Agent	Airdrie	Wounded
Dresner, Julius M.	Clerk	Winnipeg	Wounded
Elliott, Willliam	Apprentice	Kenora	Wounded
Emmett, John Edward	Helper	Ogden	Wounded
Fallon, Bartholomew J.	Clerk	Montreal	Wounded
Farley, Ralph Dearborn	Agent	Scotstown	Wounded
[illegible], George E	Instrumentman	Golden	Wounded
Fitzsimmons, Frank	Machinist	Ogden	Wounded
Ganter, Wilfred C	Loco. fireman	MacLeod	Wounded
Garvin, George I	Brakeman	Laurentian Div'n	Wounded
Gilbert, Thomas	Trimmer	Cartier	Shell shock
Gilpin, Joseph E.	Wheelborer	North Bay	Wounded
Grant, John	Bridgeman	Nelson Div'n	Killed in action
Griffin, Arthur	Apprentice	Ogden	Wounded
Griffiths, Vincent S.	Loco. fireman	Calgary	Wounded
Hadley, William J	Machinist	Montreal	Killed in action
[illegible] P.	Baggageman	Webbwood	Wounded
[illegible] G.	Apprentice	Winnipeg	Wounded
[illegible], Jas. W	Laborer	Winnifred	Wounded
Hastings, Albert H	Stenographer	Prince Rupert	Killed in action
Hayes, Arthur Bruce	Brakeman	Assiniboia	Wounded
Hemenway, [illegible]	Car checker	Outloook	Wounded
Henry, William John	Car cleaner	Winnipeg	Killed in action
Hollett, Alfred W.	Waiter	Montreal	Wounded
Holmes, Harold F	Clerk	Montreal	Wounded
Honeychurch, Wm. H.	Cleaner	Ogden	Killed in action
Hooser, William S.	Clerk	Woodstock, N.B.	Wounded
[illegible], Harry	Car washer	Montreal	Wounded

Hourd, Wesley	Clerk	Winnipeg	Died of wounds
Howard, John A.	Loco. fireman	Moose Jaw	Wounded
Howard, Norman Scott	Car checker	Toronto	Killed in action
Hoyle, John G. R.	Heavy punch hand	Montreal	Died of wounds
Hudson, George Arthur	Loco. fireman	Mooose Jaw	Wounded
Hughes, Joseph S.	Clerk	Ottawa	Wounded
Hunter, Thomas	Clerk	Montreal	Wounded
Hurst, William Albert	Transferman	North Bay	Wounded
Irvine, Gordon	Trainman	Winnipeg	Died of wounds
Jacobsen, Serge	Clerk	Winnipeg	Died of wounds
Jackson, William J.	Agent	Limerick	Killed in action
Jenkinson, Thomas	Constable	Toronto	Died of wounds
Jones, Robert Bolton	Draftman	Montreal	Wounded
Jordan, Ernest Forfar	Third officer	B.C. Coast Service	Wounded
Kaufman, Arthur	Assistant	Espanola	Wounded
Kershaw, Joseph	Helper	Winnipeg	Wounded
Kirby, John	Laborer	Lambton	Killed in action
Kosko, Michael	Machinist	Ogden	Wounded
Landry, Charles	Carpenter	Farnham	Wounded
Lewis, Charles	Cleaner	MacLeod	Wounded
Lord, John Emanuel	Clerk	Winnipeg	Wounded
Lowing, Bertram	Loco. fireman	Brandon	Wounded
McCarthy, Leo	Yardman	Windsor, Ont.	Wounded
McCaskie, Arthur A.	Stenographer	Calgary	Wounded
McCullough, John R.	Agent	Brockville	Wounded
MacDonald, Robert A.	Storekeeper	Quebec	Killed in action
MacFarlane, Walter A.	Chief clerk	Toronto	Wounded
McGowan, James	Blacksmith	Chapleau	Wounded
McGregor, Wilfred Leo	Brakeman	Cranbrook	Killed in action
McIntosh, John	Apprentice	Winnipeg	Wounded
McLean, John A.	Ass't agent	Erin	Wounded
McRobert, Paul Redvers	Ass't agent	Hartney	Wounded
Manwood, Herbert	Clerk	Vancouver	Wounded
Miquielon, Philip A.	Freight checker	Innisfail	Wounded
Moore, Stanley G.	Operator	Esquimalt	Killed in action
Morrow, Robert	Timekeeper	Kenora	Died of wounds
Moss, Fred	Flanger	Montreal	Died of wounds
Much, Frnak Llewellyn	Clerk	Montreal	Died of wounds
Muedeking, Henry W.	Wiper	Sutherland	Wounded
Murray, Charles Harry	Ass't checker	Kamloops	Gassed
Neale, Arnold Selwyn	Section foreman	Markinch	Killed in action
Newton, Frank	Accountant	Bankhead	Wounded
Nicholson, Edward H.	Loco. fireman	West Toronto	Wounded
Nixon, Frank Stroner	Clerk	Vancouver	Died of wounds
Oldfield, William	Trucker	Toronto	Presumed dead
Osborne, David	Bridgeman	B.C. District	Wounded
Ouellette, Lionel	Checker	Sudbury	Wounded
Parkins, Frank A.	Brakeman	Quebec District	Wounded
Patterson, David	Laborer	Farnham	Wounded
Penfield, Hetley	Car repairer	Outlook	Wounded
Perry, Wilfrid	Bridgeman	Souris	Wounded
Phillimore, Alfred	Car inspector	Winnipeg	Killed in action
Phillips, Edward S.	Loco. fireman	Moose Jaw	Wounded
Pickering, Tom Haydn	Clerk	Winnipeg	Killed in action
Pover, Edward	Car oiler	Vancouver	Wounded
Puncher, Leonard G.	Transfer foreman	North Bay	Wounded
Quilty, Charles Barnard	Yardman	West St. John	Killed in action
Quinn, Robert	B. & B. foreman	Cranbrook	Wounded
Reeve, Henry	Porter	Calgary	Died of wounds
Robbins, James John	Night chargeman	Goderich	Wounded
Roberts, William Henry	Clerk	Edmonton	Wounded
Robertson, Robert T.	Clerk	Montreal	Wounded
Robson, Albert George	Boilerwasher	Moose Jaw	Wounded
Rowlands, Benjamin	Clerk	Sault Ste. Marie, Ont.	Died while prisoner
Rutter, Arthur Murray	Operator	Fredericton	Died of wounds
St. Quintin, George W.	Cook	Vancouver	Wounded
Saddington, William	Loco. fireman	Kenora	Wounded
Scott, Gordon Maurice	Caretaker	Qualicum Beach	Wounded
Scott, Leslie	Section foreman	Portage Div'n	Killed in action
Scurfield, Ralph	Operator	Souris Div'n	Gassed
Selwood, Albert P.	Clerk	B.C. Lake Strs.	Killed in action
Sharpe, Charles	Clerk	Winnipeg	Died of wounds
Shaw, John	Clerk	Winnipeg	Killed in action
Shields, Percy W.	Boilermaker	Winnipeg	Killed in action
Slattery, Edward	Car cleaner	Montreal	Killed in action
Sloman, Herbert	Apprentice	Montreal	Died of wounds
Smith, Frank Vincent	Carpenter	Winnipeg	Gassed
Smith, John	Trucker	Ottawa	Wounded
Stacey, James	Trucker	Ottawa	Gassed
Stoddard, Stuart G.	Clerk	Fort William	Wounded
Stokell, Thomas W.	Carpenter	Winnipeg	Wounded
Stoneley, Joseph	Car repairer	Medicine Hat	Wounded
Street, Percy	Constable	Toronto	Killed in action
Surbeck, Theodore A.	Rodman	Weyburn West	Killed in action
Tait, Robert Baird	Clerk	Winnipeg	Wounded
Thomas, William P.	Apprentice	Ogden	Killed in action
Thompson, Arthur O.	Brakeman	Alberta District	Killed in action
Thornton, Vinal T.	Trainman	Woodstock Div'n	Wounded
Thorpe, Thomas	Loco. fireman	Kenora	Wounded
Tomes, Edward	Loco. fireman	Brandon	Wounded
Towle, Robert Sidney	Loco. fireman	Brandon	Died of wounds
Trumble, Marshal	Hostler	Swift Current	Wounded
Turner, Arthur	Clerk	Fort William	Wounded
Wade, Robert	Apprentice	Winnipeg	Wounded
Wadlow, Arthur G.	Yardman	Calgary	Wounded
Walnick, Alex	Waiter	Montreal	Wounded
Walker, William	Loco. fireman	Kenora	Died of wounds
Weist, Archibald M.	Loco. fireman	Bredenbury	Wounded
Watson, William	Fitter's helper	Schreiber	Died of wounds
Whyte, Joseph James	Brakeman	MacLeod	Believed killed
Wilkins, A.	Tel. groundsman	Calgary	Killed in action
Williams, Charles C.	Acting Agent	Kinsella	Wounded
Williamson, James	Checker	Saskatoon	Wounded
Wilson, Arthur Bird	Clerk	Toronto	Shell shock
Wilson, Charles H.	Sectionman	Wawota	Wounded
Wood, Albert Edward	Loco. fireman	Regina	Presumed dead
Woods, William Lucas	Laborer	Strathmore	Wounded
Woodman, Frederick J. H.	Clerk	Montreal	Wounded
Woodridge, Henry	Helper	West Toronto	Wounded
Wootton, Francis E.	Conductor	Brandon	Wounded
Wright, Albert Edward	Car inspector	Ignace	Wounded

Casualties to Members of European Staff.

Chandler, Arthur E.	Clerk	London	Died of wounds
Rankin, Colin	Clerk	Glasgow	Killed in action
Vevey, Alfred E.	Chief Ass't to European Manager	London	Killed in action

Shown on Honor Lists to date:- Killed, 867; Wounded, 1,870; total, 2,737

Manitoba Railway Mileage, Government Guarantees, Etc.

The Manitoba Railway Commissioner's report gives the following as the railway mileage in the province at the close of the financial year:—

	Miles
Canadian Northern Ry.	[illegible]
Canadian Pacific Ry.	[illegible]
Grand Trunk Pacific Ry.	[illegible]
Great Northern Ry. system	[illegible]
Canadian Government Rys.	[illegible]
Winnipeg Joint Terminals	[illegible]
Greater Winnipeg Water District Ry.	[illegible]
Total	[illegible]

The report expresses gratification that the province was not called upon to make any outlay during the year respecting guarantees of the province regarding the Canadian Northern Ry. securities, which total $25,502,878.33. Construction in the province by the C.N.R. up to the close of the last fiscal year, as the result of the above guarantees, was 1,875.61 miles. The report further points out that the Dominion having become the owner of the common stock of this company, the financial position of the province in this regard had become considerably improved.

Locomotive Deliveries in the United States.

The U.S. Railroad Administration has announced that 2,622 locomotives were shipped to railways under federal control during 1918. Of these 744 were built under orders of the Railroad Administration, while 1,410 were contracted for prior to the government's operation of the railways.

In the total were 200 decapods, built for the Russian government, but which were never delivered, the situation which arose in that country necessitating a change in plans.

For the calendar year 1918 there were 700 passenger cars delivered to class I railways and for the same period [illegible] freight cars were delivered. Of freight cars built during the year, [illegible] were classified as standard Railroad Administration cars. Of the total number of freight cars delivered, 8,663 were built in railway shops.

Quebec & Saguenay Ry. Construction Suit.—In May, 1918, the Quebec Superior Court gave judgment in favor of O'Brien & Doheny, contractors, for [illegible] balance due for work done and materials supplied for the construction of the Quebec & Saguenay Ry., up to the time construction was suspended in the autumn of 1912. An appeal from that judgment came before the Court of Review at Montreal recently. The contractors claim that construction was suspended by the company's failure to pay for the work as it progressed to the amount of [illegible] the estimates as certified by the company's engineer. In fixing the amount of their claim, the contractors took advantage of a clause in the contract setting out that in the event of suspension of the work, through no fault of the contractors, the engineer should proceed to make a final estimate of the work done, which [illegible] at once become due, together with all the 10% retained out of former estimates. The main question raised in the appeal is whether the contractors are entitled to a privilege upon the railway to the extent of the plus value given by their work to secure payment of the amount of their claim.

Amalgamation of Railway Associations as the American Railroad Association.

The Director General of United States Railroads issued the following circular [illegible] to provide, during the period of Federal control, a responsible channel through which the Director General may obtain recommendations for the advancement of railway practice, the American Railway Association has revised its articles of organization and by-laws and will change its name to the American Railroad Association. The scope of the association has been enlarged and will cover the former activities of the American Railway Association, American Railway Master Mechanics' Association, Association of Railway Telegraph Superintendents, Association of Transportation and Car Accounting Officers, Freight Claim Association, Master Car Builders' Association, Railway Signal Association, Railway Storekeepers' Association, and will consist of five sections, viz.: 1—Operating, 2—Engineering, 3—Mechanical, 4—Traffic, 5—Transportation. Railways under Federal control are members of the association and are directed to be represented and participate in the activities of each section through their proper officers.

The accompanying diagram shows the plan of the new organization. In referring to the change of circular used the American Railroad Association says:

"The membership of the railways now members of The American Railway Association is not affected and their status is not changed. It is desirable that all railways now members of any of the organizations to be amalgamated with the American Railway Association, if membership is not now held therein, should assume membership in the American Railroad Association, which will afford mutual discussion and consideration, by the railways under Federal control and those which are not, of methods for the scientific and economical construction, maintenance and operation of American railways."

Tentative rules of order for each of the five sections of the American Railroad Association have been approved by the executive committee. The executive committee has also appointed the following temporary general committees for each of the sections:

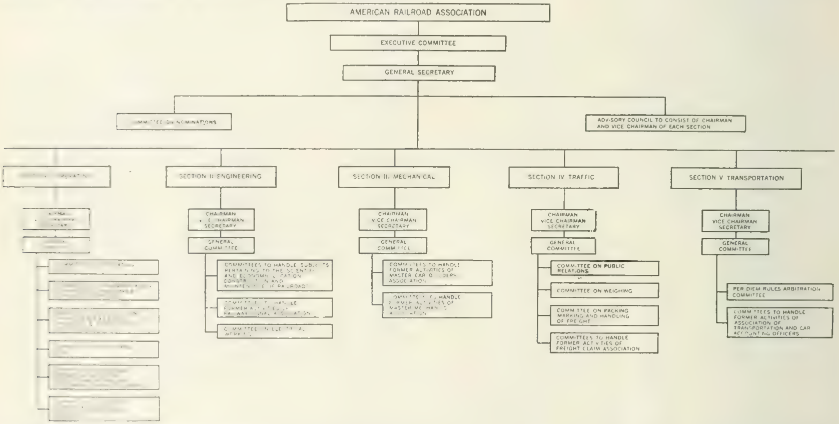
Section 1.—Operating.—W. J. Fripp, General Manager, New York Central Rd. (Chairman); J. H. Young, Senior Assistant Director, Division of Operation, U.S. Railroad Administration; C. G. Burnham, Federal Manager, Chicago, Burlington & Quincy Rd.; **A. D. MacTier**, Vice President, Eastern Lines, Canadian Pacific Ry.; R. E. McCarty, General Manager, Pennsylvania System, Lines West of Pittsburg; C. L. Bardo, General Manager, New York, New Haven & Hartford Rd.; M. H. Clapp, Manager, Telegraph Section, U. S. Railroad Administration; J. F. Caskey, Superintendent of Telegraph, Lehigh Valley Rd.; G. G. Yeomans, Member, Advisory Committee, Purchasing Section, Division of Finance and Purchases; E. J. Roth, Manager, Stores Section, Division of Finance and Purchases, U.S. Railroad Administration.

Section 2—Engineering.—Earl Stimance of Way and Structures, Baltimore & Ohio Rd. (Chairman); C. A. Morse, Assistant Director, Engineering and Maintenance Department, Division of Operation, U.S. Railroad Administration; H. R. Safford, Engineering Assistant, Central Western Region, U.S. Railroad Administration; C. F. W. Felt, Chief Engineer System, Atchison, Topeka & Santa Re Rd.; R. S. Parsons, Chief Engineer, Erie Rd.; J. A. Atwood, Chief Engineer, Pittsburg & Lake Erie Rd.; Geo. Gibbs, Chief Engineer of Electric Traction, Long Island Rd.; E. B. Katte, Chief Engineer of Electric Traction, New York Central Rd.; R. E. Trout, Signal Engineer, St. Louis-San Francisco Rd.; W. H. Elliott, Signal Engineer, New York Central Rd.; F. P. Patenall, Signal Engineer, Baltimore & Ohio Rd.

Section 3.—Mechanical. C. E. Chambers, Mechanical Assistant to Regional Director, Allegheny Region, U.S. Railroad Administration (Chairman); Frank McManamy, Assistant Director, Mechanical Director, Mechanical Department, Division of Operation, U.S. Railroad Administration; C. B. Young, Manager, Inspection and Test Section, Division of Operation, U.S. Railroad Administration; F. F. Gaines, Chairman, Board of Railroad Wages and Working Conditions, U.S. Railroad Administration; T. H. Goodnow, Superintendent Car Department, Chicago and North Western Rd.; H. R. Warnock, General Superintendent Motive Power, Chicago, Milwaukee and St. Paul Rd.; J. E. O'Brien, Mechanical Superintendent, Missouri Pacific Rd.; A. P. Prendergast, Mechanical Superintendent, Texas and Pacific Rd.; J. W. Small, Mechanical Assistant, Regional Director, Southern Region, U.S. Railroad Administration; C. F. Giles, Superintendent of Machinery, Louisville and Nashville Rd.; W. J. Tollerton, General Mechanical Superintendent, Chicago, Rock Island and Pacific Rd.; C. E. Fuller, Superintendent Motive Power and Machinery, Union Pacific Rd.; I. S. Downing, General Master Car Builder, Cleveland, Cincinnati, Chicago and St. Louis Rd.; J. S. Lentz, Master Car Builder, Lehigh Valley Rd.; J. R. Gould, Superintendent Motive Power, Chesapeake and Ohio Rd.; A. Kearney, Superintendent Motive Power, Norfolk and Western Rd.; M. K. Barnum, Assistant to General Superintendent Maintenance of Equipment, Baltimore and Ohio Rd.; **Jas. Coleman**, Superintendent Car Department, Grand Trunk Rd.; **W. H. Winterrowd**, Chief Mechanical Engineer, Canadian Pacific Ry.

Section 4.—Traffic. R. C. Wright, Assistant Director, Division of Traffic, U.S. Railroad Administration, Chairman); Traffic Assistants of the seven regional directors of the U.S. Railroad Administration; J. H. Howard, Manager, Claims and Property Protection Section, Division of Law, U.S. Railroad Administration; H. C. Pribble, General Claim Agent, Atchison, Topeka and Santa Fe Rd.; H. C. Howe, Freight Claim Agent, Chicago and North Western Rd.

Section 5.—Transportation. George Hodges, Chairman; C. M. Sheaffer, General Supt. Transportation, Penn-



AMERICAN RAILROAD ASSOCIATION
EXECUTIVE COMMITTEE
GENERAL SECRETARY
COMMITTEE ON NOMINATIONS
ADVISORY COUNCIL TO CONSIST OF CHAIRMAN AND VICE CHAIRMAN OF EACH SECTION
SECTION II ENGINEERING
SECTION III MECHANICAL
SECTION IV TRAFFIC

COMMITTEES TO HANDLE FORMER ACTIVITIES OF ASSOCIATION OF TRANSPORTATION AND CAR ACCOUNTING OFFICERS

nsylvania Rd., Eastern Lines; H. G. Kelley, President Grand Trunk Ry.; E. J. Pearson, Federal Manager, New York, New Haven and Hartford Rd.; E. H. Coapman, Federal Manager, Southern Rd.; J. J. Bernet, Federal Manager, New York, Chicago and St. Louis Rd.; G. E. Evans, Staff Officer, Operation, Louisville and Nashville Rd.; W. L. Park, Federal Manager, Chicago Great Western Rd.; G. E. Simpson, General Supervisor Transportation, Chicago, Milwaukee and St. Paul Rd.; W. C. Kendall, Manager, Car Service Section Division of Operation, U.S. Railroad Administration; J. W. Roberts, Superintendent Freight Transportation, Pennsylvania System, Lines West of Pittsburg; J. W. Nowers, Car Accountant, Atchison, Topeka and Santa Fe Rd.; J. A. Wagner, General Manager, Des Moines Union Rd.

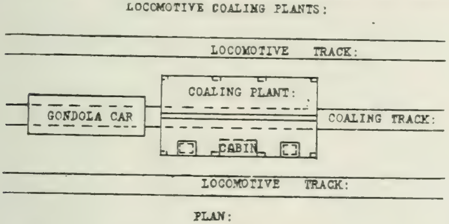
These committees will organize their respective sections and serve until their successors are elected.

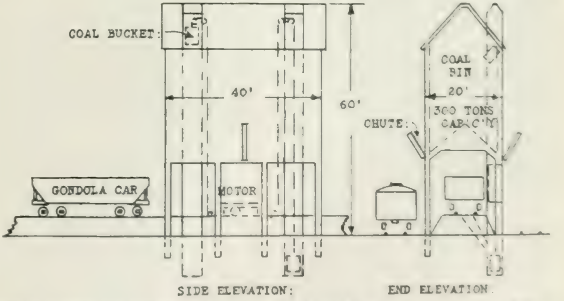
Locomotive Coaling Plants.

By J. A. Burnett, A.M.E.I.C., Consulting Engineer, Montreal.

The subject of coal handling for locomotives is one of considerable importance, and as improvements have been introduced within the last few years, it is thought that the subject may be of interest.

Formerly the ramp or gravity system was in use. This comprised a long ramp, or incline, of about 5% grade; then a series of bins or pockets. These bins were furnished with side chutes, to allow the coal to be dumped into the locomotive tenders. However, the Holman type of coaling plant was introduced, using the balanced bucket system and with a storage bin overhead. The advantages were many, among them being: saving in land area, less fire risk, and inasmuch as it frequently happened that a locomotive ran out over the end of the coal shed, it was a safer arrangement. It was also found that only light weight locomotives were able to climb the ramp, and these often had to be brought on from a distance, adding to the expense. It would be safe to say, therefore, that no more gravity coaling plants will be installed on our railways.





The balanced bucket type has been found easier to maintain than any hoist using the continuous bucket or conveyor system, and, where electric power is available, the electric driven hoist is preferred, and in most cases the cost for electric power does not come very high. The accompanying illustration shows plan and side elevations of the structure.

In general, it is found that the hoisting is done during the day time, and about three hours are needed to dump the gondola cars and hoist the coal to the bin overhead. The maximum load on the motor is about 10 to 12 h.p., the speed of hoisting being 70 ft. a minute. The buckets are designed to hoist 2,000 lb. a lift, but at times the weight runs to 3,000 lb.

The motor, if electric, is of the wound rotor type, and controlled by reversing drum controller, and solenoid brake. A powerful hand brake is also provided, operated by a lever in the cabin, and applying by a band to the end of the cable drum. This is seldom used, and is merely a precautionary measure. The cabin should be quite small, about 5 x 9 ft., to save heating in winter, and should be well boarded in, with well fitted door and windows. The roof of this cabin should be well waterproofed, as water drips in quantity from the coal bin above.

The buckets are prevented from overrunning, by means of a limit switch, installed at top of each bucket shaft, and are actuated by means of a steel ear, rivetted to the bucket. The motor is at once cut off, and the solenoid brake holds the mechanism at a stop; meanwhile the coal is dumped and fills the bin overhead.

The night attendant has only to keep guard, there being no hoisting of coal at night. At times, in severe winter weather, the night attendant will be obliged to trim the coal in the bin, to permit it to flow into the chutes, and thence into the locomotive tender.

The bucket pits should be waterproofed below the ground line, and all pitches, for the flow of coal, should be steep enough so that the coal shall flow freely. Sixty degrees from the horizontal is recommended. Where fleeting sheaves are used, they should be of C.I., bronze bushed and equipped with grease cups. Where sheaves are running idle, they should be securely keyed to the shaft, and the shaft should turn in its bearings, in preference to the sheave turning in the shaft, as is sometimes done.

The electrical equipment should comprise an ammeter of rugged design, and main switch, mounted with fuses on a panel about 18 x 24 in. As the prevailing voltage throughout Canada is 550 for 3 phase service, the slate used must be carefully selected, otherwise metallic veins will result in burning and damage to parts. In connecting the limit switches, the wire used should not be smaller than no. 10 B. & S. gauge, as there is considerable vibration to the structure and a lighter wire will break.

The roof of the coaling plant should be covered with asbestos shingle, so as to fireproof the structure.

Costs relative to 300 ton coaling plant, operating at 80% capacity, or 240 tons daily, are as follows:

First cost	$15,000
Interest per year, $15,000, at 6%	[illegible]
Electric power, 10 h.p. at $60 per h.p.	600
1 day attendant, partly skilled, at 75c	[illegible]
2 day helpers at 60c	1,440
1 night attendant, unskilled	720
Maintenance, 5% on $15,000	750
Insurance, 2% on $15,000	300
Locomotive service in spotting 3 cars a day, $5 a day (365 days)	1,825
Total cost per year	[illegible]

Coal handled per day	240 tons.
Coal handled per year	87,600 tons
Cost per ton for hoisting and handling per ton of 2,000 lb.	[illegible]

In general, this type of coaling plant has been found to be safe, economical, and of pleasing appearance, and it can be operated by electric, steam or gasoline power.

The foregoing paper was read before the Engineering Institute of Canada in Montreal recently.

Railway Supplies for South Africa.—Lloyd Harris, Chairman, Canadian Trade Commission, London, Eng., states that big railway development is pending in South Africa, which should give Canadians an opportunity of getting a market for rails, cars, etc.

The Preservation of Railway Ties.

By H. K. Wicksteed, B.A.Sc., C.E.

The question of a future tie supply for railways has, for a decade or more, been a serious one in the United States, owing to the rapid depletion of the forests, and within the past five years the anxiety has spread to Canada.

Nearly five years ago the writer became, in the course of other business, acquainted with Geo. W. McMullen, of Picton, Ont., a man who had made the conservation of waste a life study and who had made wonderfully successful studies in other fields. The conversation turned on one occasion to the subject of the preservation of timber, and in the course of it some facts and theories of extraordinary interest were developed. Mr. McMullen had, in the course of other investigations, become possessed of a fairly complete laboratory and was in close touch with modern bacteriology and practical chemistry. As a result of the acquaintance, experiments of great interest have been made, involving an entirely new process of drying timber, and more especially with reference to railway ties, the supply of which has become, within the last few years, a most momentous question with the railways. More particularly has this become so in Canada, owing to the depletion of the forests and the great increase in railway mileage during the past half decade.

Average Life of Railway Ties.—Assuming the average life of ties, for instance, at six years, the Canadian Northern Ry. alone will need over 4,000,000 a year and the other two trunk roads something more than this, or say from 12,000,000 to 15,000,000 in all. Our northern forests cannot stand this drain for any length of time, much less can we hope by any reasonable efforts in reforestation to keep abreast of the demand. The timbers used are slow-growing ones, with the exception of jack pine, and even this takes 30 or 40 years to attain sufficient size.

There are two means by which we can stave off the impending famine, one by increasing the life of the timber tie, and the other by using some other material, such as steel or concrete. Such experiments as have been made in the latter expedient have not been altogether satisfactory from the point of view of economy, even where they were so physically.

The first expedient is the only one which has come into any considerable use on this continent and it has usually taken the form of injection of creosote into the pores of the wood. This acts as an antiseptic, preventing the bacterial growth which results in decay through what we are accustomed to call "rot." The creosoting process, while a great advance on the use of raw woods, is by no means a perfect cure; first. because it is expensive, nearly doubling the cost of the tie; second, the timber is somewhat weakened in the process, owing principally to the high temperatures to which the wood is subjected; third, to be at all effective the timber should be thoroughly seasoned or dried. and this is hardly practicable by existing means, except by the consumption of a large amount of time and space and the locking up of a considerable amount of capital for that time. The Germans stack and air-dry their ties for 18 months or more before treatment, and even then do not get a dry tie or perfect product, and in America it seems to be seldom that more than one-third to one-half of this time is allowed.

Dry Woods Almost Indestructible.—According to notable chemists, dry woods or cellulose are almost indestructible by any ordinary agency such as the tie is exposed to. The bacterial growth requires moisture and oxygen for its development. It would appear, therefore, that if we thoroughly dry a piece of timber, and keep it dry, it will last indefinitely. We know from actual experience that this is so. Everyone has used or seen old timber in the form of beams and joists taken from buildings two or three centuries old and perfectly sound. In these cases moisture has been excluded. Again, every one has seen, or at any rate read, of piles and foundation timbers many centuries old in a perfect state of preservation. In these cases oxygen has been excluded. We all know that exposed timber will generally last longer when coated with paint or tar or some waterproofing material. The exceptions are where the timber has been waterproofed before it was seasoned, with the effect of retaining the moisture already in the stick and preventing its evaporation. Timber, even when air-dried for a considerable length of time, still contains 15% or more of moisture, the percentage varying with the nature of the material and the size of the stick.

Seasoning Timber Increases Strength.—Another point not so well recognized or understood is that seasoning timber increases its strength by as much as 80 to 100% in some cases, over that of the green stick. It will be seen at once that, consistently with reasonable expense and loss of time, it is well worth while to dry not only ties, but timber of any kind used as a beam or strut, where strength is necessary. If we increase the strength by even 60%, we require only 62% of the amount of material, and, as this percentage is dry, while the other contains a very large amount of moisture, the saving in freight is very much more than the apparent 38%. In Eastern Canada, at any rate, transportation is a very large item in the cost of our timber and is compelling us, as a matter of expediency, to use steel and concrete where we should use timber if it were readily available.

It being granted that drying or seasoning is extremely desirable, the question is as to the means. In the case of ordinary lumber, air-drying supplemented by a few hours in a kiln is fairly satisfactory. In that of dimension timber it is not so. First, because the air-drying in the case of large sticks takes years to accomplish, because the temperatures used in the ordinary kiln are so high as to injure the strength of the timber; third, because, even when carried on with the greatest care and deliberation, the outside laminae dry first and shrink before the heart of the stick has any chance, and this shrinkage causes checks and cracks which, for many purposes, render the stick useless.

When the "wooden walls of England" were a reality, the seasoning of large sticks was carried on by immersion in sea water for three years, more or less, the saps and resins were dissolved and washed out, and the pores of the wood left open and filled only by water. The subsequent drying was then easily, quickly, and uniformly carried on throughout the stick, and the resultant deposits of salt acted as antiseptics, just as the creosote does in the modern process. This was perhaps the most perfect seasoning possible, or ever accomplished. The process was very likely suggested to the English shipbuilder by his observation of the condition of logs and driftwood which, after years of immersion, had been cast upon his shores by the Gulf Stream and local winds and currents. The Eskimo knows no other process than this and his woods are very perfect and lasting; but, in these days of rush and hurry, it cannot be expected that anyone will prepare his material three or four years in advance. Probably the excellent reputation which Canadian white pine had with the British Admiralty was largely due to its long immersion in the waters of the Ottawa and the St. Lawrence before it was finally loaded on shipboard.

Wash Out Sap and Other Liquids.—In the experiments made in the last two years, as above mentioned, an effort was made to use the same process that nature does, and dissolve, neutralize or wash out the sap and other liquids or semi-liquids which obstruct and close the pores, and to do this within a reasonable time, much faster than nature unassisted can accomplish the work. Hot water is more effective than cold water, and hot vapor of water is, in some cases, still more so. In the new process, which is simplicity itself in theory, although the best form of mechanical application took much time and thought to study out, warm vapor, or in other words, warm air, saturated with moisture, is circulated among the ties. This opens and cleans the pores of the wood just as a Turkish bath does in the case of a man. The liquid components of the saps and resins, filling the vesicles themselves, expand with the heat, and force their way out, to be diluted and carried away by the warm vapor. After some hours of this treatment, the amount of moisture is reduced by very slow degrees, until, at the end, it is practically dry and the timber is removed with not more than 5% of moisture left in it. The rapidity with which this is done depends upon the size of the sticks and the nature of the timber, just as it does in other methods, but no subject has yet been found which did not, in the end, yield to treatment. Care is taken not to let the temperature of the kiln get above 160° F. so that no injury may be done to the fibre of the wood.

Coating to Exclude Moisture.—Timber so treated is, I believe, indestructible, except by fire, so long as it is kept dry. Even without further treatment, it will undoubtedly long outlast unseasoned material. It is, in this shape, in pre-eminently good condition to receive creosote, but we believe that creosote is absolutely unnecessary and that the elements of decay being altogether removed from the inside, all that is necessary is to keep them from entering from the outside. Some waterproofing coating is desirable, and in the case of ties a cheap one is the only one which can be economically used. In the experiments so far conducted a heavy oil tar was found, which answered the purpose perfectly, and which is an almost worthless by-product of the refineries. The ties are merely dipped in a hot bath of this material for a few minutes and, on coming out, are sanded by a sand blast, to absorb any superfluous stickiness and make them easier to handle, just in the same way as an asphalt road is sanded. Timber for building, where neat joints and carpentry are required, would probably be better treated with some pigment mixed with oil or varnish, but for rough work the asphalt or mineral tar seem to be all-sufficient and very inexpensive. The estimated cost of the drying process is 7c to 8c; of the protective coating 3c or 4c a tie. Taking the higher figures and adding a margin, it would appear that 15c will cover the total cost.

Increases Supply of Tie Timber.—The prespect which is opened up by this process is something more than merely getting the equivalent of the process-creosoted tie at a less cost. It is, besides, the potentiality of using for ties, timbers which are now useless for the purpose, or nearly so. The northern birch, for instance, is a strong, reliable wood, used by the Indians for every purpose requiring a hard wood, but unavailable for ties or bridge timber on account of its superabundant sap and its consequent tendency to rot rapidly. The poplar and the balsam are others for which there is at present practically no demand. These timbers are particularly interesting to us just now, on account of the recent opening up by the railways of thousands of square miles of northern forests, of which, with spruce and jack pine, these are the main constituents. The use of these woods for commercial purposes means not only millions of dollars to the railways in reduced cost of ties and in freight, but more millions to the people of Canada who have been burning up and wasting this forest growth as something not only worthless, but as actually impeding settlement.

Conserve the Northern Forests.—It is quite conceivable—I think we may say probable—that the settler in New Ontario, or Northern Saskatchewan, or Alberta, will find it profitable to conserve the forest on a considerable portion of his land, cutting from year to year only the mature timber, so as to encourage the young growth. Aside from the question of ties and pulp wood, what a large potential value there is in poplar, balsam and spruce! In Winnipeg's early days, poplar lumber was the principal material in house building, and there was no fault to be found with it, except its shrinkage, which drying would have prevented.

Balsam is to this day the principal cut of the little country mills in northern Nova Scotia for home use, and is an excellent material for inside carpentry. Spruce is the finest material for spars, probably, of any known; and only its perishability prevents it from making a cleaner, straighter, and stronger telegraph pole than the crooked, twisted cedars we are using. Birch is already coming to its own in the manufacture of furniture. Our northern settler has been in the habit of burning up most of these timbers as almost worthless, in order to grow potatoes in their stead. A century ago the settlers in Southwestern Ontario thought much the same about the white pine and the black walnut, and some of the wealthiest residents in that portion of the country today are those whose fathers, either by accident or design, left some of the original forest standing.

The foregoing portion of this paper was written two years ago, and there is practically no change in it except in respect to one or two details, as a result of more testing which has been carried on, and as to the figures of costs which would be considerably higher than those quoted.

A number of ties have been put in the Canadian Northern track, and while the times have been somewhat too strenuous of late for experimenting, and changes in staff have led to the neglect of the examination of these from time to time, some of them have been taken up and tested for absorption of moisture and for signs of rot.

I have one sample of a tie dug up only a few days ago which had been under the track in the Trenton yard for over three years; and I have also another sample of a birch tie, which has never been under the track at all, but which shows how absolutely perfect the drying part of the process is and what available timber birch is, though absolutely a worthless timber if it is used in outside work without seasoning, and the reason is unquestionably the amount of sap which it contains. If this is dried out and the wood sterilized, it is as strong and lasting as most other hardwoods, and better than some. It is incidentally the only hardwood in Northern Ontario and Quebec.

As a result of our experiments with these ties, we concluded that they were in the right direction in the main, but that the asphaltic waterproofings were imperfect. They melted and ran under a strong hot sun; and when abraded, as was inevitable in the case of ties, the waterproofing was gone. Some of the more tarry products which penetrated the grain of the wood were much better, and we believe them to be very good indeed.

Except for the expense, creosoting after the seasoning process has been carried out would be perfect; but I for one am extremely doubtful of the efficacy of creosoting for an unseasoned stick of timber. It always seems to me like putting a coat of paint or varnish on green wood. This merely closes up the outside pores of the wood and prevents the evaporation and oxidation of the juices and saps of the interior.

I have already alluded to the care which the Germans take with their drying and seasoning, but we are too impatient in this country to wait for this and we give at most 8 or 9 months, which is not enough. Most people probably have seen standing timber after a bush fire. For a year or so the seasoning goes on all right, and then the borers get to work. They bore through the hard seasoned outside shell, so as to get at the juices of the interior; which shows that the juices are there, although the stick has been seasoned under almost ideal conditions standing straight on end, and nearly always with the bark on to shed rain and snow.

Creosoting, I understand, costs now some 10 cents per tie; so that the treated tie costs us considerably over $1.00 and is heavier and harder to handle than the untreated tie. One of the advantages claimed for the seasoning is that it very greatly reduces the weight instead of increasing it, and that as a result we have less to pay for transportation and for trackwork. The seasoning can be accomplished in a month or less (the time varies with the character of the timber), so that even if we resort to creosoting we save time and interest on money invested in green ties, and we save room in our piling yard and drying sheds.

I have dealt in the above practically altogether with ties, because it is one problem which is bothering us railway men a great deal. Even before the war and the recent enormous advances in prices, we had become so impressed with the growing scarcity and increasing cost of timber ties that we had been making all kinds of experiments with metal and concrete ties—not in order to cheapen the first cost, but to lengthen the life of the tie and so make its annual cost less.

If we go into concrete at all, it has always seemed to me that we should alter our whole system of support to a longitudinal instead of a transverse bearing, and this again would alter the most economical form of rail to be used. Possibly we might, with a long stringer of concrete giving us the necessary stiffness and rigidity, dispense with enough steel to pay for part of the increased price to the bearing; but imagine what we should get in the way of drainage and precautions against frost heaving in our climate! I have seen reinforced concrete ties doing very excellent work in the tropics, but our frost conditions alter the whole aspect of the matter. Shimming upon the top of a concrete tie would be a very different matter from drawing the spikes out of a wooden tie and putting longer ones in; or, as we have to do sometimes, putting a complete new tie on top of the old one.

I am afraid that for many years to come we must continue to use wooden ties, at any rate on all but the most perfect and most heavily congested parts of our railways; and this being the case, and the supply diminishing while the demand increases, it behooves us to make them as long-lived as possible.

There are, besides the item of ties, a great many other utilities about a railway which we have hitherto been accustomed to build of wood, but for which latterly we have been substituting structures of steel, concrete and other materials; and the reasons for the substitution have been the same—increased life and lower maintenance charges, and also, in the case of timber trestles, water tanks and buildings, danger from fire.

On our own Canadian Northern at any rate we have had numerous cases of bridge decks catching fire, and in many cases the fires have spread from the decks to the body of the structure; but in how many cases have we found that the commencement of the fire was where some little punkiness and rot had started, and that a smouldering fire had been fanned by a strong wind into a blaze! Ballast decks have been introduced to obviate these fires, but they don't seem to have come into general use; and the tie, aside from fire risk, certainly does not last so long as if freely ventilated. Prevent the rot and I think you will find that the risk of fire is greatly diminished. Season the timber thoroughly, and apply a fireproofing coating of tar and sand, similar to what we have put on our building roofs at times, and the risk will disappear almost entirely. In this case, the question of abrasion, of the rubbing off of the protective coating, does not come in at all, but the protective coating, whatever it may be, should not be put on unseasoned timber.

We all know of old bridges and other structures which have been protected from the weather and have stood up for a generation or more, and been replaced only because too small or too weak for modern loads; and in many cases where wooden bridges have been replaced by steel and concrete, it is questionable whether the change was economical in the fullest sense of the word, and whether it would not have been better policy, as an intermediate step, to take more care in preserving the timber and to put concrete abutments and piers under it.

One of the main reasons for much of

[illegible] steel [illegible] the [illegible] past has seen the growing scarcity of [illegible] and the cheapness of the [illegible] and still more recently the conditions have been reversed, and steel has become very difficult to obtain, while timber has not increased in price in the same ratio. These of course, are largely temporary conditions, brought about by the exigencies of war, but they are not going to readjust themselves in a few months.

Practically all of our dimension timber has come of late years from British Columbia or the Southern States, and the cost to us here is largely a matter of freight rates. Freight rates are based on weight. If we can remove the 30 or 40% of moisture which many of our timbers contain and at the same time increase its strength by proper treatment before it starts on its journey, it follows that smaller quantities will often answer our purpose and that these quantities will be lighter in weight and cost us less per cubic foot, so that there is a double gain, and I believe that in the aggregate it is a very important gain indeed.

There are mnay advantages in the use of timber structures in certain situations; and if we could increase their life and lessen the risks from fire, I think we should all feel much less inclined to rush into massive structures of steel and concrete. Permanent work which will last through the centuries is all very well, in its proper place, in connection with great undertakings which will themselves be useful for centuries. Railways, in this country at any rate, are not always of this character, and I have known several cases (I have at this moment in mind some very expensive and well constructed works) which have been a stumbling block and deterrent to improvement, because they were built in the wrong place and the authorities did not want to throw them away. How many of our railways are located in the wrong place to suit modern conditions of traffic, not so much because of blunders or shortsightedness on the part of the original builders, but because the financial and economic conditions of the present day are entirely different from those of a generation ago —and who can say to what extent these conditions may be changed another generation hence!

Take the case of the Canadian Pacific across the western plains, for instance. It has been relocated and rebuilt for miles; but who shall say that the original location and construction were wrong? Is not the financial success of the C.P.R. direct evidence to the contrary, and that the light grading and cheap timber trestles and bridges were absolutely right and good policy?

Take the opposite case of the Grand Trunk, built two generations ago to the high standards of the English roads. Not only was the road handicapped from the start by enormously high capitalization, but it was deterred from making desirable changes in location by the existence of such expensive works. I have myself been told that a certain location was [illegible] because it would "scrap" a $50,000 structure. The Canadian Pacific [illegible] built on that identical location and is hauling nearly double the Grand Trunk loads.

Consider the ever developing railway situation in Canada. Two transcontinental roads have been built across the continent, with the avowed intention of competing [illegible] with [illegible] and [illegible] conditions [illegible] brought it about that these two lines have come under the same ownership and management. One of these has cost about double what the other has. Without asking the question whether one might have been dispensed with altogether, it is safe to say that the money which has gone into expensive construction could be put to very much better use today if it were available.

Because we have just made a great effort and surprised ourselves by borrowing nearly a billion dollars from our own people, there is no reason why we should rush into indiscriminate expenditures. There is an enormous amount of work to be done to bring our railways to the highest standing of efficiency, and it behooves us to be sure that our money is spent judiciously. There will be none too much to go round, and anything in the way of economy which can be effected consistent, of course, with due respect for the safety of the public—(don't let us confuse economy with parsimony)—will be well worth doing.

I must confess that I have nothing to teach anybody and am quite incompetent to do so. The development of railways has gone on so fast that I have become somewhat taxed in changing old ideas and convictions for new ones fast enough to keep up with the times; but I have thought much about the fundamental reasons for things and have watched with with concern a growing tendency towards extravagance and luxury among railways as well as individuals.

If a timber structure will answer its purpose as well as a steel one and save money for a much needed improvement elsewhere, by all means let us use the timber. If ties can be treated with or without creosote, so that they will last so much longer than untreated ones, so that the annual charge against the railways will be less even thought the initial expense is greater, by all means let us investigate the treatment.

What I want to do is to give for discussion a subject worth discussing. My friend, Mr. McMullen, died while he was pursuing his investigations—literally so, for he passed away on a train out of Chicago, where he had been attending a convention of the American Railway Engineering Association. His son, Barrett McMullen, has carried on his work. Whether the final outcome will be that the seasoning will be merely a preliminary to creosoting, or whether other and cheaper preservatives may be found, I cannot say. I am firmly convinced of one thing only and that is, that the proper seasoning of timber preliminary to treatment or use has never received proper attention; that Mr. McMullen's process accomplishes it perfectly; and that if it is used freely, the use of timber for ties or otherwise will be much more justifiable and truly economical than it has been in the recent past.

The foregoing paper was read before the Canadian Railway Club recently.

Transportation Statistics.—The Statistics Act, 1918, required every transportation company to make returns, by August 1 in each year, to the Dominion Bureau of Statistics, the same to be made up to June 30. A bill introduced in the House of Commons, by the acting Minister of Trade and Commerce, proposes to amend the act, by providing that the returns shall be made annually by Mar. 1, and for the year ending Dec. 31.

Alaska Railway Service Maintained Despite Icy Rails.

Difficulties of railway operation in Alaska are apparent from the Alaskan Engineering Commission's official publication, which describes conditions between mile 57 and mile 68 early in December. Despite these adverse conditions service was not discontinued. This section of the line is low and flat and is affected by the adjoining glaciers. Warm rains, followed by sudden cold weather, made about an inch of ice on the rails in this section and, there being no machinery to remove it, gangs of laborers at a temperature 12 deg. F., worked continuously in relays Saturday, Saturday night, Sunday and Sunday night, picking the ice off the rails ahead of the trains. According to a later issue of the Alaska Railway Record the operating department was not discouraged by this and other troubles along the line, through service being maintained even when dog teams had to be used to transfer mail and passengers across snow-filled gaps.

Imperial Munitions Board's Appreciation of Railway Services. The Board's work at Ottawa having been completed, the members of the staff necessary for the completion of the liquidation of the assets have moved to the Imperial Oil Building, Toronto, except a few of the Records Department officers, who are remaining in Ottawa temporarily. Before leaving Ottawa, the Chairman, Sir Joseph Flavelle, wrote E. W. Beatty, President, C.P.R.; D. B. Hanna, President, Canadian Northern Ry.; J. E. Dalrymple, Vice-President, Traffic, G.T.R.; and F. P. Brady, as General Manager, "Eastern Lines, Intercolonial Ry Co." expressing his great appreciation of the assistance given the board by the different railways' entire operating staffs, and stating that on many occasions during the last three years the board had asked officers of the different companies to give special consideration to the movement of traffic and in all cases had met with generous response.

Grade crossing elimination at Detroit, Mich., is viewed as a single problem by a city engineering commission which has just reported. The needs of the city for the next 15 years have been carefully studied, and a progressive programme has been laid out for the completion of all the necessary work in that time. Other important factors of the problem discussed are the relative advantages of full and partial elevation, the clearance and design of subways, the relation to industry facilities, the relation to streets in outlying districts of the present and future, the city planning aspect and the apportionment of cost.

Intercolonial & P.E.I. Ry's Employes Provident Fund. F. P. Brady, Chairman, Provident Fund Board, announces that the committee of tellers, appointed by him to count the ballots cast for the election of two members of the board to be elected by the employes, have reported that W. P. Hutchinson and B. A. Bourgois received the highest number of votes, and were therefore elected.

Railway Materials for India.—The Canadian mission in London advised the Canadian Trade Commission in Ottawa recently of the Indian Government's desire to get in touch with Canadian rail, angle, splice and bolt manufacturers, with a view to placing orders.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys. — S. R. CAIRNS, whose appointment as Inspector, Sleeping, Dining and Parlor Cars, Eastern Lines, Ottawa, Ont., was announced in our last issue, has been appointed Sleeping Car Agent, Montreal.

L. E. CROWDER, heretofore machinist helper, Radville, Sask., has been appointed Locomotive Foreman, Gravelbourg, Sask. This is a new position.

G. ERICKSON has been appointed Roadmaster, Oba Subdivision, Ontario District, vice R. Ferguson transferred.

R. FERGUSON, heretofore Roadmaster, Hornepayne, Ont., is reported to have been appointed Roadmaster, Atikokan-Rainy River Division, Fort Frances, Ont.

M. L. FLETT has been appointed Commissary Purchasing Agent, Sleeping, Dining and Parlor Car and Hotel Department, Office, Toronto.

D. McK. FORD, heretofore chief clerk, Eastern Lands Department, Canadian Northern Ry., Toronto, has been appointed chief clerk, President's office, Canadian National Rys., Toronto.

E. L. MacDOUGALL has been appointed Sleeping and Dining Car Agent, Rosedale, Toronto.

C. R. MacKENZIE, formerly Assistant to General Manager, Western Lines, Canadian Government Rys., Winnipeg, has been appointed Assistant to General Manager, Eastern Lines, Canadian National Rys., at Montreal.

Y. MOODY has been appointed Assistant Superintendent, Sleeping, Dining and Parlor Cars, Toronto.

S. J. POTTER, heretofore Assistant Paymaster, Eastern Lines, Canadian Northern Rys., has been appointed Paymaster, Lines east of Port Arthur, Ont., Canadian Northern Ry System, Offiice, Toronto.

JAMES ROBB has been appointed Inspector, Sleeping, Dining and Parlor Cars, Eastern Lines, Toronto.

W. L. STITT has been appointed Sleeping and Dining Car agent, Ottawa, Ont.

REGINALD H. M. TEMPLE, General Solicitor, Canadian National Rys., Toronto, has been transferred to Winnipeg, and given charge of the Legal Department there. The position of Western Counsel, Canadian Northern Ry., Winnipeg, held formerly by O. H. CLARK, has been abolished. W. W. EVANS, heretofore Solicitor, Canadian Northern Ry., Winnipeg, and T. H. GILMOUR, heretofore Solicitor and Claims Agent, Canadian Government Rys., Western Lines, Winnipeg, have resigned.

JOHN WARDROP has been appointed General Agent, Industrial and Resources Department, Western Lines. Office, Winnipeg.

D. O. WOOD, heretofore Assistant Export and Import Agent, C.P.R., Toronto, and for a time, Superintendent of Inland Transportation, British Ministry of Shipping (Canada), Montreal, has been appointed Traffic Manager, Export and Import Department, Canadian National Rys., with general supervision of export and import traffic, and of arrangements made for the transportation of such by the C.N.R., via Atlantic and Pacific coast ports. Office, Toronto.

Canadian Pacific Ocean Services Ltd. A. H. ALLAN, formerly General Assistant, H. & A. Allan, Agents, Allan Line Steamship Co., and latterly on active service, has been appointed Freight Manager, Great Britain and European Continent, C.P.O.S. Ltd. Office, London, Eng.

H. S. CARMICHAEL, heretofore Passenger and Freight Manager, London, Eng., has been appointed Passenger Manager there.

G. C. DEW, heretofore Assistant Freight Agent, C.P.R., Montreal, has been appointed Asiatic Freight Agent, C.P.O.S. Ltd. Office, Montreal.

R. S. ELWORTHY, heretofore General Agent, Passenger Department, C.P.R., Minneapolis, Minn., has been appointed General Agent, C.P.O.S. Ltd., Chicago, Ill. Owing to a typographical error in the spelling of his name, the announcement in our last issue, this appointment is repeated correctly.

J. J. Horn.
Superintendent, Kenora Division, Manitoba District, Canadian Pacific Ry.

R. W. GREENE, heretofore in city ticket office, Grand Trunk Pacific Ry., Winnipeg, has been appointed Travelling Passenger Agent, C.P.O.S. Ltd., there.

W. T. MARLOW, formerly Import Freight Agent, C.P.R., and latterly Deputy Director General, British Ministry of Shipping (Canada), Montreal, has been appointed General Freight Agent, in charge of freight traffic, Atlantic and Pacific services, C.P.O.S. Ltd. Office, Montreal.

G. D. ROBINSON, formerly Export Freight Agent, C.P.R., and latterly Director, Ocean Steamship Department, British Ministry of Shipping (Canada), Montreal, has been appointed European Freight Agent, C.P.O.S. Ltd. Office, Montreal.

Canadian Pacific Ry.—W. T. BENNET, heretofore chief clerk, Auditor of Pay Rolls Department, has been appointed Auditor of Pay Rolls, vice R. F. Gauld deceased. Office, Montreal.

JOHN BURNS, heretofore Assistant Works Manager, Angus shops, Montreal, has been appointed Works Manager, Angus shops, Montreal, vice H. Osborne, who has retired after long and faithful service.

T. J. CALLARY has been appointed Claims Investigator for Auditor of Claims, Montreal.

R. A. DART, heretofore General Yardmaster, Calgary, Alta., has been appointed Assistant General Yardmaster there.

W. H. GORDON, heretofore Trainmaster, Lethbridge, Alta., has been appointed Trainmaster, Field, B.C.

C. S. GOWANS, heretofore acting Import Freight Agent, Montreal, has been appointed Import Freight Agent, Montreal.

D. J. GOWANS has been appointed Inspector of Hotels. Office, Montreal.

S. C. GRAHAM, heretofore Local Freight Agent, Edmonton, Alta., has been appointed General Yardmaster, Calgary, Alta., vice R. A. Dart.

G. HIAM, formerly District Freight Agent, Fort William, Ont., and recently returned from active service overseas, has been appointed District Freight Agent, Cleveland, Ohio, vice M. S. Thorne promoted.

R. E. LARMOUR, heretofore General Agent, Freight Department, New York, N.Y., has been appointed General Freight Agent, Eastern Lines, vice E. N. Todd transferred. Office, Montreal.

P. J. MELVIN, heretofore acting Export Freight Agent, has been appointed Export Freight Agent. Office, Montreal.

J. A. MORICE, heretofore Contracting Agent, Foreign Freight Department, Toronto, has been appointed Agent, Foreign Freight Department there.

F. H. SPROULE, heretofore agent, Gull Lake, Sask., has been appointed Local Freight Agent, Medicine Hat, Alta., vice D. Patterson.

M. S. THORNE, heretofore District Freight Agent, Cleveland, Ohio, has been appointed General Agent, Freight Department, New York, N.Y., vice R. E. Larmour promoted.

E. N. TODD, heretofore General Freight Agent, Eastern Lines, Montreal, has been appointed General Foreign Freight Agent, in charge of export and import traffic, via both Atlantic and Pacific seaboards. Office, Montreal. This is a new position.

D. W. DONAHUE, heretofore Division Superintendent, Michigan Central Rd., Chicago, Ill., has been appointed Division Superintendent, Canadian Division, vice Jas. Balkwill, deceased. Office, St Thomas, Ont.

Michigan Central Rd.—F. G. THOMAS has been appointed ticket agent, St. Thomas, Ont., vice C. I. Singer, promoted.

Grand Trunk Ry.—P. A. CLEWS, Grand Trunk Ry., heretofore City Agent, London, Eng., has been appointed General Agent, Freight Department, G.T.R., and Canadian Express Co., there, vice F. G. English, killed in action.

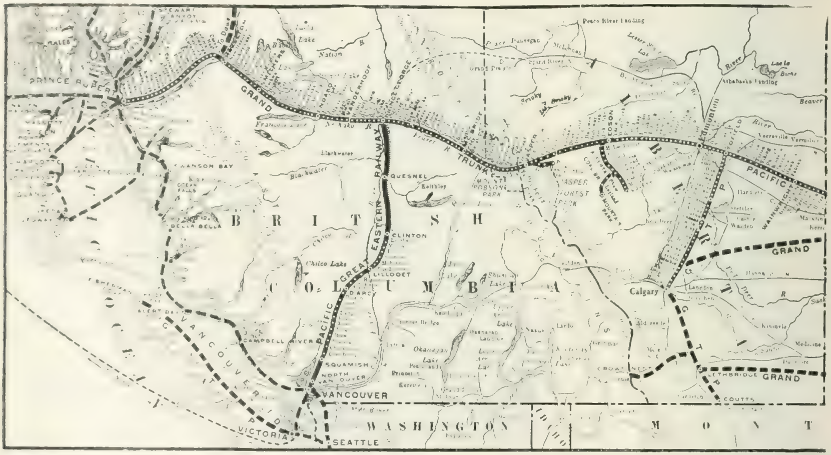
Grand Trunk Pacific Ry.—G. H. BARTLEY, heretofore dispatcher, Grand Trunk Pacific Ry., has been appointed Chief Dispatcher, Biggar, Sask., vice J. H. Groat, whose appointment as Superintendent there, was announced in our last issue.

The Grand Trunk Pacific Railway System Placed in the Hands of the Minister of Railways, as Receiver.

While the serious condition of the G.T.P.R. finances has been well known for several years, the announcement made on Mar. 8, that the Dominion Government had appointed the Minister of Railways, Hon. J. D. Reid, as receiver for the system, including all subsidiary companies, came with dramatic suddenness, and was probably as great a surprise to the company's officials as to the public. The correspondence which led up to this action, the order in council appointing the receiver, and subsequent correspondence, are given in the order of their dates as follows:

G.T.R. Says it Will Be Unable to Pay Interest.

Frank Scott, Vice President and Treasurer, G.T.P.R., wrote the Finance Minister, and acting Prime Minister, Sir Thomas White, Feb. 25, as follows:



"Referring to our recent conversations, I am in receipt of a cable from Mr. Smithers stating that in the anticipation of receiving the balance of the appropriation of $7,500,000, viz., $951,911, to apply for interest on Grand Trunk debenture stock due Mar. 1, payment was duly advertised. In consequence, however, of the remittance being coupled with the condition that it is to be used only for operating obligations, the company will be unable to meet the interest due on Mar. 1, and a serious situation will result. I respectfully beg to draw your attention to the matter, in order that the actual position, and possible consequences may be fully appreciated."

The Acting Prime Minister's Reply.

Sir Thomas White replied to Mr. Scott Feb. 26 as follows: "I beg to formally acknowledge receipt of your letter of Feb. 25, which you personally handed to me at my office here. I note what Mr. Smithers states in his cable as to the G.T.P.R. Co. being unable to meet the interest due upon its securities on Mar. 1. With reference to the balance of the appropriation of the vote of $7,500,000 by parliament, $923,311 was paid to your company on your certificate no. 10, dated Jan. 28, 1918, approved by the acting Deputy Minister of Railways. This certificate expressly states that this sum is 'on account of cash deficit in the operations of the company from April 1, to Nov. 30, 1918, inclusive,' and 'is required to enable the company to meet its operating obligations.' The small balance of the vote amounting to about $28,000, will, I understand, be required for the same purpose. There seems no doubt that the deficit in operation should have priority over all other charges.

"I have already informed Mr. Kelley, President of the company, and yourself, that it is not the intention of the government to ask parliament to provide a further vote for the G.T.P. while our negotiations with the G.T.R. remain in their present unsatisfactory condition. As I indicated to you, it will be for the G.T.R. directors to determine the question of their responsibility in respect of the interest maturing tomorrow upon securities guaranteed by their company."

The interest on the G.T.P. debenture stock was, however, paid when due, viz: Mar. 1.

G.T.P.R. Gives Notice of Cessation of Operation.

Frank Scott wrote Sir Thos. White Mar. 4 as follows: "I am instructed to inform the government that in view of the fact that the increased rates applicable to the G.T.P.R. have not been sufficient to meet the increased operating expenses, it will not be possible for that company to continue its operations when the present funds have been exhausted, which will be about Mar. 10. May I ask you to be so good as to acknowledge the receipt of this letter?"

Sir Thos. White wrote Frank Scott, Mar. 5, simply acknowledging his letter of Mar. 4, stating the company's intention to discontinue operations after Mar. 10.

Order in Council Appointing the Minister of Railways as Receiver.

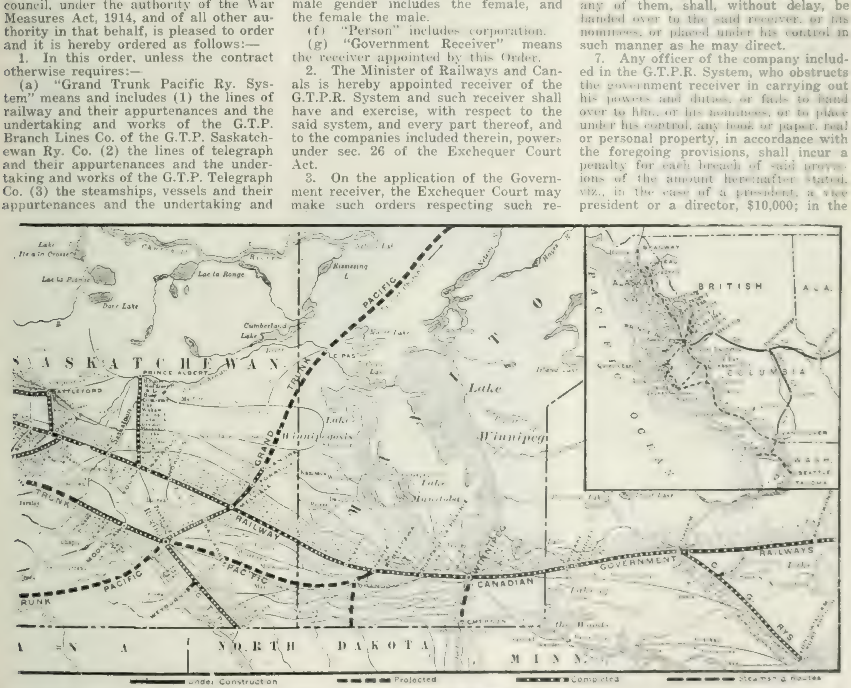
The following order in council was passed at Ottawa, Mar. 7.:—

Whereas under the authority of The Appropriation Act no. 2, 1918, the Governor in council advanced $7,471,399.93, or thereabouts, to the Grand Trunk Pacific Ry. Co., for certain purposes in said act defined, including the meeting of deficit in operation of the G.T.P.R. System, such sum being in addition to other large sums previously advanced under previous authority for similar purposes.

And whereas a letter dated Mar. 4, 1919, from the Vice President of said company was received by the Minister of Finance, as follows:—

"I am instructed to inform the government, that in view of the fact that the increased rates applicable to the G.T.P.R. have not been sufficient to meet the increased operating expenses, it will not be possible for that company to continue its operation when the present funds have been exhausted, which will be about Mar. 10. May I ask you to be so good as to acknowledge receipt of this letter."

And whereas should the operation of the G.T.P.R. System be discontinued, great detriment to the public interests would ensue, and the intention of parliament in authorizing the said advances would be defeated. And whereas the continued operation of said system is essential in the present position of Canada, resulting from the war, which has not yet been terminated by peace, especially in connection with the transport of returning Canadian troops and of supplies and equipment and freight, and other services made necessary by the war. And whereas for the protection of the public interests and for the purposes aforesaid, it is essential that the opera-



tion of said system should be continued without interruption. And whereas the duty of continuing such operation is thrown upon the Government of Canada, inasmuch as there are no effective provisions in existing laws whereby such continued operation could be otherwise secured.

And whereas immediate action by the government is impossible, therefore His Excellency the Governor General in council, under the authority of the War Measures Act, 1914, and of all other authority in that behalf, is pleased to order and it is hereby ordered as follows:—

1. In this order, unless the contract otherwise requires:—

(a) "Grand Trunk Pacific Ry. System" means and includes (1) the lines of railway and their appurtenances and the undertaking and works of the G.T.P. Branch Lines Co. of the G.T.P. Saskatchewan Ry. Co. (2) the lines of telegraph and their appurtenances and the undertaking and works of the G.T.P. Telegraph Co. (3) the steamships, vessels and their appurtenances and the undertaking and works of the G.T.P. Steamships Co. (4) the properties, hotels, and appurtenances and the undertaking and works of the G.T.P. Development Co.

[Editor's Note.—Another order in council, passed Mar. 13, states that through inadvertence there were omitted from the definition of "G.T.P. Ry. System" in sec. 1 of the order passed Mar. 7, the necessary words relating to G.T.P. Terminal Elevator Co. Ltd., and it was therefore ordered that the following be inserted at the end of the definition of "G.T.P. Ry. System" in sec. 1, vis: "(5) The properties, elevators, terminals, and appurtenances and the undertaking and works of G.T.P. Terminal Elevator Co. Ltd."]

(b) "Officers" means and includes directors, President, vice presidents, managers, Secretary, Treasurer, clerks, servants and employes.

(c) "Books and papers" means and includes books of accounts, or of entries, relating to the business, or operation, or maintenance, of the said lines of railway or telegraph or steamships, vessels, hotels, properties or works, or any of them, or any part thereof, also records, statements, and documents relating to such business, operation, or maintenance or any part thereof.

(d) "Exchequer Court" means the Exchequer Court of Canada.

(e) The singular number includes the plural, and the plural the singular; the male gender includes the female, and the female the male.

(f) "Person" includes corporation.

(g) "Government Receiver" means the receiver appointed by this Order.

2. The Minister of Railways and Canals is hereby appointed receiver of the G.T.P.R. System and such receiver shall have and exercise, with respect to the said system, and every part thereof, and to the companies included therein, powers under sec. 26 of the Exchequer Court Act.

3. On the application of the Government receiver, the Exchequer Court may make such orders respecting such receiver, and his powers and duties, and the carrying out thereof, including the issue of receiver's certificates, as the court may deem necessary, or expedient, in the public interest.

4. Subsec. 5 and 6 of sec. 26 of the said act shall apply to the government receiver, and to the G.T.P.R. System and every part thereof and to the companies included therein, except that no remuneration of the receiver shall be fixed by the court.

5. The Government receiver may, on or after Mar. 10, 1919, or on such earlier day as the G.T.P.R. Co., or any company included in the G.T.P. System may cease to operate efficiently, its undertaking and works, or any portion thereof, take possession of such undertaking and works, or any portion thereof, and the Exchequer Court may, from time to time, make and enforce such orders in aid of the Government receiver, with respect to taking of such possession or otherwise as the court may deem expedient for the carrying out of the provisions of this order, according to their true spirit and meaning.

6. Each company included in the G.T.P.R. System, and its officers, shall facilitate the carrying out of the powers and duties of the government receiver and all books and papers, real or personal property, of each of the said companies, in its possession, or under its control, or the control of its officers, or any of them, shall, without delay, be handed over to the said receiver, or his nominees, or placed under his control in such manner as he may direct.

7. Any officer of the company included in the G.T.P.R. System, who obstructs the government receiver in carrying out his powers and duties, or fails to hand over to him, or his nominees, or to place under his control, any book or paper, real or personal property, in accordance with the foregoing provisions, shall incur a penalty for each breach of said provisions of the amount hereinafter stated, viz., in the case of a president, a vice president or a director, $10,000; in the case of a manager, with the authority of or similar to that of a general manager, or of one acting for or assisting a general manager, $5,000; in the case of a secretary or of a treasurer, or of one acting for or assisting a secretary or treasurer, $2,500; in the case of any clerk, servant or employe, $1,000.

8. Any penalty incurred under the foregoing provisions may be sued for and recovered, with costs, in the Exchequer Court, by suit or proceeding in such court instituted by the Attorney General of Canada.

9. Nothing in this order contained, and nothing done or to be done under the authority hereof, shall render the Government of Canada or the government receiver, or anyone acting under the authority of the government receiver, or of the Exchequer Court, liable to the Grand Trunk Ry. Co. of Canada, or to any company included in the G.T.P.R. System, or to any creditor, or holder of any bonds, debentures, debenture stock or other se-

curities of the said companies, or any of them, for any claim by reason of the making of this order, or of anything done or to be done under the authority hereof, or under the authority of the government receiver or of the Exchequer Court, nor shall afford any defence to, nor shall prejudice any claim, action, or proceeding of the Government of Canada which the government might lawfully make or take, had this order not been made.

10. All officers, except the board of directors, of any company included in the G.T.P.R. System, shall continue to discharge for the government receiver, till further orders, or directions, by him, duties in connection with the operation and management of the undertakings and works of any company included in the G.T.P.R. System, similar to their present duties, so that no interruption in the operation and management thereof may occur.

11. Nothing herein contained, or done, or to be done, hereunder, shall prejudice the exercise by the Exchequer Court or by any court of any province of Canada, of its present jurisdiction under the Exchequer Court Act, or under any other law or jurisdiction, to appoint a receiver or to order or decree a sale or foreclosure of any railway, or section thereof, or other property affected by this order, provided that before any such sale or foreclosure is ordered or decreed or any receiver is appointed by any such court, notice of the application shall be given to the Minister of Railways and Canals of Canada, and he, or counsel for him, shall be heard upon the application, and the court in granting, or refusing, or postponing, the application, shall take into consideration the public interests involved, and shall make such order as shall in the opinion of the court protect the public interests.

12. The Minister of Railways and Canals, mentioned in this order, means the minister for the time being, and upon a vacancy occurring his successor shall become the government receiver. The powers and duties of the government receiver may be exercised by such member of the government as may from time to time be the acting Minister of Railways and Canals.

13. Should it be made to appear to the government receiver that any book or paper is or has been used for the purpose of the operations of the Grand Trunk Ry. Co. of Canada, as well, as the operations of any company included in the G.T.P.R. System, and that for such reason the same should not be handed over to the receiver, or placed under his exclusive control, the government receiver may, on such terms and conditions as he may deem necessary, allow the joint use of same to be continued. The government receiver may open such books and accounts as in his opinion may be necessary, to separate and transfer from any such book or paper, jointly used, accounts and entries relating to any of the companies included in the G.T.P.R. System, and may so separate and transfer the same and the said receiver shall keep the accounts of his receipts, expenses and disbursements in connection with each of the companies included in the said system, and their works, undertakings and properties, or parts thereof, in such manner that one may be distinguished from another, and that the interests of the various parties interested therein may be ascertained.

14. The Governor in council may, from time to time, under the order of the Exchequer Court, and upon the security of receiver's certificates, or otherwise, advance to the government receiver such sums as may be required to enable him to exercise his powers, and to perform his duties as receiver; the sums so advanced shall be paid out of any unappropriated monies in the Consolidated Revenue Fund of Canada.

15. No transfer of any shares in the capital stock of any company included in the G.T.P.R. System shall, after the appointment of the government receiver, be made, and no such transfer shall be entered on any register or transfer book. Any transfer contrary to this provision shall be null and void, provided that the government receiver may, on the application of any person interested, or of his own motion, permit any transfer to be made or completed.

Chairman Smithers Cables.

Frank Scott wrote Sir Thos. White Mar. 7 as follows: "I have been instructed by Mr. Smithers to forward the following cable message to you, as from him:

W. P. Hinton,
Vice President and General Manager, Grand Trunk Pacific Railway.

" 'H. G. Kelley has handed me cable message, from Frank Scott, containing extract from your letter saying that it is not the intention of the government to ask parliament to provide further vote for G.T.P.R. while negotiations with the G.T. remain in their present unsatisfactory condition. I beg to recall that when ministers came over last summer, it was stated in parliament negotiations would be resumed in London. I accordingly saw ministers with members of board several times, and at last was told that the ministers could make no advance in their original offer without the consent of the full cabinet in Ottawa. In these circumstances progress in negotiations was impossible, but with a view to facilitating matters, just before the Prime Minister left for Canada, a committee of the board and myself saw him with two of his colleagues, and made a fresh proposal, involving a very big reduction on our first offer. This offer was not accepted, but on Nov. 5 the High Commissioner for Canada sent for me and said he had a message from the Prime Minister asking me if we wished to continue negotiations, and if so, he thought I should go to Canada. I told the High Commissioner that, looking to the fact that the government had given no sign of any intention of departing from their original offer, I thought it was useless going out, unless I had some further explanation or assurance as to the government's intentions. To this we have had no reply, and I really fail to see how the company can be held responsible for the unsatisfactory condition of our negotiations. Mr. Kelley is returning in a few days and I think it would be advisable if you could cable any reply you may wish to make to this communication before he leaves.' "

Sir Thomas White Cables Chairman Smithers.

Sir Thos. White cabled A. W. Smithers, Mar. 8 as follows: "Replying to your cable received through Scott, government considers unsatisfactory condition of negotiations due to board of directors of G.T.R. Co. entirely failing to appreciate its responsibilities to the G.T.P.R. undertaking, and the bearing of its liabilities in respect thereto upon the question of the net earning power and value of the G.T.R. System. In November last the Prime Minister cabled to Sir George Perley to suggest to you that if your company desired further negotiations the government would be glad to see you in Canada as soon as convenient. He pointed out that it did not seem useful to continue discussion by correspondence. He also suggested that if you came you should be invested with ample powers to conclude an arrangement if one could be reached. Your attitude towards the reasonable suggestion contained in the Prime Minister's communication seemed clearly to indicate indifference towards the continuance of negotiations. Confirmatory of this is the peremptory notification on Thursday last to the government, without previous intimation or discussion, that the G.T.P.R. would on Mar. 10 discontinue operations entirely, regardless of consequences to Canada through interruption of traffic over a system so extensive and important."

Official Annnouncement of Receivership.

On Mar. 8 Sir Thos. White made the following announcement: "Hon J. D. Reid, Minister of Railways, has been appointed receiver of the G.T.P.R. System. The appointment follows an official notification which Sir Thomas White received on Mar. 6 from the Vice President of the G.T.P.R. Co., notification that, in view of the fact that the increased rates applicable to the G.T.P.R. have not been sufficient to meet the increased operating expenses, it would not be possible for the company, owing to lack of funds, to continue its operation beyond Mar. 10. In view of this notification, it became necessary that the government should, in the public interest, immediately take steps to ensure the continued operation of the system. Under existing legislation this could not be accomplished by an application to the courts for the appointment of a receiver. The War Measures Act, however, was found to provide adequate authority for action by the government, and consequently an order in council was passed appointing the

Minister of Railways receiver of the G.T.P.R. System, which includes the branch lines, telegraph, steamships, hotel and development and other companies. W. P. Hinton, Vice President and General Manager of the G.T.P.R. System, has agreed to conform to the requirements of the order, and to facilitate the carrying out of the powers and duties required of the minister as receiver. The immediate object of the order, viz, to prevent interruption in the operation and management of the system, has therefore been already attained. An important feature of the order in council, is that which preserves to the government any other and ultimate remedies which it possesses under the provisions of trust mortgages securing issues which it has guaranteed or otherwise as creditors of the system. Similarly, the rights and remedies of other parties are not interfered with by the order."

G.T.P.R. Operation Carried On.

The Minister of Railways commenced to act as receiver on Mar. 10, W. P. Hinton, Vice President and General Manager, G.T.P.R., and other company officials having signified their willingness to obey the order in council, they have been retained in their respective positions and no changes of titles have been announced. The Minister of Railways is acting as receiver in his individual capacity, as though appointed by the Exchequer Court and not by the government.

Finance Minister's First Statement in House of Commons.

Sir Thos. White, in speaking in the House of Commons, Mar. 10, said that he wished to make a statement as to important action taken by the government respecting the G.T.P.R. System, upon which he thought it desirable the house should have immediate information. The facts were fully set forth in correspondence which he would read, and in an order in council which he had laid on the table and which, as it was somewhat lengthy, he would summarize. He then read a lettter from Frank Scott, Vice President and Treasurer, G.T.P.R., dated Feb. 25, and his reply of Feb. 28, also letters from Frank Scott, dated Mar. 4, and his reply of Mar. 5, all of which are given in earlier portions of this article. The minister then said, "Under existing legislation, it is not possible, except under proceedings for foreclosure, or sale, to have a receiver appointed for a system such as the G.T.P.R. The government, therefore, was confronted with what it regarded as the imperative necessity, in the national interest, of providing for the uninterrupted operation of the system. It was found that the War Measures Act gave the government complete jurisdiction for the action which it took, viz: by order in council to appoint the Minister of Railways as receiver for the system. Sir Thomas then read a summary of the order in council of Mar. 7, the full text of which is given in an earlier portion of this article. The minister continued, "While, under the War Measures Act, the order in council has the full effect of a statute, as parliament is sitting, it is manifestly desirable that the government should introduce legislation validating and confirming the order in council, and sanctioning what the government has done. Within a day or two I shall introduce the necessary resolution to that end. I received on the 8th inst. a letter from the Vice President of the G.T.P.R., containing a cable from the Chairman of the G.T.R. board, A. W. Smithers, which refers to a statement made in one of the letters I have read to the house." He then read a letter from Frank Scott, dated Mar. 7, and his reply of Mar. 8, both of which are given in earlier parts of this article.

F. S. Cahill, M.P. for Pontiac, Ont., asked if it was the government's intention to continue governing by orders in council. Sir Thos. White replied that if the government had not the powers under the War Measures Act, and the G.T.P.R. had carried out its expressed intention of discontinuing operation, the entire system, embracing all the subsidiary companies, would have been at a standstill, with serious consequences.

R. L. Richardson, M.P. for Springfield, Man., asked if the G.T.P.R. was actually in default. Sir Thos. White replied that it was not, but the notification received was that it would discontinue operation.

Legislation Confirming Appointment of Receiver.

Sir Thos. White, on Mar. 20, moved in the House of Commons that the house go into committee to consider a resolution that it was expedient to brnig in a measure to ratify and confirm the order in council of Mar. 7 appointing a receiver and which is given in an earlier part of that article. D. D. Mackenzie, leader of the opposition, expressed the opinion that the War Measure Act was never intended to be used for purposes of this kind, and there was only sec. 6 that could possibly be used for such an action. As the war had ended there was no occasion for using the measure, and the regular course of applying through the Exchequer Court should have been adopted. The resolution was passed, and the house went into committee thereon.

Sir Thomas White there reviewed the whole enterprise from its foundation until the present situation arose, and contended that the G.T.R. had apparently come to the conclusion that it would not continue to be responsible for the payment of the interest upon the G.T. Pacific Ry. securities, that it would not be responsible for the deficit in its operation, but would cast the entire burden upon the Dominion Government. He then discussed the Drayton-Acworth report; and the negotiations which had since taken place with the G.T. Ry. directors, with regard to purchase. The terms of an offer made on behalf of the government to take over the G.T.R. and the G.T. Pacific Ry. and to assume all the obligations of both companies, were an annual payment of $2,500,000 a year for three years, $3,000,000 a year for the next four years and $3,600,000 annually thereafter, the G.T.R. to distribute these sums as it might determine among the holders of 4% and other stock. An alternative proposal was to submit the matter to a board of arbitration, the award to be by way of annual rental for 99 years. The company made a counter offer in Aug. 1918, by asking for an annual payment of £977,000, an amount equal to the net earnings of 1913. The government was carrying on the line with the Minister of Railways as receiver, and he was maintaining the service. What would be done later had not been determined, but unless a satisfactory situation ensues, the government would be obliged to have recourse to whatever legal remedies it might have, and it had many.

A long discussion followed, many members taking part., and the resolution was concurred in. A bill giving effect to the resolution was then introduced by Sir Thomas White and read a first time.

The Inception of the G.T.P.R. Project, Legislation, Etc.

The idea of the extension of the G.T.R. to Western Canada was brought prominently into notice in 1903, was not a new one, as years before the construction of the C.P.R. to Sault Ste. Marie, the G.T.R. had a charter to build from some point on its line terminating at North Bay through Algoma westerly. An understanding was reached between the two companies, and the G.T.R. project was abandoned for the time. It was revived again in 1902, but the first public announcement was not made until the beginning of 1903, when simultaneously with the appearance of notices to the effect that the G.T.R. would apply to the Dominion Parliament at its then forthcoming session, for the incorporation of the Grand Trunk Pacific Ry. Co., with power to build a line from Gravenhurst, or North Bay, to the Pacific Coast, announcement was made that F. W. Morse, then Third Vice President, G.T.P., and the late W. Wainwright, were then General Assistant and Comptroller, had left Montreal in Mar., 1902, on a trip to the Pacific coast in connection with the project.

At this time there was another transcontinental project in the field, apart from the Canadian Northern Ry. enterprise, which were then taking final form, viz: the Trans Canada Ry., promoted by J. G. Scott, then President Quebec and Lake St. John Ry., and connected with other projects having for their object the development of Quebec. Mr. Scott was at that time engaged in endeavoring to create public interest in his project for the building of a line from Quebec to Port Simpson, having an estimated length of 2,830 miles, or from Chicoutimi, the Q. and L. St. J. Ry. terminus, on the Saguenay Ry., to Port Simpson, with an estimated length of 2,700 miles.

At the half-yearly meeting of the G.T.R. in London, Eng., May, 1903, the 30th anniversary of the incorporation of the company, Sir Charles Rivers Wilson, the President, in referring to the G.T.P. Ry. project, said: "To such a company the G.T.R., without engaging the credit of its own shareholders, would bring as a valuable contribution, its influence, experience and established connections. The bill has been introduced and the form and extent of the government assistance are under discussion with Sir Wilfrid Laurier and his colleagues. As a result of the discussions with the government the plans took a new form, the agreement between the promoters of the G.T.P.Ry. and the government was made public July 30, and the measure providing for the construction of a national transcontinental railway was introduced. The agreement, which was dated July 29, was ratified by chap. 71 of the Dominion statutes for that year.

Then the late C. M. Hays, then President G.T.R., proposed an extension of this span to the Pacific coast, his idea was to start from North Bay, Ont. He never contemplated an easterly extension to Quebec and the Maritime Provinces, which were promised a line by the then government.

At the half yearly meeting of the G.T.R. shareholders the President said: "At the wish of the Dominion Government and of popular opinion there ha-been grafted upon the original idea a much larger scheme, contemplating the construction of a road straight across the continent from New Brunswick in the east, to the Pacific coast in the west. The government will themselves be the owners of the line from New Brunswick to Winnipeg, and the G.T.P. Ry. will be restricted in its ownership to the road west of Winnipeg. It would be inopportune for me to allude to any future connection which the G.T.R. may have with the scheme, only bearing in mind. of course, that nothing will be done without the shareholders' consent."

The agreement provided for the construction by the Dominion Government of a railway to be built entirely within Canada from Moncton, N.B., to Winnipeg, Man., and to be leased upon completion by the G.T.P.Ry. for 50 years, for the first seven years on the basis of paying the working expenditures, and for the remainder of the term at a rental of 3% a year upon the ascertained cost of construction, such lease to be renewable. The G.T.R. undertook to build a line from Winnipeg to the navigable waters of the Pacific Ocean, at or near Port Simpson, or such other point on the Pacific coast as might be agreed upon. The line was to be built to a standard equal to that of the G.T.R. main line between Montreal and Toronto, and as to gradient, etc., was to conform to the standard of the eastern section, to be built by the Dominion Government. By way of assistance to the company in the construction of the line, the act provided that the Dominion should guarantee payment of the principal and interest of an issue of bonds for an amount sufficient to produce a sum equal to 75% of the cost of its construction, such amount not to exceed $13,000 a mile in respect of the prairie section from Winnipeg to the eastern limit of the Rocky Mountains, such limit to be fixed by the Chief Engineer for the company and the Chief Engineer for the government, and $30,000 a mile for the mountain section,. Although 75% of the cost of each section might be exceeded by the respective sums a mile. The company was to pay the interest on the bonds issued in respect of the prairie section from the date of issue, the government only having to pay to prevent default, such payment to be a debt due by the company to the government. For the first seven years after issue of the bonds for the mountain section, the government was to pay the interest, and for the next three years the company was to be primarily liable for the interest, the government amount paid to be a debt due by the company to the government. During this three years the government was not to exercise its right of foreclosure under the mortgage. After the 10 year period the government would be in a position to exercise its full rights under the mortgage. The company agreed that the G.T.R. Co. should guarantee the payment of the remainder of the bonds required to be issued in respect of the line from Winnipeg to the Pacific coast, such bonds to be a second charge, subordinate to those issued under the Dominion guarantee. The G.T.P.R. was to provide rolling stock and equipment for the operation of both divisions at a minimum cost of $20,000,000.

The G.T.P.R. Co. was incorporated by chap. 122 of the Statutes of 1903, with an authorized capital of $45,000,000, of which not exceeding $20,000,000 could be issued as preferred stock. The company was authorized to build a line from Moncton to the Pacific coast; a branch line from the main line southerly to North Bay or Nipissing Jct., on the G.T.R., a branch from the main line southerly to Montreal, a branch line to Port Arthur, Fort William, or other port on Lake Superior as might be approved by the government, and branches to Brandon, Regina, Prince Albert, Calgary, and to Dawson. The company was authorized to issue bonds for $30,000 a mile on the line from Moncton to Winnipeg; $20,000 a mile on the prairie section, and $50,000 on the mountain section, and bonds on the branch lines to the same amount as authorized for the section of main line which they might join. The Dominion Government was given the right to nominate one of the directors.

While these measures were before arliament, the late Hon. A. G. Blair, then Minister of Railways, objected to the terms of the contract and resigned his office.

An amending act, passed in 1904, confirmed an agreement made between the government and the company, providing among other matters, for the leasing to the company of any completed sections of the Transcontinental Ry., before the completion of the whole line; declaring that the government would implement its guarantee of the bonds of the prairie and mountain sections of the western division, providing that in the event of the government deciding to operate the eastern division, the company should for 50 years have such haulage rights over it as might be necessary for the conducting of operations of the western division, and giving the government power in such a case, of acquiring any branch lines which might have been constructed connecting with the eastern division.

The G.T.P. Branch Lines Co. was incorporated by the Dominion Parliament in 1906, with an authorized capital of $50,000,000, of which $20,000,000 could be issued as preferred stock to build 18 branch lines in New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta, British Columbia, and Yukon. These lines included those mentioned in the charter of the G.T.P.R., with the exception of the line to Port Arthur or Fort William.

The Saskatchewan Legislature in 1909 authorized the guaranteeing of the G.T.P. Branch Lines Co's. bonds, providing for the construction of 195 miles of branch lines, and in 1910 the mileage to be built under provincial guarantee of bonds was increased to 670. These branch lines have practically all been built. Subsequently the legislature authorized the guaranteeing of $3,800,000 of bonds for terminal construction at Regina, Saskatoon, Moose Jaw, Prince Albert, Swift Current, and Battleford, to which was added in 1912, a guarantee of bonds for $1,300,000 for bridge construction. The Saskatchewan Legislature also passed an act incorporating the G.T.P. Saskatchewan Ry, which entered into an agreement with the Saskatchewan Government for the construction under a guarantee of bonds, of 205 miles of branch lines, which was increased by 270 miles in the following year. These branch lines were partly in extension of the branches already built, or of branch lines therefrom.

The Alberta Legislature in 1909 authorized the guararteeing of the G.T.P. Branch Lines Co's. bonds in respect of 491 miles of branch lines, and in 1912 guaranteed the company's bonds for an additional 58 miles.

Construction of the Lines.

The surveys for the line were proceeded with at once, the starting point being Portage la Prairie, Man., and work had been so far completed that an Sept. 1, 1906, the government had approved of plans for the line almost to Edmonton, Alta., 720 miles, and contracts had been let for grading. The location was through a fine farming country and gave a line with easy curvature, and gradients not exceeding 0.4% against eastbound traffic, and 0.5% against westbound traffic. The preliminary location to the Pacific coast, where the terminus had been located, and which was subsequently named Prince Rupert, was practically completed in 1907, and the fund the following year, when it was announced by the late Sir Collingwood Schreiber, Chief Engineer for the government, that the Prairie Division would extend from Winnipeg to Wolfe Creek, approximately 916 miles, and the Mountain Division from Wolfe Creek, viz, the Yellowhead Pass to Prince Rupert, 859 miles. Revisions during the course of construction, reduced these figures to 912.7 miles for the Prairie Division, and 835.6 miles for the Mountain Division. The location on the Mountain Division showed an easy curvature, the sharpest curve having a radius of 955 ft., the gradients of the Prairie Division being exceeded only at one point in the vicinity of Tete Jaune, where for 19 miles the gradient against eastbound traffic was 1%. The location between Portage la Prairie and Winnipeg was settled during 1908, and the connection with the Canadian Northern Ry. tracks, in that city, was arranged for with the part use of terminals in 1913, and confirmed by legislation in 1914.

The track was laid with 80 lb. rails, the first rails being laid out of Portage la Prairie at the end of 1906, in which year 35 miles were laid. The Lake Superior Branch was built in 1907 and 1908, from the National Transcontinental Ry., which had been built easterly from Winnipeg, to Fort William, and this line was opened in connection with the completed sections of the line in the west, through traffic being operated between Winnipeg and Edmonton, from Sept. 13, 1909. A temporary train service was given over 120 miles of the main line west of Edmonton from Feb. 1, 1910, and complete operations through to the Pacific coast from Sept. 6, 1914. Branch line construction in Saskatchewan was started at Melville, in 1909, and subsequently at other points in Saskatchewan and Alberta.

During the course of construction, in his report for the year ended Mar. 31, 1909, Sir Collingwood Schrieber said that the cos tof the prairie section had greatly exceeded the estimated cost owing to the increased weight of rail used—80 lb. instead of 65 lb.—the increased cost of rails from $25.25 to $36.59 a ton; the increased cost of ties from 25c each, to 50c, 60c and 70c each; the increased cost of timber for bridges, etc., and the increased cost of labor. These remarks were also applicable to the mountain division, and to an accentuated degree, as labor and materials continued to advance.

In his report for the year ended Mar. 31, 1917, Sir Collingwood Schrieber showed that that total expenditure on the line up to Dec. 31, 1916, had been $131,070,730.64, of which $37,910,534.88 had been expended on the Prairie Division, and $93,160,196.76 on the Mountain Division. At that period it was estimated that the value of the work remaining to be done to comply with the acts of parliament, the contracts and the specifications was $2,297,500 on the Prairie Di-Section, and $2,334,385 on the Mountain Section.

Mileages of Lines.

		Miles
Main line, Winnipeg to Prince Rupert		1,748.00
Saskatchewan Branches.—		
Melville to Canora	55.20	
Melville to Regina	98.40	
Regina to Weyburn and Northgate	155.00	
North Regina to Riverhurst	114.40	
Young to Prince Albert	111.80	
Biggar to Loverna	104.60	
Oban to Battleford-Carruthers	95.00	734.40
Alberta Branches.—		
Tofield to Calgary	201.50	
Bickerdike to end of steel	56.70	
Coalspur to Mountain River	31.00	
Pocohontas to Snaring Jct.	14.20	303.40
Mileage operated		2,785.80
Lake Superior Branch (leased to Dominion Government)		188.80
Mileage owned		2,974.60

In addition the company has graded 26 miles of a branch from Harte to Brandon, Man., and some mileage of branch lines under provincial guaranteed bonds in Saskatchewan.

The Lake Superior Branch, 188.8 miles, while owned by the G.T.P. Ry. was leased to the Dominion Government for 99 years, at $600,000 a year when the National Transcontinental was placed in operation. Prior to that time it was operated by the G.T.P. Ry. in conjunction with the section of the N.T. Ry. from Lake Superior Jct. to Winnipeg, under the terms of an arrangement with the government.

Subsidiary Companies.

The G.T. P. Coast Steamship Co., was incorporated to carry on a freight and passenger business on the Pacific coast, and in 1910, inaugurated a service between Seattle, Wash., Victoria, Vancouver and Prince Rupert. Two steamships —the Prince Rupert and the Prince George—were built for this service, and to these there were subsequently added two steamships purchased and renamed the Prince John and the Prince Albert. Other vessels were utilized, in the service, either by purchase or charter, and one of the purchased vessels has been sold. The latest vessel acquired is the motor schooner Tillamook. The present fleet comprises the four Princes, the motor ship, and a tug.

The G.T.P. Telegraph Co. was incorporated in 1906 by the Dominion Parliament with authorized capital of $5,000,000, and a telegraph line has been built for commercial as well as railway purposes.

The G.T.P. Terminal Elevator Co. was incorporated under the Dominion Companies Act, Jan., 1909, with authorized capital of $1,000,000, to lease and operate a terminal elevator then under construction on Mission River, Fort William, Ont., and it subsequently built an elevator at Tiffin, Ont.

The G.T.P. Townsite and Development Co. was formed to acquire townsites and other lands along the line, and develop the property so acquired. Townships were acquired at divisional points, at the Prince Rupert terminus, and at other points on the line. The entire common stock of $3,000,000 is held by the G.T.P. Ry., or its nominees, and the remaining $2,000,000 is preferred stock. The company held in 1909, according to a statement of the Ministry of Railways in May of that year, 81 townsites and a three-quarter interest in the townsite of Prince Rupert, in all, 78,648 acres. The company has built hotels at Ottawa, Winnipeg, Edmonton, and Prince Rupert and started to build one at Regina.

Bond Issues, Etc.

The securities authorized to be issued to provide funds for the construction of G.T.P.R. lines amounted to $215,134,896, of which there has been issued and there is outstanding, $190,601,784.86. These issues are guaranteed as follows:

By the Dominion of Canada.—		
1st Mortgage bonds, due 1962	$68,040,000.00	
4% Sterling bonds due 1962	8,140,848.00	$76,180,848.00
By The Grand Trunk Ry. Co.—		
3% Series A bonds due 1955	$10,206,000.00	
4% Series B bonds due 1955	9,963,000.00	
4% Lake Superior bonds due 1955	7,533,000.00	
4% Perpetual debenture stock	34,879,252.86	
4% debenture stock due 1923	15,000,000.00	
4% bonds due April 1919	10,000,000.00	
5% Secured notes due 1923	9,720,000.00	97,301,252.86
By the Province of Saskatchewan.—		
4% bonds due 1939	$11,347,848.00	
4½% terminal bonds due [illegible]	1,882,240.00	13,230,088.00
By the Province of Alberta.—		
4% bonds due 1939	$ 2,430,000.00	
4% Coal Branch bonds due 1942	1,159,706.00	[illegible]
Total guaranteed bonds		$190,601,784.86

In addition the company has received by way of loan, secured on mortgage, the sum of $6,000,000, and another of $8,000,000, on account of which $5,892,366.49 was paid out by the Dominion Government in 1917, and the balance was subsequently included in a revote.

Operating Results.

The first official report of the company's earnings was for the year ended June 30, 1913, the principal figures up to 1917, the latest issued, being as follows:

	Gross Earnings	Operating Expenses	Net Earnings	Passengers Carried	Tons of Freight Carried
1913	$8,162,204.86	[illegible]	[illegible]	[illegible]	[illegible]
1914	8,244,594.13	7,262,147.[illegible]	[illegible]	[illegible]	[illegible]
1915	6,660,581.23	[illegible]	[illegible]	[illegible]	[illegible]
1916	6,965,188.88	[illegible]	1,060,[illegible]	[illegible]	[illegible]
1917	6,611,298.18	[illegible]	[illegible]	[illegible]	[illegible]
*1917	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

*Grand Trunk Pacific Branch Lines.

† Deficit.

The Company's Officers.

Following are the executive officers:—President, H. G. Kelley, Montreal; Vice President Traffic, J. R. Dalrymple, Montreal; Vice President and General Manager, W. P. Hinton, Winnipeg; Vice President and Treasurer, Frank Scott, Montreal; Vice President and General Counsel, W. H. Biggar, K.C., Montreal; Assistant to President, D. E. Galloway, Montreal; Assistant to the President and General Manager, A. A. Tisdale, Winnipeg; Secretary, H. Phillips, Montreal.

The General Superintendent is H. H. Brewer, Winnipeg; General Freight Agent, A. E. Rosevear, Winnipeg, and General Passenger Agent, W. E. Duperow, Winnipeg.

Railway, Finance, Meetings, Etc.

Grand Trunk Pacific Ry.—A London press report for 1918 states that the G.T.R. had paid interest on the G.T. Pacific Ry. notes due Mar. 3. The bond issues on which the half year's interest is said to have been paid, are $9,720,000 of G.T.P.Ry., 5% secured notes; and $34,879,252 of G.T.P.Ry. 4% of perpetual debenture stock.

Lacombe and Blindman Valley Electric Ry.—The Alberta Department of Railways report for 1918 states that the Alberta Government holds the majority of stock in this company, and that the line is managed by a board of directors consisting of the members of the government, F. Ford, Edmonton; N. L. Harvey, acting Deputy Minister of Railways; H. A. Warner, and R. H. Douglas, of the provincial engineering staff. The report states that the line handled during the year 5,000 passengers; 5,500 tons of freight, 100,000 bush. of grain, and 7,800 pkgs.

Pacific Great Eastern Ry.—Under the terms of the Pacific Great Eastern Ry. Agreements Amendment Act, 1913, the British Columbia Legislature guaranteed the payment of certain debenture stock of the company of which $5,925,195 has been issued. This stock was pledged to the Union Bank as collateral security for the repayment of a loan of $4,800,000 at 6%. The Union Bank being desirous of having the loan repaid, the company arranged for it to be taken over by the Bank of Commerce, with the approval of the B.C. Government. This loan falls due June 30. The B.C. Legislature has passed an act guaranteeing this loan unconditionally from time to time until repayment has been made.

The B.C. Legislature has also passed an act transferring to the Pacific Great Eastern Ry. the assets of the P.G.E. Development Co.; vesting in the railway company all the powers of the development company, and authorizing the railway company to sell any of the development company's lands. The Development Co. is to be dissolved, its liabilities being transferred to the railway company.

Quebec and Saguenay Ry.—At the judicial sale of this railway at Montreal, Mar. 4, the Financial Controller, Railways Department, made a bid of $4,489,313.54, which was the only one. This was accepted by the directors, and all the papers were signed. The terms of sale were that 20% was paid with the bid, and the balance within fifteen days. The sale was arranged as being the easiest and most complete procedure for the transfer of the line to the Dominion Government. The vendor was the Quebec Savings and Trust Co., as trustee for the bond issue which was held wholly by the Quebec Ry., Light, Heat and Power Co. A press report states that the Dominion Government will also pay interest on the purchase price from the date when the matter was arranged until its completion on Mar. 4.

Mainly About Railway People Throughout Canada.

J. O. Apps, whose appointment as General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, was announced in our last issue, was born at Tara, Ont., Nov. 9, 1877, and entered railway service in 1893 as clerk, Local Freight Department, Illinois Central Rd., Chicago, Ill., remaining there until 1896. He entered C.P.R. service in Nov. 1897, since when he has been to Mar. 1903, clerk in General Superintendent's office; Mar. 1903, clerk in General Superintendent's office; Mar. 1903 to May 1907, chief clerk, General Baggage Department; May 1907 to Jan. 1909, Assistant General Baggage Agent; Jan. 1909 to Feb. 1919, General Baggage Agent, all at Montreal.

John J. Beck, Superintendent, Union Station, Toronto, died Mar. 22, aged 70. He had been in railway service for nearly 50 years, his first service being with the Great Western Ry., now part of the G.T.R., as brakeman, eventually becoming freight conductor, passenger conductor, between Toronto and Sarnia, and agent at Niagara Falls and Buffalo. He was appointed Superintendent, Toronto Union Station in 1906, and hoped to hold the position until the approaching removal to the new station, when he intended to retire. S. V. Beck, Freight Agent, G.T.R., Windsor, Ont., and John Beck, C.P.R. ticket office, Toronto, are sons.

E. N. Bender, General Purchasing Agent, C.P.R., Montreal, announced the engagement of his daughter, Margaret Irene, to Capt. Jno. Black, 5th Canadian Infantry Brigade, Headquarters, France, and formerly of St. Stephen, N.B.

Ernest A. Blow, who has been appointed to a position in the Industrial and Resources Department, Canadian National Rys., Winnipeg, went west from Whitby, Ont., in 1879, since when, except for a short period, he has been in newspaper service for a time as editor of the Portage la Prairie Review, and latterly on the Manitoba Free Press.

W. A. Bowden, Chief Engineer, Railways and Canals Department, Ottawa, has been appointed a member of the Dominion Power Board.

Lady McLaren Brown, wife of the General European Manager, C.P.R., after visiting her sister, Mrs. C. E. Neill, in Montreal, is now staying with her mother, Mrs. Crerar, in Hamilton, Ont.

Samuel Robert Cairns, who has been appointed Sleeping and Dining Car Agent, Eastern Lines, Canadian National Rys., Montreal, was born there, Oct. 31, 1869, and entered transportation service, Feb. 1, 1906, since when he has been, to Apr. 1907, sleeping car conductor, main line, Montreal to Vancouver, C.P.R.; Apr. 1907 to July 1912, chief instructor. Sleeping and Dining Car Department C.P.R., Montreal; July to Nov. 1912, Travelling Inspector, Richelieu and Ontario Navigation Co., Montreal; Jan. [illegible] to Apr. 1914, in private business; Sept. 1915 to Jan. 1919, inspector of munitions, Imperial Munitions Board at various points in Canada and the U.S.; Feb. to March, 1919, Inspector, Sleeping, Dining and Parlor Cars, Eastern Lines, Canadian National Rys., Ottawa, Ont.

James Coleman, Superintendent, Car Department, G.T.R., has been appointed a member of the American Railroad Association's temporary general mechanical committee.

Wilfred Lawson Crighton, whose appointment as General Advertising Agent, Canadian National Rys., Toronto, was announced in our last issue, was born at Derby, Eng., Nov. 9, 1871, and entered railway service in May 1891, since when has been, to May 1896, advertising clerk, C.P.R., Toronto; May 1896 to June 1901, in advertising department, C.P.R., Montreal; June 1901 to Feb. 1919, Advertising Agent, Canadian Government Rys., Moncton, N.B.

L. C. Thompson,
General Storekeeper, Eastern Lines, Canadian National Railways.

George Coster Dew, who has been appointed Asiatic Freight Agent, Canadian Pacific Ocean Services Ltd., Montreal, was born at Toronto, Aug. 9, 1886, and entered transportation service, Mar. 15, 1907, since when he has been, to May 8, 1908, stenographer, C.P.R., Toronto; May 9, 1908 to Aug. 31, 1911, stenographer, C.P.R., Montreal; Sept. 1, 1911 to Feb. 9, 1913, clerk, C.P.R., Montreal; Feb. 10, 1913, to Feb. 28, 1914, chief clerk, C.P.R., Montreal; Mar. 1, 1914 to Dec. 31, 1916 Contracting Agent, C.P.R., Montreal; Jan. 1, 1917 to Feb. 28, 1919, Asiatic Freight Agent, C.P.R., Montreal.

Robert S. Elworthy, whose appointment as General Agent, Passenger Department, Canadian Pacific Ocean Services Ltd., Chicago, Ill., was announced in our last issue, was born in London, Eng., Sept. 10, 1877, and entered transportation service, July 21, 1891, since when he has been, to Apr. 1, 1904, clerk, and Assistant Ticket Agent C.P.R., Chicago, Ill.; Apr. 1 to Dec. 31, 1904, City Passenger Agent, C.P.R., St. Louis, Me.; Jan. 1, 1905 to Mar. 31, 1909, chief clerk, Passenger Department, C.P.R., Chicago, Ill.; Apr. 1 1909 to Nov. 1, 1910, General Travelling Agent, Minneapolis, St. Paul and Sault Ste. Marie Ry., Minneapolis, Minn.; Nov. 1, 1910 to Apr. 30, 1912, City Ticket Agent, same road, Minneapolis, Minn.; May 1, 1912 to Oct. 31, 1913, City Ticket Agent, C.P.R., Chicago, Ill.; Nov. 1, 1913 to Dec. 31, 1915, chief clerk, C.P.R. rail and steamship lines, Chicago, Ill.; Jan. 1, 1916 to Feb. 1, 41919, General Agent, Passenger Department, C.P.R., Minneapolis, Minn.

Edward Fitzgerald, Assistant to Chairman, Imperial Munitions Board, and formerly Assistant General Purchasing Agent, C.P.R., returned to Ottawa early in February from England, where he was in consultation with the Hudson's Bay Co's. Governor and committee, in connection with his new duties as Deputy Chairman of the company's Canadian Advisory board at Winnipeg. He assumed his new duty at Winnipeg in March, and is living at the Fort Garry Hotel. In publishing Mr. Fitzgerald's portrait in Canadian Railway and Marine World for March, he was referred to as "Deputy Chairman, Canadian Advisory Board, Hudson's Bay Co., and latterly Assistant General Purchasing Agent, C.P.R." It should have read, "'formerly Assistant General Purchasing Agent, C.P.R., and latterly Assistant to Chairman, Imperial Munitions Board, Ottawa."

Charles Harry Fox, whose appointment as Division Engineer, C.P.R., Regina, Sask., was announced in a recent issue, was born at Winnipeg, Apr. 2, 1885, and entered C.P.R. service in May 1902, since when he has been, to July 1903, chief clerk, Construction Department, Winnipeg; July 1903 to Sept. 1904, rodman, at various points, Western Lines; 1904 to 1910, attending McGill University, graduating B.Sc civil engineering in 1909, and M.Sc., reinforced concrete, in 1910, and, during the summers, acting as instrument man, C.P.R., at various points; 1910 to 1912, Resident Engineer, Watrous, Alta, and Fort William, Ont.; 1912 to 1915, Assistant Engineer, Manitoba District, Winnipeg; May 1918 to Jan. 1919, military service with Canadian Engineers.

A. E. Fraser, Chief Engineer, Western Lines, Canadian National Rys., and several section hands, were killed by a snow slide on the Canadian Northern Ry. in the Rocky Mountains, Mar. 30.

Major General Sir Percy Girouard, K.C.M.G., D.S.O., Director, Sir W. G. Armstrong Whitworth and Co., of England, and President, Armstrong Whitworth of Canada Ltd., is in Canada on a business trip. He was at one time in C.P.R. service as an engineer, and has spent several years in the British Army, being chiefly concerned with military railways in Egypt, South Africa and India. He was in France in a similar connectijon during the earlier stages of the war, until the War Office decided that his services could be of greater benefit in England. He was also, for some time Governor of Nigeria, where he carried out a large railway scheme.

Leonard Chester Groom, whose appointment as Auditor, Land Department, Canadian Northern Ry., Toronto, was announced in our last issue, was born at Guelph, Ont., Nov. 8, 1884, and entered Canadian Northern Ry. service, Aug. 1, 1908, since when he has been, to Jan. 1, 1909, clerk, Land Department, Jan. 1, 1909 to Jan. 1, 1919, chief clerk, same department, Toronto.

D. B. Hanna, President, Canadian National Rys., and M. H. MacLeod, Vice President, in charge of operation, etc., left Toronto, Mar. 26 on an official trip to the Pacific coast, expecting to be away about three weeks.

Reginald William Douglas Harris, heretofore Trainmaster, C.P.R., Minnedosa, Man., has resigned to take up farming at Tappen, B.C., where he has acquired a fruit, poultry and cattle ranch. He was born at Victoria, B.C., and is the elder son of Dennis R. Harris, civil engineer, his mother being the youngest daughter of the late Sir James Douglas, K.C.B., who was Governor of Vancouver Island and British Columbia when they were Crown colonies and before they were united, and who founded and named the city of Victoria. He was from 1897 to 1904, with the Bank of British North America ni Victoria and Vancouver, and from 1904 to June 1905 was engaged in civil engineering as assistant to F. J. Ritchie, D.L.S., in British Columbia. He entered C.P.R. service in June 1906, since when he has been, to June 1906, wiper, Field, B.C.,; June 1906 to June 1911, fireman, Revelstoke, B.C.; Apr. 1914 to May 1916, Trainmaster, Wilkie, Sask.: May 1916 to Feb. 2, 1917, Trainmaster, Moose Jaw, Sask.: Feb. 2, 1917 to Jan. 1, 1919, Trainmaster, Minnedosa, Man.

Lewis R. Hart, whose appointment as General Agent, Passenger Department, C.P.R., Boston, Mass., was announced in our last issue, was born at Fairport, N.Y., June 3, 1877, and entered railway service, June 22, 1899, since when he has been, to Feb. 1900, telegraph operator and ticket agent, New York, New Haven and Hartford Rd., West Quincy, Mass.; Feb. to Sept. 1900, assistant ticket agent, same road, Quincy Mass.; Sept. 1900 to Dec. 1905, assistant ticket agent, same road, Fall River, Mass.; Dec. 1905 to July 1913, chief clerk, Passenger Department, C.P.R., Boston, Mass.; July 1913 to Jan. 1916, chief clerk, Passenger Department, C.P.R., New York; Jan. 1916 to Mar. 1919, General Agent, Passenger Department, C.P.R., Buffalo, N.Y.

C. A. Hayes, Vice President, Traffic, Canadian National Rys., left Toronto, Mar. 14, for an official trip to the Pacific coast, expecting to be away about three weeks.

G. Hiam, who has been appointed District Freight Agent, C.P.R., Cleveland, Ohio, entered transportation service in June 1904, since when he has been, to Jan. 1914, clerk with C.P.R., Canadian Northern Ry., and Cuba Rys.; Jan. to July 1914, Travelling Freight Agent, C.P.R., Toronto; July 1914 to June 1915, District Freight Agent, C.P.R., Fort William, Ont.; and from June 1915, when he enlisted for active service, with the Canadian Expeditionary Force, to serving in Canada, England and France, until Mar. 1918.

Lady Holt, wife of Sir Herbert Holt, one of the C.P.R. directors, is expected to return to Montreal in April, after having spent over three years in England to be near her sons.

James Jackson Horn, who has been appointed Superintendent, Vancouver Division, British Columbia District, C.P.R., Vancouver, was born at Carleton Jct., Ont., Nov. 26, 1873, and entered C.P.R. service, Jan. 12, 1892, since when he has been, to 1895, agent and operator, Lake Superior and Manitoba Divisions; 1895 to 1911, dispatcher, Fort William, and patcher, Kenora, Ont.; 1912 to 1913, In- Kenora, Ont.; 1911 to 1912, Chief Dis- spector of Transportation, Winnipeg; 1913 to 1915, Chief Dispatcher, Kenora, Ont.; 1915, Trainmaster, Ignace, Ont.; 1916 to Feb. 16, 1919, Chief Dispatcher, Kenora, Ont.

C. R. Hosmer, one of the C.P.R. directors, has been elected a director of the United States Financial Corporation Ltd., a consolidation of C. Meredith and Co. Ltd., Montreal, and the New Guaranty Trust Co. of New York, to handle Canadian business.

Mrs. S. J. Hungerford, wife of the Assistant Vice President, Canadian National Rys., and Miss Alice Hungerford, left Toronto towards the end of March, to spend a few weeks in Winnipeg and Minneapolis.

W. J. Uren,
Superintendent, Farnham Division, Quebec District, Canadian Pacific Ry.

F. L. Hutchinson, Manager in Chief, C.P.R. Hotels, etc., and Mrs. Hutchinson, have been on a trip to the Pacific Coast.

Walter James Hyman, who has been appointed chief draftsman, Car Department, G.T.R., Montreal, was born in England, Aug. 9, 1882, and entered G.T.R. service in 1904, since when he has been, to 1914, draftsman; 1914 to Nov., 1918, assistant chief draftsman, Montreal.

F. W. G. Johnson, who died at Montreal, Jan. 3, from pneumonia, aged 58, was formerly in G.T.R. service there, and later in Great Northern Ry. service at St. Paul, Minn., and returned to Montreal some time ago as manager of a Molsons' Bank branch.

H. G. Kelley, President, G.T.R., and Grand Trunk Pacific Ry., returned to Canada, Mar. 20, after a business trip to England. He has been appointed a member of the American Railroad Association's temporary general transportation committee.

R. E. Larmour, who has been appointed General Freight Agent, Eastern Lines, C.P.R., Montreal, was born at Brantford, Ont., Sept. 26, 1868, and entered railway service Aug. 1884, at Stratford, Ont., as office boy in the office of his father, who was then Division Superintendent, G.T.R., remaining there until 1886; since when his record has been: 1886 to 1888, clerk in the office of General Manager, Great Eastern Fast Freight Line, Detroit, Mich.; 1888 to 1890, Accountant to General Superintendent, Chicago and Grand Trunk Rd., Detroit, Mich.; 1890 to 1892, Local Freight Department, G.T.R., Detroit, Mich.; 1892 to 1898, Transfer Clerk, Through Freight from Wabash Rd. to G.T.R., at Windsor, Ont. He entered C.P.R. service in 1898, and has been, to Nov. 1899, chief clerk Freight Department, Fort William, Ont.; Nov., 1899 to May 1900, acting agent, Fort William; May, 1900 to Aug. 1900, chief clerk, Superintendent's Office, Fort William; Aug., 1900 to Feb. 1903, agent, Port Arthur, Ont.; Feb., 1903 to Feb. 1905, Freight Claims Agent, Pacific Division, Vancouver, B.C.; Feb., 1905 to Feb. 1906, Freight Claims Agent, Central and Western Divisions, Winnipeg; Feb. to Aug. 1906, City Freight Agent, Winnipeg; Aug., 1906 to June 1908, Freight Agent, Fort William, Ont.; June to July, 1908, General Agent, Fort William, Ont.; July, 1908 to June 1909, General Freight Agent, Kootenay and Boundary District, Nelson, B.C.; June, 1909 to Apr. 1911, General Freight Agent, Central Division, Winnipeg; Apr. to June 1911, Division Freight Agent, Manitoba Division, Winnipeg; June, 1911 to July 1914, Division Freight Agent, British Columbia Division, Vancouver; July, 1914 to Sept. 30 1915, Assistant General Freight Agent, Vancouver, B.C.; Sept. 30, 1915 to Mar. 15 1919, General Agent, Freight Department, New York, N.Y.

Howard M. MacCallum, whose appointment as General Freight Agent, Canadian Pacific Ocean Services, Ltd., Toronto, was announced in our last issue, was born at Huntingdon, Que., Dec. 3, 1882, and entered transportation service in Sept. 1899, since when he has been, to May 1904, general freight and passenger work, Allan Line, Montreal, and Portland, Me.; May 1904 to Aug. 1907, chief clerk to General Passenger Agent, Steamship Lines, C.P.R., Montreal; Aug. 1907 to Aug. 1908, Travelling Passenger Agent, Steamship Lines, C.P.R., Winnipeg; Aug. 1908 to Dec. 1909, General Agent, Steamship Lines, C.P.R., Winnipeg; Jan. 1910 to Feb. 1919, General Agent, Canadian Pacific Ocean Services Ltd., Chicago, Ill.

A. D. MacTier, Vice President, Operation, etc., Eastern Lines, C.P.R., has been appointed a member of the American Railroad Association's temporary general operating committee.

Sir Donald Mann visited Winnipeg in March.

Andrew McCulloch, whose appointment as Chief Engineer and General Superintendent, Kettle Valley Ry., Penticton, B.C., was mentioned in our last issue, was, prior to his appointment as Chief Engineer, K.V.R., June 1, 1910, engaged for several years, in engineering work on Eastern and Western Lines, C.P.R. From June 1, 1910, he had charge of the location and construction of the K.V.R., and later had charge of both engineering and maintenance work. On the resignation of J. W. [illegible] as General Superintendent, Dec. 16, 1918, he was also appointed acting General Superintendent, and confirmed in that position, Feb. 20.

Walter Taylor Moodie, who has been appointed Superintendent, Division 3, Central District, Canadian National Rys., Port Arthur, Ont., was born at Glasgow, Scotland, Mar. 10, 1882. From Oct. 1897 to Oct. 1902, he served his apprenticeship with a firm of civil engineers there, from Oct. 1902 to Mar. 1903, was assistant engineer, with the same firm, and from Mar. 1903 to Feb. 1905, assistant engineer, Caledonian Ry., Glasgow, Scotland; Mar. 1905 to Mar. 1908, assistant engineer, Central South African Rys., Transval; Apr. 1908 to Sept. 1911, assistant engineer, Canadian Northern Ry., Winnipeg, Man.; Oct. 1911 to Sept. 1915, Engineer, Maintenance of Way, same road, Winnipeg; Oct. 1915 to Dec. 1918, District Engineer, same road, Winnipeg.

Thomas Fletcher Oakes, former President of the Northern Pacific Rd., died in Seattle, Wash., Mar. 14, aged 76. In 1863 he entered the service of the Kansas Pacific Ry., from which he resigned as Vice President in 1879 to become General Superintendent of the Kansas City, Fort Scott & Gulf Rd. He later served as Vice President and General Manager of the Oregon Ry. & Navigation Co. In 1881 he became Vice President Northern Pacific, and served as President from 1888 to 1893, when he was appointed receiver for two years.

Sir Edmund Osler, of Toronto, one of the C.P.R. directors, has been staying at Hot Springs, Virginia.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., accompanied by Mrs. Peters and Miss Dorothy Langford, left Vancouver, Mar. 15, in the official car, British Columbia, to attend the C.P.R. officials' conference and dinner in Montreal, Mar. 21 and 22.

T. P. Phelan, President, Canada Railway News Co., was sufficiently recovered from the operation he underwent in January to be able to leave Baltimore about the middle of March to complete his convalescence at Atlantic City. He is expected to return to Toronto towards the end of April or early in May.

Miss Doris M. Piper, daughter of Hiram L. Piper, of the Hiram L. Piper Co., railway and steamship supplies, Montreal, was married Mar. 13, to E. C. Crutchley, of Jersey City, N.J.

Sydney John Lyle Potter, who has been appointed Paymaster, Canadian Northern Ry., Toronto, was born in Devonshire, England, Apr. 5, 1887, and entered railway service in England with the Great Northern Ry., being, from May 5, 1905 to Oct. 1, 1907, clerk at King's Cross, London. He came to Canada in 1907, and entered Canadian Northern Ry. service, Oct. 28, 1907, since when he has been, to Oct. 1, 1915, clerk, Toronto; Oct. 1, 1915 to Dec. 31, 1918, Assistant Paymaster, Toronto.

Alfred Price, General Manager, Eastern Lines, C.P.R., when in Toronto recently, paid a visit with the mayor to the new Elizabeth St. school, and ad[illegible] the pupils. As a boy he attended the old Elizabeth St. school.

Henry Thomas Rawlings, whose appointment as Lake Forwarding Agent and Fuel Inspector, Canadian National Rys., Cleveland, Ohio, was announced in our last issue, was born in London, Eng., Sept. 27, 1883, and entered railway service June 1, 1908, since when he has been, to Apr., 1914, in the Accounting Department, Canadian Northern Ry., Toronto; Apr. 1914 to Sept. 1918, chief clerk, Vice President's office, same road; Sept. 1918 to Mar. 31, 1919, chief clerk, President's office, Canadian National Rys., Toronto.

Senator H. W. Richardson, who died at Kingston, Ont., some months ago, left an estate valued at about $2,000,000.

W. D. Robb, Vice President, Transportation and Maintenance, G.T.R., and Mrs. Robb, have been spending a short time at Atlantic City N.J.

H. R. Safford, formerly Chief Engineer, Grand Trunk Ry., now Engineering Assistant, Central Western Region, U.S. Railroad Administration, has been appointed a member of the American Railroad Association's temporary general engineering committee.

Lady Schreiber, widow of Sir Collingwood Schreiber, K.C.M.G., C.E., formerly General Consulting Engineer, Dominion Government, who has been a patient in the Ottawa General Hospital for about a month, was able to return home Mar. 14.

R. E. Perry.
Assistant General Freight Agent, Eastern Lines, Canadian National Railways.

Lord Shaughnessy, Chairman, C.P.R., returned to Canada Mar. 17, after a trip to Europe.

G. E. Smart, General Master Car Builder, Canadian National Rys., Toronto, who was laid up with influenza and pneumonia, for some weeks, was able to get out again at the end of March.

D. A. Story, formerly Freight Traffic Manager, C.G. Rys., Moncton, N.B., who retired on the superannuation list recently, left Moncton, N.B., Feb. 27, for Los Angeles, Cal., expecting to remain on the Pacific coast until June, and then to return to Halifax, N.S.

Harry A. Stuart, who has been appointed Division Freight Agent, Canadian National Rys., was born at Portland, Me., Aug. 16, 1891, and entered Railway service in May 1912, since when he has been, to Oct. 1913, City Freight and Passenger Agent, Chicago Great Western Ry., Winnipeg; Oct. 1913 to Aug. 1916, City Passenger Agent, Chicago and North Western Ry., Winnipeg; Sept. 1916 to Dec. 31, 1918, City Freight Agent, Canadian Northern Ry., Winnipeg.

E. F. L. Sturdee, whose appointment as General Agent, Passenger Department, C.P.R., Seattle, Wash., was announced in our last issue, was born at St. John, N.B., Mar. 29, 1876, and entered C.P.R. service in Dec. 1893, since when he has been, to July 1894, clerk, Colonization Department, Moncton, N.B.; July 1894 to Aug. 1897, clerk, Passenger Department, St. John, N.B.; Aug. 1897 to June 1902, clerk, Passenger Department, Toronto; June 1902 to Mar. 1911, excursion clerk, Montreal; Mar. 1911 to Dec. 1913, chief clerk, Montreal; Dec. 1913 to Apr. 1915, Assistant District Passenger Agent, Toronto; Apr. 1915 to Mar. 1919, General Agent, Passenger Department, Boston, Mass.

William Taylor, General Agent, White Pass and Yukon Route, St. Michaels, Alaska, died at Seattle, Wash., Mar. 12. He had been with the company since 1900, and was, at one time, General Agent at Dawson, Yukon, and later, Superintendent of the Upper Yukon River District.

Lorne Cameron Thompson, whose appointment as General Storekeeper, Eastern Lines, Canadian National Rys., Toronto, was announced in a previous issue, was born at Kingston, Ont., Nov. 25, 1882, and entered railway service, in Mar. 1897, since when he has been, to June 1898, requisition clerk, Stores Department, Delorimier Ave. Shops, C.P.R., Montreal; June 1898 to Apr. 1889, billing clerk, Stores Department, C.P.R., Hochelaga, Montreal; Apr. 1899 to June 1900, timekeeper, car shops, C.P.R., Hochelaga, Montreal; June 1900 to Mar. 1901, Storekeeper, C.P.R., Quebec, Que.; Mar. 1901 to June 1902, Storekeeper, C.P.R., Brownville Jct., Me.; June 1902 to Nov. 1903, Divijsion Storekeeper, C.P.R., McAdam Jct., N.B.; Nov. 1903 to June 1904, relieving storekeeper, Eastern Lines, C.P.R.; June 1904 to Oct. 1905, Storekeeper, section A, Angus shops, C.P.R., Montreal; Oct. 1905 to Mar. 1907, chief clerk, General Storekeeper, Angus shops, C.P.R., Montreal; Mar. 1907 to July 1909, Storekeeper, Ontario Lines, Canadian Northern Ry., Parry Sound, Ont.; July 1909 to Nov. 1912, Division Storekeeper, Ontario and Quebec Lines, Canadian Northern Ry., Toronto; Nov. 1912 to Feb. 20, 1916, General Storekeeper, Eastern Lines, Canadian Northern Ry., Toronto; Feb. 20, 1916 to Jan. 14, 1919, Superintendent Transportation, Imperial Munitions Board, Ottawa, Ont.

William J. Uren, whose appointment as Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, Que., was announced in a recent issue, was born at St. Marys, Ont., Jan. 23, 1872, and entered railway service Sept. 6, 1888, since when he has been, to June 1890, telegraph operator, C.P.R., Hawk Lake, Rat Portage, Ont., and various other points; June 1890 to Nov. 1892, agent and operator, C.P.R., Barclay and Dexter, Ont.; Nov. 1892 to Nov. 1898, Terminal Agent and Yardmaster, C.P.R., Ignace, Ont.; Nov. 1898 to June 1903, dispatcher, C.P.R., Fort William, and Rat Portage, Ont.; June 1903 to Apr. 1904, Chief Dispatcher, C.P.R., Rat Portage, now Kenora, Ont.; Apr. to June 1904, Night Chief Dispatcher, C.P.R., Winnipeg; June 1904 to May 1905, Chief Dispatcher, C.P.R., Moose Jaw, Sask.; May 1905 to Nov. 1908, Chief Dispatcher, and

Relieving Trainmaster, C.P.R., Winnipeg; Nov. 1908 to Nov. 1909, Superintendent, C.P.R., Brandon, Man.; Nov. 1909 to June 1910, Superintendent, C.P.R., Moose Jaw, Sask.; June 1910 to Sept. 1912, Superintendent, C.P.R., Cran-Brock, B.C.; Sept. 1912 to Nov. 1913, Superintendent, C.P.R., Calgary, Alta.; Nov. 1913 to Nov. 1918, Superintendent, and relieving General Superintendent, C.P.R., Toronto.

L. A. Vallee, Chief Engineer and Director of Railways in connection with the Quebec Public Works and Labor Department, and Engineer of the Quebec Public Utilities Commission, died at Quebec, Mar. 10. He was born at Beauport, Que., Nov. 30, 1851, and entered the Sherbrooke and Eastern Townships Ry's. service as an apprentice engineer in 1869, and from 1870 to 1876 acted as rodman, leveller and transit man, North Shore Ry. From 1876 to 1882 he was Assistant Engineer and Division Engineer in charge of construction and maintenance of way, Quebec, Montreal, Ottawa and Occidental Ry., now part of the C.P.R. In 1882 he was appointed Government Engineer, and in 1895, Director of Railways for the Province of Quebec, and in 1909, also Engineer, Quebec Public Utilities Commission.

Sir William Van Horne's estate of $6,371,374.73 included 2,000 shares of British Columbia Sugar Refineries Co's. stock valued at $300,000. The B.C. Government assessed the estate $14,242.10 for succession duties, but the executors contended that the basis upon which this figure had been arrived at was wrong, and that on a correct basis the succession duties would be $8,523. Chief Justice Hunter, on Mar. 13, held that the province could not assess succession duties on property outside its own borders. It is reported that the case will be appealed by the Government.

Adrian P. Villain, who has been appointed City Ticket Agent, C.P.R., San Francisco, Cal., was born there, Feb. 6, 1891, and entered transportation service in Aug. 1908, since when he has been, to Apr. 1911, car register clerk, Pullman Co.; Apr. 1911 to Mar. 1913. ticket clerk, Southern Pacific Co.; Mar. 1913 to Dec. 1915, City Passenger Agent, C.P.R.; Dec. 1915 to Feb. 1919, Travelling Passenger Agent, C.P.R.; all at San Francisco.

Ewart Buchan Walker, whose appointment as Electrical Engineer, Canadian National Rys., Toronto, was announced in our last issue, was born there, Dec. 15, 1879. He entered Canadian General Electric Co's. service at Peterborough, Ont., in 1901, and was engaged in factory work until 1903, when he was appointed Manager, Storage Battery Department, remaining in that capacity until 1909, when he became a partner in Chapman and Walker Ltd. electrical engineers and contractors, and from 1915 has been engaged as an electrical engineer, Eastern Lines, Canadian Northern Ry.

John Wardrop, who has been appointed General Agent, Industrial and Resources Department, Canadian National Rys., Winnipeg, will have jurisdiction extending over the Western Lines, from Port Arthur, Ont., to the Pacific coast. He has had considerable experience in immigration work, as Assistant Industrial Commissioner in charge of European and U.S. immigration.

R. J. S. Weatherston, Division Freight Agent, G.T.R., Ottawa, Ont., was presented with a purse of money, by a number of local business men, and a gold watch, with a silver tea service for Mrs. Weatherston by the local G.T.R. staff, at Stratford, Ont., Mar. 1, on leaving that city, where he had been Division Freight Agent, G.T.R., for over seven years.

Rowland Hill Webster, whose appointment as Commercial Agent, G.T.R., Moncton, N.B., was announced in our last issue, was born at Pictou, N.S., July 2, 1885, and entered railway service Dec. 1, 1900, since when he has been, to Nov. 1909, clerk in freight office, Intercolonial Ry., Pictou, N.S., and relieving agent, freight work, and ticket agent, at various points, Sydney and Truro Districts, Canadian Government Rys.; Nov. 1909 to Apr. 1910, chief clerk to Assistant General Passenger Agent, C.G.R., Halifax, N.S.; Apr. 1910 to Feb. 1912, Steamship Ticket Agent, C.G.R., Quebec, Que., and Halifax, N.S.; Feb. 1912 to Feb. 1919, Travelling Freight Agent, G.T.R., Moncton, N.B.

W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., has been appointed a member of the American Railroad Association's temporary general mechanical committee. He returned to Montreal towards the end of March, having spent a few weeks in the south, recuperating after a very severe cold.

American Railroad Association's Mechanical Convention at Atlantic City.

The first session of the Mechanical Section (formerly the Master Car Builders' Association and the American Railway Master Mechanics' Association) will be held at Atlantic City N.J., June 18 to 25.

The convention will be under the management of the mechanical section's general committee, composed of three representatives of the United States Railroad Administration, two representatives of each of the operating regions into which the U.S. has been divided, and two representatives of Canadian railways. The names of the committees are given on pg. 172 of this issue. The Canadian representatives on the committee are, Jas. Coleman, Superintendent Car Department, G.T.R.; and W. H. Winterrowd, Chief Mechanical Engineer, C.P.R. Following is the programme:

June 18 to 20. Report from committees to be received and considered as follows:—

Arbitration, J. J. Hennessey, chairman.

Standards and recommended practice (M.C.B.), T. H. Goodnow, chairman.

Train brake and signal equipment, T. L. Burton, chairman.

Brake shoe and brake beam equipment, B. B. Milner, chairman.

Couplers, R. L. Kleine, chairman.

Loading rules, J. J. Burch, chairman.

Car wheels, W. C. A. Henry, chairman.

Safety aplıances, C. E. Chambers, chairman.

Car construction, W. F. Kiesel, chairman.

Specifications and tests for materials (M.C.B.), T. M. Waring, chairman.

Car Trucks, J. T. Wallis, chairman.

Prices for labor and material, P. F. Smith, Jr., chairman.

Train lighting and equipment, J. R. Sloane, chairman.

Nominations, F. W. Brazier, chairman.

Tank cars, A. W. Gibbs, chairman.

Draft gears, R. L. Kleine, chairman.

Welding truck side frames, bolsters and arch bars, W. O. Thompson, chairman.

Standard blocking for cradles of car dumping machines, J. McMullen, chairman.

Revision of passenger car rules of interchange, H. H. Harvey, chairman.

Depreciation for freight cars, M. K. Barnum, chairman.

June 21.—Election of officers.

June 23 to 25.—Reports from committees to be received and considered as follows:—

Standards and recommended practice (A.R.M.M.), W. E. Dunham, chairman.

Mechanical stokers, A. Kearney, chairman.

Powdered fuel, C. H. Hogan, chairman.

Specifications and tests for materials (A.R.M.M.), F. M. Waring, chairman.

Design and maintenance of locomotive boilers, C. E. Fuller, chairman.

Locomotive headlights, H. T. Bentley, chairman.

Superheater locomotives, W. J. Tollerton, chairman.

Design, maintenance and operation of electric rolling stock, C. H. Quereau, chairman.

Train resistance and tonnage rating, O. P. Reese, chairman.

Subjects, M. K. Barnum, chairman.

Intercolonial Ry. Property Not Insured.—The Minister of Railways, in answering a question in the House of Commons recently, stated that the Intercolonial Ry. locomotives, material, buildings, stations, car sheds, locomotives, trucks, workshops and elevators, were not insured against fire.

Railway Supplies for Mexico.—A cablegram from the United States Consul-General in Mexico announces that a presidential decree in effect from Feb. 20 permits the importation of the following railway supplies into Mexico free of duty for six months: Switch points, iron and steel ties, turntables, iron and steel rails, frogs, and tie plates. The duties thereby remitted amount to 0.03 peso per kilo gross weight, or $0.68 per 100 lbs.

Canadian Northern Ry's. St. Boniface Taxes.—The St. Boniface, Man., City Council, has came to a settlement with the Canadian Northern Ry. in respect to overdue taxes, which were reported to amount to nearly $250,000 since 1911, on account of which the city sold at a tax sale in Oct. 1918, a part of the 80 acres of land held by the company. The settlement reached is reported to be $25,000 cash, and $125,000 to be covered by interest bearing notes to be paid within a year.

Board of Conciliation, Grand Trunk Pacific Ry.—The following are [illegible] of a board of conciliation appointed to arbitrate between the Grand Trunk Pacific Ry. and certain of its employes who are members of the Canadian Brotherhood of Railway Employes:—A. J. Andrews, K.C., chairman; [illegible] representing the company, and T. J. Murray, representing the men. All the three members live in Winnipeg.

The United States Railroad Administration Railways entering Montreal, viz., the New York Central, Central Vermont Ry., Rutland Rd., and Delaware and Hudson, will from Apr. 1, use as a down town ticket office, the premises at [illegible] St. James St., hitherto used by the Delaware and Hudson Rd. for that purpose.

Railway Rolling Stock Orders and Deliveries.

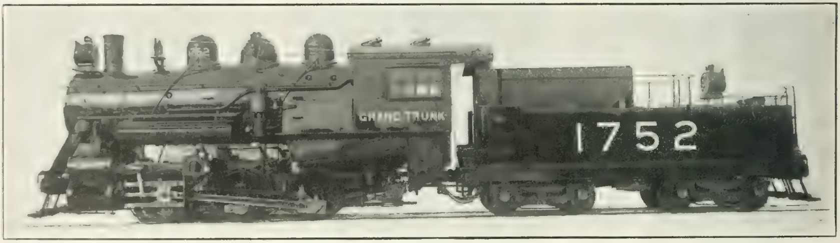
The C.P.R., to Mar. 19, received the following additions to rolling stock: 16 steel underframe box cars, 75 flat cars, and 2 decapod locomotives, from its Angus shops, Montreal, and 2 vans from its Winnipeg shops.

The Canadian National Rys. baggage cars, 20 of which are on order with Canadian Car and Foundry Co., as mentioned in a previous issue, will have the same general equipment as is being supplied with the colonist cars, except that the air brake cylinder will be 16in. diar., instead of 18 in.

Following are dimensions and general details of the 300 stock cars, which Canadian National Rys. has ordered from National Steel Car Co.:

Capacity	30 tons
Length inside	36 ft.
Width inside	8½ ft.
Height inside	8 ft.
Draft gear	Tandem
Journal boxes	4¼ x 8 in.
Trucks	Simplex
Brake beams	M.C.B. 2
Springs	M.C.B. class G

With reference to the 150 refrigerator cars, 500 stock cars, and 250 ballast cars, which Canadian National Rys. has ordered from Canadian Car and Foundry Co., and details of which were given in our last issue, we are advised that the refrigerator and stock cars will be built at the company's Amherst, N.S., works, and the ballast cars at its Fort William, Ont., works.



Grand Trunk Railway Six Wheeled Switching Locomotive.

The C.P.R. has ordered the following rolling stock, for delivery during this year by its own shops: 20 steel baggage and express cars, 106 steel refrigerator cars, 260 steel flat cars, 440 steel underframe flat cars, 1 all steel grain car, 70 tons capacity, 4 decapod locomotives, 10 mikado locomotives, 16 Pacific locomotives, 15 Santa Fe locomotives, at its Angus shops; and 6 vans at its Winnipeg shops.

The Canadian National Rys. colonist cars, 100 of which are on order with Canadian Car and Foundry Co., and 50 with the Pullman Co., as mentioned in a previous issue, will have the following equipment and specialties: 6 wheel trucks with 5 x 9 in. axles, McCord journal boxes, rolled steel wheels, equipped with latest type of clasp air brakes, Westinghouse L.N. equipment with 18 in. brake cylinder, Safety Car Heating and Lighting Co's. electric lighting system, 30 volts, 300 ampere hour battery, with lights so arranged inside of car as to provide half light on night circuit, 4 separate circuits arranged for lighting, and no gas to be used for auxiliary purposes, Vapor Car Heating Co's. latest vapor heating system, emergency stove for auxiliary heating in addition to regular colonist cooking range, Du Pont fabrikoid seat covering, pantasote curtains, composition flooring, interior finish, wood, exterior, steel, gravity water system supplied from overhead tanks with specijal filling device from side of car, 3 wash basins at men's end of car, and one at the women's end, smoke room in 4 sections.

The G.T.R., during January, received 3 six-wheel switching locomotives from its Montreal shops, and has a further 22 of the same type under construction. Following are the chief details:

Cylinders, diam. and stroke	21 x 26 in.
Driving wheels	51 in.
Boiler, diam.	68 in.
Boiler pressure	180 lb.
Firebox	95-15 16 x 4¼ in.
Tubes, no. and diam.	158-2 in., 21-5½ in.
Tubes, length	12 ft. 5 in.
Heating surface, firebox	132 sq. ft.
Heating surface, tubes	1,391 sq. ft.
Heating surface, total	1,523 sq. ft.
Grate area	27.5 sq. ft.
Wheel base, driving	12 ft.
Wheel base, engine	12 ft.
Weight on drivers	151,400 lb.
Weight, total	154,000 lb.
Tractive power	34,400 lb.
Factor of adhesion	4.49
Tank capacity	4,560 gall.
Coal capacity	6 tons
Valve motion	Walschaert
Driving wheel centers	Cast iron
Tender wheels	Tires and retaining rings
Safety valves	2-3 in.
Grate shakers	Hand
Steam heat	Gold or Vapor
Driving box shoes and wedges	Brass
Reverse gear	Casey-Cavin
Headlights	Pyle National

The C.P.R. ordered recently 140 Hart-Otis general service cars from the Hart-Otis Car Co., mention of which was made in a previous issue. They are being built in Canada. The floor of the car is composed of 8 drop doors, 4 on each side hinged to the center sill, and operated in sections of 2 doors to a section. The operating gear is the Hart-Otis Car Co's. latest improved rolling shaft type, the operating shaft being 2½ in. open hearth mild steel. The cars have an apex 14½ in. high at the center, by 2 ft. 4 in. wide at the floor line, and built up of steel plates and angles, entirely covering the center sills. Following are the chief dimensions.—

Length inside coupler knuckles	27 ft. 8½ in.
Length over end sills	24 ft. 4½ in.
Length inside	22 ft. 5 in.
Width overall	9 ft. 11 ¼ in.
Width inside	9 ft. 6 in.
Height inside	5 ft.
Height from rail	9 ft. 4 13-16 in.
Height from rail to floor	4 ft. 4 13-16 in
Truck centers	13 ft.
Wheel base of truck	5 ft. 6 in.
Wheel base of car	18 ft. 6 in.
Doors on each side	4
Width of door opening	2 ft. 2 in.
Length of door opening, intermediate	5 ft. 7 in.
Length of door opening, end	4 ft.

Following are the chief details of the Mikado, Pacific and Santa Fe locomotives, which the C.P.R. is building at its Angus shops, numbers of which are given elsewhere on this page:

Mikado.

Boiler pressure	200 lbs.
Cylinders	25 x 32 in.
Driving wheels, diar.	68 in.
Tractive effort	54,000 lb.
Firebox, inside	120⅛ x 84⅝ in.
Flues, no. and diar	40-5½ in.
Tubes, no. and diar.	211-2¼ in.
Length over tube sheets	18 ft. 6 in.
Firebox heating surface	274 sq. ft.
Arch tube heating surface	37.5 sq. ft.
Tube and flue heating surface	3,347.78 sq. ft.
Superheating surface, approx.	845 sq. ft.
Total equivalent heating surface	4,926.78 sq. ft.
Grate area	70.3 sq. ft.
Grate area	70.8 sq. ft.
Factor of adhesion	4.18
Weight on drivers	226,000 lb.
Weight on engine truck	25,000 lb.
Weight on trailing truck	49,000 lb.
Total weight, engine	300,000 lb.
Total weight, tender loaded	180,000 lb.
Coal capacity, tons	12
Water capacity, imp. galls.	8,000

Pacific.

Boiler pressure	200 lbs.
Cylinders	24 x 30 in.
Driving wheels, diar.	70 in.
Tractive effort	42,000 lb.
Firebox, inside	114⅛ x 84⅝
Flues, no. and diar.	38-5½ in.
Tubes, no. and diar.	202-2¼ in.
Length over tube sheets	18 ft. 4⅞ in.
Firebox heating surface	264.5 sq. ft.
Arch tube heating surface	32.5 sq. ft.
Tube and flue heating surface	3,197 sq. ft.
Superheating surface, approx.	803 sq. ft.
Total equivalent heating surface	4,698.5 sq. ft.
Grate area	60.87 sq. ft.
Factor of adhesion	4.25
Weight on drivers	175,000 lb.
Weight on engine truck	50,000 lb.
Weight on trailing truck	50,000 lb.
Total weight, engine	275,000 lb.
Total weight, tender loaded	180,000 lb.
Coal capacity, tons	12
Water capacity, imp. galls.	8,000

Santa Fe.

Boiler pressure	200 lb.
Cylinders	26½ x 32 in.
Driving wheels, diar.	58 in.
Tractive effort	65,870 lb.
Firebox, inside	120⅛ x 88⅞ in.
Flues, no. and diar.	45-5½ in.
Tubes, no. and diar.	230-2¼ in.
Length over tube sheets	21 ft.
Firebox heating surface	332.5 sq. ft.
Arch tube heating surface	37.5 sq. ft.
Tube and flue heating surface	4,200 sq. ft.
Superheating surface, approx.	1,085 sq. ft.
Total equivalent heating surface	6,197 sq. ft.
Grate area	74.2 sq. ft.
Factor of adhesion	4.16
Weight on drivers	275,600 lb.
Weight on engine truck	24,000 lb.
Weight on trailing truck	55,000 lb.
Total weight, engine	254,600 lb.
Total weight, tender loaded	180,000 lb.
Coal capacity, tons	12
Water capacity, imp. galls.	8,000

Canadian Railway
AND
Marine World
ESTABLISHED 1898

Devoted to Steam and Electric Railway, Marine, Shipbuilding and Railway, Harbor and Canal Contractors' Interests.

Official Organ of various Canadian Transportation Associations.

Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors,
70 Bond Street, Toronto, Canada.

ACTON BURROWS,
Managing Director and Editor-in-Chief.

AUBREY ACTON BURROWS - Secretary and Business Manager.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—The programme of betterments on this district, according to a press report, will, in addition to the usual repair work to bridges, culverts and buildings, include the replacement of 45 miles of rails between St. John, N.B., and Megantic, Que., on the main line, and 50 miles of ballasting, mostly in Maine; tree planting at various points along the line for snow protection purposes; the replacing of the trestle bridge at Newburg Jct., north of Woodstock, by a 12 ft. concrete arch; the replacement of the turntable at McAdam by a larger and heavier one; the building of three standard type dwellings for divisional officers, and 10 standard type dwellings for other employes at Brownville Jct.

New Brunswick Coal and Ry. Co.—A press report states that several trestles will be removed, and will be replaced by concrete culverts next year. The line extends from Norton to Minto, N.B., and is operated in connection with the Fredericton and Grand Lake Coal and Ry. Co., by the C.P.R. under lease.

Quebec District.—A press report stated recently that the company had made an appropriation of $236,000 for improvements to the freight yard at Three Rivers,, Que. We are advised that while improvements will probably be required at this point before long, plans have not been prepared, and nothing has been decided as to what will be done.

The Interprovincial and James Bay Ry. Co., incorporated by the Dominion Parliament, and controlled by the C.P.R., has power to build a line from Lumsden's Mills, Que., at the terminus of the branch from Mattawa, to Des Quinze River, for the building of which five years extension of time was granted in 1917. The Abitibi Chamber of Commerce on Mar. 6, passed a resolution asking the Dominion Government not to renew the charter unless the company starts construction of the line, with the intention of carrying it through from the Des Quinze River into the Abitibi country. The Quebec Legislature has voted 4,000 acres of land a mile in aid of the construction of a line from Timiskaming, on Lake Timiskaming, the terminus of the C.P.R. branch line from Mattawa, or from the proposed terminus of a branch of that line, via Ville Marie, on the Quebec shore of Lake Temiskaming, to the Riviere des Quinze. (Sept., 1917, pg. 359).

Ontario District.—A. press. report states that the company contemplates building a second track on its line between Guelph and London. As a matter of fact Guelph is on the company's branch line from Guelph Jct to Goderich, 15 miles from the main line to London. The company has a double track line from Toronto to Guelph Jct., and surveys for continuing the second track as far as Woodstock were completed in 1913, at the time when the second track was completed to Guelph Jct. Several of the contractors left their plants on the work, expecting to go ahead, but subsequently removed them.

Saskatchewan District.—A deputation waited on D. C. Coleman, Vice President Western Lines, Mar. 13, asking that the company build a line from Lanigan, to Humboldt and thence northwesterly toward Prince Albert, Sask. This is, in part, one of the lines for which the company is asking the Dominion Parliament to authorize it to build (Feb., pg. 75), the particular line in the company's application being from Lanigan, on the Pheasant Hill branch, generally northeasterly to a point between the Carrot and Saskatchewan Rivers, and then on to a point near Cumberland House, Sask. Mr. Coleman is reported to have advised the deputation that pending the result of the application to parliament the company was investigating the traffic possibilities of the district and was endeavoring to lay out a line to serve it.

Surveys are being made for a line from Swift Current easterly. C. H. Larson, J. B. Paget and J. K. Foster have been appointed location engineers.

Alberta District.—When the Board of Railway Commissioners was in Regina, Sask., Mar. 2, representations were made in favor of the immediate completion of the Weyburn-Lethbridge line. The vacant link is between Manyberries and Altaway at the Alberta-Saskatchewan boundary, about 37 miles. D. C. Coleman, Vice President Western Lines, pointed out that the greater portion of the land through which the line would pass was let out on grazing leases, and the company should not be asked to build lines in unprofitable territory. (Mar., pg. 130).

Nakusp and Slocan Ry.—The British Columbia Legislature is being asked to confirm an agreement made between the British Columbia Government and the C.P.R., respecting the Naksup and Slocan Ry. bonds. The bond issue was for £137,960, guaranteed as to principal and interest by the B.C. Government, and became due July 1, 1918. The agreement provides that the B.C. Government shall acquire the bonds, and sell the same to the C.P.R. at a price not exceeding their face value, and upon certain other conditions following upon the purchase. The C.P.R. agrees to continue to operate the railway until the termination of its lease, June 30, 1920, and to pay taxes on the same on the basis set forth in clause 25 of the indenture of Aug. 9, 1913, the province to repay to the C.P.R. any taxes collected in excess of that basis.

Upon the second reading of this bill, Mar. 1, it was explained that the agreement was entered into July 1, 1918. The guarantee was authorized by the legislature 25 years ago, the interest rate being 4%. The arrangement that the C.P.R. should retire the bonds and take possession of the railway relieved the province of its obligation in connection with the bonds and the road. Under the old agreement the company was obliged to pay to the province 40% of the gross receipts which had failed to meet interest payments by some $29,000 a year, a debit to the province of $326,408 in all. In the event of the province renewing the bonds and holding the company to the original arrangement, not only would the interest rate on the bonds have advanced, but there would have been the continual drain on the treasury to the extent of over $30,000. The Finance Minister said the agreement was a good bargain for the province.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Rys.—The United States Congress appropriated $4,002,380 recently for the continuance of construction on the line from Seward to Fairbanks, Alaska, but the Senate failed to ratify it. The line is 471 miles long including a branch. The report of the Alaska Engineering Commission, which has charge of the work, showed that at the end of 1918 the work was about two-thirds completed. It has been done entirely by small contractors, and by day labor, under the supervision of the commissions' engineering staff. The branch line to the Matanuska coal fields, 38 miles, is completed. The first 71 miles of the main line consists of the old Alaska Northern Ry., in which the shareholders of the former Soverign Bank of Canada were interested, and the last 7 miles into Fairbanks consist of that mileage of the old Tanana Valley Ry., a line 44.5 miles long, which were acquired by the commission. The 393 miles to be built to connect these two pieces of line, were located through a waste country. There has been built 206 miles of main track, and the 38 miles of branch line referred to above; in connection with which there has been built 30 miles of yard tracks, sidings and spurs. Of the 187 miles of main track yet to be built, clearing and grading, or clearing has been completed on 78 miles of the right of way. The amount expended to Dec. 31, 1918, was $29,876,277, of which $1,157,839 was on the purchase of the old Alaska Northern Ry., and $2,404,564 on rehabilitation of the same; $300,000 was paid for the Tanana Ry., and $46,407 was expended on restoring the 7 miles included in the mileage of the new line. Two termini have been laid out, at Anchorage on the coast, and at Neana on the Tanana River. The line was built from Seward north and from Anchorage south, so that since the autumn of 1918 there has been through traffic from Seward to Anchorage, Matanaska and the Susitna Val- There is an unconstructed section across Broad Pass to connect the Susitria Valley with the road coming down from Nenana, and another stretch of a few miles on the north of the Tanana River before connection is made with the Tanana Valley Ry. outside Fairbanks. (Mar., pg. 134).

Athabasca and Grande Prairie Ry.—The Dominion Parliament is being asked to change the route of this projected railway as set out in an original application for incorporation by the following: From the junction of the Athabasca and Solomon Rivers, northerly to the junction of the Smoky and Muskeg Rivers, thence through the Grande Prairie district northerly to Peace River Landing, and thence to Fort Vermilion. Barnard and [illegible], Montreal, are solicitors for applicants. (Mar., pg. 134).

Bell River Valley.—The Abitibi Chamber of Commerce, meeting at Amos, Que., Mar. 19, gave consideration to the railway construction necessary for the opening up of the district. In addition to the proposed line from the terminus of the C.P.R. branch from Mattawa, to Des Quinze River, and branch, referred to in this department under "Interprovincial and James Bay Ry.", the members suggested the building of branches of the National Transcontinental Ry. from Amos, mileage 887 from Moncton to James Bay on the one side, and to a connection with lines running into Montreal on the other.

The Quebec Legislature has voted a subsidy of 2,000 acres of land a mile in aid of the construction of a colonization railway from the Kiask Falls of the Bell River, southeasterly through the Laas, Hurault, Castaquier or Lamoranduere, Duvernay, Dalquier, and Fiquery Tps. to Amos, and thence through the Villemontel or Lamotte and Pressac or La Passe Tps. to Lake Kawagama, a total distance of between 80 and 100 miles. Such a line would be the beginning of the line advocated by the Abitibi Chamber of Commerce. The North Ry. has a charter for building into this territory from Montreal.

The Brunner, Mond Co., Canada, Ltd., is asking the Ontario Legislature for power to build a private tramway from the Indian stone quarry reserve to the Detroit River, crossing the second concession road of Anderton Tp., and to confirm a bylaw of that township granting permission to cross the road. We are officially advised that the proposed tramway would run between the stone quarries on the 2nd concession of Anderton to the Detroit River, about 0.75 of a mile, but that it will not be built if running permission can be obtained over the Michigan Central Rd. The line would connect with the 5 miles of track on the company's premises, on which standard gauge cars are hauled by steam locomotives. The present equipment consists of the company's own freight cars, while regular railway cars for inbound and outbound freight, are also run over it. G. Kimber is the company's engineer. (Feb., pg. 79.)

Canada and Gulf Terminal Ry.—The Quebec Legislature has voted a land subsidy of 2,000 acres a mile in aid of the extension of this railway from its present terminus at Matane to Gaspe Basin, 190 miles. An extension of line for the building of this line has also been granted by the Quebec Legislature. At present it extends from Mont Joli, on the International Ry., to Matane, 59 miles. The proposed extension is through the center of the Gaspe peninsula. Surveys for the extension have been made but the final location has not been settled. (Feb., pg. 79).

Esquimalt and Nanaimo Ry.—A press report states that plans are being prepared for an extension of the line from Bambridge, mileage 127, on the line to Alberni, northerly to Ucluelet and Clayoquot, and from Bainbridge easterly to Comox Lake.

Grand Trunk Ry.—We are officially advised in connection with a press report from Portland, Me., that the company had started work on a third grain elevator of 3,000,000 tons capacity there, that no such work has been started and that it is not the company's intention to build another elevator there.

The movement for a station at Mount Dennis, between West Toronto and Weston has been revived, and a press report states that the company is looking for a site. It is stated that a site on Roy Ave. was under consideration prior to the war.

The London, Ont., Chamber of Commerce has started a movement for the reconsideration of the plans for a new station and for the elevation of the company's tracks in the city. The matter was fully discussed several years ago, but has been in abeyance for some time. (Mar., pg. 134).

Greater Winnipeg Water District Ry.—The commissioners of this railway decided recently to expend $3,000 on ties for the railway and also decided that notwithstanding the completion of the laying of the pipe line for Winnipeg water supply, the line should be kept in good order. (Mar., pg. 134).

Hamilton, Ont.—The Ontario Legislature was asked at this session of the City of Hamilton for an act authorizing the city council to provide $15,000 for filling in Sherman Inlet between the Toronto, Hamilton and Buffalo Ry. and the G.T.R. ;to build a railway from the T., H. and B. R. in lot 29, con. 4, Saltfleet Tp., northerly to the G.T.Ry's. Northern and Northwestern Division in lot 29, or lot 30, broken front concession of Saltfleet Tp.; to build a railway from near the Red Hill to Burlington Jct., and from near the junction of the last mentioned line with the G.T.R. main line east of Hamilton to Hamilton cemetery, and to build any other lines within a radius of 15 miles from the center of the city; to form a terminal company and construct and operate terminals within the city, and to enter into agreements with railway companies for the use of the same. The city also desires authority to raise money for carrying out these projects, by debentures, to be issued from time to time as required, subject to the ratepayers.

It was stated by the city's representatives at the hearing before the private bills committee, Mar. 17, that the situation had been entirely changed by the passing of the Hydro-Electric Radial Ry. bylaw, Mar. 15. A conference with Sir Adam Beck, it is said, resulted in an agreement being reached under which the power to construct terminals, etc., was withdrawn, and the only piece of railway which the city may build is the Red Hill cut off, which it is stated, will ultimately form part of the Hydro-electric radial line.

Hudson Bay Ry.—Deputations representing various sections of the prairie provinces waited on the Dominion Government recently, to urge the immediate completion of this railway from Pas to Port Nelson, on which there are 92 miles of track to be laid between the second crossing of the Nelson River and Port Nelson. The Manitoba Legislature on Mar. 5 unanimously passed a resolution calling for the completion of the line during this year. An Ottawa press dispatch of Mar. 21, states that the government has decided at once to call for tenders for 250,000 ties for the completion of tracklaying on the grading already done.

Lacombe and Blindman Valley Electric Ry.—The Alberta Legislature has under consideration a bill to amend this act incorporating the Lacombe and Blindman Valley Electric Ry., in such a way as is necessary owing to the Alberta Government having taken it over. The offices are transferred from Lacombe to Edmonton; the name is to be changed to the Lacombe and North Western Ry.; authority is asked to issue $25,000 of bonds a mile, which sum is to include bonds heretofore issued and the government asks power to lend the company money on the security of a mortgage; to acquire the capital stock, and to have the same registered in the name of the Minister of Railways or his nominees; the line to be completed by Dec. 31, 1921. The Alberta Government took over the company's property recently under a mortgage, and has been operating it for some time. (Mar., pg. 134.)

Medicine Hat Central Ry.—The Alberta Legislature has incorporated a company with this title to build a railway from Coutts, on the International Boundary, northeasterly, crossing the C.P.R. Lethbridge-Weyburn line near Foremost, and the C.P.R.'s Crowsnest line at Whitla or Winnifred, thence to Ajax on the South Saskatchewan River, and on to Medicine Hat, and thence northeasterly to the Alberta-Saskatchewan boundary, approximately due east of Hilda post office, Alta., the total length of the line being approximately 200 miles. The company is authorized to acquire and take over from Jos. B. Swan, Medicine Hat, his right and title to an agreement made with the City of Medicine Hat, respecting a spur line of railway, and to issue stock of the company in payment for the same. The company is authorized to enter into agreements with the City of Medicine Hat respecting running rights, the building of spur lines, etc. It may use steam, electricity, or any other motive power for the operation of its lines. The provisional directors are: L. N. Laidlaw, C. S. Blanchard, and H. O. Knowles, Medicine Hat, Alta. (Mar., pg. 135.)

Michigan Central Rd.—A press report states that the company is planning to spend $1,000,000 or more upon improvements in the vicinity of Niagara Falls, Ont., the work to include the raising of the line across the cantilever bridge, and the building of a new station between the present northend station and the Victoria Park station. (Oct., 1918, pg. 488).

Montreal Central Terminal Co.—The Dominion Parliament is being asked to extend the time within which the company may begin and complete its projected railways, bridges, tunnel and terminal.

The question of the construction of a tunnel under the St. Lawrence River at Montreal was discussed by the Chamber of Commerce, Mar. 12. C. N. Armstrong, President the M.C.T. Co., explained the company's plans and argued that a terminal under the river and having its outlet at Longueuil, on the south shore, would greatly facilitate the settlement of local transportation problems. The project was referred to the transportation committee for consideration and report.

Montreal Harbor Railways Electrification.—We are officially advised that if the commissions' present plans are carried out a start will be made with the electrification of the harbor railways, etc., during the summer.

Pacific Great Eastern Ry.—The Minister of Finance in the course of his budget speech in the British Columbia Legislature, Mar. 12, stated that the liability for the company's bonds is $20,160,000 and, in addition, provision has to be made for the continuance of its construction northward. The province is the possessor of a line of railway serving a valuable section of B.C., the development of which is very important. There will need to be a good deal of financing in connection with the line, and the government will have to float a loan to provide for further construction. It is expected that the work of extending the line will afford work for many returned soldiers.

A return presented to the British Columbia Legislature Mar. 14, shows the cost of the line to that date as follows: Railway, $18,001,669; equipment, $1,153,204; lands and townsites, $1,608,222; rails, $1,150,000; cash, buildings and shops, etc., $459,000; sundries, $50,000; Peace River extension, $34,458; total, $22,456,553.

Quebec Central Ry.—The Quebec Legislature has granted 2,000 acres of land a mile for the company's projected branch from Scotts, mileage 110, on the Sherbrooke-Lewis line, to a junction with the National Transcontinental Ry., near St. Jean Chrysostome, 70 miles. We are officially advised that the question of the branch is under consideration, but nothing definite has yet been arranged.

Quebec Rapid Transit Ry.—The Dominion Parliament is being asked to extend the time within which this projected railway may be built. The company was incorporated in 1913, with authorized capital of $1,000,000, and offire at Quebec, and the undertaking was declared to be a work for the general advantage of Canada. The authorized railway extends from Quebec City towards and through Charlesbourg, Jeune Lorette, Ancienne Lorrette, Ste. Foye, Cap Rouge, Sillery, and Montcalmville, and also from Charlesbourg, through Riviere Jeune, Notre Dame des Laurentides, and Lake St. Charles to Jeune Lorette, and around the Island of Orleans, and across the island by the most feasible route. The company is also authorized to build a bridge from the north shore of the St. Lawrence to the Island of Orleans. The company may also operate steamers and other vessels, and may operate its railway by steam, electricity or other motive power. The provisional directors are, E. Taschereau, L. Savard, E. Parent, Quebec; F. X. Latulippe Beaufort, Que.; C. Renaud, Jeune Lorette, Que.; A. Lortie, St. Gregoire, Que. (Aug., 1913, pg. 395.)

St. Francis Valley Ry.—The Quebec Legislature has voted a land grant of 2,000 acres a mile in aid of the building of a line from Stanstead to St. Frances du Lac, 95 miles, and for a line from near St. Bonaventure on the St. Francis River, to Sorel, 25 miles.

The St. F.V. Ry. was originally incorporated by the Quebec Legislature under the title of the L'Avenir and Melbourne Ry., with power to build a line from the International Boundary, near Stanskid, near Magog, Melbourne and Drummondville, to Sorel, with a branch from Cherry Valley to Granby. Surveys were reported to have been made in 1914 for the section of the line from Drummondville to Melbourne, 30 miles. C. B. Hibbert was Vice President. (Apr., 1916, pg. 139).

The Shefford, Bagot and Missisquoi Ry. Co., was incorporated by the Quebec Legislature in 1914, to build a line St. George, on the Intercolonial Boundary between Quebec and Vermont, to a junction with the Intercolonial Ry. between Bagot and St. Eugene. A. R. MacMaster, Montreal; W. H. Robinson, Granby, Que., and J. E. Rennells, Worcester, Mass., were among the provisional directors. An extension of time to Nov., 1922, for the starting of construction, and to Nov., 1927, for the completion of the line, has now been granted by the Quebec Legislature, which has also voted 2,000 acres of land a mile in aid of the construction of the railway from the International boundary between Quebec and Vermont, in the parish of Clarenceville, Missisquoi County, to a junction with the Intercolonial Ry., between Bagot and St. Eugene, 75 miles. (Apr., 1914, pg. 166.)

Timiskaming and Northern Ontario Ry.—We are officially advised that the T. & N.O. Commission expects to employ during the coming construction season about 250 additional men on betterments on the line. This will include, in addition to the ordinary work, the relaying of new 85 lb. rails, of which the Dominion Government has allotted the commission 3,000 tons; the reballasting of 25 miles of track, and, according to a press report, the fencing of 50 miles of line.

In connection with the deputation which waited on the Ontario Government recently urging the extension of the line from Cochrane to James Bay, on Hudson Bay, we are officially advised that the commission's plans for this survey have not been completed. It is impracticable to start surveys at present, as it will be about May 1 before the rivers are open, when canoes can be used. A press report states that this survey will be in charge of A. Cole.

Tenders for the whole work, other than steel bridges, necessary to the complete construction of the roadbed, ready for the ties and rails, also track laying, ballasting and fencing, for a branch from Swastika to Kirkland Lake, 6 miles, and from Timmins to the Mattagami River, 2 miles, will be received at the commission's office, Toronto, up to Apr. 15, at noon. The work on both these lines is comparatively light, and there are no engineering features of any interest. Swastika is at mileage 165 on the main line, and the branch is to be built to promote the development of the Kirkland Lake gold mining area. Timmins is the present terminus of the 35 miles branch from Porquois Jct. The proposed extension will carry it to the navigable waters of the Mattagami River, there, a press report states, wharves and docks will be built. The Mattagami, is the second westerly tributary of the Moose River, the Abitibi being the other. (Mar., 1918, pg. 541.)

Vancouver Union Terminals.—A. P. Gillies, a United States engineer, who has for some years past visited Toronto, and Montreal, advocating the laying out of central terminal stations for steam and electric railways, had an interview with the British Columbia Premier, Mar. 12, with reference to plans for such a terminal in Vancouver. The plan outlined provides for the utilization of the Hastings Mill site and the erection thereon of a large terminal building with hotel, stores and theatre, etc., into which all the railways serving Vancouver would be brought. The plans also provide for wharfage and other facilities for handling steamship traffic. The estimated cost of the work is $[illegible]. Government support of the plan was asked by way of an assurance that the Pacific Great Eastern Ry. would use the terminal when completed. The Premier is reported to have stated the government would look favorably upon the project, if it were shown to be economically feasible, and provided there would be no obligation involving any liability on the government. As the Canadian National, Canadian Pacific, Great Northern and Northern Pacific already have their own and comparatively now terminals in Vancouver, the scheme is hardly likely to become a reality.

Canadian National Railways Construction, Betterments, Etc.

Construction plans for the year.—A large number of deputations from various parts of Western Canada, waited upon D. B. Harris, President, Canadian National Rys., Mar. 5, to urge the building of lines through the territories in which they are variously interested. The ideas of the deputations, as to what lines should be built and where they should pass existing lines, and the reasons why they should be built were given at length. We understand that due consideration was given to the suggestions, and that while, necessarily, some of them cannot be acted on, others will be. Other deputations have urged the construction of new lines, etc., in Eastern Canada.

Prince Edward Island Ry.—Superintendent Grady is reported to have said Mar. 13, that as soon as weather conditions permit the work of laying a third rail on the line will be proceeded with, and that it is hoped to have the work completed by the end of July. The work at Emerald includes the building of a new station, and a platform for the transfer of passengers and baggage, and the reorganization of the yard and trackage.

Intercolonial Ry.—A Moncton, N.B., press report states that plans are being prepared for enlarged freight sheds there.

Surveys are being made on the old Canada Eastern Ry. from McGivney Jct., where the line crosses the National Transcontinnetal Ry., to Fredericton, to which would be required to be done to make that section of the line part of a direct route of the National Transcontinental Ry. to St. John, N.B. From Fredericton the route would be over the St. John and Quebec Ry., which is nearing completion, to a junction with the C.P.R. at Westfield, and thence over that company's line. Tests are being made at Fredericton for foundations for a new bridge across the St. John River.

The Levis, Que., Board of Trade has passed a resolution protesting against a proposal to repair the present station buildings there, and asking that a new building to suit the importance of the place be erected at once to replace the one destroyed by fire several years ago.

Canadian Northern Ry.—In reference to a press report stating that plans were being prepared for a line from Montreal to La Tuque, Que., we are officially advised that the company already has a line between these points, and does not require a second one.

Tenders were received recently for the following works:—

For the construction of 8 abutments and one culvert between Sydenham and Ottawa on the Rideau subdivision, and for the construction of 2 concrete culverts and 2 concrete abutments at mileage 17.1 and 17.5 on the Pembroke subdivision, Ottawa-Port Arthur line.

Tenders will be received to April 3, for the construction of 2 concrete abutments and concrete culverts between Oshawa and Cobourg, on the Trenton Subdivision; and for track filling and concrete work on the Muskoka Subdivision between mileage 130 and 149, Parry Sound; the construction of concrete piers at the Seguin River crossing on the industrial spur, Parry Sound, and train fitting and concrete work on the Sudbury Subdivision between Parry Sound and mileage 30. Also for the construction of 6 abutments and 2 culverts between Gormley and Mount Albert, on the Muskoka Subdivision.

In connection with the prospective line from Toronto to Hamilton and on to the Niagara frontier, A. G. Garden, President Hamilton Board of Trade, sent the following telegram to President D. B. Hanna, Mar. 5: "What prospect is there for the extension of the Canadian National System through Hamilton to the frontier?" Mr. Hanna replied from Ottawa ,on Mar. 7 as follows: "Canadian Northern Ry. acquired right of way to and through Hamilton for the construction of line from Toronto through Hamilton to Niagara frontier, and absolutely requires the whole width of right of way which we own through your city for our purposes. Board of directors of Canadian National Rys. are on record as approving of the early construction of this line, and arrangements are now under way to carry this out."

A deputation representing the Flin Flon Mining Syndicate waited on President Hanna recently to urge the building of a line from the Hudson Bay Ry., north of Pas, Man., to a large mining area about 70 miles out. The Flin Flon property is a copper mine, and it is said that the syndicate was advised that if it would undertake to erect a smelter of adequate capacity and guarantee to keep it in operation for a number of years, the Canadian National Rys. would probably build the line asked for. We are officially advised.

The Canadian Northern Ry. has in operation as branch from Luxton, on its Maryfield-Bengough branch, to Bienfait, and Estevan, Sask., it is proposed to connect this with the northern lines so as to give access to the northern coal fields.

It is probable that some gradings will be done on a line to connect the Thunderhill branch at Sturgis, Sask., with Hudson Bay Jct., that a reconnaissance survey for the line has been made, and that it would be 74 miles long from milage 8 on the Hudson Bay Ry., to the Flin Flon mining area, within a few miles of the Manitoba-Saskatchewan boundary line. The Mandy mining properties are in the same area as the Flin Flon mne.

On the Thunderhill branch now terminating at Preeceville, Sask., grading will be done during the summer northwesterly for 25 or 30 miles.

Grading has been completed on a line from Humboldt, Sask., mileage 1,734, on the Canadian Northern transcontinental line, northerly to St. Brieux, the present terminus of a 21 mile branch southerly from Melfort. Track will be laid on this grading this year.

A survey for a line from Melfort, Sask., northeasterly to the Carrot River district was made several years ago, and it is possible that some grading will be done although this has not been decided.

Rails are to be laid for about 25 miles on a branch which has been graded from Vonda, Sask., northeasterly. This line runs about midway between the Humboldt-St. Brieux-Melfort line, and the present Saskatoon-Prince Albert line. The question of the extension of this line to Melfort on the north, and from Vonda on the south, to Saskatoon, is being looked into.

It is probable that the Canadian Northern prairie territory, track will be laid on some 200 miles already graded and that about 150 miles of new line will be built, making about 350 miles of new branches will be taken from the main line, making a total of about 740 miles of track to be laid altogether.

We are officially advised that the tunnels proposed to be built in the Rosebud Valley, Alta., are situated between mileage 191.9 and 193.8 on the Calgary-Vegreville line and will form part of the revision of location for that distance. The object of the revision is to eliminate 6 crossings of the Rosebud River, the line being carried at present on temporary timber structures. The revision will also eliminate some bad curvature, and will effect a saving of about 0.4 of a mile of track. Outside of the tunnel work, there will be about 125,000 cu. yd. of excavation necessary. The work to be done has no unusual engineering features.

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—The British Columbia Finance Minister in explaining the financial position of the province to the Legislature, Mar. 12, stated that the taking over of the Canadian Northern Ry. by the Dominion Government meant that the government had assumed all responsibilities. The province is still the guarantor for the principal and interest of the Canadian Northern Pacific Ry. bonds for $47,975,000 due 30 years hence, but, of course, as the Dominion Government will not default the province is relieved of anxiety regarding this obligation and something like $1,750,000 annual interest on the principal.

The C.P.R. Co's. annual meeting will be held at Montreal, May 7.

Essex Terminal Ry.—Application is being made to the Dominion Parliament for authority to increase the capital stock from $400,000 to $1,500,000.

North Shore Ry.—In conection with the recently advertised sale of the right of way of this railway, which was built as the Beersville Coal and Ry. Co., extending from McAdam Jct. on the Intercolonial Ry., to the Beersville coal fields, a new Brunswick newspaper says the line was sold recently for $12,000, ostensibly to satisfy the stockholders; that the purchaser immediately disposed of the property to another person for $30,000; and that then the rails were sold off at the present high price of steel. The New Brunswick Government, the paper adds, put at least $16,000 into the line, and is carrying that amount of bonded indebtedness at present.

Sir Sandford Fleming.—Rev. Bruce Taylor, D.D., Principal of Queen's College, Kingston, Ont., read a paper on the life of the late Sir Sandford Fleming, at a recent meeting of the Royal Canadian Institute, Toronto, of which Sir Sandford was one of the founders. The paper referred to Sir Sandford's many years connection with the Intercolonial Ry.; his advocacy of standard time, and of the Pacific cable, and mentioned many instances of his life, which brought out his passion for honor, his loyalty to friends, his tenacity of purpose, his vision and his daring.

Canadian Pacific Railway Officers' and Employes' Conference and Dinner in Montreal.

The third conference and dinner of C.P.R. officers, officials and employes, from all over the system, which were intended to be held annually, but which were interrupted by the war, were held at Montreal Mar. 21 and 22. The meeting on Mar. 21 at the Ritz Carlton Hotel, which was attended by about 300, was presided over by C.E.E. Ussher, Passenger Traffic Manager, who was the chairman at the last previous meeting at Winnipeg. The following papers were read and discussed.

"Relations between company's officers and employes, organized and unorganized," by J. McMillan, Manager, C.P.R. Co's. Telegraphs.

"Employes' Magazine", a short talk, by J. M. Gibbon, General Publicity Agent.

"The company's popularity an asset in securing traffic", by F. W. Peters, General Superintendent, British Columbia District.

"Claims", by G C. Jackson, Auditor of Claims.

"Personal Injury", by F. R. Haney, Claims Adjuster, Eastern Lines.

"Fire Prevention", by E. Moore, Insurance Commissioner

On Mar 22, a large number of those in attendance at the previous day's meeting, left Windsor St. station, Montreal, at 10.05 a.m., by special train, and spent the balance of the morning inspecting the Montreal terminals. In the evening, there was a dinner at the Ritz Carlton, attended by over 500, which is dealt with fully further on in this article.

On Mar. 23, a large number of the officials, etc., left Windsor St. station, Montreal, at 1 p.m., for Quebec, arriving there at 6.30 p.m., and dining at the Chateau Frontenac. On Mar. 24, after visiting Ste. Anne de Beaupre, and points of interest in Quebec, they left at 1.30 by special train, making a detour to the Quebec bridge. They dined on the train and arrived back in Montreal at 9 p.m.

The Dinner and Speeches.

The dinner in the Ritz Carlton ball room, on the evening of Mar. 22, was a magnificent function, attended by over 500. Just prior to it, President Beatty, accompanied by several members of the committee, received the officers and others attending in an ante-room. When the chairman of the evening, F. L. Wanklyn, General Executive Assistant, entered the ballroom, accompanied by Lord Shaughnessy, President Beatty, and other chief officers, there was a most enthusiastic demonstration of welcome. Mr. Wanklyn had Lord Shaughnessy seated on his right, and President Beatty on his left, the others at the head table being Grant Hall, Vice President of the company; W. R. MacInnes, Vice President, Traffic; D. C. Coleman, Vice President, Western Lines; E. Alexander, Secretary; J. Leslie, Comptroller; W. N. Tilley, K.C., Consulting Counsel; A. Price, General Manager, Eastern Lines; F. W. Peters, General Superintendent, British Columbia District; G. H. Ham, headquarters staff; Dr. H. A. Beatty, Chief Medical Officer; T. E. McDonnell, Vice President, Dominion Express Co.; J. J. Warren, President and General Manager, Kettle River Valley Ry.; J. H. Walsh, General Manager, Quebec Central Ry.; and F. E. Meredith, K.C., director, C. P. Ocean Services Ltd.

F. L. Wanklyn's Speech.

The chairman, in proposing the toast of "The Company," said: "I feel it immeasurably beyond my powers to do even scant justice to such an important subject. I will not attempt to 'paint the lily,' nor 'to guild refined gold.' It it not possible for me to begin to materially enlighten such a critical audience as I have before me, regarding anything that you do not already know about the great corporation that we have the honor to serve. The Canadian Pacific Railway Co. is, indeed, a wonderful organization. In a comparatively short time it has earned for itself a world wide reputation for energy and efficiency, and success. It has accomplished things that were at one time considered practically impossible. It has succeeded beyond the wildest dreams of the illustrious and far sighted men who conceived and built the railway from ocean to ocean, across our great Dominion, through vast and almost uninhabited territories, hitherto but little known, bridging mighty rivers, gridironing boundless prairies, tunnelling lofty mountains, winding through virgin forests, overcoming physical and climatic difficulties of all kinds and under all conditions. The actual work of construction was not, by any means, the only difficulty to be overcome, but, when constructed and in operation, traffic had to be created, vacant lands had to be peopled, industries had to be established, a thousand things essential to the success of this gigantic undertaking had to be devised and executed on a sound commercial basis. A nation had to be built, and it was, and the Canada of today—the brightest jewel in the British crown—is largely due to the construction of the C.P.R.

"We are indeed fortunate to have with us tonight the Chairman of our company, Lord Shaughnessy, the great executive chief who has done so much to make the company what it is today. For 20 years he has been at the helm, and has piloted our good ship through many tempests and difficult passages, always safely and wisely, into the smooth waters of success and efficiency, and even now, after handing over his charge to another capable steersman, we rejoice to find that he is with us, with an eye on chart and compass, ready and willing, with advice and experience, to assist in overcoming any difficulties that the turbulent future may have in store.

"The wonderful story of the Canadian Pacific related by our much esteemed ex President, Lord Shaughnessy, in his address to the shareholders, reads like a fairy tale. Begun and carried to a most successful issue within the lifetime of some of the original projectors, a remarkable group, shrewd men of indomitable courage and persistent perseverance, who can truly be called "empire builders", their names are forever link-

Lord Shaughnessy, Chairman of the Board, C.P.R.; and E. W. Beatty, K.C., President, C.P.R., about to board a train.

ed with the unparalleled progress and prosperity of the Dominion. The company has ever been fortunate in the selection of its executive chiefs. Mount Stephen, Van Horne, Shaughnessy, Beatty, men possessing incomparable talents, untiring energy, and devotion to the company's interest and welfare. They are the galaxy of great men who carried on. They worked out its problems and achieved the wonderful results. They builded better than they knew. To serve such chiefs is a distinct honor, and the wonderful result is the echo from those under them, to whom various details and complexities of the organization are entrusted. As it was in the past, so it is today, and ever will be, as long as we have the good fortune to look up to men like E. W. Beatty, our first Canadian born president. That square jaw and look of determination inspire universal confidence, and with such a leader we need not fear the future. We are justly proud of him. Let us hope and pray that for many years to come he will be spared to preside over the destinies of our great company.

"The C.P.R. is a cardinal factor in the life of our empire, linking up, as it does, the motherland with the dominions across the seas and beyond, bringing closely together the eastern and western hemispheres. Just think for a moment what this meant during the late war, as an imperial lesson to all observers, the carrying of nearly 100,000 Mongolian laborers from far off Manchuria to work in old France, swiftly, silently, safely, thereby releasing much needed fighting men whose places in non combatant positions they were able to fill. Remember also what the C.P.R. men have done. In the dark and anxious days, when the very existence of our great empire was in peril, and the outcome of the fierce and bloody struggle was a matter of conjecture, C.P.R. employes gallantly did their bit; they volunteered in thousands, in answer to the call, leaving comfortable homes and all that was nearest and dearest, prepared and ready to make the supreme sacrifice for King and country. Ten thousand went to the front; 867 never will return; many have already returned, 1,870 maimed and broken: but all proudly conscious of having played their part like men, able to rejoice in the fact that they helped to bring about the glorious victory which crowned their efforts. All honor to our returned heroes; we thank them for what they did, as C.P.R. men, for freedom's cause. Is there anything calculated to impress the other nations of the world more vividly, as to the power of that empire and the extent of its resources than this; all made possible and efficiently carried out by the great C.P.R. Co. Not only Canada, but the British Empire, owes an everlasting debt of gratitude to the bold and daring men who had the vision and the genius to provide British North America with a peerless transportation system, which reached out across both oceans, and which, in the dark hour of the sore trial, did so much to save the empire and the civilization of the world.

"The saying is that nothing succeeds like success. Nothing is more satisfying to the individual than to work for and to be associated with a successful concern. It is a progressive, cumulative quality; it can only be sustained by continued effort; slacking off and slowing down court failure; it is the product of properly co-ordinated individual effort of the highest quality. It is aptly illustrated in the deep and mysterious natural phenomenon of crystalization, in which the molecules assume a regular arrangement conducive to the best results. The brilliant strategist and brave soldier, essential to each other, can only attain sucess by properly co-ordinated effort.

"C.P.R. ideals have been established and recognized the world over, they must be maintained, and it is up to you and to me to "Carry On"! Gentlemen, loyalty must ever be our watchword; loyalty to the great institution we have the honor to serve; loyalty to our President, by carrying out the duties entrusted to us, cheerfully and to the best of our ability; loyalty to the country we all love so well. Imbued with this all inspiring spirit, the future will be as grand as the past and all is well. I ask you, therefore, gentlemen, friends and colleagues, to drink to the continued prosperity of the company, and to the health of our well beloved Chairman, Lord Shaughnessy, and our President, E. W. Beatty, pledging to both our unswerving loyalty and our affectionate devotion."

Lord Shaughnessy's Speech.

"I appreciate very much, the piece of music that has just been so beautifully rendered. Killarney was the birthplace of my mother, and I hold her memory in dearest recollection, and it was appropriate, therefore, that I should have called three successive cars Killarney, in which I spent so many hours, weeks and months travelling over the system, and devoting myself to that great corporation to which we are connected, a corporation that holds for me, and I am sure for you, the very foremost place in our affections.

"I entered railway service nearly 50 years ago, just after leaving school. During that 50 years I have been associated with two companies, one for 14 years, and with the C.P.R. for 36 years. I would not have time to tell you of the many interesting events connected with my association with the C.P.R., its officers, its directors and its affairs, but I can say most truthfully that one could not lead a more interesting life, though it was not always smooth sailing. Frequently there were difficulties, and difficulties of a serious character, to surmount, but in the main our success during the past 20 and 25 years, was without interruption, and when the time came when the future welfare of the company demanded a younger and more active man should be charged with the duties of chief executive, it was a most fortunate circumstance that the directors had in hand a man of such paramount ability, and such unquestioned integrity and such great vision as possessed by our new President, my successor, Mr. Beatty.

"He takes the property over in a splendid condition, physically and financially. He takes it over with something that may be of even greater value than either of these, with what I conceive to be the best organization in the world, an organization founded upon discipline without fear; discipline that had for its substance and was based upon fair dealing and justice; discipline that had as one of its main ingredients the loyalty of the men who were under discipline; discipline that knew and declared to the men that every man was safe in his position if he were safe himself. That was the foundation of the splendid organization of which you here, are the outstanding representatives, and Mr. Beatty may feel gratified that in starting upon his career as President of this great corporation he is to have the assistance, the loyal and unquestioned and energetic assistance, of such men as I see around me. It is very gratifying after all these years to see so many here who started in small posts and who have obtained positions of marked prominence. I see here, W. R. McInnes, E. Alexander, J. Leslie, A. Price, Geo. Ham and others who I recollect as young boys, and who are now, I was going to say, grey-haired men, but I will say who have grey hair, probably due to the earnestness with which they performed their duties, but which earnestness in the end brought them to the posts they now occupy in the company's affairs. I do not wish to take too much of your time tonight, because I know that there are others to follow, but there are some few things I would like to refer to.

"We are now entering upon rather a new era in industrial affairs. Those of you who have to do with labor matters, face problems of a character somewhat different to any you have faced heretofore. I think I can say for the C.P.R. that during my period of office the relations between the labor employed by the company and the officers were of a most harmonious character. We had little of the difficulties that others had to contend with. I hope that those conditions will continue in the future, but in dealing with labor questions and in dealing with other subjects, we must be to the forefront and in the front rank, and must not be behind or lag to the rear. I have just returned from England. There the situation of labor is a cause of anxiety. Nominally the problem between labor and employers is a question of hours and rates of pay. To my mind, and it will be so here, there is something beyond that now. It is not only a question of hours and rates of pay, but of the actual status of men who are performing such a large portion of work of building up industries, and making themselves as strong an influence as the capitalists and employers. It is a question of what their social status is to be in the future. We may take it for granted beyond question that the working man of the future, the working man of today, must be permitted and enabled and assisted, he and his wife and children, to lead quite a different existence to that of the past. They must not be confined to the narrow, sordid lives that have been theirs hitherto. They must have the opportunity to enjoy the good things of life that those in higher positions have enjoyed. I am sure that every officer of the C.P.R. who has to do with social and industrial questions of this kind will, as I suggested before, be in the front rank in meeting the situation and in dealing with it judiciously and thoughtfully.

"Now, my good friends, one word more. By reason of your positions, and I am speaking more particularly to those who are located in our own country, by reason of your positions you have great opportunity of promoting a national sentiment in Canada that will be productive of the greatest possible benefit to the country. In your own localities, by reason of your posts, you have a broad acquaintanceship. You can conduct a propaganda of national idealism, of national thought, that will be a safeguard to the welfare of our beloved country. I do not mean by aggressive interference in political campaigns. That is to be avoided, but by intelligence of thought in utilizing the superior information that you have, because of your connection with the bigger and broader questions of the country, by utilizing that information, by impression upon your neighborhood, by having a campaign of good feeling between the east and the west, and north and south, between every race and every class of citizen who constitute our citizenship in this country. I have no doubt that you will do that, and will be willing to do it.

"Now, I have become a bit of a supernumerary. We worked along together for a good many years. I cannot tell you, I would not attempt to tell you, how highly I appreciate the devotion and the loyalty that I have met with throughout all the years of my administration, nor would I attempt to thank you, nor tell you how large a part that loyalty and devotion played in the success that attended my efforts. I feel sure that I bespeak for my successor, Mr. Beatty, that same spirit and co-operation. Great as is our corporation, vast as are our interests, varied as its activities, I have in my mind's eye a C.P.R. infinitely more great, more successful, and more progressive than at any time, and with the wisdom and tact and ability of your President, combined with the loyal and devoted efforts of yourselves, that end can be attained. I will not take time to say more tonight. I am afraid that I have kept you too long as it is. I can only express my great gratitude that I have had the opportunity to be here. I know of no gathering that is as homelike as a C.P.R. gathering, and there is no other atmosphere that so inspires and exhilarates as a C.P.R. atmosphere. I hope and earnestly trust that while for a time there may be difficulties resulting from, and brought about by the war, the forward movement of the company will continue without interruption, and I will close, my dear friends, by assuring you that you have the thanks and blessing of your old chief."

President Beatty's Speech.

E. W. Beatty, K.C., said: "I trust that you will permit me to put my own interpretation on the generosity and warmth of your greeting, and to assume, as I am perhaps warranted in assuming, that you are expressing, through me, your appreciation of the company. In fact, if it were not for the innate modesty which characterizes all officers of the company, I would say that you are taking advantage of the occasion to indulge in a little audible appreciation of yourselves. This, I think, is the third dinner held by the officers and employes of the company, the last one being held in Dec., 1912. By reason of the outbreak of hostilities in 1914, these gatherings, which were intended to be annual, have not been resumed since. This was inevitable, but I sincerely trust that nothing in the future will prevent a function which has in it so much of pleasure to the participants, and, in a different degree, perhaps some profit. It was my privilege in 1912 to attend the second annual banquet, in my capacity, at that time, of General Solicitor of the company, and it is only fitting that I should recall to those of you who were present then, the fact that several of the most honored and respected officers of the company who were there, are not here now. They have passed out of the service, and, in many cases, out of this life, but they have left a place in our recollections and our affections which cannot be effaced. We cannot pay too much respect to those men—and some of them are here tonight—who have given the best of their life's service in the company's intrests, who have reached the age of retirement, and who are now spending the declining years of their lives in comparative freedom from business affairs, but whose affections for, and interest in, the company and everything pertaining to it, still exist. They are worthy of the appreciation which all of you more active are, I know, so willing to accord them.

"The last six years have made somewhat violent changes in the personnel of the company's organization, and I was struck particularly, when considering the proceedings at that dinner—and especially the remarks made by the President, then Sir Thos. Shaughnessy, with the effect of the company's traditions upon those engaged in directing its enterprise. It is well enough for us to give our time and thought to the problems of today and the possibilities of tomorrow, but it would never be wise in our case to disregard the lessons of the past, or the standards of efficiency and integrity set us by the distinguished men who have heretofore headed this company's activities. It has always struck me as a fact of peculiar significance that each stage of the company's development from 1881 to 1918, when Lord Shaughnessy retired from the Presidency, was marked by the incumbency in the office of the President of a man who, by nature, disposition and talents, was peculiarly fitted to direct the administration of the company's affairs during the particular period of his tenure of office. You may say that that was our good fortune, and it certainly was, but it was not an accident that Lord Mount Stephen, Sir Wm. Van Horne and Lord Shaughnessy presided over the destinies of this company at those particular periods. It was, in fact, one of those results which come from the development of men in responsible positions over a period of years, which enable them, when the testing time comes, to fill the gap necessary to be filled if the company is to progress and prosper. It is, perhaps, not fitting that I should indulge in encomiums on the work of these men, who, in different ways, and for different reasons, appealed so strongly to the imagination and the confidence of the Canadian people, and the results of whose work is shown in the outstanding position which the company holds in the many and widespread phases of its activity. Their work meant much to Canada, to the Canadian Pacific Railway and to its shareholders, and that result is easily appreciated and will be given its due measure of recognition in the history of this country. There is another gentleman whose quiet and retiring disposition is apt to make us forget that he is, with one exception, the sole member living of the original syndicate which was incorporated as the C.P.R. Co. I refer to R. B. Angus who, from the beginning, has been the guide, counsellor and friend of each of the company's successive executive, and has never, in the past 38 years, failed to serve and guide the company's interests in a way that has earned the admiration and appreciation of his associates on the board and the company's shareholders. To us, however, who succeed in later years to the positions occupied by them and others, their personal qualities must be a continual and, I hope, effective inspiration. All of them were men of unswerving integrity, loyalty and true vision, which inspired the confidence of the people without, and a spirit of loyalty in the employes within. If it were seemly to do so in his presence, I would cheerfully devote much time to a personal tribute to the qualities of heart and mind which have made Lord Shaughnessy such a distinguished and unique personality in Canada, and have made his period of office, for the past 19 years, one of uninterrupted prosperity. From him I have learned much, and from the high quality of his ideals I have received a practical inspiration, which I know is shared by you all, to do what is best, but always creditably, in the company's interests. Lord Shaughnessey's devotion to the company, and to its interests, the affection in which he is held by the officers, and, in the last analysis, his judicial attitude, in spite of the handicap of racial temperament, have been to me the three outstanding phases of his character and career. If you add to this, a rigorous sense of discipline, and an unswerving integrity, and unimpeachable official and private life, you will have some appreciation of why it is that this extraordinary measure of respect and confidence is accorded him by the people of this country.

"As I have said, the last dinner of the officers, etc., was held in Dec., 1912. At that time Lord Shaughnessy gave to you some interesting figures indicative of the company's progress in the previous 10 years and, in order that you may have some conception of the steady progress which was maintained since that time, I am impelled to give you a few further figures just made public in our annual report: In 1912 the company had 1,820 locomotives; in 1918 it had 2,225. In 1912 it had 1,841 passenger cars; in 1918 it had 2,179. In 1912 it had 369 sleeping and dining cars, and in 1918 it had 480. The transportation development is probably most vividly evidenced by the increase in the number of freight cars, the company, in 1912, owned 61,144, and in 1918, owned 89,513. In 1912 the company's gross earnings from transportation were, $123,000,000, and in 1918, $157,000,000. The pay roll has now reached the enormous sum of $7,500,000 a month. Unfortunately, owing to the increased cost of operating, the ratio of net earnings has not been maintained, but as this is a condition due to exceptional causes, and is common to all railway and industrial enterprises in recent years, it is not one which indicates any lack of advancement. The variety of the company's interests is just as numerous as outlined to you on previous occasions and the extent of its activity in all of them has shown the same progression as in its purely transportation enterprises. In the strenuousness of the times in which you live, and the exacting nature of the services which you are called upon to render, it is conceivable that time for a study of the company's history and of the character of the work, in transportation and other ways, which it has done and is doing, may not be accorded to you. I would commend to each of you an earnest and careful consideration of the speech of the then President, delivered at the last annual meeting of shareholders. It is a concise and illuminating historical exposition of the development of the C.P.R. I do not wish you to live in the past, but an adequate appreciation of the development of the company, since its inception, is necessary to a proper realization of the character and importance of the work, individually and collectively, you are all attempting to do now.

"The problems of today, transportationally speaking, are not at all akin to the problems of the past, and the problems of the future have still more of the unknown in them than the problems of today. The C.P.R. is what is termed a public service corporation, which means that, in its primal functions, it makes its way by serving the public. While it has always been a public service corporation, the view of what constitutes effective public service, has, in later years, been modified and enlarged. It is said that the public is an exacting and jealous mistress. It is also true that the public is a generous friend, and the attitude of the public toward a corporation is necessarily and properly influenced by the attitude of that corporation and its officers toward the public. Nothing is so readily recognized and appreciated as willingness to serve, and efficiency in service. In these times, when the people's minds are directed to possible changes in the theory of administration of transportation companies, it is more important than ever that the officers and men of this company should appreciate to the full the character of their obligations to the public. I am not unmindful of the fact that unreasonable demands are periodically made of railway companies, but I cannot avoid the conclusion that upon the extent to which the people of this country believe in the C.P.R., as an institution which is honestly and efficiently managed, and upon the extent to which they believe in the integrity and fair dealing of the company's officers, will, in a large measure, depend their attitude toward the company, in connection with projects for government ownership, nationalization, or whatever other term the excursions of governments into private enterprises are designated by.

"The C.P.R. is not in business for its health, but health is very necessary to it, and that health depends upon the prosperity and goodwill of the Canadian people. Canada's prosperity is our prosperity and what is good for Canada is good for the C.P.R. Canada's interests are our interests. Many of you have grown up in the company's service. You have been faced with competition from other companies performing public service. You know the extent of that competition, and the healthy conditions which evolve from it. It is said that self interest is the guiding influence in men's lives, and that is true, and nothing spurs men to effort toward greater efficiency more than the healthy competition of a rival engaged in the same business. The competition which you have to meet at present is in a measure different from this. It has all the elements of the natural struggle for business which pertains to all industries, but it has this aspect of abnormality, in that the principal competing forces, being the government, possesses in itself powers which make the competition unequal. In many cases the government is in the position of judge and jury; of the man who is umpire, who owns the ball field and has an interest in one of the teams. Improperly used, such competition is unfair. I do not say necessarily so, but the strong and human tendency is to exercise strength where one knows he possesses strength and to exercise power where that power is accorded. I have great confidence in the sense of fair play which prevails in this country. I believe a judge, known to be unfair, would, without hesitation, be removed, and I believe that no country which has invited the investor of foreign countries to stake his money on the future of Canadian enterprises would permit those enterprises to be jeopardized in the slightest degree by the acts even of the government itself. I am only mentioning these facts lest someone might assume that we did not know the difference between these forms of competition, and so that you may be even more assiduous, conscientious and loyal to the interests you represent, and keenly alive to the obligations you owe the public, by whom in the last analysis we shall all be judged.

"No one could be prouder than I am of the company's position and prestige in Canada, and throughout the empire, and my pride is tinctured with humility, in that I appreciate my own share in its extraordiary development has been small. I have, however, acquired from my predecessors, and especially from my immediate predecessor, an appreciation of those standards and ideals which have made this company a somewhat different corporation, and one to whose activities one may swear fealty, only less in degree to that which you naturally give to your country. Its fortunes and development have heretofore been linked up so intimately with those of the country itself that the C.P.R. can rightly be termed a national enterprise, and its development a national development. It was purely Canadian in its conception, largely Canadian in its development, and if its activities have been so extensive as to be imperial in character, it has redounded not only to the benefit of the corporation itself, but to Canada and its people also.

"In closing, I wish to say a word to you in appreciation of the loyalty which has always characterized the company's officers and men. For years, as you know, I was a member of the Law Department, and therefore in the position of the man in the grand stand watching the game; and often the man in the grand stand sees more of a game than the players. If there is one thing more than another that during these years convinced me that the C.P.R. must progress and prosper, it was the fact of the strong spirit of loyalty which permeated every department and was shown by every man in it. It is perhaps true that loyalty to a corporation is, in some form or other, bound up in the human equation, and has some relation to a man's respect and loyalty to his immediate superior, but loyalty cannot exist from the bottom up unless it prevails from the top down. The loyalty which every officer owes to those above him ijs exactly measured by the loyalty which they owe to him. Superior officers are expected to give consideration and support to the efforts of those whom they direct, and those who are taking direction are required to carry out the wishes of their superiors, and the duties of their offices, with that complete and absolute loyalty which their treatment by those superiors has warranted.

"They used to tell every American boy:—'Some day you may be President of the United States', and that was said only as indicating the equality of opportunity which existed in that country. Some few years ago I was returning from Quebec, with two friends in whose composition a sense of humor had taken the place of respect, and, when we reached Three Rivers, they disappeared from the car, and, on their return, presented me, with due ceremony, with a picture postcard, on which was printed, 'No mother ever said to her son, 'some day you will be Vice President.' I am not repeating this for the purpose of discouraging those of you who are vice presidents in embryo, but as an appropriate example of the general feeling that the highest position is open and is the one which should be aimed at. So far as fairness of opportunity goes, the C.P.R. offers opportunity for every boy; a fair field, no favorites, and no handicaps on natural endowment. The company is looking, day by day, for boys and men who are disciplined, reliable and brainy, and in no corporation in Canada are there so many first, second and other prizes offered for the capable and efficient man. I hope you will remember this and advise your wives and heirs accordingly. The value of the individual to a corporation cannot be over estimated if he appreciates what he can do with his own personality. None of us, I presume, has a full conception of the influence of the personal equation in human affairs. It, however, influences every situation and every individual action. If you capitalize your personal qualities for the benefit of the road, it is that much more potent factor in its success. I commend to you a personal and studious interest in the affairs of this country, with which your own fortunes are inextricably bound up. I commend to you an increasing interest in the affairs of your local communities, both for your own sake and for ours, and I particularly commend to you an intimate knowledge of the company and its affairs, a desire to give, and to accept unhesitatingly, suggestions for the benefit of the service, no matter from what quarter received, a jealous regard for your own standing in the community and the first and prime duty of efficient service to those with whom the company has dealings."

The Vice Presidents' Speeches.

Grant Hall, Vice President of the company, said: "After hearing Lord Shaughnessy, and the President and the chairman, it seems that we have nothing to do, but I would like to express, at least, my pleasure in seeing so many old friends here, and so many others who are here from all parts of the system. The idea of this dinner originated with Mr. Beatty, and I may say that from the close association that I had with him that I do not think there has been any mistake in having put the mantle where it has fallen. Lord Shaughnessy has made some very pertinent suggestions, and some very important statements in connection with what I may call the personal element. One has only to think of what has transpired in Russia where, if I understand the matter aright, the Bolsheviki have attempted to eradicate the personal element, and have just about destroyed that country. We on the C.P.R. have been fortunate, we officers, in having had as President for a great many years a man of extremely broad vision, courage, with abundant faith in this country, who gave us an equipment and roadbed and terminals not to take care of business, as it existed at that time, but to take care of a business that we may be fortunate enough to get, and he had the vision to believe we would get. I think it is for us to say to Lord Shaughnessy that we will take care of the property, and tell him that it will be kept in as good a condition as when he turned it over to our President, Mr. Beatty. Unfortunately on a railway it often happens or has happened, but never on the C.P.R., that we have socalled departments, that jealously guard and take care of what they call their rights. Let me ask every officer here to co-operate. Let me ask every officer to give the Vice President who succeeds me in the west, and the one in the east, that support that was given me when I was in the west. We will have problems facing us from now on that are most serious. We had the war. Now that the war is over, the settlement problems are as serious in a way as were the war problems. Meet it together, cooperate and consult and show that you are all of one accord.

"Lord Shaughnessy, it was with a great deal of pleasure that we all heard that you would be present this evening. It was with some regrets that the announcement was received last autumn that in order to obtain a rest from your arduous labors you had decided to retire from the presidency of the company, but it was with feelings of satisfaction that it was learned that you were to remain as chairman of the board. Let me assure you, sir, that you have the respect and affection of the employes from the highest to the lowest to a marked degree. I would ask you, sir, to take this small token of our respect to Lady Shaughnessy, and we wish Lady Shaughnessy, your family and yourself many years of happiness." Mr. Hall then handed Lord Shaughnessy a magnificent sheaf of roses.

W. R. MacInnes, Vice President, Traffic, said: "I would like, first of all, to thank our leading counsel for his pleasant words about vice presidents, I imagine that in speaking about traffic some of you may expect that I will tell you how tariff sheets are constructed, and how revenues are collected. I must disappoint you, and I think it will be more interesting and give a more human touch to treat of comparisons between the traffic managers of olden days, and those of modern times."

Mr. MacInnes told some amusing stories of the old days when traffic managers worked on systems all of their own, of "gentlemen's agreements," which was a misnomer as far as the word "gentlemen" was concerned, for no traffic manager was expected to keep his word. He told of a brother official who then was in St. Louis. A miller wanted to make him a present of a barrel of flour, and the traffic man said: "All right, send it up to my house."

"Oh, no, that would cost more than to ship it to Liverpool," said the miller. Then had followed the days of Teddy Roosevelt and the coming into action of the inter-state commission and the prosecution and persecution of the railways. He urged the importance of looking after local business, not only for selfish reasons, but because it was well to have a well satisfied local community.

D. C. Coleman, Vice President, Western Lines, said in part: "I wish to add my thanks to those of Vice Presidents Hall and MacInnes for the gracious acceptance of this toast. I regard it as a great honor to be invited to the general conference and dinner with a delegation of the officers representing the interests of the company on the outer marches of the great west. In the west we serve what some people are inclined to regard as a difficult constituency. It is true that the western people are outspoken and free in criticism. If you fail to meet their views as to services they sometimes voice their feelings with a pungency and a directness which is a little disconcerting but, on the other hand, they are generous almost to the point of extravagance, in appreciation for good services, and no people could possibly respond more warmly or more heartily to courteous treatment and reasonable argument. When confidence is once given, it not lightly taken away. These people have a very high opinion of the C.P.R. They have great esteem and regard for the officers who control its policy, and I think that we can also say that they also have confidence in the officers who are in charge of carrying out the policy into practice. If we continue to make timely aid for the railway provisions of that country, and if the officers out there maintain our present standing of keenness and efficiency, no competitor can successfully assail our relative position west of the Great Lakes. The President can feel confident that his policy will be carried forward into actual practice to the full extent of our powers, because not only is it our duty to him and the company to give him that service, but the policy that he has proclaimed makes a convincing appeal to our reason and imagination."

W. D. Tilley, K.C., of Toronto, the company's Consulting Counsel, proposed the health of the vice presidents and expressed regret at the absence of I. G. Ogden, Vice President, Finance, and A. D. MacTier, Vice President, Eastern Lines.

F. W. Peters, General Superintendent British Columbia Division, proposed the toast of the Canadian Pacific Ocean Services Ltd., which in the absence of the Chairman, G. M. Bosworth, was responded to by one of the other directors, F. E. Meredith, K.C.

Geo. H. Ham, of the headquarters' staff, in a characteristically witty speech, proposed "Our allied interests," which was responded to by J. J. Warren, President of the Kettle Valley Ry.

A capital programme of vocal and instrumental music, with many original features, was interspersed between the speeches, and a short time was devoted to the showing, on a screen, of a splendid collection of photographs of general officers, and chief operating officials, and of views along the C.P.R. from Nova Scotia to British Columbia.

Rhymes of The Rear End Man.

The following verses, which are attributed to Arthur S. Piers, Manager Real Estate Department, C.P.R., accompanied the souvenir menus distributed at the officers' and employes' dinner in Montreal, Mar. 22.

Said the **Woodman**, to the **Coleman**,
As they drove to **Morse**, and back,
" Wonder why the **Pyne Burns**,
"With a **Curle** of Smoke so **Black**."

Said the birdman in his **Curtis**,
As he chased the peaceful dove,
"I wonder if the trumpet **Blair**,
"In **Paradis** above."

Said the **Tinker**, to the **Taylor**,
As they chanced to meet one **Dey**,
"For a suit I'm going to **Spencer**,
"A **Price** that I can pay."

Said Lee, to General **Jackson**,
As they fought on **Bosworth** field,
"If you'll leave the terms to **Balfour**
"At Fort **McKenzie**, I will yield."

Said **Howard**, meeting **Oswald**,
With his **Hatton**, in the **Hall**,
"I think I **Seymour** of **Reynolds**,
"In that painting on the **Wall**?"

Said the **Cook**, at **Conway** Castle
Putting a **Gascoigne** in the stove,
"A **Crabbe** and **Ham**, I'll **Freiser**."
Was he not a curious cove?

"This **Fairbairn** I will **Foster**,
"If a **Goodchild** he will be,"
Said **Kirkpatrick**, to **McPherson**,
And a **Goodman** brave, was he.

If Harry **Lauder** lost his **Hart**,
To Pretty Alice **Lloyd**,
Do you think that Gertie **Millar**
Would be very much annoyed?

A **Sturdee Savage** had a wish
To occupy the Throne,
But **Reeder**—do not be alarmed
He's in jail now at **Malone**.

Humphrey and **Hodge** went to **Hamilton**,
To see **Jack Johnson** fight
Such a **Motley** crowd had gathered
They had to **Camp** out for the night.

Annable rode on the **Atcheson**,
Many **Miles** of the **Main** line, to see
As the train was so late, a **Cherry**, he ate,
"With no diner it's awkward" said he

Purvis was trying to catch **Pickrell**,
On the banks of the **Fraser**, I'm told
Though he tried to keep warm on a **Collins**,
What he caught was a terrible cold

Brown bought a ticket to **Leslie**,
And **Snell** bought one to **Grant**.
But WHY should they go to Ontario?
Can you answer the question? I can't.

Wilson asked Admiral **Perry**,
How to **Moore** his ships to the **Piers**.
"With the **Rudder**, and room for **Shearing**,
"We've done it," said David, "for years."

Two pitchers were having an argument,
Alexander and **Bender**, by name.
Had **Fulton**, or **Benjamin** Franklin,
Any **Wright** in the **Temple** of fame?

If **Nelson**, or Admiral **Hawkins**
Had blocked the Zeebrugge **Moule**,
Would it not have solved the **Riddell**,
For **Bernier** to have reached the Pole?

With Laura **Secord** Sis **Hopkins**,
Was feeling as sore as a **Boyle**,
For the names that Laura **Calder**,
Were not according to Hoyle.

When **Jeffries** was fighting **Corbett**,
And **Britt** sat with Bombardier **Wells**,
Sullivan said to the **Ussher**,
"They think they're a couple of swells."

Grand Trunk Pacific Telegraph Officers Convention.—The third annual conference of Grand Trunk Pacific Telegraph Co. officials was held at the Macdonald Hotel, Edmonton, Alta., recently, H. Hulatt, Manager of Telegraphs, G.T.R. and G.T.P.R., Montreal, presiding. Important matters tending to increase the efficiency of the service were discussed. Among those present were, Superintendents W. J. Rooney, Western Division; W. E. Bell, Central Division; electrical engineers, S. Robertson, F. H Hiscock; general foremen, G. Nicolson, D. S. Adamson, G. Spratt, A. Dougall, chief operators, J. A. C. Kelman, C. A. Radford, J. Stevens; city managers, J. E. Grace, Winnipeg, G. A Jackson, Regina, A. Vegel, Saskatoon, G. B. Breen, Calgary, J. O. Pilon, Edmonton, J. E. Lalonde, Prince George. Mr Hulatt entertained all those attending the conference at dinner the first evening, Superintendent N. E. Walton, Dawson Freight Agent L. V. Bruce, and City Passenger and Ticket Agent J. F. Philp also being present.

The Northern Construction Co. Ltd., has been granted supplementary letters patent under the Dominion Companies Act, converting it from a public company into a private company.

Canadian Transportation Men, Engineers, Etc. in the War.

A Canadian on his way back to his billet, on the British Western Front, crossing a badly shelled area.
Canadian Official Photograph. Copyright reserved.

Canadian Railway and Marine World is desirous of publishing all the information possible about the war work of Canadian transportation men, engineers, etc., and invites its readers to send in information for use in this connection. No doubt a large number of our readers receive many letters from the front, etc., extracts from which would prove of interest in these columns. We should be glad to be favored in this respect.

Army Transportation Intelligence.—The sale of army mules at Tattersall's recalls an incident which sent a ripple of sheer joy through our forces in France when the war was still young. It was a routine order from G.H.Q. as to the transport of machine guns, then being greatly increased in numbers. The gun on ammunition limber was to be drawn by "a mule, or if not available, by an intelligent N.C.O. and five men." The army had not ceased chuckling over this gem of red tapedom when there appeared in orders the notice: "Reference G.R.O.—of such a date—line 7; delete the word 'intelligent.' "—London Chronicle.

The Grand Trunk Employes' Patriotic Association, consisting of officials and employes located at Toronto, held its final meeting Mar. 8, to receive reports and for winding up its affairs. The report showed that since the organization of the association in Aug. 1914, $39,800.81 had been received and $39,677.43 expended. The balance was handed to a special committee to dispose of as conditions may warrant. The expenditures were divided as follows: Toronto and York County Patriotic Fund and Canadian Red Cross Society $23,093.20; British Red Cross Society $4,250; Christmas boxes for enlisted employes $3,595.05; Overseas Club Tobacco Fund $2,200; Y.M.C.A. $2,000; Navy League of Canada $1,500; British Sailors Relief Fund $1,000; Prisoners of war $830; Catholic Army Huts Fund $500; Relief Committee $457.50; Honor Roll and flags $114.30; Daughters of the Empire, Mimico, $100; current expenses $37.38. J. A. Murphy, Secretary of the Association, was presented with a gold watch in recognition of his services.

PERSONAL NOTES.

Capt. F. D. Burpee, Superintendent, Ottawa Electric Ry., Ottawa, Ont., resumed his duties early in March, after an absence of three years, on military service. In 1894 he enlisted in the Ottawa and Carleton Rfles, and afterwards was in the O.A.A.C. Co. of the 43rd Regiment, which he rejoined in 1915. He enlisted in the 207th Battalion, C.E.F., in Ottawa, in Feb. 1916, and assisted in recruiting the battalion. He left for England as second in command in May 1917, and was quartered at Seaford, Sussex, where, after a few days, the battalion was broken up. He then transferred to the Canadian Railway Troops, reverting to the rank of lieutenant, and went to France July 7, reporting to the 5th Battalion, C.R.T., at Arras. This battalion, like all other railway construction units, was employed all over the British front, seldom remaining longer than four or five weeks on one job, and being constantly employed on repair and construction of narrow and standard gauge railways. The 5th Battalion worked in front of Ypres in Oct. 1917, when fighting was practically continuous, and immediately after the capture of Zonnebecke was ordered to construct a narrow gauge line to that point. Later in the year this battalion followed the Third Army in the unsuccessful attempt on Cambrai, and worked in the vicinity of Hermes and Havrincourt for about six weeks. The last work the battalion was engaged in, prior to its return to England, was the reconstruction of the main line between Lille, France, and Brussels, Belgium. This line had been destroyed by the enemy on retirement, the demolition being very thoroughly done. About 2 lb. of perdite was exploded at every second joint, and a mine, consisting of 4 or 5 shells of a special type for railway destruction, was exploded in the grade at intervals. In other places the destruction was carried out by means of a track destroyer, consisting of a heavy rail bent into a hoop and slipped under the rail joint and attached to a number of locomotives by a steel cable. This, while it did not destroy the rail, twisted the track sideways, split all the ties and tore up the grade. One line was rebuilt with salvaged material, the second track being laid with new material brought up by train.

Capt. Norman J. D'Arcy, M.C., eldest son of W. H. D'Arcy, General Claims Agent, C.P.R., Winnipeg, has returned from overseas service.

Col. J. S. Dennis, C.M.G., liason officer and Red Cross Commissioner, Siberian Expeditionary Force, Chairman of the Canadian Economic Commission in Siberia, and Assistant to the President, C.P.R., was reported to have left Vladivostock for Canada, Mar. 19.

Lieut. A. C. Doucet, Royal Air Force, killed in an aeroplane accident in England recently, was son of Lt.-Col. A. E. Doucet, of Quebec, Que., formerly District Engineer, National Transcontinental Ry.

Brigadier General C. L. Hervey, D.S.O. of Montreal, who returned to Canada, Mar. 24, went overseas as Major of a unit of the Canadian Railway Troops, and shortly after arriving in France, was promoted to Lieut.-Colonel and given command of the 4th C.R.T. In June 1918, he was promoted to Brigadier-General, and placed on special service in England. Before taking up military service, he was a director of the Courtenay Bay Construction Co., and was supervising the construction of the breakwater. He had also been in charge of considerable contracting work on the C.P.R. in New Brunswick.

Lt.-Col. W. B. Kingsmill, D.S.O., of Saunders, Torrance and Kingsmill, Canadian Solicitors for the Michigan Central Rd., has returned to Toronto and has resumed his practice. Prior to the war he was in command of the 10th Royal Grenadiers, and later organized and commanded the 123rd Battalion C.E.F., which proceeded to France as the pioneer battalion of the 3rd Division. It fought at Vimy Ridge, Avion, Passchendaele and Hill 70. On the disbandment of all pioneer battalions, the 7th Battalion Canadian Engineers was organized, with Lt.-Col. Kingsmill in command. He returned from France in Aug. 1918, and has since been acting as Judge Advocate General at Ottawa. He was twice mentioned in dispatches, and was awarded the D.S.O. for service in France.

Lieut. M. P. MacLeod, of the R.A.F., son of M. H. MacLeod, Vice President, Operation, etc., Canadian National Rys., who went overseas in Feb. 1917, arrived back in Toronto late in March.

Major R. C. Manning, D.S.O., whose death in France, Nov. 6, was reported recently, was, before enlisting, in the Bridge and Building Department, Canadian Government Railways, Moncton, N.B. He enlisted on the outbreak of war, as a private, and went to France as a lance corporal, being granted a commission for bravery on the field. He was awarded the Military Cross in Sept. 1915, the Distinguished Service Order in 1917, and the French Cross of the Legion of Honor in Jan. 1918.

Col. C. W. P. Ramsey, C.M.G., formerly Engineer of Construction, Eastern Lines, C.P.R., and Mrs. Ramsey, arrived in Montreal, from England, early in March. Col. Ramsey was born at Bury, Que., Jan. 15, 1883, and entered C.P.R. service as an apprentice in the Mechanical Department at the Delorimier Ave. shops, in 1898, and served in various minor capacities until Sept. 19, 1903, when he was transferred to the Construction Department at Montreal, passing through the various grades of draftsman, transit man, Assistant Engineer and Division Engineer. On Mar. 15, 1912, he was appointed Engineer of Construction, Eastern Lines, and held that position until Feb. 25, 1915, when he was granted extended leave of absence on his appointment as Lt.-Colonel in command of the Canadian Overseas Railway Construction Corps. During 1918, he was promoted to Colonel, made a Companion of the Order of St. Michael and St. George, and seconded for service at the War Office.

Capt. Hon. W. J. Shaughnessy, son of the Chairman of the C.P.R., returned to Canada, Mar. 17, after about 30 months service overseas, chiefly on Lieut.-Gen. Sir Arthur Currie's staff. He went overseas with the 199th Irish Rangers, and was, for some time attached to the British Headquarters staff, later being transferred as A.D.C. to Gen. Currie. He is returning to his law practice.

Major-General J. W. Stewart, C.B., of Foley, Welch and Stewart, railway contractors, who has, since 1916, been in railway work on the western front in France and Flanders, and who latterly acted as Director General of Transportation there, returned to Canada Mar. 6. In an interview at Montreal, he stated that the Canadians rendered great service to the British transport service and became as famous behind the lines as at the front. During the first two years of the war, the British built a little over 100 miles of railway, but from 1916 to the end of the war, more than 3,000 miles of standard gauge, and 6,000 miles of narrow gauge lines were built, enabling 250,000 tons of munitions to be moved monthly .

Liability for Injuries on Joint Railway Lines.—Mrs. P. Beauchemin has been awarded $12,025 and costs by a Quebec court against the G.T.R. as compensation for the death of her husband, a section foreman, who was struck by a train. He was in the G.T.R. employ and at the time of the accident was mending a broken rail near St. Basil, Que., on a section of the line over which the Intercolonial Ry. has running rights, and was struck by an Intercolonial locomotive. Justice Greenshields, held that the plaintiff could not be held bound by any agreement as to joint control; he was in the G.T.R. employ and doing that company's work, and whatever remedy the G.T.R. had was as against the Intercolonial Ry. The company alleged that the accident was due to inexcusable fault, but the facts showed that the fault lay with the driver of the Intercolonial train failing to obey a stop signal at St. Basil. The moment the train entered the section of the line at Montreal or St. Lambert, he was under the orders of the train dispatcher who was an exclusive employe of the G.T.R. As between the section foreman and the G.T.R. the responsibility lies with the company. It was further alleged that there was contributory negligence on the part of the section foreman, but he failed to find any, and on the other hand considered it a case of inexcusable fault on the part of the company.

United States Railways Financial Situation.—The U.S. Congress adjourned without making appropriations amounting to $750,000,000 asked by the Railroad Administration. This left that body with practically empty coffers, about $381,000,000 of debts and no funds to finance the programme of improvements planned for this year as a measure to take up the slack in the materials and labor markets. It was arranged Mar. 5 by the government to retain control of the railways and to have the industrial companies do their own financing for the next few months on the open market or through advances by the War Finance Corporation which is reported to have about $337,000,000 of resources available.

Questions About Canadian National Railways Officials.

In answer to a question, by A. B. Copp, M.P. for Westmoreland, N.B., in the House of Commons recently, the Minister of Railways stated that the following officials, attached formerly to the Canadian Government Rys. head office at Moncton, N.B., had been transferred for service on the Canadian National Rys.

C. A. Hayes, formerly General Manager, Eastern Lines, C.G.R., Moncton, promoted to Vice President, in charge of traffic, all lines, Canadian National Rys., Toronto.

H. H. Melanson, formerly Passenger Traffic Manager, C.G.R., Moncton, promoted to Passenger Traffic Manager, all lines, Canadian National Rys., Toronto.

R. F. McLeod, formerly Assistant General Passenger Agent, C.G.R., Moncton, promoted to Assistant to Passenger Traffic Manager, in charge of Tariff Bureau, Canadian National Rys., Montreal.

W. L. Crighton, formerly Advertising Agent, C.G.R., Moncton, promoted to General Advertising Agent, all lines, Canadian National Rys., Toronto.

—add questions about C.N.R officials—

G. E. Smart, formerly Master Car Buiilder, C.G.R., Moncton, promoted to General Master Car Builder, all lines, Canadian National Rys., Toronto.

H. F. Alward, formerly General Claims Agent and Solicitor, C.G.R., Moncton, promoted to General Solicitor, Canadian National Rys., Montreal.

In answer to another question by Mr. Copp, the minister stated that F. P. Brady and A. E. Warren, are general managers of the Canadian National Rys. Mr. Brady's jurisdiction extends over all Canadian Northern lines east of Port Arthur, and National Transcontinental lines east of O'Brien, Que., and over the former Canadian Government Rys. His salary is $12,000 a year and his office is at Montreal. Mr. Warren's jurisdiction extends from O'Brien west, on the National Transcontinental Ry., and on all Canadian Northern lines west of Port Arthur. His salary is $10,000 a year and his office is at Winnipeg.

C. A. Hayes, formerly General Manager, Eastern Lines, Canadian Government Rys., with a salary of $12,000 a year, is now Vice President, in charge of traffic, Canadian National Rys., at the same salary.

In answer to a question by J. H. Sinclair, M.P. for Antigonish and Guysborough, N.S., the Minister of Railways stated that no employes formerly in the Canadian Northern Ry. service had been appointed since Jan. 1 to positions on the Canadian Government Rys. east of Montreal, but W. A. Kingsland, formerly General Superintendent, Canadian Northern Ry., Montreal, had been appointed Assistant General Manager, Eastern Lines, Canadian National Rys., and his jurisdiction had been extended to cover Canadian Government Rys., east of O'Brien. Guy Toombs, formerly Assistant Freight Traffic Manager, Eastern Lines, Canadian Northern Rys., had had his jurisdiction extended to include Canadian Government Ry. lines west of Matapedia, Que. and Edmundston, N.B., and east of Armstrong.

Railway Subsidies.—The Dominion Public Accounts for the year ended Mar. 31, 1917, show that railway subsidies of $959,583.88 were paid during the year.

Orders By Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the board's proceedings. No other paper has done this.

General order [illegible]. Jan. 1[illegible]. Approving specifications for [illegible] dated Ottawa, May 22, 1918, submitted by Canadian Railway Mail Services Department for use by railway companies operating in Canada.

28052. Jan. 22. Dismissing Toronto, Hamilton & Buffalo Ry. application for a rehearing by way of appeal from order [illegible]951, Dec. 24, 1918, rescinding clause 7 of order 25570, Oct. 27, 1916, providing for interswitching at Brantford, Ont.

28053. Jan. 21. Ordering Kitchener & Waterloo St. Ry. to move north derail at the diamond crossing with G.T.R. at King St., 100 ft., and south derail, 75 ft. from the nearest G.T.R. rail, and to place cluster lights with red light center over derail.

28054. Jan. 23. Ordering that crossing of Bruce St., Galt, Ont., by G.T.R. and Lake Erie & Northern Ry. be protected by watchman between 7 a.m. and 7 p.m.

28055. Jan. 22. Authorizing C.P.R. to remove its regular agent at Kinorth, Sask.; caretaker to be appointed to see that station is kept clean, heated and lighted for passengers.

28056. Jan. 23. Relieving Canadian National Rys. from providing further protection at Wallace or White Lake crossing, Sheffield Tp., Ont.

28057. Jan. 23. Amending order 27826, Nov. 18, 1918, re Lautz Bros. siding, Beachburg, Ont.

28058. Jan. 23. Extending to June 1, time within which the Edmonton, Dunvegan & British Columbia Ry. shall fence its right of way through east half of Sec. 31, Tp. 72, Range 5, west 5th meridian, Alta., and install farm crossing for S. Wright.

28059. Jan. 25. Amending order 27770, Oct. 9, 1918, re G.T.R. level crossings in Brantford, Ont.

28060. Jan. 25. Approving Great Northern Ry. timetable showing service between Guichon and Sumas, via Colebrook, and to Vancouver, B.C.

28061. Jan. 27. Extending to Mar. 27 time within which C.P.R. shall install electric alarm bell at crossing of King St. West, Ingersoll, Ont.

28062. Jan. 25. Authorizing C.P.R. to build spur for Three Rivers Shipyards, Ltd., Three Rivers, Que.

28063. Jan. 27. Amending order 14606, Aug. 21, 1911, re Canadian Northern Ry. interswitching at Brandon, Man.

28064. Jan. 27. Ordering New York Central Rd. to stop all its trains, both incoming and outgoing, on flag at Westmount station, Que.

28065. Jan. 27. Relieving Canadian National Rys. from providing further protection at crossing near Vegreville station, Alta.

28066. Jan. 27. Authorizing C.P.R. to remove its station agent at Naughton station, Ont.; caretaker to be appointed to see station is kept clean, heated and lighted for passengers.

28067. Jan. 28. Amending order 28039, Jan. 16, re C.P.R. level crossing at Grant St., Quebec.

28068. Jan. 24.—Approving agreement, July 27, 1917, between Bell Telephone Co. and Wakefield & Masham Telephone Co., Ottawa and Pontiac Counties, Que.

28069. Jan. 22. Dismissing application of City of Niagara Falls, Ont., for order directing Niagara, St. Catharines & Toronto Ry. to lay its tracks down center of Queen St. and to construct a new cross-

28070. Jan. 31. Approving G.T.R. clearance at siding for Canadian General Electric Co., Toronto.

28071. Jan. 31. Authorizing Toronto Terminal Ry. to lay conduits containing pressure steam lines across Bay, Yonge, and Scott Sts., and upon and along Esplanade St., between Yonge and Scott Sts., Toronto.

28072. Jan. 31.—Authorizing Pere Marquette Ry. to erect bridge over spur serving Gray Dort Motors Ltd., Chatham, Ont., with 16 ft. clearance.

28073. Feb. 5.—Suspending, pending hearing by Board, G.T.R. supplement to tariff C.R.C. no. 1024 and cancellation of item 195 in C.P.R. supplement 14 to tariff E 3551 showing increase in rates on agricultural lime or stone dust from [illegible], Ont.

[illegible] Feb. [illegible] Authorizing Essex Terminal Ry. to build extension of spur for Swedish Crucible Steel Co. of Canada, Ltd., Windsor, Ont.

[illegible] Feb. [illegible] Authorizing British Columbia Government to build crossing over C.P.R. at Notch Hill.

[illegible] Feb. [illegible] Authorizing Canadian Northern Ontario Ry. to build spur for Eastern Land Department, Canadian National Rys., at [illegible].

[illegible] Feb. [illegible] Relieving G.T.R. from providing further protection at crossing near Corby-[illegible], Ont.

[illegible] Feb. [illegible] Approving Esquimalt and Nanaimo Ry. [illegible] for Straits Lumber Co., [illegible], B.C.

[illegible] Feb. [illegible] Authorizing Canadian Northern Ontario Ry. to build spur for Anglo Canadian [illegible] Co., [illegible] Tp., Sudbury District, Ont.

28082. Jan. 21. Rescinding order 27497, July 24, 1918, and ordering work to be done in connection with the Foster St. drain and the natural water courses in connection with drainage at crossing of C.N.R. and C.P.R. tracks, Belleville, Ont.

28083. Feb. 7. Authorizing British Columbia Electric Ry. to build extension of Graham Co's spur for Barrett Co., Point Grey, B.C.

28084. Feb. 5. Extending to May 15, time within which Grand Trunk Pacific Ry. shall build stock yard at Ardrossan, Sask.

28085. Feb. 5.—Authorizing Department of Justice to build coal conveyor over Grand Trunk Pacific Ry. for Alberta penitentiary.

28086. Jan. 27.—Ordering G.T.R. to provide shelter at Brussy station, Que., and substitute the name of Brussy for Ile Perrot.

28087. Feb. 10.—Authorizing Kettle Valley Ry. to open for traffic its line from mileage 13.6 at Princeton, B.C., to mileage 8.

28088. Feb. 13. Suspending, pending public hearing by Board, supplement 3 to C.P.R. tariff E-3383, supplement 5 to G.T.R. tariff E-3411 and supplement 1 to C.N.R. tariff E-1121, cancelling commodity rates on cheese to Montreal.

28089. Feb. 10.—Approving Canadian National Ry. bylaw authorizing R. E. Perry, A.G.F.A. and W. Hately, A.G.F.A.; H. H. Melanson, T.M.; R. F. MacLeod, A.P.T.M.; R. L. Fairbairn, G.P. A., and R. Creelman, A.P.T.M., to prepare and issue freight and passenger tariffs respectively.

28090. Feb. 11. Dismissing application of J. H. Warrington, Cornwall, Ont., and others for reduction in class rates and carload minimum weight on shipments of live poultry.

28091. Feb. 8.—Ordering that cost of installing transfer track between the G.T.R. and Niagara St. Catharines and Toronto Ry., at Thorold, Ont., be paid equally by G.T.R. and Canadian National Rys.

28092. Feb. 8.—Authorizing G.T.R. and C.P.R. to operate over crossing at Komoka, Ont., without first stopping.

28093. Feb. 10.—Recommending to Governor in council for sanction, Maine Central Rd. rules for operating department effective from Jan. 1.

28094. Feb. 10.—Authorizing G.T.R. and Michigan Central Rd. to operate over crossing at Canfield, Ont., without first stopping.

28095. Feb. 10.—Amending order 28064, Jan. 27, re stopping of New York Central Rd. trains at Westmount, Que.

28096. Feb. 11.—Authorizing Saskatchewan Government to build highway crossing over C.P.R. on road north of Sec. 26, Tp. 17, Range 16 west 3rd meridian.

28097. Feb. 12.—Approving British Columbia Government's plan of overhead bridge on Columbia and Northwestern Ry., near Castlegar, B.C.

28098. Feb. 11.—Authorizing C.P.R. to build spur for S. Ouellette, Campbell Tp., Que.

28099. Feb. 11.—Ordering the use of 9 temporary railway crossings between Dosquet and Lyster, Que., for certain property owners pending hearing of question of location and construction of permanent crossings to be heard by the board in Montreal.

28100. Feb. 10.—Authorizing C.P.R. to build spur for J. C. Wright, Proton Tp., Ont.

28101. Feb. 8.—Ordering Canadian National Rys. to stop train no. 8 on flag at Richmond, Ont., on Monday mornings to accommodate the weekend passenger traffic for Ottawa.

28102. Feb. 13.—Relieving Grand Trunk Pacific Ry. from providing further protection at crossing between Unity and Vera, Sask.

28103. Feb. 11. Approving agreement, Jan. 21, between Bell Telephone Co. and Stroud Telephone Co., Simcoe County, Ont., and rescinding order 23352, Feb. 23, 1915.

28104. Feb. 12.—Ordering C.P.R. to maintain day and night watchmen at crossings of Waterloo and Adelaide Sts., London, Ont.

28105. Feb. 13.—Authorizing G.T.R. to build spur for Imperial Oil Ltd., Toronto.

28106. Feb. 13.—Authorizing City of Toronto to carry a 10 in. water main across overhead bridge at Strachan Ave., over railway tracks.

28107, 28108. Feb. 18.—Approving Bell Telephone agreements with St. Marys Telephone system Ltd., Shefford County, Que., Jan. 3; and Lambeth Telephone Co., Middlesex County, Ont., Feb. 4.

28109. Feb. 17.—Approving Bonaventure and Gaspe Telephone Co. bylaw authorizing E. A. Bouillon, Managing Director, and M. C. Harris, General Manager, to issue triaffs for board's approval.

28110. Feb. 17.—Authorizing Saskatchewan Government to build highway crossing over Canadian National Rys. in n.e. ¼ Sec. 20, Tp. 39, range 4 west 3rd meridian, at Osler townsite.

28111 Feb. 18.—Dismissing complaint of St. Lawrence Pulp and Lumber Corporation against rate of $23.07 a gross ton on secondhand rails from Matapedia, Que., and requesting reparation to basis of $11.79 a gross ton from Montreal to Vancouver with addition of arbitrary of $1.12 a gross ton from Matapedia to Montreal.

28112 Feb. 21. Dismissing application of Mme. Napoleon Bessete of Roxton Falls, Que., for order directing C.P.R. to remove stock pen from near her dwelling.

28113. Feb. 20.—Approving agreement, Feb. 11, between Bell Telephone and Burgessville Telephone Co., Oxford and Brant Counties, Ont.

28114. Feb. 20.—Ordering G.T.R. to provide a one pen stock yard and loading chute at Jamesons siding, Ont.

28115. —Feb. 19.—Authorizing Canadian National Rys. to build spur for J. Bachler Boulter Tp., Ont.

28116. Feb. 25.—Authorizing G.T.R. to build 2 additional tracks at grade across William St., Brockville, Ont.

28117. Feb. 24.—Approving plan of interlocking plant to be installed by C.P.R. at Kempton, Ont.

28118. Feb. 26.—Authorizing Canadian National Rys. to build branch for Standard Chemical Iron and Lumber Co. of Canada Ltd., Ferguson Tp., Ont.

28119. Feb. 25.—Ordering C.P.R. within 60 days to install improved type of automatic bell near Farrelton, Que.

28120. Feb. 25. Disallowing Ottawa Electric Ry. tariff C.R.C. 5 which was filed to become effective Nov. 18, 1918, and which was suspended pending hearing.

28121. Feb. 24.—Ordering that transfer track between Niagara St. Catharines and Toronto Ry. and G.T.R. at Thorold, Ont., be maintained by N. St. C. and T. Ry.

28122. Feb. 21.—Amending order 28982, Jan. 21, re extension of walls of culvert opposite Marsh Engineering Works, Belleville, Ont.

28123. Feb. 27.—Approving Lake Erie and Northern Ry. standard freight mileage tarif C. R.C. 162.

28124. Feb. 27.—Approving London and Port Stanley Ry. standard mileage freight tariff C.R. C. 224.

28125. Feb. 26.—Relieving C.P.R. from providing further protection at crossing between sec. 25, Tp. 16, Range 25, and sec. 30, Tp. 16, Range 24, west 2nd meridian.

28126. Feb. 26. Ordering Canadian National Rys. to erect a one-car stock pen at Mair, Sask.; by Sept. 30.

28127. Feb. 26.—Authorizing C.P.R. to build spur for Harris Abbatoir Co., Toronto.

28128. Feb. 27.—Authorizing Toronto, Hamilton and Buffalo Ry. to build 2 branch lines for Ker and Goodwin Machine Co., Brantford, Ont.

28129. Feb. 28.—Ordering C.P.R. to install improved type of automatic bell at crossing of Bull St., Woodstock, N.B.

28130. Feb. 28.—Approving Pere Marquette Ry. plan of timber trestle to be built at Muirkirk, Ont., in lieu of culvert directed by order 27821, Dec. 11, 1918.

28131. Feb. 27.—Authorizing C.P.R. to build 2 spurs for Wayagamack Pulp and Paper Co., Belle Rive Island, Que.

28132. Feb. 28.—Authorizing C.P.R. to build spur for Excelsior Coal Co. in s.w. ¼ sec. 30, Tp. 1, Range 5, west 2nd meridian, Sask.

28133. Mar. 4.—Authorizing Drury, Dennison and Graham Tps., Ont., to build highway crossing over Algoma Eastern Ry., near O'Donnell, Ont.

28134. Mar. 4.—Approving agreement, Feb. 10, between Bell Telephone Co. and Shakespeare Telephone Co., Sudbury District, Ont.

28135. Feb. 28.—Relieving C.P.R. from providing further protection at Kingston Crossing, near Verona station, Ont.

28136. Feb. 27.—Amending order 28154, Jan. 23, re crossing of Bruce St., Galt, Ont., by G.T. R. and Lake Erie and Northern Ry.

28137. Mar. 4.—Approving location of Canadian Northern Ry., Jackfish Lake Branch, from mileage 60.45 to 93.91, Sask.

A Railway Coal Freight Case.—Judgment was given Mar. 20, by Chief Justice Falconbridge, at Hamilton, Ont., in the case of Niblock vs. G.T. Ry. The action was to recover $24,053.51 for coal sold, but the New York Central Rd. intervened with a claim for freight over its lines. The judge said: "I do not think that the New York Central Rd. claim against the defendants is mere camouflage on the part of these defendants. Let defendants pay into court $19,283.17, with interest from Aug. 15, 1913, less their costs, as of an interpleader application, which I fix at $60. Plaintiff may apply to the court on notice to the New York Central Rd., for payment out."

Railway Land Taxation.—The Greater Winnipeg Water District is asked by the Manitoba Legislature recenly for power to tax railway lands in the district in regard to the water levy, but the clause was struck out by the bill.

Electric Railway Department

Increases in Electric Railway Freight and Passenger Rates.

British Columbia Electric Ry.—Vancouver City Council passed the following resolutions Feb. 7: "That the city exercise its rights to cancel and abrogate the agreement of July 8, 1918, granting permission to the B.C. Electric Ry. Co. to collect 6c fares on its street cars within the City of Vancouver, and that the cancellation thereof do take effect immediately at the expiry of the nine months from the date of the last mentioned agreement, and that the notice of such intention to cancel the same forthwith be formally given to the company.

The mover of the resolution, Ald. McRae said that it was not an attempt to break the 6c fare bylaw, but simply a preliminary move to place the city in a safe position in connection with the legislation coming before the legislature to appoint a public utilities commission. He pointed out that a clause in the draft bill for the proposed public utilities commission provides that fare schedules stand as they are until such time as the board deals with them.

Representatives of the Victoria City Council and the company have met on several occasions with a view to arriving at a satisfactory settlement of the proposed 6c fare question, but no material progress has been made.

In view of the fact that the company is asking the city to eliminate the jitney from routes in direct competition with the company and, should this be granted, will expect the city to enforce the regulation (one of the concessions asked of the city in return for a 6c fare), the jitney men have circulated a petition, asking that jitneys be allowed to operate freely in competition with the company, as heretofore, and have obtained a considerable number of signatures. The petition and signatures was presented to the city council as an argument in favor of retaining the jitney in its present unrestricted condition, a number of local garages presented a similar petition to the city council. The legislature's private bills committee refused to consider the city's application for a bill to eliminate the jitney on traffic lines competing with the company, but on Mar. 14 the council, by a vote of 5 to 3, decided that the section should be retained in the bill.

Cape Breton Electric Co.—The Nova Scotia Public Utilities Commission gave judgment, Mar. 4, on the application of the Cape Breton Electric Co., and the Sydney and Glace Bay Ry., for an increase of fares on their lines, which were heard in July and August, 1918. The S. and G.B. Ry. is leased by the C.B.E. Co., the two lines being operated as a unit. The C.B.E. Co. operates its lines in Sydney and Glace Bay, which are connected by the company's ferry service, while the S. and C.B. Ry. is an interurban line, serving the mining district between the two termini. The fares in Sydney and Glace Bay were 5c, while on the interurban line there are 5 zones on each of which a 5c fare was charged, making a 25c fare from Sydney to Glace Bay. The company asked authority to increase the fares by 1c in Sydney and Glace Bay, and by 1c in each zone on the interurban line, and to charge 1c for each transfer. The municipalities through which the line passes, opposed the application and desired to have limited tickets at for workers, and for school children.

The commissioners dealt with the matter as the application of the C.B.E. Co., the two lines being treated as one. In an elaborate judgment they authorized the increase of fares, except the request to charge 1c each for transfers which was not pressed very thoroughly by the company and was finally dropped. The new fare is therefore 6c each in the city of Sydney, and the town of North Sydney , and Sydney Mines respectively, while the through fare from within the City of Sydney to Glace Bay, covering 5c zones, is advanced from 25c to 30c, with no limited or reduced rate likely except to school children. Although the commissioners stated that they felt sure they had no power to require that tickets should be sold to school children at a reduced rate, the company intimated that it was not averse to doing this, and finally offered to selll tickets to children under 16 years of age in attendance at public schools, on schooldays, betweeen 8 a.m. and 5 p.m., at 10 for 30c. This rate does not go into operation until Apr. 1. In the course of the judgment the commissioners said that the value of the company's property used and useful in connection with the furnishing of tramway service plus the usual overhead charge for engineering, etc., was $764,918, this valuation being based upon figures submitted by C. M. O'Dell, an engineer, who was engaged upon the construction of the line, and who was a witness for the municipalities. The company's expert engineer, L. R. Nash, of Boston, Mass., placed the value of the property at $1,600,000.. Under the terms of the Public Utilities Act, the company is entitled to earn a return of not less than 8% on the value of the property used and useful in connection with the service which it is rendering. The company is therefore entitled to a return of $61,193.44 in addition to taxes and depreciation. From the returns of earnings and operating expenses submitted it appeared that for 1918, there was available after meeting operating expenses, $46,963; whereas in 1917 there had been $99,777.15. The company based its application for relief upon the ground of increased costs of operation in all lines, especially emphasizing the increases in coal and labor. The total operating expenses increased from $133,472.92 in 1914, to $243,522.00 in 1918, while the revenue increased from $202,327.11 to $290,490 in the same period. The taxes increased from $8,537.25 in 1914 to $18,967 in 1918. The operating costs, while high as compared with pre war conditions, were not extravagant in view of the greatly increased cost of labor and materials. One item in particular which was claimed to be extravagant was a payment to Stone and Webster of 2.9% of the gross annual earnings in return for which the services of the legal, engineering, accounting and managerial staffs of the firm are at the company's disposal and perform for it functions which it would otherwise have to maintain a staff of its own to fulfil. While occasionally the company might possibly escape with a slightly lower expenditure, the commissioners found that "on the whole the arrangement cannot be said to be excessive." Transportation is the only thing the company has to sell, and if it is apparent that it could not economize in expenses by curtailing the service, on the other hand there are demands by the municipalities for increased service, and the commissioners were satisfied that any impairment or reduction in the service now being provided would fail to meet the needs of the communities served. The only alternative was an increase of fares. After an examniation of the effect of the increased fares elsewhere, the judgment proceeds to set out that, while putting the rate asked for into effect, it must be reached as a temporary schedule which might be modified should the results of its operation, when known, call for such modification. With this end in view the company is directed to furnish quarterly statements showing the results of the increased schedule.

During the hearing of evidence a statement was made with reference to an agreement with Glace Bay, but after examining the whole matter the commissioners were of the opinion that there was nothing in the matter to preclude them from exercising the general control over rates conferred upon them by the Public Utilities Act.

Lake Erie and Northern Ry.—The Board of Railway Commissioners taxed order 28, 125, Feb. 27, approving this company's standard freight mileage tariff C.R.C., 165, the rates named in which are on the same basis as apply on steam railways in Eastern Canada.

London & Port Stanley Ry.—The Board of Railway Commissioners passed order 28, 124, Feb. 27, approving this company's standard mileage freight tariff C.B.C., 224.

London St. Ry.—We have been advised, in reference to the company's application to the London, Ont., City Council, for power to increase fares that the no. 1 committee recommended that the mayor be authorized to employ an expert accountant to report on the accounts, state and physical condition of the company, and that the city solicitor be asked to advise as to the power of the council to amend bylaw 916, the franchise agreement. The committee has been advised that any amendment of the bylaw would have to be approved by the Ontario Legislature. These recommendations were approved by the city council, Mar. 3. No appointment of an auditor had been made at the time of writing, Mar 22. The London Chamber of Commerce decided Mar. 14, that it would secure an independent report on the company's affairs

The no. 1 committee had a special meeting Mar. 21, in connection with street railway matters. The mayor is reported to have said that the city was not at present contemplating the purchasing of the railway

A bill has been introduced in the House of Commons to ratify an agreement made between the company and the City of London, Jan. 20, 1919, which nullifies an agreement of Nov. 28, 1917, and provides for an advance in semi weekly excursion rates from London to Port Stanley and return from May 24 to Sept. 10 in each year. The new return rates are not to exceed 50c to persons over 12 years of age, and 25c for persons under 12, except children under 5, accompanied by a parent, or other person, in charge, who are to be carried free. The old fare was 30c for the round trip, so that the advance is 20c. There were no children free with the old arrangement.

The Nipissing Central Ry., which is owned by the Ontario Government and operated by the Timiskaming and Northern Ontario Ry. Commission, has filed a local passenger tariff with the Board of Railway Commissioners which advances fares practically 25%, effective Apr. 1. The new fares are as follows:—

Within town limits of Cobalt, Haileybury and New Liskeard, 7c, or 4 tickets for 25c. Between North Cobalt and Haileybury or Cobalt, 10c, or 12 tickets for $10. Between Cobalt and Haileybury, between Cobalt and Kerr Lake and intermediate points, and between New Liskeard and Haileybury, 15c, or 8 tickets for $1. Between New Liskeard and Cobalt, 30c, or 4 tickets for $1.

Scholars tickets, good for 10 rides, between Cobalt, Haileybury and intermediate points; between New Liskeard, Haileybury and intermediate points, and between Cobalt, Kerr Lake and intermediate points are sold at 30c. These tickets are good only on days on which school is in session, going to and from school, and will not be honored at any other time of day, or on Saturdays, Sundays, or holidays. They will be sold to scholars only on presentation of certificate bearing the personal signature of the principal of the school, certifying that the applicant is a regular attendant of his school under 18 years of age and properly entitled to use these tickets.

Workmen's tickets, good for 21 rides, between 5 and 7.30 a.m., and 4.45 and 7 p.m., daily, except Sunday, are sold as follows:—Between Cobalt, Kerr Lake and intermediate points, $1.25; between Cobalt, Haileybury and intermediate points, $1.25; between New Liskeard, Haileybury and intermediate points, $1.25; between New Liskeard, Cobalt and intermediate points, $2.50. On car leaving Cobalt at 6.45 p.m., also on car leaving New Liskeard 6.45 p.m., workmen's tickets will be accepted as far as Haileybury only.

As before stated, the increases are practically 25%, except between Cobalt and Haileybury, Cobalt and Kerr Lake, and Haileybury and New Liskeard. An advance of 25% on the old 10c rate would have made a very cumbersome fare, so it was advanced to 15c cash, or 8 tickets for $1. As residents of the district will, in nearly all cases, buy tickets, they will really only pay an increase of about 25%.

Women Conductors at Kingston.—The Kingston, Portsmouth and Cataraqui Electric Ry., Kingston, Ont., issued notice recently that no more women would be engaged as conductors. We are advised that the company has found women most satisfactory as conductors, that it is not discharging any of them, and that when their services are dispensed with entirely it will be due to the fact that there is an abundance of male help labor.

Answers to Questions on Electric Railway Topics.

Answers have been sent to questions through the American Electric Railway Association's question box, by Canadian electric railway officials, as follows:—

Snow Removal Agreements.—In entering into an arrangement with a municipality for the removal of snow and ice from streets occupied by tracks, is it better for the company to agree actually to perform the work, or to contribute to its cost?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—It is better for the company to do the work, as it usually has better facilities, and the equipment necessary can in many cases be combined with that required to clear the tracks. After the railway has swept its right of way and pushed the snow back to provide room for vehicular traffic without encroaching upon the car tracks, the municipality should be asked to bear the cost of transporting the snow entirely from the streets.

W. F. Graves, Chief Engineer, Montreal Tramways Co.—Our experience in Montreal, where we have a most unusual snow fall, in the average over 10 ft., is that it is more economical to contract the moving of snow from streets occupied by tracks, either with the municipality or a private contractor. In the first place, by arranging with either, the company relieves itself of many complaints as to dumping of snow and the condition in which the street is left. It also eliminates many long hauls of loaded snow, as municipalities or contractors are able to utilize vacant property in the immediate vicinity at a very small cost, or in instances no charge at all, while the company would, of necessity, have to dispose of the snow at some distant snow dump. In instances we have saved as much as 50% by entering into private contract.

Destroying Weeds by Electricity.—Does any reader know of any method of destroying vegetation or eradicating weeds on railway roadbeds by the use of electricity?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—I do not know of any electrical method of removing weeds. We have used a spray of coal-gas tar with good results, applying it in the spring. After three annual treatments the line will be free from weeds for about three years. The tar kills not only the weeds, but a large extent the seeds and roots as well.

Returned Soldiers as Trainmen.—In engaging discharged soldiers and sailors as trainmen, do you consider it necessary to subject them to a physical examination, or would you take the certificate of discharge as evidence of their good physical condition?

F. L. Hubbard, Assistant to General Manager, Toronto Ry., Toronto.—We think they should undergo physical examination, both for the protection of the public, and also on account of the Workmen's Compensation Act, for the protection of the company.

Dust Shields and Guards.—What has been your experience with dust shields and dust guards on modern railway motors; do they materially increase the life of bearings?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—Dust guards are almost a necessity, as they not only increase life of bearings, but also protect the gears. We have two types of motors using interchangeable axles and gears, and the ones with dust guards have not only less bearing trouble, but run with less noise.

Paper as a Lining for Pinions.—Is a liner of paper better than a lining of metal when used to make loose pinions tight on armature shafts?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—I would not favor the use of any kind of liner on pinions. We build up worn shaft with electric welder and turn a new bearing for the pinion.

Pressed Steel Gear Pans.—Please state your experience with the new style pressed steel gear pans. We have had a number of breakages and are inclined to prefer the malleable iron pans.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—We have had but slight experience with pressed gear cases, but from this are inclined to prefer the malleable, which we can easily repair by electric welding. With some 240 four-motor equipments in service we have taken from stores only one new gear case in the last year.

Running Pinions Without Keys.—What results have been obtained by running pinions on railway motors without keys?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—Would be afraid to try pinions without keys, as there is not sufficient bearing to guarantee that they will not slip with the high torque required in modern rapid acceleration.

Handling Passengers Carried Free.—When city employes are carried free under the terms of a franchise, is it better to provide them with tickets or to carry them on their uniforms or badges, and

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—This depends largely on the method of fare collection in use. We do not register our fares, and our arrangement is as follows: Policemen and firemen in uniform carried free. Plain clothes men and other civic employes show passes. Letter carriers, when in uniform, are carried on passes.

Advertising on Outside of Car.—Do any companies derive any revenue from the sale of advertising space on the outside of their cars; what are the objections to such a practice?

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry.—I would not favor allowing advertising on the outside of cars, for appearance sake. Then these signs would have to be removable for painting and washing cars, etc. We allow banners to be hung on the fenders, this privilege being controlled by the advertising company which places cards inside the cars.

Reporting Reckless Drivers.—What is the experience of companies in reporting reckless drivers to the police; what forms are supplied to the trainmen, and what results have been obtained?

F. L. Hubbard, Assistant to the General Manager, Toronto Ry., Toronto.—Our trainmen are instructed to report cases of reckless driving, blocking of car tracks, or damage to cars by wagons, automobiles, etc. These are handled by the operating department, an inspector collects damages where the company is not at fault and looks after the reporting of such cases to the police and prosecutions in the police court. Trainmen report the occurrences on the forms used for reporting accidents.

Proposed Hydro Electric Radial Railways in the Niagara Peninsula.

The hydro electric radial railways proposed to be built between Port Credit and St. Cartharines, and between Welland and Bridgeburg, Ont., by the Hydro Electric Power Commission of Ontario, on behalf of the municipalities concerned, were voted on by those municipalities, Jan. 1, 1917. The aggregate vote for the first named line was 7,236 for, and 5,545 against; and for the second line, 2,097 for, and 392 against. In the latter case there were majorities for the railways in the case of each municipality, so that so far as that line is concerned, the matter was considered settled. In the former case, majorities were recorded against the proposal in Hamilton, Nelson Tp., and Saltfleet Tp., the figures in each case being, Hamilton, 3,192 for, 3,626 against; Nelson Tp., 90 for, 101 against; Saltfleet Tp., 104 for, 241 against.

Owing to the existence of the war, and the consequent restrictions on bond issues, and general financing, the matter was allowed to rest, but with the declaration of the armistice, interest was again aroused, and the councils of the three municipalities in which the bylaws were defeated in 1917 decided to re-submit them. They were voted on Mar. 15 being carried in two municipalities and defeated in one as follows: Hamilton, 6,172 for, 3,435 against; Nelson Tp., 67 majority for; Saltfleet Tp., 26 for, 87 against.

The Port Credit-St. Catharines line is intended to connect with the proposed hydro radial line between Toronto and London, previously authorized, at Port Credit, and the municipalities interested are,—Toronto, Trafalgar, Nelson, East Flamboro, West Flamboro, Barton Saltfleet, North Grimsby, Clinton, Louth and Grantham townships; Grimsby and Beamsville villages; Oakville and Burlington towns, and Hamilton and St. Catharines cities. The total mileage from Port Credit to St. Catharines is 59.57. The route proposed is as follows:

Port Credit-Hamilton section: From a point approximately one mile west of Port Credit on the projected Toronto-London line it is proposed to parallel the Grand Trunk Railway to near Clarkson, thence southwesterly across the Toronto-Hamilton highway to Con. 3, thence through same to Oakville, where Oakville Creek will be crossed near Sheddon Ave. From Oakville the line will strike straight for the Hamilton Radial Ry. crossing of Bronte Creek, from which it is proposed to parallel the Hamilton Radial Ry. to Burlington. Through Bulington the line will cross the town in the neighborhood of Wellington Ave., and thence direct to a crossing of the old Desjardins Canal at Valley Inn;

Hamilton City section: Through Hamilton it is proposed to parallel the G.T.R. main line on the west side between the railway and the highway. Through Harvey Park and Dundurn Park the line will be south of and as close to the G.T.R. as possible, and will continue easterly, crossing Barton St. near Greig St., and keeping on the south side of Barton St. to the corner of Tiffany St., where it will cross Barton St. and continue northeasterly across Bay, Park, Murray and McNab Sts. and James St. between Murray and Stuart Sts., thence in the same general direction across Hughson, Mary, Catharine, Ferguson and Wellington Sts., at which latter point it will turn and follow south of Ferire St., across Victoria and Emerald Sts. to a point just north of the T.H. & B.R. spur, which it will parallel on the north side to Sherman Ave., thence it bears northeasterly to the south side of the Hamilton and Northwestern Ry., which it will parallel to the city limits;

Hamilton-St. Catharines section: From Kenilworth Ave., Hamilton, just south of the Hamilton and Northwestern Ry., the line will turn and bear southeasterly to midway between the G.T.R. Stoney Creek station and the village, thence to about ¼ mile north of Fruitland, and at about the same distance north of the Hamilton stone road as far as Winona, from which it will parallel the G.T.R. on the south side through Grimsby and as far east as the Grimsby and Clinton township line, from which it will bear southeasterly to Beamsville, just north of the Hamilton stone road, and thence parallel the same to Jordan. From Jordan to the town line between Louth and Grantham it is proposed to follow in the neighborhood of the road allowance between concessions 6 and 7 of Grantham Tp. to where it crosses the G.T.R., thence southeasterly to near Victoria and Permilla Sts. and along Permilla St. to the west end of the new bridge over the old Welland Canal.

Following is an estimate of the cost of construction, equipment and operation, with estimated operating revenue:

Capital Cost:	
Right-of-way, track construction, and buildings	$8,935,363
Sub-station, car shops, and rolling stock	2,425,000
	$11,360,363
Annual Operating Revenue:	
Passenger revenue	$760,000
Freight revenue	545,000
Miscellaneous revenue	57,000
	$1,362,000
Annual Charges:	
Operating expenses	$570,289
Maintenance expenses	152,193
Total operating and maintenance expenses	$722,482
Interest charges	568,018
	$1,290,500

The class of construction covered by the estimates is based upon a single track line of 80 lb. rails on private right of way for practically the entire distance. The line will be double tracked through Hamilton, with practically no level highway crossings, thus allowing high speed right through the city. By connecting with the Toronto-London line at Port Credit it will be possible to utilize the high speed entrance of that line to the large radial terminal to be provided in the center of Toronto. The Toronto entrance will have no level highway crossings between the centre of the city and New Toronto, and will utilize a steel viaduct along the harbor front, a tunnel under the exhibition grounds, an open cut through South Parkdale, and an elevated embankment from Sunnyside to the Humber River. Ample allowance is said to have been made to cover a very high class of construction, and 80 lb. steel rails, concrete culverts, steel bridges and other similar structures are designed to carry, in an economical manner, the heaviest types of freight cars now in use on steam railways. Proper station facilities, freight sheds and team tracks have been provided for in the various municipalities, and especially in Hamilton, where provision is made for a passenger terminal of sufficient size to accommodate the other lines which are proposed for that district.

The 1,500 volt direct current system of power has been estimated upon, with 4 substations located at various points between Port Credit and St. Catharines. This voltage and substation spacing will ensure ample power supply to heavy freight trains. The following equipment has been estimated upon:

30	3-compartment all steel, passenger motor cars.
6	suburban passenger motor cars.
15	passenger trailer cars.
4	express motor cars.
2	motor work cars.
10	60-ton steel locomotives.
350	freight cars.

The furnishings of the passenger cars will be of a high standard, and approximately 500 h.p. in motor capacity on each car will allow high speed even when a trailer is hauled.

It is anticipated to give practically hourly service between Toronto and St. Catharines, with a suburban service for a few miles both east and north of Hamilton. Limited cars, making few stops between termini, will be run at certain hours to take care of through business, and these cars should, it is claimed, make practically the same running time between Toronto and St. Catharines as is now in effect on the G.T.R. Local cars will, of course, be run in addition to the limited trains, and these will stop at approximately one mile intervals. The 10 locomotives provided for in the estimates will be used to haul heavy freight trains, and it is anticipated that from 3 to 6 round trips a day will be required to handle the freight business which has been estimated. In addition to this, express cars will also be used to handle light package, milk and freight business. These cars can make frequent stops along the line and collect milk cans, farm produce, etc., at points convenient to the residents of the different sections.

It is announced that the adverse vote given in Saltfleet Tp., will not affect the construction of the line as planned, though whether any stops will be made at any points in the township, or not, remains to be considered.

The voting on the bylaw aroused considerable interest in the general railway situation in Hamilton and in the matter of a common entrance for all lines to the city. Sir Adam Beck, on behalf of the commission, stated that it would assist and support the city in an application to the Board of Railway Commissioners to authorize a common entrance for all railways, and a common right of way on the G.T.R. location, presuming that the government took over the G.T.R., which is at present under consideration.

The amount covered by the original bylaw submitted to the Hamilton ratepayers was $5,869,286, but in the course of the recent campaign for the second vote, Sir Adam Beck announced that owing to numerous causes, including a possible relocation and reduction in certain costs, it was likely that the share for which Hamilton would be responsible, would possibly be decreased by about $2,000,000.

It is expected that the government restrictions on the financing of this railway construction will be removed at an early date, and that the preliminary work of the construction will be commenced during this year.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and subsidiary companies.—

	Jan. 1919	Jan. 1918	7 mos. to Jan. 31, 1919	7 mos. to Jan. 31, 1918

Expenses	36,957.50	33,256.65
Net	15,232.74	8,171.58

Niagara, St. Catharines and Toronto Ry.—The Niagara Falls, Ont., City Council notified the company Mar. 18, that when its franchise for its lines in the city expires, the city will take over the railway and operate it. The franchise of the Niagara Falls, Wesley Park and Clifton Tramway Co., which expires in Mar. and Apr., 1920, covers 4.56 miles of lines. The ratepayers at the January elections voted in favor of acquiring these franchises.

Electric Railway Notes.

The Lewis County Ry. is reported to be building a single truck steel one-man car.

The Edmonton Radial Ry. is adopting a new type of lamp for lighting the cars, and has improved the bell connection so that a passenger can notify the motorman when he wants to get off.

The Quebec Ry. Light and Power Co's new stop system on the city lines, put in force recently, is reported to have resulted in a speeding up of cars and the giving of a better service. There will be a theater stop after 2 p.m. on week days. The company will add to the stop points as experience shows them to be necessary.

Winnipeg City Council has been asked by property owners and residents on River Ave., to have the Winnipeg Electric Ry. tracks thereon taken up and a bus line established. The company is reported to have informed the council that if the residents desire it and, the council approves, the company is willing to make the change. The petitioning residents and owners were asked to submit details in writing when they would be fully considered.

The St. Thomas, Ont., City Council, is considering the question of operating one-man cars on the municipal railway and rerouting several lines in order to economize. It is estimated that about $12,000 a year would be saved thereby. The line is at present controlled by the city council, and it is proposed to obtain power to elect at the regular municipal elections in January of each year, two commissioners, who, with the mayor, will be a commission to manage the railway.

The American Electric Railway Association will hold a convention with exhibits, in the autumn.

Electric Locomotives for Hydro Electric Power Commission of Ontario.

As stated previously in Canadian Railway and Marine World, the Hydro Electric Power Commission of Ontario is having 6 additional electric locomotives built, for use on its Niagara power development construction railway. The general dimensions, etc., are as follows:

Length overall	41 ft. 0 in.
Length of truck centers	25 ft 0 in.
Length of main cab	16 ft. 0 in.
Length of auxiliary cab	9 ft. 6 in.
Width over side sills of locomotive	9 ft. 0 in.
Width over main cab	9 ft. 0 in.
Width over auxiliary cab	6 ft. 6 in.
Height of rail to bottom of side sills	3 ft. 4 in.
Height of rail to center of coupler knuckle	2 ft. 10½ in.
Height of rail to top of roof	12 ft. 8½ in.
Truck wheel base	7 ft. 0 in.
Track gauge	4 ft. 8½ ft.

The locomotives are designed for double end operation, for either switching or road service. Both ends are symmetrical about the center line across the body, the total weight, including equipment, being 100,000 lbs.

The trucks are of the arch bar type, with M.C.B. class C springs. The wheels are 36 in. chilled grey iron M.C.B. 1912 profile; axles M.C.B. 5½ ft. x 10 in.; journals with center between hubs of wheels of 50 in. to take motor bearings and cast steel gears, which are pressed on the axle. The under frame has six 12 in. I beams at 40 lb. sills, the full length of the locomotive, with 8 in. I beams at 25 lb.; cross sills rivetted to longitudinal sills; end buffers 15 in. channel at 33 lb., rivetted to sides of longitudinal sills; bolster 1 in. x 14 in. x 9 ft. longitudinal sills.

The main cab is of box type, with 2 side doors; 2 end doors, 4 ft. side windows, 4 end windows and removable doors between the main cab and hoods. Two hoods are parallel, one at each end of main cab, with 2 removable doors on one side of each hood. Carlines, and posts in hoods and main cab, are standard structural shapes, with inside finish in main cab only. Additional ballast is added in flooring by placing solid cast iron slabs 2¾ in. thick by 18 in. by 9 ft. long in the floor under the hoods at each end only. This ballast weighs altogether 24,080 lb., and brings the weight of body truck equipment, etc., up to the required 100,000 lb. total necessary for proper tractive effort.

The electrical equipment consists of 4 G.E. 66 B motors 125 h.p. each, mounted on each truck; type M multiple unit control consisting of 2 sets of D.B. 31 contactors, each set consisting of 13 contactors. 2 D.B. 20 reversers, 10 frames of rheostats, 2 C 6 controllers, 2 B T 335 junction boxes, necessary kicking coils, lightning arrester, main switch, motor cut-out switches, fuse boxes, choke coil control switch, lighting headlight and heater switches, trolleys, etc.

Each pair of two motors is wired up in such a way as to give 2 sets of equipment, separate and distinct from each other, which are paralleled together in each controller, one of which is at each operating end. Located in front of each operating position, where they can be readily seen, and used in operation, and under the hood, is one set of contactors, one reverser, air gauges whistle valve, sander valve, dump line valves, ammeter and all control switches. All control leds are special standard 19-25 wire, and run in conduit without colors, each individual wire being tested out before connection. All main leads are special standard extra flexible wire, and are run singly, each one in a separate conduit, with bellmouths and gaskets in each end, for weather proofing, and to prevent wearing of insulation on wires in operation.

Air brake equipment is Westinghouse 14 E.L. locomotive air brake, as used by present steam roads with two 50 cu. ft. motor driven air compressors, both located in main cab. Extra features are the dump line operating couplers and valves, used for operating 20 cu. yd. dump cars on the Niagara power development. All compressors and control are equipped with multiple unit features, so that it is possible for one operator to operate 2 or more locomotives from the one controller.

Four trolley bases are used, due to the double end operation, and side trolley wire construction, used. The trolley wire on which these locomotives will operate is located 7 ft. from the center of the track and 24 ft. from the rail, requiring the use of 4 trolley bases with poles bent out to reach this wire.

The interior finish of cab is painted dark green; floors, doors, and sash, medium gray; outside body and truck, black; lettering and stripping in yellow; numbers E 13 to E 18 inclusive lettered Hydro-Electric Power Commission.

These 6 locomotives will supplement 12 other similar ones, numbered E 1 to E12, at present in operation at Niagara Falls.

Toronto's Acquisition of Portion of Toronto and York Radial Railway.

Canadian Railway and Marine World for March contained a summary of the agreement under which the City of Toronto proposed to take over the portion of the Toronto and York Radial Ry's. Metropolitan Division property on Yonge St., within the city limits. Certain clauses in the agreement were considered to be not quite so clear as was desirable, and it was handed over to W. N. Tilley, K.C., for correction, so that the points relative to the carriage of freight over the city lines, etc., may be perfectly plain. His report came before the board of control, Mar. 25, and it was decided the agreement, with Mr. Tilley's suggested amendments be submitted to the Hydro Electric Power Commission of Ontario, for approval, or otherwise. In common with other cities, towns, townships and villages, Toronto made an agreement with the Hydro Electric Power Commission of Ontraio, in connection with the proposed building of a hydro radial railway between Toronto and London. One of the clauses in this agreement provides that municipalities entering into such agreement with the commission, are debarred from making any agreement with, or bonussing any other railway or transportation company without the commission's consent

Mount Royal Incline Ry.—A Quebec court recently, authorized the Mount Royal Incline Ry. to appeal against Justice Bruneau's order directing the sale of the company's line and other assets by public auction recently.

The Service at Cost Campaign in Ontario.

E. P. Fredericks, Secretary, Association of Holders of Public Utility securities, had the following letter in the Toronto Globe, March 10:—"In your editorial in today's paper under the heading 'Hamilton and the Radial', you refer to the bylaw which is now before the people of Hamilton and say 'the scheme has nothing of an exploiting nature in it. The service will be rendered at cost.'

"It is gratifying to note that the Globe, in common with a great many other thinking minds throughout the province, is beginning to realize that service at cost as applied to public utilities is 'obviously in the interest of the city.'

'This association is endeavoring to let the people in Ontario know more about this modern and businesslike method of operation, and what applies to Hamilton will apply with equal force to any community where public utilities are in need of readjustment."

Toronto Works Commissioner Replies.

R. C. Harris, Toronto's Works Commissioner, and a member of the city's transportation commission, which is making preparations for taking over the Toronto Ry. in 1921, when its franchise will expire, issued the following statement the same day:—"E. P. Fredericks, Secretary of an association of holders of public utilities, an organization composed of stockholders in street railway and like concerns operating in the Dominion, publishes in this morning's Globe a communication relative to the service at cost upon which the proposed hydro-radial project is founded. Mr. Fredericks states that thinking minds throughout the province are beginning to realize that service at cost, as applied to public utilities, is obviously in the interests of the city.

"Mr. Fredericks represents a financial group, who have invested in public utilities, such as the Toronto Ry., which, while earning large returns upon overcapitalization, refused to furnish adequate service to the citizens of Toronto, flouted their protests, and condemned them to a condition during rush-hour periods from which the law protects cattle in transit. When operating expenses increased, and dividends of necessity declined, these interests merge identity in an association advocating service at cost, not the service at cost of the hydro, where the dividends are returned to the consumer by means of decreased power rates.

"The service at cost, which Mr. Fredericks and his principals advocate, is on a basis of charging, in the case of the street railway, such a fare as will guarantee the capitalist 6 per cent annual return on the money invested after paying all operating and other expenses. In other words, the capitalist is guaranteed his annual return, and if other expenses increase, then the fare to the passenger is increased in order that the investor may secure undiminished 6 per cent. annual return. In a word, the investor takes no risk whatever, the user of public utilities being condemned to make good all variation of cost in order that the capitalist may be protected.

"This is the inset of a campaign to secure a renewal of the Toronto Ry. franchise, but the people of Toronto, who have so long endured the abominable service provided by this public utility corporation, will not be misled by a specious application of the service at cost principle. By the hydro system, every consumer shares in benefits derived and an annual unimpaired return is not guaranteed to capitalists, who control like corporations privately owned."

The Toronto Railway Replies.

The Toronto Ry. on Mar. 15 commenced issuing "Public Service Topics," a 4 pg., 6 x 9 in. leaflet which is distributed on its cars. The first number contained the following:

Works Commissioner R. C. Harris has issued a statement concerning a recent discussion of the service at cost plan of street railway operation, in which he says: "This is the insert of a campaign to secure a renewal of the Toronto Ry. franchise, but the people of Toronto, who have so long endured the abominable service provided by this public utility corporation, will not be misled by a specious application of the service at cost principle."

Commissioner Harris takes rather too much for granted. This company is not seeking to secure a renewal of the franchise with the city by using the service at cost plan as a pretext. In common with all other public utilities this company has been watching with interest the success of the service at cost plan, because it is being generally recognized as the modern and logical method of conducting the affairs of such concerns. It did not remain for Toronto to add its stamp of approval to the plan to secure for it the endorsement of the leading transportation men on this side of the Atlantic. The service at cost principle had ample vindication before it ever reached Ontario, so it requires no defence at this time.

Service at cost, in its broadest application, simply means that a public utility shall pay its own way. There isn't a business man anywhere in the country who will deny that this is a rational method of conducting any kind of an enterprise. A business that is conducted on a less than cost basis is doomed to only one end, and if anyone in Toronto thinks that the street railway system here can be run at a loss indefinitely they must certainly be blind to the simplest rudiments of business.

Service at cost demands that a utility be conducted so that it gives the maximum service at the minimum charge. It gives public control and enables the city to take over the road whenever it wishes to. It is the fairest, squarest and most business like method of conducting the affairs of a public utility that has thus far been devised. When cities like Montreal, Chicago, Philadelphia, St. Louis, Cincinnati, Des Moines, Toledo, Dallas, Youngstown, Kansas City, and other important centers adopt the service at cost plan in preference to all others there must be some reason for it. Not all of these cities can be wrong. It is only last week that the Provincial Commission of New Brunswick recommended service at cost for St. John after months of investigation into various methods of operation.

It is only fair to say in reply to Mr. Harris that service at cost does not contemplate a return of 6% on anything but the actual gold value of the property a value that is not set by the company, but by a board of arbitration or other disinterested parties. Other phases of the service at cost plan brought out in Mr. Harris' statement will be discussed in subsequent issues of this bulletin. So far as the service in Toronto is concerned we shall have considerable to say about this also later on.

This company is not seeking to block municipal ownership, but is endeavoring to secure such co-operation as will enable it to give to Toronto, during the next two years, such service as the public demands.

Meeting at Windsor.

E. P. Fredericks addressed the Windsor Chamber of Commerce, Mar. 17, and reviewed the entire public utility situation, with special reference to the problems of the street railways. He the service at cost plan and the member seemed very much impressed with its possibilities as applied to their particular situation. The Windsor Chamber of Commerce is made up of members from a number of the nearby towns and is really represenattive of about six communiites where street railway problems have been engaging a great deal of attntion for the past few years. The opinion seems to prevail that some application of the service at cost plan would come nearer solving the problem than anything that has thus far been presented. At an early meeting of the chamber of commerce the matter of endorsing the plan will be taken up for final action.

Following an address recently to the Kingston Board of Trade by E. P. Fredericks, secretary of the Holders of Public Utility Securities, the board passed the following resolution: "Resolved that Kingston Board of Trade endorses the principles of the service at cost plan by which good street railway service, under close public supervision, shall be furnished without profit and for rates of fare just sufficient to pay the actual cost as designated under the service of cost plan."

Buffalo, Lockport and Rochester Ry. Reorganization.—This electric railway was sold by auction at Rochester, N.Y., Mar. 12, to W. A. Mahon and W. W. Foster of Rochester, representing the bondholders. The property includes [illegible] miles of track between Rochester and Lockport, the right to terminals in both cities, traffic agreements with the Rochester city lines and the International Ry. for the operation of cars in Lockport and over the line into Buffalo, together with power stations and rolling stock. The company was understood to be interested in a project for building a bridge over the Niagara River, to make a connection with the electric lines in the Niagara Peninsular of Ontario. The sale was in accordance with a reorganization plan prepared by the bondholders protective committee, R. Home Smith, D. B. Hanna, and Senator F. Nicholls, Toronto.

The Port Arthur, Ont., Trades and Labor Council asked the City Public Utilities Commission, Mar. 18, to reduce fares on the Port Arthur Ry. The deputation was advised that nothing could be done this year as the fares are the subject of an agreement with the Fort William City Council. It was stated that the deficit on the P. A. C. Ry. for 1918 was approximately $29,000, and that it was proposed to provide for meeting part of the same by a levy of one mill on the general taxation.

American Electric Railway Association on Electric Railway Financial Conditions.

At the American Electric Railway Association's mid-year meeting in New York, N.Y., Mar. 14, the committee on readjustments presented the following report: Your committee believes that the question submitted to it must properly be divided into two phases: (1) those dealing with urban street railways; (2) those dealing with interurban street railways; and that while the condition of both systems are in the main, the same, and while the causes of the condition are practically identical, the remedy often differs. Our committee now has under consideration plans which, it believes, will assist in meeting the situation confronting the industry. These will be reported to you from time to time in detail. In its opinion, there are certain fundamentals which must control the readjustment of the relations between the companies and the communities they serve, and it presents for your consideration the following summary of these fundamentals:

That the electric railways of the country are breaking down under present conditions of operations. As a result, the public is being deprived of service and is facing certain financial losses through the depreciation of electric railway securities which are largely held by savings banks, life insurance and trust companies and other similar institutions in which its savings are invested. That this condition is primarily due to the economic error of establishing an inflexible fare regardless of the cost of the service rendered or the distance hauled. That to correct this difficulty, flexible fares must be established which will be automatically adjusted to the cost of the service demanded by and furnished to, the community.

That a necessary element of the cost of service is such a return on the fund employed as will attract capital to the public service. To provide incentive to enterprise and initiative, there must be an additional reward for economic management.

That in the interest of the car rider, who must ultimately pay the cost of local transportation, every special impost and tax which cannot be justified upon the ground that it is payment for benefits received should be abolished.

That to secure satisfactory service and keep fares as low as possible, the public must act on the principle of the "greatest good to the greatest number" and must co-operate with the operating companies in making effective economics by the use of "skip-stops," one-man cars, etc.; the speeding up of schedules by reduction of vehicular interference.

That electric railway transportation is a community problem to be solved by the community and the company acting together and animated by a spirit of civic interest and devotion to the public service and having as its objective the establishment of such regulations as will give the public the greatest efficiency, economy and enterprise in the operation of their transportation utilities.

That the committee proposes to carry out as rapidly and as effectively as possible, the following programme. To furnish to members of the association at as early a date as possible, information concerning franchise settlements and agreements along service at cost and other lines: To analyze these various agreements and present for the information of the companies such a summary of their provisions as will provide a guide inthe drafting of new ordinances or agreements To directly assist communities in which the readjustment of franchise relations are under way; to furnish at the instance of the railway company to civic organizations and similar bodies, information as to, and studies of public utility questions.

In conclusion your committee recommends that the scope of the association's activities be so enlarged as to provide machinery for carrying out the purposes set forth herein.

Proposed Purchase of Detroit United Railway By The City.

After a lengthened period of negotiations the Detroit, Mich., City Council, on Mar. 17, approved an agreement with the Detroit United Ry. for the purchase of its city lines. The company agrees to sell what is known as the city property for $31,500,000 of which $15,000,000 is to be paid on the city taking over the property, and the balance at the end of 1931 with 6% interest a year on the deferred payment. The sale does not include quite all the trackage owned by the company in the city, as some terminals of other lines, the stock of which is held by the D.U.R. are situated within the city. Such tracks, however, may be used by the city upon varying terms. Neither does the sale include all the company's property, as freight and passenger terminals and property unused for railway purposes will remain with the D.U.R. The city also agrees to pay the market value of all supplies and materials at hand. The estimated value of the property and supplies to be taken over, plus the value of the property not taken over, is put at $37,000,000. In addition the purchase carries with it the unhampered right of continued operation of the company's freight and passenger cars into and through the city of Detroit. The gross income of the company from freight and express business is in excess of $1,250,000. The question of the approval of the agreement will be submitted by a vote of ratepayers Apr. 7.

Montreal Tramways Co.—The Minister of Labor has authorized the appointment of a board of conciliation to investigate the differences between the company and its employes inregard to wages and working conditions. The company has nominated Hon. J. L. Perron, K.C., as its arbitrator and the men named J. T. Foster. On Mar. 20 protested against an appointment of Mr. Perron on the ground that he is financially interested in the company.

Toronto Civic Ry.—The commissioners of the city works, street, property and parks departments, have reported to the city council that they approve of the principle of an 8 hour day. The report says, in part: "In so far as the civic car lines are concerned, the estimated increased cost approximates $26,755. These employes, by reason of the fact that they operate on schedule, could not render additional service in the shorter day."

The Toronto Railway Co. Stops Paying Dividends.

The Toronto Ry. Co. issued the following circular to its shareholders at the end of March: "In view of the heavy obligations facing the company, your directors have decided not to pay the regular quarterly dividend on the company's capital stock. It is with regret and only after mature consideration that this decision has been arrived at. For some years past, as you are probably aware, the street railway companies of Canada and the United States have been operating under very unfavorable conditions (due mainly to the excessive costs of materials and labor), which have necessitated the cutting down of many dividends and the elimination of many others. Only companies able to meet increasing costs out of advanced rates of fares, have been able to sustain dividends.

"Your directors deem it imperative that the company's property be efficiently maintained; and, with this end in view, are compelled to provide very large disbursements for the rebuilding and overhauling of the company's rolling stock, new cars and trackage renewals. A large portion of the expenditure so required is beyond the control of the directors, since it is made under order of the Ontario Railway and Municipal Board. Further, there is an additional disbursement of $150,000 required for increase in wages, pursuant to a recent decision of a board of conciliation. The latter expenditure is the more regrettable because at the time of this decision there was in existence a contract between the company and its employes, which, it will be remembered, was made by order of a previous board of conciliation, effective June 15, 1917, the term of which, under the contract, did not expire until June 15, 1919, and which in itself provided for an increase of wages about $700,000 annually. But it is useless to complain of these conditions and decisions, much as we may regret them. They are mentioned only as factors which have made necessary the elimination of dividends."

Sherbrooke Railway & Power Co.—The Toronto Globe stated recently that W. C. Hawkins, Vice President and Managing Director, Dominion Power & Transmission Co., had said that its subsidiary, the Southern Canada Power Co., was having no trouble and that it had scrapped its intururban railway. The Southern Canada Power Co. is not a subsidiary of the Dominion Power & Transmission Co., nor has it any connection with the latter, although Mr. Hawkins is its President. The Southern Canada Power Co. owns and operates the Sherbrooke Ry. & Power Co., which company shut down its electric railway for two days some little time ago, until the question of fares was arranged satisfactorily with the Sherbrooke City Council, but the line has not been scrapped and is still running.

The Montreal City Commissioners on Mar. 13, passed a resolution authorizing the City Solicitor to ask the Quebec Public Utilities Commission to direct the proceeding with the work of placing all electric wires in the city in underground conduits. This work was in progress in districts 4 and 6 of the city, but about a year ago, the Quebec Public Utilities Commission, owing to the abnormal price of material authorized the postponement of the work.

Mainly About Electric Railway People.

Thos. Ahearn, President, Ottawa Electric Ry., left Ottawa, Mar. 5, with Alex. Johnston, Deputy Minister of Marine, to spend some weeks at Coronada Beach, Cal.

Capt. F. D. Burpee, has resumed his duties as Superintendent, Ottawa Electric Ry. on returning from three years overseas service, reference to which is made under "Canadian Transportation Men, Engineers, etc., in the War," on another page of this issue. He was born at Ottawa, Ont., Apr. 25, 1876, and commenced railway work in 1891, under H. B. Spencer, Superintendent, District 4, Eastern Division, C.P.R., Ottawa, and transferred to electric railway service in 1893. Since when he has been, to 1896, stenographer, 1896 to 1898, cashier and paymaster, 1898 to Aug. 1912, accountant, during which time he also acted as assistant to the Secretary-Treasurer, and to the Superintendent, Ottawa Electric Ry. In Aug. 1912, on the resignation of J. E. Hutcheson, to become General Manager Montreal Tramways Co's. service, he was appointed Superintendent.

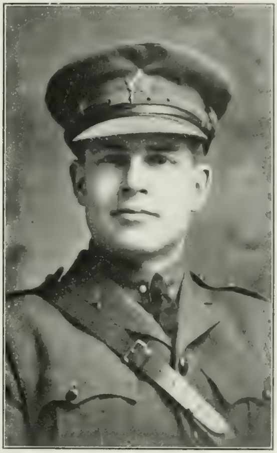
A. J. Clarke, who was appointed acting Superintendent, Grand River Ry., and Lake Erie & Northern Ry., Galt, Ont., during the absence of M. M. Todd, Vice President, continues to act as Superintendent, since the latter's return. Prior to occupying that position, he was engaged on the L.E. & N.R., piloting trains over the G.T.R. at Port Dover, Ont. He commenced his transportation service in May, 1901, in Dominion Power & Transmission Co.'s service, at Hamilton, Ont., and was engaged in the train service with that company for 13 years, in train operation between Hamilton and Burlington, relieving agent, and dispatcher, chief dispatcher of the Hamilton, Grimsby & Beamsville Ry., acting Superintendent, same line, and latterly Superintendent of Interurban Lines.

H. E. Crawford, President Windsor, Essex and Lake Shore Rapid Ry., died at Chatham, Ont., Mar. 9, aged 59. He had been in poor health for some time and suffered a stroke on Mar. 7, after which he did not recover consciousness. Before removing to Chatham in 1915 he was in the store business in Tilbury for many years, was mayor of that town for several years.

J. A. Ellis, formerly of Ottawa, who is a member of the Ontario Railway and Municipal Board with a salary of $4,000, has also been appointed in charge of the Ontario Bureau of Municipal affairs with an additional salary of $1,000.

H. G. Foreman, Assistant Treasurer, Canadian Northern Ry. System, has also been appointed Assistant Treasurer, Toronto Suburban Ry.

Arthur Hilliard Foster, B.A. Sc., who has been appointed Manager, Brantford Municipal Ry., Brantford, Ont., was born at Guelph, Ont., Dec. 24, 1888, and from 1905 to 1908 took a course in civil enginjeering at the University of Toronto Faculty of Applied Science, and during vacations was employed as rodman, Guelph and Goderich Division, C.P.R., prospecting in Larder Lake and Megantic District, land surveying in Northern Ontario, and town engineering; from May to Dec. 1909, Assistant Resident Engineer, National Transcontinental Ry., Mattagami, Ont.; Dec. 1909 to Mar. 1910, Resident Engineer, N.T.R., Lost River; May 1910 to Aug. 1911, in service of City of Toronto; Aug. 1911 to Mar. 1919, Manager and Engineer, Guelph Radial Ry., and Guelph Water Department, Guelph, Ont.



F. D. Burpee,
Superintendent, Ottawa Electric Ry.

A. H. Foster.
Manager, Brantford Municipal Railway

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., was one of the masqueraders at a skating party given by the Governor General in Ottawa, March 1, appearing as a Chinaman.

D. B. Hanna, President, Canadian National Rys., has also been elected President, Toronto Suburban Ry., vice Sir Wm. Mackenzie, resigned.

The Hon. D. O. L'Esperance has been elected Vice President, Quebec Ry., Light, Heat and Power Co., succeeding Lorne C. Webster, elected President.

G. W. Lang, who has been acting Superintendent, Ottawa Electric Ry., during the absence on overseas service of Capt. F. D. Burpee, has resumed his former position as Claims Agent, Capt. Burpee having returned to his duties as Superintendent.

Sir Wm. Mackenzie, President Toronto Ry., and Monterrey Ry., Light and Power Co., left Toronto, Mar. 22, for Monterrey, Mexico, in his private car Natalia, accompanied by F. H. Phippen, K.C., and expecting to return early in April.

T. Marriott has been appointed Chief Dispatcher Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., vice R. W. Robertson deceased.

D. J. McIntosh, heretofore accountant, Niagara, St. Catharines and Toronto Ry., has left the company's service.

A. J. Mitchell, Vice President, Canadian National Rys., has been also elected Vice President, Toronto Suburban Ry., succeeding the late Allan H. Royce.

W. G. Murrin, Assistant General Manager, British Columbia Electric Ry., spent a few weeks at Santa Barbara, Cal., during February and March.

R. P. Ormsby, Secretary, Canadian National Rys., has also been appointed Secretary, Toronto Suburban Ry., G. C. Royce, heretofore Secretary-Treasurer and General Manager, who is still acting as General Manager.

Major Jas. A. Roosevelt, second cousin of the late Theodore Roosevelt, and formerly British Columbia Electric Ry. official, died on a transport recently on his way home from France.

George Lee Snelling, whose appointment as acting Secretary-Treasurer, Ottawa Electric Ry., Ottawa, Ont., was announced in our last issue, was born there, Mar. 2, 1880, and entered the company's service, Aug. 1, 1898, since when he has been, to Feb. 1902, junior clerk; Feb. 1902 to Aug. 1, 1912, timekeeper, stenographer and storekeeper; Aug. 1, 1912, to Dec. 23, 1918, accountant, and from Mar. 2, 1914, during various absences of the late Secretary-Treasurer, acting Secretary-Treasurer.

Lorne C. Webster, President, Webster Steamship Co., and Agent, Nova Scotia Steel & Coal Co., Montreal, heretofore, Vice President, Quebec Ry., Light & Power Co., has been elected President, succeeding the late Sir Rodolphe Forget. Mr. and Mrs. Webster, left Montreal, early in March, for Old Point Comfort, Va.

St. Thomas Municipal Ry. The report of the St. Thomas, Ont., city auditor, for 1918, shows that there was a deficit of $11,1[illegible] on the operation of the city's electric railway for the year.

The Ottawa Electric Ry. has decided to appeal to the Supreme Court against the Board of Railway Commissioners decision given Feb. 10, and published in Canadian Railway and Marine World, for March, declining to to grant an increase of fares on its suburban lines.

Electric Railway Projects, Construction, Betterments, Etc.

Berlin and Northern Ry. Co.—The Ontario Legislature is being asked to change the name of this company to the Waterloo-Wellington Ry. Co., and to extend the time for the construction of the projected extension. The company was incorporated under the Ontario Companies Act, Dec. 7, 1901, with the title of the Berlin and Bridgeport Electric St. Ry., and its title was changed to the Berlin and Northern Ry. in 1912. The company has power to build a electric railway from Bridgeport, the terminal of its original line, to Elora and Fergus. (Feb., pg. 88.)

Hamilton St. Ry.—The City Engineer asked the Hamilton board of control recently for authority to spend $16,000 on repairs to the roadbed on King, Hirkimer, Wentworth and Margaret Streets, on the ground that the improvement of the street railway servico depended upon this work being done. The board decided Mar 20, to report to the city council that it had no funds at its disposal for this work.

London and Port Stanley Ry.—Plans for the erection of station buildings at St. Thomas and Port Stanley, Ont., at an estimated cost of $12,000 each, have been approved by the commissioners. The chairman of the commission is reported to have said that the buildings will be paid for out of surplus revenue, and that the work will be put in hand at once.

Montreal Tramways Co.—A press report states that the Tramways Commission has directed the opening of a line passing through Kelly St., and Poincare Ave., and that the property owners along the projected line have consented to pay their proportion of the cost of street paving.

Pemberton, B.C.—In connection with the proposed power developments of the West Kootenay Light and Power Co., a press report says: "What is perhaps more important to the company in aiding to arrive at a decision about the secondary extensions will be the amount of electricity which the governmenjt will require for irrigation pumping in connection with the development of the southern Okanagan lands. If considerable pumping is done and if the government goes ahead with an electric tram line from Petrolia, there is no doubt the power company will prepare immediately for the establishment of a north and south pole line."

Peterborough Radial Ry. The business of the Electric Power Co. Ltd., which owned the stock of the Peterborough Radial Ry., was taken over as from Mar. 1, 1916, by the Hydro Electric Power Commission of Ontario, under the provisions of an order in council, of the Ontario Government, dated May 5, and the Ontario Legislature in 1917 authorized the Peterborough City Council to take over the line, and its utilities commission to operate it under powers to be set out in a bylaw.

A recent press report refers to a proposed extension of the line on Park St., from Albert St. to Lansdowne St., and to a project for an extension from Peterborough to the summer resorts on the Kawartha Lakes. Both these matters are said to be under consideration. (May, 1917, pg. 203).

Saskatoon Municipal Ry.—We were officially advised recently in respect to the proposed extension to the line at a cost of $46,000, that the city council had not reached any definite decision as to what will be done. (March, pg. 143.)

St. Thomas Municipal Ry.—A citizen's committee after examining into the condition of this railway has recommended that the line should not be scrapped, as had been suggested, but that it be operated with one man cars and that about $8,000 be expended on putting the tracks and the overhead system in order. The matter is under consideration, together with the committee's suggestions as to the operation of the line.

Sudbury-Copper Cliff Suburban Electric Ry.—The Ontario Legislature is being asked to authorize the company to increase its capital stock from $250,000 to $500,000, and to sell the unissued ordinary shares at a discount, a price to be fixed by law. The company has built 7.9 miles of line and requires further capital for equipment and extensions.

Electric Railway Employes' Wages, Working Conditions, Etc.

Calgary Municipal Ry.—The Calgary, Alta., City Council is considering demands of its employes who are members of the street railway union for increased wages and better terms. The men ask for an 8 hour day, an increase to 65c an hour, or $1.35 over their former wage of $4.50 a day. For holidays double time is asked, and the request made that all men who were on the service before Jan., 1919, be placed on the maximum of 65c. Another clause demands that all men operating work cars of all kinds shall become members of the union within 60 days of joining the department.

London and Port Stanley Ry.—At a meeting of the London Railway Commission, Mar. 12, it was decided to grant the employes an 8 hour day, and an increase of wages to go into effect May 1. The increases of pay will give the following schedule: To trainmen, 40c an hour for the first year of service, and 43c an hour for the second year; motormen and conductors will receive 43c an hour for the first year, 44c an hour for the second year, and 45c an hour for the third year; an additional 10c an hour will be paid for all work done over 10 hours a wages paid to motormen and conductors was 23c an hour, and the present rates of wages are 30c, 33c and 35c an hour for first, second and third year men respectively.

Transportation of Postal Mail.—At the opening of the hearing by the Board of Railway Commissioners at Ottawa, on Mar. 18, of the steam railways companies' application for increased compensation for carrying mail, which was referred to the board by the Dominion Government, Acton Burrows, Honorary Secretary-Treasurer, Canadian Electric Railway Association, who appeared on behalf of 11 electric railway companies carrying mails, said that they had no desire to interject themselves into that hearing, but he asked that any of the companies he represented might, on making application to the board, have their cases considered, and have hearings, if such should be considered necessary. This request was acquiesced in, and steps are being taken to represent the electric railway companies' cases to the board at an early date.

London Street Railway's Sunday Operation Outside City.

Sir Adam Beck has introduced in the Ontario Legislature a bill to amend The Ontario Railway Act as follows:

"1. Subsec. 2 of sec. 234 of The Ontario Railway Act, as amended by sec. 40 of The Statute Law Amendment Act, 1914, and by sec. 31 of The Statute Law Amendment Act, 1917, is amended by adding at the end thereof the following: 'Or, subject to subsec. 2a, to the London St. Ry. Co., in the operation of that part of its existing line lying in the Township of Westminster, west of the west limit of the City of London.'

"2. The said sec. 234 is amenjded by adding thereto the following subsection: '2a. Nothing in subsec. 2 of this section shall entitle the London St. Ry. Co. to run any of their cars on any Sunday in the Township of Westminster, unless and until the said company has received permission from the Council of the Corporation of the City of London and from the Public Utilities Commission of the City of London by bylaws to run their cars on Sunday, and then only and usbject to such terms and conditions as may be contained in such bylaws, and unless and until the said company has also entered into an agreement or agreements with the said corporation, and the said the Public Utilities Commission of the City of London, to observe the terms and conditions of the bylaws.' "

When the question of running street cars in London on Sundays was first considered some years ago very strong objection was made by a number of people to the cars being operated to Springbank, so the latter service was not included in the provision permitting the operation of cars in the city on Sundays. The desire for Sunday cars to Springbank, has, however, been growing to such an extent that it was taken up with the London City Council last year, by Sir Adam Beck, with a view to having such a service provided in connection with the Byron Sanitorium, which is across the river from Springbank Park, and the bill above quoted is apparently the next step in the process.

The British Columbia Electric Railway and its Victoria Franchise.

In connection with the negotiations between the B.C.E. Ry. and the Victoria, City Council for a new franchise, one of the questions arising has been that of the jitney traffic. The company desires to have inserted as one of the conditions that the city shall prohibit the operations of a jitney on routes directly in competition with the company's cars. A section in a city bill now before the Legislature giving the council power to prohibit jitney traffic was refused consideration by the private bills committee of the legislature, but, on Mar. 14, the council, after considerable discussion decided by a vote of five to three to retain the section in the bill.

The franchise regulations, which cover the granting of a 6c fare, fixing the charge for electric light, and other matters, were still pending, Mar. 20.

An Auto Bus Line to be operated on the Toronto-Hamilton highway, has been authorized by Toronto Police Commissioners.

Public Utilities Commission for British Columbia.

The bill providing for the formation of a public utilities commission for British Columbia has been drafted, but is meeting with considerable opposition in various quarters. While it would give the commission power over rates, whether under franchises or not, the public utility companies are objecting to it on the ground that much wider powers have been given, but on the contrary, no safeguard provided for the companies.

A deputation from the chief utilities in the province waited upon the B.C. Government at Victoria in January and endeavored to have a clause inserted, providing that a reasonable return on the investment should be allowed. While no reply had been given to the date of writing, it is reported that the phrase "that rates shall not be unjust or unreasonable," is to be defined, and that just rates shall not be either insufficient or excessive.

The companies endeavored to have the commission reduced in membership from three to one, and lodged a protest against the veto power of the governor in council. The clause as drafted provided that only appeals on questions of law should go to the appeal court, and appeals on evidence of fact should go to the lieutenant-governor in council, which, in addition, had power to carry or rescind any decision of the commission.

Clause 90 of the bill is as follows: "If the lieutenant-governor in council considers it advisable in the public interest, he may, from time to time, of his own motion, and without any application or petition, vary or rescind any decision, order, rule or regulation made by the commission, whether the decision, order, rule or regulation is general or limited in its scope and application, or is made inter partes or otherwise. Every order made by the lieutenant-governor in council, pursuant to this section, shall be binding on the commission and on all parties and shall for all purposes be deemed to be an order duly made by the commission under this act."

Vancouver newspapers have protested vigorously against this part of the measure, evidently deeming that it would place too much power in the hands of one party. "Why cannot the utilities commission be made as independent of political control and interference with its decisions as the Board of Railway Commissioners of Canada?" said the Daily Province.

The preliminary draft of the bill was issued Mar. 6, but up to Mar. 17th had not been introduced in the legislature.

Among the bills introduced in the B.C. Legislature, Mar. 20, was one providing for the franchise of a public utilities commission. A press dispatch states that the clause giving the Lieut.-Governor in council power to vary, reverse or annul any decision of the commission has been modified from that in the original draft, and that other clauses of which there was some criticism have also been varied.

Calgary Municipal Ry.—Referring to the reported deficit of $34,000 in the operation of this line for 1918, we are advised that there are several adjustments to be made which will reduce this and which, as reported, included $16,000 spent on Bowness Park; $2,000 on reconstruction of cars and amounts chargeable to depreciation as well as other items.

Proposed Purchase of Ottawa Electric Railway.

The terms of the city of Ottawa's bill, before the Ontario Legislature respecting the proposed purchase of the Ottawa Electric Ry., were approved by the city council Mar. 17. The bill gives the city power to enter into an agreement with the company for the purchase of its electric railway, subject to the approval of the ratepayers. The lines, if taken over, are to be put under the management of the city's hydro electric commission, the members of which are to be paid salaries to be fixed by the council. The value of the line and the property to be taken over is to be fixed by arbitration, and the money to pay for the same is to be raised by a loan. The line is to be taken over upon the expiry of the franchise in 1923.

The city is also applying to the Dominion Parliament for authority to acquire the company's lines, franchises, etc., and authorizing it to "construct, maintain and equip an electric street railway in Ottawa, and by way of the Interprovincial Bridge to Main St., Hull, Que.

The company offers to sell the railway and all its holdings for $6,500,000. The city has appointed the following to report on the respective values: Financial, T. Bradshaw, Finance Commissioner, Toronto; overhead wires, J. E. Browne, General Manager, Ottawa Hydro Electric Commission; water lots, power houses, generators, rolling stock, etc., R. S. Kelsch, C. E., Montreal; tracks, A. F. Macallum, City Works Commissioner, Ottawa.

T. Bradshaw, Finance Commissioner of Toronto, has written the Mayor of Ottawa expressing grave doubts as to the wisdom of the city giving further consideration to the present offer. He says that if the citizens desire to acquire the enterprise their best interest will be served by waiting until 1923, when the franchise expires, and then acting in the terms of the existing agreement between the city and the company. One of the main reasons for this suggested delay is that the raising of a large loan would be necessary and as interest rates are falling the longer the city can delay the floating of a loan the less onerous the interest and other debt charges will be.

Montreal Tramways & Power Co's Bond Issue.

An issue of $7,300,000 of 6½% 5-year secured gold bonds of the Montreal Tramways & Power Co. was placed on the market recently by a syndicate of underwriters at par and accrued interest. The first interest coupon is for two months and matures May 1. Thereafter the interest coupons will mature half yearly on Nov. 1 and May 1, but the last coupon will be for four months interest, from Nov. 1, 1923, to Mar. 1, 1924, when the principal will become due. The bonds will be issued in denominations of $100, $500 and $1,000.

The M. T. & P. Co., which controls by stock ownership the Montreal Tramways Co., has pledged to the trustee the following as security for the new issue:—$7,000,000 fully paid 5% debenture stock of Montreal Tramways Co., and $2,500,000 5-year 6% gold bonds of Montreal Tramways & Power Co., which latter bonds are secured by a trust deed pledging $2,100,000 fully paid ordinary stock of Montreal Tramways Co. This places the control of the Montreal Tramways Co. in the hands of the trustee (the Montreal Trust Co.) as security for the holders of these bonds, and a clause in the trust deed provides that in the case of the M. T. Co.'s capital being increased, sufficient of the additional stock shall be pledged with the trustee to maintain absolute control of the company in its hands.

Under the Montreal Tramways Co.'s contract with the City of Montreal, as ratified by the Quebec Legislature in 1918, there is appropriated an annual return to the company of $2,177,177.10, being 6% on $36,286,285, which is the capital value of its assets as determined by the contract. The annual sum of $2,177,177.10 is more than sufficient to pay all the Montreal Tramways Co.'s fixed charges on its outstanding bonds and debenture stock, and a dividend of 10% on its common stock.

The issue sold rapidly and is reported to have been oversubscribed.

The Lambeth Motor Transport Co. has been incorporated under the Ontario Companies Act, with authorized capital of $10,000, and offices at Lambeth, Ont., to operate motor busses and trucks for carrying passengers, freight, etc., and generally to act as a common carrier. The company may not however "operate or control any public utility or municipal franchise within the meaning of part 12 of the Ontario Companies Act until authorized to do so by supplementary letters patent. The provisional directors are:—R. Piper, T. H. Hamlyn, Rev. J. Holmes, F. N. Soper, and W. K. Coldicott, Lambeth, Ont. The company was expected to have started operations Mar. 8, arrangements having, according to a press report, been made for five round trips a day, and if the business warranted, a couple of trips at night. The bus has a seating capacity of 34. An application has been made to London City Council for a grant of $500 towards the project, and an agitation has been instituted in Lambeth to ask the Ontario Government to pave the highway from Lambeth to London, 6 miles, in the event of that piece of road not forming part of the projected provincial highway to Windsor. F. N. Soper, is the prime mover in the company.

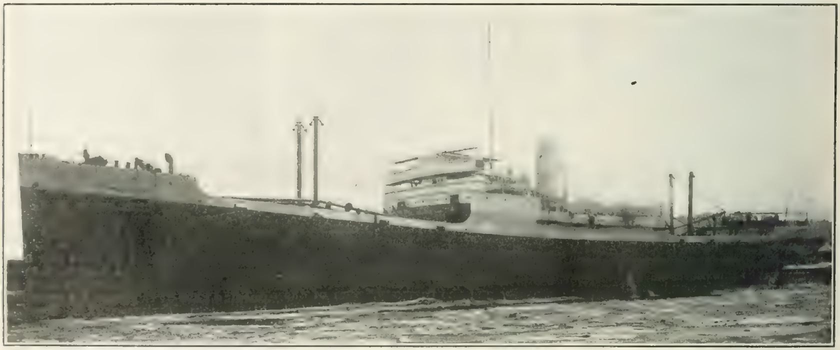
Car Line Routing in Toronto.—An application was made to the Ontario Railway and Municipal Board recently, to order the Toronto Ry. to restore the car service on McCaul St., between Queen and College Sts., to the same as it was before the necessary rerouting of cars over the Bloos St. viaduct. The board therefore requested the company to divert its Harboard St. cars, on Sundays, until further notice, east on College St., south on McCaul St., east on Queen St., south on York St., east on Front St., north on Bay St., west on Queen St., west on Queen St., north on McCaul St., and west on College St., to Spadina Ave., then to assume the regular route north and west, it being the opinion that the Harbord cars would serve more people on Sundays going to the station, and to the foot of Bay St by this diversion, and at the same time would accommodate those desiring to attend the churches on McCaul St. The board announced that it could not see its way clear to order any additional service on McCaul St. during week days, as the locality seems to be very well served.

"Conductor," ventured the stranger in New York. "Well, sir?" "Does this car pass anywhere near the corner of 42d Street and Broadway?" "Frequently, sir. We ran right over that corner about sixty blocks back."

Marine Department

8,100 ton d.w. Steel Cargo Steamships for Canadian Government Merchant Marine, Ltd.

Of the 45 steel cargo steamships which the Marine Department has ordered, to be operated by Canadian Government Merchant Marine Ltd., 16 are to be of 8,100 tons d.w. each, representing a total dead weight carrying capacity of nearly 130,000 gross tons. These orders have been placed as follows: Canadian Vickers Ltd., Montreal, 6; J. Coughlan & Sons, Vancouver, 4; Halifax Shipyards Ltd., Halifax, N.S., 2; Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., 2; Victoria Machinery Depot Ltd., Victoria, B.C., 2; Canadian Vickers Ltd. launched the first of these steamships, Canadian Pioneer, at Montreal, Dec. 3, 1918. She left there Dec. 6, in tow, for Quebec, where she has been completed, and is ready for operation on the opening of navigation. Canadian Vickers Ltd. laid keels for three more on Nov. 30 and Dec. 2, 1918, respectively. Halifax Shipyards Ltd., laid the keel for one, Feb. 24. The principal dimensions of these vessels are as follows:



Canadian Government Merchant Marine Ltd. s.s. Canadian Pioneer, 8,100 tons d.w., in Quebec Harbor.

Length between perpendiculars	400 ft. 0 in.
Breadth moulded	52 ft. 0 in.
Depth moulded	31 ft. 0 in.
Draft loaded	25 ft. 1 in.
Deadweight carrying capacity, about	8,100 tons.
Speed on trial	12 knots
Complement officers and men	45

The vessels are of the two deck type, with poop, bridge and forecastle, straight stem, eliptical stern and 6 watertight bulkheads. A double bottom, 43 in. deep, with solid floors on every third frame, extends from end to end of vessel with the usual facilities for filling and emptying. The vessels are framed on the transverse system, with a 26 in. frame spacing, bulb angle being used for both frames and beams. To facilitate stowage of cargo, side stringers have been dispensed with, and the outside plating correspondingly increased. All the decks are plated with steel . On the poop and in way of accommodation, the decks are sheathed with British Columbia fir.

The cargo hatches have been arranged for expeditiously handling cargoes and are of the following dimensions:— No. 1, 32 ft, 6 in. x 26 ft.; no. 2, 34 ft., 8 in. x 26 ft.; no. 4, 34 ft., 8 in. x 26 ft.; no. 5, 30 ft., 4 in. x 26 ft.; hatch on bridge deck, 18 ft. x 10 ft. Widely spaced pillars in cargo holds have been adopted to reduce to the minimum obstruction in handling cargoes. For the working of the hatches, 4 derrick posts are provided; 2 between the forward pair and 2 between the after pair of hatches, with 2 derricks to each post. The cross bunker hatch, on bridge back, is operated by 2 derrick posts, having ventilator tops and derrick to each post. All the derricks have a 5 ton lifting capacity. Ten cargo winches are fitted on board, 2 each to the 4 main cargo hatches, 1 on bridge and 1 on poop deck. These are of Clark-Chapman type as manufactured by the builders, having cylinders 7 in. diameter by 12 in. srtoke.

The vessel has one steel lower mast, with B.C. fir lowering top mast, to suit the Manchester Canal bridges, fitted about amidships, carrying the wireless aerials and lifting leads for derrick posts.

The anchor equipment is as required by Lloyds', viz.; 2 bower anchors, 60 cwt. stockless; 1 bower anchor, 50½ cwt. stockless; 1 stream anchor, 16¼ cwt. ex-stock; 1 kedge anchor, 7 cwt., ex-stock; 210 fathoms 2 3-16 in. stud link chain cable, together with stream chain, manilla hawsers and warps, all as required by Lloyds'.

The steering gear is located aft, under the poop. The gear is controlled from the wheel house on flying bridge, by telemotor, and is of the steam and hand patent guided segment type, with cylinders 9 in. diameter by 12 in. stroke as manufactured by the builders.

The vessel is lighted throughout by electric light, the dynamo having a capacity of 10 k.w. The engine will run at 350 revolutions a minute, with steam at 100 lbs. pressure, and is of the single cylinder, vertical, enclosed type, with cylinder 8 in. diameter by 6 in. stroke. The dynamo, which is coupled directly to the engine shaft, is of the 4 pole type, compound wound. The wiring is on the double system throughout, being lead covered, in the accommodation, and lead covered and armored, in the machinery and cargo spaces. The lights are grouped under the following circuits: 1 navigation light; 2 wireless telegraphy; 3 machinery spaces; 4 accommodation and store rooms; 5 cargo spaces.

In accordance with the requirements of the Canadian Board of Steamship Inspection, the following life saving applications are provided: 2 lifeboats 28 ft. x 8½ ft. x 3½ ft.; 2 dinghys 18 ft. x 5½ x 2½ ft.; 4 life rafts; with life belts and life buoys as required by the board.

The seamen's and firemen's accommodation is situated aft under the poop, in compartments fitted out for 2 men. Separate mess rooms and lavatories have been provided, and all requirements, such as lighting, ventilation and sanitation are in conformity with the British Board of Trade regulations, governing the survey of masters' and crew spaces. The hospital is placed under the forecastle, together with carpenters shop, paint room and lamproom. The officers' and engineers' accommodation is at the fore end of bridge deck, and includes one cabin for each officer, dining saloon, pantry, baths, w.c.'s and stores. The petty officers' cabins, etc., and mess room, are at the after end of the officers' accommodation on bridge deck. The captain's cabin is on the upper bridge, with office adjoining, the latter having internal communication with the chart room forward, and with the wireless office and cabin aft, all on upper bridge. An internal stairway communicates with the officers' accommodation below. The cold storage chambers and plant are on the upper deck, below the after end of bridge deck. Two fresh water tanks, each of about 2,500 gals. capacity are provided. They are connected to a distiller capable of distilling 1,000 gals. in 24 hours.

Engines, Boilers, etc.—The vessel is propelled by one set of triple expansion, surface condensing engines, with cylinders 27 x 44 x 73 x 48 in. stroke. The air pump with a diameter of 24 x 24 in. stroke; the two feed pumps 4 in. diar. by 24 in. stroke, and the 2 bilge pumps 4 in. diameter by 4 in. stroke, are all worked from the main engines. The main circulating pump is of the centrifugal type, and is driven by an engine having a 6½ in. diar. cylinder by 6 in. stroke. The reversing engine is made reversible, the gear being of the all round type and arranged for steam and hand power. The general donkey and feeed donkey pumps are of the vertical double acting type, having steam cylinder 9½ in. diameter, water cylinder 7 in. diameter and a stroke of 18 in. The ballast donkey pump is also of the vertical double acting type, having steam cylinder 10½ in. diameter, water cylinder 14 in. diameter and a stroke of 24 in.

An evaporator is provided capable of supplying 25 tons of fresh water per 24 hours. The vessel is provided with filter, feed water heater, winch condenser, telegraphs, etc. The contraflo system of condensing and feed heating is being fitted to all vessels of this class. Steam is supplied by 3 single ended Scotch boilers, working under Howden's system of forced draft, with diameters of 15½ ft. x 11½ ft. long and having a working pressure of 180 lbs. a square inch. Air is supplied by a fan, driven by 1 single cylinder open type engine, 7½ in. diameter by 5 in. stroke.

The machinery on completion will be subjected to a 4 hour trial in dock, after which an official 6 hour full speed trial, with the vessel fully loaded, will be run. The vessels are being built to meet the requirements of Lloyd's 100 A1 class, special survey, and also under the direction of the Marine Department constructors.

Protection Asked by Auxiliary Marine Equipment Manufacturers.

The following memorial has been sent to the Ministers of Finance and Marine at Ottawa by some 30 manufacturers:—

The Canadian manufacturers of auxiliary marine equipment humbly submit:—That the order in council of Oct. 31, 1916, which grants a drawback, not exceeding 99%, on all material used in the construction of ships, is unjust and unfair to them and detrimental in its consequences to the country at large. Your petitioners do not ask for a modification of the Customs Tariff in force since 1907, but simply for the repeal of the above mentioned order in council, or at least for its modification to such an extent as to grant them an adequate protection to which they are entitled, and this without injuring in any way the shipbuilding industry.

By the Customs Tariff, 1907, item 470, schedule A, all material entering into the construction of ships, of a class or kind made in Canada, are subject to duty. The effect of the above order in council is to remove such duty and the Canadian manufacturers of marine equipment are left without protection. The government seems to have recognized this injustice and unfairness caused to your petitioners, for in Mar., 1918, another order in council was passed, extending to them the privilege of a drawback on imported raw material. However, this last order in council has proved to be unpractical and inoperative in the great majority of cases, and this has been admitted by the officers of the Department of Customs. Moreover, it places the manufacturer at the mercy of the shipbuilder in the matter concerning the drawback, stating that this can be obtained only "with the consent of the shipbuilder". Instances have occurred where the shipbuilder has demanded that the drawback on the manufacturer's raw material be paid to him and not allowed to the manufacturer.

Your petitioners beg to lay before you the following considerations as to the injustice and unfairness resulting from such order in council:—

With possibly one or two exceptions, all the manufacturers interested in this matter established their business before 1916, with the firm belief that the general protective policy of the Canadian Government, as laid down by both Conservative and Liberal administrations, was fixed. With hardly any exception, every interested manufacturer, in anticipation of an increased demand for marine equipment, has incurred expenditures for better facilities, the aggregate extra investment representing a large amount. Whereas previous to 1915 some specialties may have been made abroad that were superior to those manufactured in Canada, under a protective tariff this kind of industry has made such progress in Canada, that now there is not a single item that is not being produced in some Canadian factory, of a design, quality and efficiency in every respect equal to the best produced anywhere in the world.

American capital and American influence is strong in many shipyards in Canada, and preference is given to American products even where the identical material of equal quality is made in Canada. The cost of manufacturing machinery in Canada is from 15% to 20% in excess of the cost of making the same article in the United States, and this excess is due to the cost of raw material. Comparative cost sheets have already been submitted to the Minister of Finance by one of the firms interested. The raw material cannot be free in spite of the drawback offered. For instance, pig iron for foundry purposes is produced in Canada under tariff protection, and owing to the shortage of foreign supply, must be used. This applies to other forms of iron and steel.

While marine engine and boiler builders have been busy, this has been largely due to the fact that these items have been on the list of prohibited exports promulgated by the United States, and also by Great Britain. The same does not apply to pumps and other auxiliary marine equipment, and when peace conditions obtain, every branch of marine equipment will be affected equally.

Under the operation of the existing regulations, and because the Customs Department is not actually interested in checking the foreign prices, the dumping clause is virtually of no effect, as without this help of the department, it is practically impossible to check prices, which are frequently below those quoted by American makers to American shipyards.

Under existing conditions, the manufacture of marine equipment is unprofitable. Many firms now prepared to supply the Canadian demand must retire from the marine field. Every single manufacturer has contributed to the Victory Loans, with the understanding that the proceeds would be spent in Canada. Would it be fair to them to use their subscription in the purchase of auxiliary marine equipment from their foreign competitors when the same can be bought in Canada? There appears to be no special reason why the manufacturers of marine equipment should be specially singled out from all the industries of Canada, and deprived of the benefits which every other trade enjoys.

The detrimental effect and its consequences to the country at large can easily be seen. The same adequate protection must be given to manufacturers of marine equipment, as is given to any other class of manufacturers. Otherwise they will be forced to abandon this field of business, and the unavoidable consequence will be the closing of their factories and the dismissal of a great many persons who will be without employment, at a time when the labor question has become a problem of so great importance to our country. Instead of helping to solve this problem by giving employment to many it will increase its difficulties of adjustment. Your petitioners are tax payers to the country. If their industry is ruined, the revenues of Canada will evidently suffer by it.

Not only the manufacturers, but also the great majority of their employes, have contributed their full share to the Victory Loans. It has been represented to all these men (in the aggregate thousands) that the proceeds of recent loans would be spent in Canada. What explanation shall your petitioners give them on the part of the government if their factories are closed and they are left without employment, after all the advertisement announcing to the public the increased shipbuilding in Canada.

An adequate protection granted to the manufacturer of marine equipment will not increase the cost of shipbuilding to the government, and it will not affect materially nor unjustly the profits made by the shipbuilder. Some purely Canadian shipbuilding firms try to place all business in Canada. Why should not every one of them do the same? It is a fact that several of the largest, most successful yards purchase all material in Canada that can be made here. Their contract prices have not been affected by this.

If the duty is restored on such marine equipment as is already being made in Canada there would be no increase in the price per ton to the government on ships being built. It has been the experience of a number of Canadian manufacturers that they are asked for prices before tenders are made to the Marine Department, and that contracts have been arranged on the basis of these prices. Subsequently the orders for the raw material in question have been placed in the United States. The Canadian Government does not benefit by any saving effected by the shipbuilder.

Your petitioners humbly submit that by passing the order in council of Oct. 31, 1917, there was no intention to destroy the Canadian marine equipment industry, that in view of the above considerations, the government should see the injustice done to the undersigned manufacturers, and also to a great many people vitally interested in this kind of industry, and should also see the detrimental consequences of the maintenance of such order in council, and they pray for the repeal of same, or at least for its amendment and change to such an extent as to give an adequate protection to the Canadian marine manufacturers, which, they humbly submit, would in no way injure the shipbuilding industry in Canada.

Marine Engineers Wage Scale Classification for Great Lakes District.

The National Association of Marine Engineers of Canada have sent to owners of steamboats operating in the Great Lakes district printed copies of a minimum wages scale and classification for steamboats operating in that district which is as follows:—

Adopted by the Great Lakes Executive Committee representing Port Arthur, Sault Ste. Marie, Collingwood, Owen Sound, Midland, Toronto, Kingston, Sarnia and St. Catharines councils, Jan. 10, 1919, and approved by the National Executive Committee. This card to be effective during the season of 1919, or until revised or amended by the Great Lakes Executive Committee.

Conditions of Employment.—All engineers shall be furnished 1st class transportation, including berth and meals, from the lake ports nearest their homes to the steamboats on which they are to be employed, when going to fit out, and after the steamboats go out of commission, 1st class transportation, including berth and meals, shall be furnished to the lake port nearest the homes of the engineers.

In all references to tonnage to be construed as gross tons. In all reference to monthly conditions, 30 days to constitute a month.

All ratings in all classes to include board and accommodation, excepting passenger ferry steamboats.

Overtime at the rate of 75c an hour for all time over 12 hours shall be paid engineers on boats carrying only one engineer.

Any special conditions of employment not covered by the provisions of this wage scale to be submitted to the Great Lakes Executive Committee through the Business Manager for adjustment.

Passenger Steamboats.

Class 1—All passenger steamboats of 3,000 tons or over: chief engineer, $2,400 a season; second engineer, $180 a month.

Class 2A—All passenger steamboats of 1,250 tons, and under 3,000 tons, running 6 months or over: chief engineer, $2,100 a season; second engineer, $150 a month.

Class 2B—All passenger steamboats of 1,250 tons, and under 3,000 tons, running less than 6 months: chief engineer, $1,900 a season; second engineer, $150 a month.

Class 3—All lake passenger steamboats under 1,250 tons and all passenger steamboats confined to river service requiring second class engineer: chief engineer, $1,650 a season; second engineer, $125 a month.

Class 4—All passenger steamboats from 45 n.h.p. to 25 n.h.p.: chief engineer, $150 a month; second engineer, $110 a month.

Class 5—All passenger steamboats under 25 n.h.p.: chief engineer, $125 a month.

Freight Steamboats.

Class 1—All freight steamboats of 5,000 tons or over: chief engineer, $2,400 a season; second engineer, $180 a month.

Class 2—All freight steamboats of 3,000 tons, and under 5,000 tons: chief engineer, $2,100 a season; second engineer, $150 a month.

Class 3—All water bottom freight steamboats under 3,000 tons, requiring second class engineer: chief engineer, $1,900 a season; second engineer, $130 a month.

Class 4—All freight steamboats not included in classes 1, 2 and 3 and requiring second class engineer: chief engineer, $1,800 a season; second engineer, $120 a month.

Class 5—All freight steamboats not otherwise classified and requiring third class engineer: chief engineer, $155 a month; second engineer, $110 a month.

Tug Steamboats.

Class 1—All tug steamboats requiring second class engineer: chief engineer, $165 a month; second engineer, $130 a month.

Class 2—All tug steamboats from 75 n.h.p. to 50 n.h.p.: chief engineer, $150 a month; second engineer, $125 a month.

Class 3—All tug steamboats from 50 n.h.p. to 25 n.h.p., and all h.p. tugs over 15 n.h.p.: chief engineer, $145 a month; second engineer, $115 a month.

Class 4—All tug steamboats under 25 n.h.p. and not embraced in class 3: chief engineer, $130 a month; second engineer, $105 a month.

Tugs operating exclusively in Welland Canal (dredge tug excepted): engineer, $140 a month. Overtime clause not to apply to this class.

In addition to the foregoing, all engineers of tug steamboats operating from the harbors of Port Arthur, Fort William and Sault Ste. Marie shall be paid 10% over the rates in the above four classes.

Ferry Steamboats.

All passenger ferry steamboats operating from Sault Ste. Marie, Ont., and requiring second class engineer: chief engineer, $170 a month; second engineer, $160 a month. For season of not less than 10 months.

All other passenger ferry steamboats requiring second class engineer: chief engineer, $160 a month. Minimum for season not to be less than $900.

All passenger ferry steamboats requiring third class engineer: chief engineer, $135 a month.

Canadian Vessels' Fate in Russia.—There is considerable speculation as to what has become of Canadian steamships sent to Archangel in the early stages of the war. The Earl Grey is reported sunk. The Minto and the J. D. Hazen were both sold to the Russian Government, but whether they were paid for is another question. It is stated the Bruce will return to go on her old route in the Newfoundland-Sydney service. It is said she was sent to Glasgow for repairs previous to the Russian debacle, and thus escaped falling into the hands of the revolutionists.

Bishop Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with $1,500,000 authorized capital and office at Montreal, to own and operate steam and other vessels and other navigation facilities, and to carry on a general navigation and transportation business.

Cost of Vessels to Be Built By United States Government.

Washington, D.C., from dispatch, Mar. 24.—Readjustment of shipbuilding costs to peace time production is expected by experts of the U.S. Shipping Board to establish a basic price in the neighborhood of $150 a ton for future contracts let to U.S. yards. Recent conferences here between General Manager Piez of the Emergency Fleet Corporation and representatives of Pacific coast builders are said to have developed virtual unanimity of opinion that high cost methods of production, which prevailed at a time when the national emergency demanded speed in production above everything else, should be eliminated as quickly as ness practice. Prospects of keen compossible to obtain a return to sound business practice. Prospects of keen competition in world trade, the western men were told, made it necessary to hold construction costs to a figure which would permit payment of dividends from competitive rates which would have to be established to get business.

Cancelled contracts will be replaced with new orders when the ways are empty, but the prices are expected to be considerably below those prevailing during the war, which sometimes ran as high as $450 a ton. Government assumption of labor and material hazards also will be abandoned. During hostilities, the Shipping Board adopted a policy of absorbing increased costs. Increases in wages and overtime pay alone amounted operators will assume the risk of a rise in the price of material or of demands for more pay, the government withdrawing its supervision over such questions.

Readjustment of production costs is expected to be facilitated by new prices for steel, though the reduction scarcely will affect that part of the shipbuilding programme now under construction. Most of the steel ships now being built were contracted for at a lump sum, but the Emergency Fleet Corporation is expected to benefit in the remaining contracts based on the cost plus system. It was said the Shipping Board regarded the cut in prices as likely to encourage more shipbuilding.

Government Vessel Insurance. — A Washington, D.C., press dispatch states that plans for the establishment of a Government agency in the U.S. for the writing of marine insurance, on the same lines as during the war, are being formulated by U.S. Shipping Board officials, it being stated that private companies' rates are too high. It has been suggested that the Dominion Government should adopt a similar course, with the view of meeting the excessive rate charged by insurance companies to cover navigation risks on the St. Lawrence.

The Shipmasters' Association, Halifax. N.S., is, we are advised, in good working order and about 45 new members have been admitted recently. It is the association's intention to be ready to furnish masters, mates and coast pilots at any time when requested. The association has a number of men who are good pilots in Canadian and Newfoundland waters and on the United States sea coast. Capt. Neil Hall, Port Warden, at Halifax, is Secretary.

"I'd like to know one thing, pop." "What is that, son?" "Do they pay the submarine crews from the sinking fund?" —Baltimore American.

Farrar Transportation Co's Claim for Insurance on s.s. Meaford.

The Farrar Transportation Co., Ltd., Toronto, issued the following circular to its shareholders recently:—There may be some of our shareholders who are not thoroughly conversant with the existing conditions relative to the apparently abnormal delay in the collection of the insurance money on the s.s. Meaford, the winding up of our company and the final cash distribution to the shareholders, and your executive committee beg to place the following information before you.

The Meaford went overseas in the fall of 1916 to be engaged in trading between the United Kingdom and Mediterranean ports, as permitted by the British Admiralty. In a circular that was mailed to the shareholders July 2, 1918, we advised you that on or about March 27, 1918, the Meaford was lost while on voyage from Gibraltar to Belfast, Ireland. The circumstances under which the Meaford disappeared, leaving no directly ascertainable cause of the disaster, have resulted in an extended delay in collecting the insurance. The chief difficulty has been that, owing to the existing conditions in Europe, business of this kind has been somewhat paralyzed and by reason of the Meaford being protected by two entirely different sets of insurance underwriters, one set covering the ocean marine insurance and the other set covering the war risk insurance, you can readily understand the number of parties who have to be conferred with and consulted to finally determine which set of insurance underwriters will pay us for the Meaford's loss. As the interests involved are large, it is a question for the two groups of underwriters to settle among themselves and this decision has been finally left to a board of arbitrators. This is in accordance with the custom which has been established in English insurance circles. The arbitrators usually decide the proportionate probabilities of the vessel being lost by marine or war risk and the respective underwriters agree to pay their proportion in accordance with the arbitrators' decision, say, 50% would be recoverable under marine policies and the other 50% under war risk policies, or it might be 25% and 75%, according to the view which the arbitrators take the facts of the case.

There has been considerable delay in the correspondence between the numerous interested parties in getting an acceptable arbitration agreement drawn up and procedure to be adopted agreed upon by all parties concerned. The form of agreement upon which the arbitration will take place has been prepared by our London legal advisers and has already been accepted by the solicitors on behalf of the marine risk underwriters and is now in the hands of the solicitors acting for the war risk group.

It is a source of regret to your directors that the circumstances of the Meaford's disappearance were such that we have not been able to obtain the customary settlement from the underwriters, which would have given no difficulty had we possessed a clear proof of loss by war risk. We need hardly add that this all important matter of securing a satisfactory settlement is receiving our unremitting attention, and everything possible has been and is being done to hurry the final adjustment of the insurance that will be the most advantageous to our shareholders.

Referring to the ultimate insurance settlement, we would ask you not to feel at all uneasy. The worst that can happen is that we may not have the use of the funds for some time yet. We would draw to your notice that while the Meaford was lost the last of March, 1918, she was not posted missing by Lloyd's, her principal underwriters, until June 18, and officially acknowledged lost by Lloyd's one month later. We also wish to draw your attention to the fact that no formal action regarding insurance claim could be taken by us until the steamer was posted missing, and no action was taken by the underwriters until July, when the vessel was officially acknowledged lost, hence our claim for the insurance has only had the underwriters' consideration for approximately six months.

Bill to Place Coast and Inland Water Vessels Under Board of Railway Commisioners.

J. E. Armstrong, M.P., of East Lambton, Ont., introduced in the House of Commons recently, a similar bill to those he has introduced in previous years and which were not passed, in part as follows:—

1.—Subsection 1 of section 30 of the Railway Act, Revised Statutes of Canada, 1906, chapt. 37, is amended by inserting the following paragraphs immediately after paragraph (g):—

"(ga) With respect to any privilege or concession given by any company or express company or by any person owning or controlling any such steamboat or vessel as is in the next paragraph mentioned, and where any privilege or concession is given by any such person or by any company or express company to any person or class of business or in any part of Canada, the board may order that such privilege or concession be discontinued or modified or granted to any other person or class of business, or in any other part of Canada, either the same or in a modified form.

"(gb) With respect to the traffic accommodation, classification of freight, traffic agreements, tolls and tariffs to be furnished, made, entered into and charged in connection with and by steamboats, and other vessels engaged on a regular route carrying passengers or freight or both from one port or place outside of Canada and with respect to the places along the line of route where such steamboats and vessels shall call for traffic, the time of call and duration of stay."

2.—All tariffs of tolls, tariffs, agreements, and classifications of freight charged, entered into or adopted in connection with any steamboat or vessel mentioned in paragraph (gb) of this act shall be submitted to the board.

In introducing the bill Mr. Armstrong said:—

This bill is for the purpose of compelling the boats on our inland waters and coastwise trade to come under the control of the Board of Railway Commissioners. At present the only boats that are under the control of that commission are those that are connected with the large railway corporations in our country. They are compelled to file their rates, tolls, tariff grievances, with the board, while the other 4,500 boats—because there are 4,500 on the Canadian Register—are allowed to charge whatever rates they please, call or not at any dock or port as they please, and are a law unto themselves. When we take into consideration the fact that the people of Canada have spent nearly $350,000,000 in deepening our waterways, buoying and lighting our harbors and rivers, building our docks, piers and canals throughout the country, and then find themselves without any control so far as government control is concerned, we cannot help realizing that we are placed in a somewhat humiliating position. This is, however, practically the only public utility in Canada that is not under some form of government control, and Canada is practically the only country in the world that has not absolute control over her shipping on inland waters and coastal trade. I hope, when this matter comes before the house, members will give it every consideration and that it will become law at the earliest possible date. I understand that a bill for the consolidation of the Railway Act has already been introduced into the Senate, and I hope it will come before the house in the near future. If it does, I trust I shall be allowed the privilege of placing an amendment in that bill containing the principles contained in this bill which I have now laid before the house.

Naval Service Vessels Sold.

The Naval Service Department has sold to the Anderson Co., of New York and Montreal, 60 steam trawlers, and some 80 wooden steam drifters, which were built in Canada during the war, for the British Government. The Anderson Co. is proceeding to dispose of these.

Amongst other vessels which the Department has disposed of, are seven of the type, which were known, during the war, by the designation P.V. followed by a number, from 1 to 7 inclusive. These have been sold to Hayes and Anderton, 50 Broad St., New York, who intend to use them in connection with their fishing operations, in addition to their present fishing fleet, which is said to be the largest on the Atlantic coast engaged in the Menhaden fishing industry. These vessels will bring their fish into the factories at various points from Wilmington, N.C., to Montauk. The seven vessels which they have now acquired, are claimed to be the largest, fastest and most modern of any vessels used in the industry. The Naval Service Department invited tenders for the purchase of these vessels, but all of the tenders received were rejected, as they were considered too low. The Department then opened negotiations with Hayes and Anderton, one of the original tenderers, and sold 6 of the vessels for $40,000 each, and 1 for $30,000, a total of $270,000. The original cost of these vessels to the government was $[illegible], after which, $144,917.22 was spent on alterations to fit them for service conditions, and $[illegible] for repairs.

The Cunard Steamship Co. is reported to be capitalizing about £[illegible] of its reserve fund, and is distributing the same amongst its shareholders, as a bonus. The dividend for 1918 was 20%. It is stated that the company is planning a large extension of its business, which may involve other shipping companies.

Canada Steamship Lines Limited, Annual Report and Meeting.

Following are extracts from the report for the calendar year 1918 to be presented at the annual meeting in Montreal Mar. 1, and which is over the signature of J. W. Norcross, who was elected President recently, to succeed Jas. Carruthers, resigned: —

The accounts show net earnings for the year of $4,338,079.88, leaving $2,324,098.15, after deduction of all fixed charges, including depreciation, and making provision for war tax. The company's general freight earnings, admittedly, have benefited by war conditions, but, on the other hand, passenger and packet freight business has suffered and operating costs have been abnormally high. Balancing one thing against the other, the directors on the whole, without being unduly sanguine, and keeping well in sight the necessity for ample provision against temporary setbacks, look forward to the future with confidence.

Canada, which has made giant strides during the last few years and months in world politics, is still a very young country from the point of view of its development; and its shipping, both inland and on the high seas, is in its infancy. Our practically unlimited natural resources are increasingly required in the markets of the world and our government is awake to the fact that they must be carried there. The dangers ahead are not of nature's making. With wise leadership and sane legislation the contrast between living conditions on this side and those on the other side of the Atlantic should be such as to cause a flow of immigration here, that will ensure the country's prosperity and the prosperity of the company for years to come.

The shareholders will be asked to confirm an amendment to bylaw 22, changing the number of its executive committee from 5 to 6.

There are two vacancies on the board caused by the resignations of Jas. Carruthers and J. C. Newman.

The physical assets have been thoroughly maintained and are in good condition.

Balance Sheet, Dec. 31, 1918.

Fixed assets:		
Vessels as at Dec. 31, 1917		$20,730,864.34
Less net deductions for year, being excess of vessels lost and sold over additions to fleet		652,288.36
		$20,078,575.98
Real estate, buildings, docks and wharves, as at Dec. 31, 1917	$5,511,682.93	
Add net additions for year	542,461.60	
		6,054,144.53
Other fixed assets as at Dec. 31, 1917	725,759.71	
Add net additions for year	308,889.50	1,034,649.21
		$27,167,369.72
Less depreciation reserve		3,506,190.29
		$23,661,179.43
Current and working assets:		
[illegible] and on [illegible]	$ 553,267.86	
[illegible]	[illegible]	
[illegible] able, [illegible]	1,614,313.53	
Adjusted losses due by underwriters	552,139.39	
[illegible]	[illegible]	
[illegible] accrued	[illegible]	
Inventories of stores and supplies	[illegible]	
		5,438,976.09
Charges deferred to future operations:		
Insurance unexpired	$ 520,931.46	
Repairs, etc., applicable to 1919	181,635.76	
Miscellaneous	20,809.45	
		723,376.67
Investments		427,139.50
Funds deposited with trustees for mortgage bonds and debenture stock		126,038.98
Adjusted losses due by underwriters payable to trustees		118,320.53
		$30,495,031.20
Leases, contracts and goodwill		8,424,646.79
		$38,919,677.99
Capital stock:		
125,000 shares 7% cumulative preference stock		$12,500,000.00
120,000 shares common stock		12,000,000.00
		$24,500,000.00
Funded debt:		
5% debenture stock	$7,120,506.66	
Less amount held in treasury $598,400.00		
Amount retired by operation of sinking fund 594,919.82	1,193,319.82	
	$5,927,186.84	
First mortgage bonds	757,020.02	6,684,206.86
Current and accrued liabilities:		
Accounts payable	$1,308,750.23	
Bond interest accrued	114,707.91	
Business profits war tax	960,516.71	
Preference dividend declared (payable Jan. 2, 1919)	218,750.00	
		2,602,724.85
Reserves:		
For freight and other claims	10,000.00	
For premium on redemption of bonds of Richelieu and Ontario Navigation Co.	2,409.42	
Surplus arising from sinking fund purchases of debenture stock	110,706.22	
		123,115.64
Surplus		5,009,630.64
Contingent liabilities—None ascertained.		
		$38,919,677.99

Operating Account.

Operating revenue:		
Vessels		$13,481,238.63
Docks and wharves		222,310.11
Miscellaneous		174,674.66
		$13,878,223.40
Other revenue		216,169.68
Total revenue		$14,094,393.08
Expenses		9,756,313.20
Net earnings		4,338,079.86
From which deduct:		
Interest on mortgage bonds	$ 58,303.02	
Interest on debenture stock	301,219.57	
Other interest	25,665.31	
Special bonus to employes	37,063.49	
Reserve for depreciation	1,146,730.34	
Reserve for doubtful debts and claims	20,000.00	
Directors fees	25,000.00	
Reserve for business profits war tax	400,000.00	2,013,981.73
Profit for year		$ 2,324,098.15

Surplus Account.

Balance Dec. 31, 1917		$ 2,374,754.12
Add:		
Profit for year 1918, as per operating account	$2,324,098.15	
Net profit on sales, etc., of fixed assets	1,276,136.38	3,600,234.53
		$ 5,974,988.65
Deduct:		
Balance of organization expenses charged off	90,358.01	
Dividends on preference stock 7% for year 1918	875,000.00	
		965,358.01
Surplus as per balance sheet		$ 5,009,630.64

The President, J. W. Norcross, in speaking at the annual meeting said: "Perhaps of special interest is the fact that the working capital hsa been increased to approximately $2,800,000. This has been effected by an increase in the current and working assets to $5,538,926, against $4,056,000, while the current liabilities have been reduced to approximately $2,600,000, against $3,800,000 a year ago. The company goes into the new year with a total surplus slightly in excess of $5,000,000, an increase of over $2,500,000 as compared with the previous year. The physical assets have been maintained at a high standard and are in an exceptionally satisfactory condition. This applies not only to our freight vessels, but likewise to the entire passenger fleet. General conditions since the cessation of hostilities have become so unsettled that it is almost impossible for anyone to forsee at all clearly the possibilities of the immediate future. It should be pointed out however, that the company's various lines are in an excellent position to handle all business offering and there is reason to expect that general tourist traffic, which has been a negligible factor during the past few years, will become a very important factor in the company's profits during the coming season.

All the directors were reelected, and Hon. Frank Carrell, of Quebec, was elected to succeed Jas. Carruthers, who resigned some little time prior to the annual meeting. The directors for this year are as follows: President and Managing Director, J. W. Norcross; Vice President and General Counsel, C. A. Barnard, K.C.; Vice President, M. J. Haney; Director of Transportation, W. E. Burke; Director of Finance, F. S. Isard; Director of Operation, H. W. Cowan, other directors: Edmund Bristol, K.C., M.P., Hon. F. Carrell, Hon. J. P. B. Casgrain, J. E. Dalrymple, D. B. Hanna, H. B. Smith, G. H. Smithers, J. P. Steedman.

Canadian Merchant Service Guild.—A bill has been introduced in the House of Commons to incorporate R. A. Batchelor, and others, as Canadian Merchant Service Guild, its objects being to unite fraternally all persons employed in ships operating in and out of Canadian waters, whether inland or deep sea waters and who are entitled to membership by the bylaws. To insure the members, or the dependent children of the members, in accordance with the provisions and subject to the limitations and requirements of The Insurance Act, 1917, relating to fraternal benefit societies. The Guild's office is to be at Vancouver.

Rhine Navigation.—French pilots, for the first time in 48 years, will soon be guiding French and German vessels up and down the Rhine. The men will be recruited from among the helmsmen and pilots of the high sea rover fleets of the French navy, and are being instructed under the jurisdiction of the Ministry of Marine. The pilots will take charge of steamboats, tugs and barges loaded with foodstuffs destined to the armies of occupation, and will also command squadrons of light gunboats charged with the "watch on the Rhine."

Coast, Lake and Steamship Officers for 1919.

The following appointments, made by navigation companies, engaged in Canadian navigation, for their various steamships and tugs, have been reported to Canadian Railway and Marine World. The first column gives the names of the vessels; the second, those of the captains; and the third, those of the chief engineers.

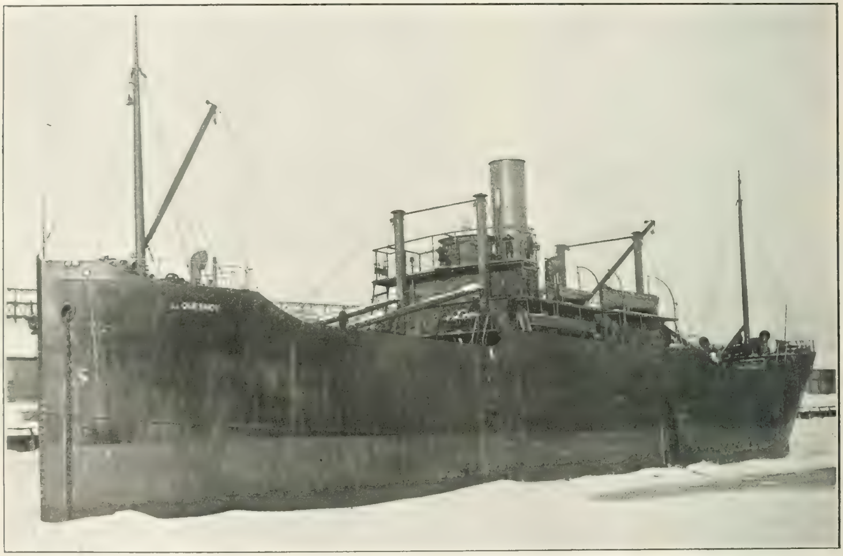
Camouflaging Ships.—The system of "dazzle painting" applied to some 3,000 British merchant ships during the war as protection from U boat attack was demonstrated recently at the Naval Camouflage School, Burlington House, London, by Lieut.-Commander Norman Wilkinson, R.N.V.R. By reversing the system, and making ships more clearly visible, it is hoped to avoid collisions. Lieut.-Commander Wilkinson abandoned the idea of lessening the visibility of ships, his object being to puzzle the U boat commander, and make him lose time, by sending him on a wrong course. Therefore he painted ships in such a way that the direction in which they were going could not be made out through a periscope. By means of stripes of blue, black and grey on the sides, bridge, chart house, masts and funnel, he falsified the appearance of the ship, so that it was almost impossible to distinguish the bow from the stern. The lines of perspective were also falsified.

The public traffic regulations for the ports of Halifax and Sydney, N.S., necessitated by the war, have been rescinded.

General Shipbuilding Matters Throughout Canada.

Canadian Allis-Chalmers Ltd.—The report of the Canadian General Electric Co. for 1918 referred to operation of its railway, Canadian Allis-Chalmers Ltd., as follows: "Early in 1918 your directors formed the impression that the end of the war could not be long delayed and, therefore, the policy was adopted of casting about for new lines of manufacture that would keep our facilities employed after orders for munitions should cease, and fill the gap during the time intervening between the cessation of war orders and the reconstruction of trade channels through which we would again commence to receive orders in adequate volume for our normal output under prewar conditions. Having in mind that the mercantile marine of the allied countries had been steadily depleted and that many orders for cargo ships were being placed in Canada and the United States, we devoted our energies to securing orders for marine engines, boilers, and other auxiliaries. The great activity in the shipbuilding industry had resulted in the opening up of many new yards in both Canada and the United States, and while the old established plants were equipped to build the ship machinery required for their own requirements, the majority of the newly organized yards, and many of the older ones were compelled to enlist the cooperation of other machinery builders to enable them to meet the unusual demands and attain maximum production. As our plants in Toronto were well equipped for undertaking the manufacture of marine engines, in sizes ranging from 200 h.p. up to 4,000 h.p., and of Scotch marine boilers of the largest size required for ships up to 10,000 tons capacity, as well as practically all other ship auxiliaries, important contracts were secured during the year for machinery and equipment for installation in ships building both in Canada and the U.S. Including the machinery required for the four 3,500 ton steel cargo steamships building at our Niagara shipyard, but not including the ships, the orders for marine engines, towing engines, Scotch boilers, condensers, ships' winches, shafting, propellers, and other ship auxiliaries, at the end of the year amounted to $5,490,707.00, the contracts in question being received either directly from or for account of the following:—Imperial Munitions Board, Marine Departments, and Naval Service Depratment, $1,602,412; French Government, $853,487; U.S. Shipping Board, Emergency Fleet Corporation, U.S. Navy and U.S. Army Embarkation Service, $3,034,806. Total, $5,490,707, of that amount approximately $4,000,000 is carried forward into 1919.



Steel cargo steamship Le Quesnoy, 4,300 tons, built by Dominion Shipbuilding Co., Toronto, wintering in Louise Basin, Quebec, Que.

Dominion Shipbuilding Co., Toronto.—The steel cargo steamship Le Quesnoy, 4,800 tons d.w., which was launched at Toronto, Nov. 23, 1918, had her final dock trial on Mar. 10, and is ready for sea on the opening of navigation. She is wintering at shed 20, Louise basin, Quebec, Que., as shown in the accompanying illustration.

Foundation Co., Victoria, B.C.— The first two of the 3,000 ton wooden steamships which this company is building for the French Government, were to be launched towards the end of March. The Ogden Point assembling plant, which was used by the Imperial Munitions Board for the equipment of wooden vessels built on the B.C. coast, for the British Government, has been taken over by the Foundation Co., on payment of $60,000, and will be used for equipping the 20 wooden steamships being built by the company for the French Government. It was expected that additional machinery would be ready for installing during March, when the first of the 20 vessels would be ready for outfitting. It was anticipated that the first vessel will be ready for sea about the end of April, or early in May, and the other vessels at the rate of one every two weeks.

Halifax Shipyards Ltd., Halifax, N.S., started erecting the steel framework on its power plant building, Mar. 17, and the erection of the steel work of the plate shop was started a few days later. The excavation for the air compressor and stores building was completed towards the end of March, when the erection of the building was started.

J. E. Pettis, Spencers Island, N.S., launched the tern schooner Minas Prince, Mar. 4. She is of 457 tons register and is classed for 12 years with Bureau Veritas. The equipment includes hoisting power and all latest improvements. She is owned in Parrsboro, N.S., and is loading for the West Indies.

Polson Iron Works, Ltd., Toronto.

Early in March it was announced that J. B. Miller would continue as President of the company, but would relinquish the general managership, and that M. E. Forbes, formerly Vice President and General Manager, Dayton, Ohio, Production Co., and R. J. Cluff, of Cluff Bros., iron pipe and plumbers supplies, Toronto, had been appointed joint general managers, A. H. Jeffrey remaining with the company as Secretary. A report that there had been a change of ownership was denied. On Mar. 17 the company applied for a winding up order, which was granted, G. T. Clarkson, being appointed liquidator. The Toronto General Trust Co. applied for a declaration that as trustee under a debenture mortgage, and as holder of a debenture for $600,000, it was entitled to a charge on all the company's property and asked for the appointment of a receiver and mnaager. It is stated that the company's business will be carried on without interruption.

C. T. White and Sons, Alma, N.B., are building 2 schooners with auxiliary power. They will be sister vessels, 150 ft. long, 600 tons gross, 900 tons displacement, and they will be equipped with gas power, and the most modern cargo facilities.

Yarrows Limited, Victoria, B.C.—In reference to the report, mentioned in Canadian Railway and Marine World for March, that Yarrow & Co. Ltd., Scotstown, Glasgow, intended diminishing the output at its shipbuilding plant there and to increasing the production of its Vancouver, B.C., plant, we are advised by Yarrow & Co. Ltd., Scotstown, that it is under the impression that the Pacific Coast will advance rapidly, and that it wishes, as far as it can, to develop its Victoria works, with a view to having two strings to its bow.

Atlantic and Pacific Ocean Marine.

The Panama Canal was used in December by 166 ocean going ships; $537, 057 being collected in tolls.

The French General Trans-Atlantic Co., it is announced, will re-establish its steamship service with Canada, as soon as circumstances permit, so that the direct service between France and Canada, as given before the war, will be continued.

Furness Withy and Co's. s.s. Appenine ran aground at Witless Point, near St. John's, Nfld., Mar. 4, presumably being driven in by ice, which was packing on the coast. She sailed from Liverpool, Eng., Feb. 19 for St. John's and Halifax, and was overdue at the first named port.

Quebec, Que., press dispatch Mar. 25: –The Canadian Pacific Ocean Services Ltd. will renew its St. Lawrence passenger and freight business this spring with its two largest and finest ships, the Empress of Britain and the Empress of France, which was formerly named the Alsatian, which will make Quebec the chief summer Atlantic terminus. This regular ocean mail service will possibly be increased during the season.

Canadian Pacific Ocean Services, Ltd., has bought the steamships War Beryl and War Peridot in Great Britain. They are steel cargo steamships of 10,800 estimated d.w. tons each, and of the following dimensions: length 41 ft. 6 in., beam 55 ft. 2 in., depth 29 ft. The s.s. War Peridot left Liverpool, Eng., Mar. 15, for St. John, N.B., where she was expected to arrive Mar. 28. The s.s. War Beryl was expected to be delivered to the company about Mar. 28, and to sail for St. John a few days later.

The rumor has again been revived that the C.P.R., on behalf of Canadian Pacific Ocean Services Ltd., may shortly purchase the whole fleet of an important English steamship company, which controls a large proportion of the trade between Great Britain and the east, and that the company will make Quebec its main summer port for Canada. As we have before pointed out, the whole transoceanic businesses of the empire are in a state of flux, and for some time past, there have been amalgamations, absorptions, working agreements, etc., by, and between, the various steamship companies, and it is not conceivable that the C.P.R., with its world wide system, will be behind other companies in carrying out whatever extensions may be necessary and politic. The C.P.R., as a transportation company, is unique, and it will doubtless retain that position.

Maritime Provinces and Newfoundland.

The Boston and Yarmouth Steamship Co. resumed service between Yarmouth, N.S., and Boston, Mass., Mar. 6, with the s.s. Northland. The service was suspended during the war.

The House of Commons passed a resolution Mar. 19, authorizing the government to establish a government controlled steamship service between Pictou, N.S., and Magdalen Islands. The present service is given by a privately owned vessel, under a government subsidy, and it is stated to be unsatisfactory.

The s.s. Julienne was sold under a court order, at Halifax, N.S., recently to Farquhar and Co., Halifax, for $43,500. She was owned by Anderson and Co., New York, and was sold as the result of actions by the owners of cargo, for $320,000 for nonfulfillment of charter, and by the captain for $11,000 for wages and disbursements.

The Prince Edward Island Public Works Department is receiving tenders to Apr. 14, for the operation of a steamship of about 200 tons register, and certified for not less than 200 passengers, and maintaining a speed of not less than 10 knots an hour, from Charlottetown to Crapaud, to Orwell, to East River and to West River, once a week, for five years from the opening of navigation.

The Marine Department's s.s. Lansdowne, lying at the marine picr at Dartmouth, N.S., is reported to have been condemned. She was built at Maccan, N.S., in 1884, and is screw driven by engine of 80 n.h.p., Her dimensions are, length 188.6 ft., breadth 32.1 ft., depth 15.8 ft.; tonnage, 680 gross, 463 register. She served the Marine Department at the various maritime ports, and during the war was stationed at Sydney, N.S.

The Troja Steamship Co's. s.s. Troja, with a cargo of coal for St. John, N.B., ran ashore on the Old Proprietor, Grand Manan, N.B., Mar. 18, and is believed to be a total loss. The crew were all taken off by the s.s. Aberdeen and taken to St. John. The Troja was built in 1918 by the Dominion Shipbuilding Co., Toronto, and was classed 100 A1 at Lloyd's for trans Atlantic service. Her dimensions were, length over all 261 ft., breadth moulded 43½ ft., depth moulded 28 ft. 2 in.; deadweight tonnage, 4,300. She was equipped with triple expansion engines. The loss is stated to be covered by insurance, partly placed in Canada and partly in Europe. It is reported that as the result of a work commissioners enquiry the blame for the loss has been placed on the master of the vessel, Capt. Caine.

Province of Quebec Marine.

The Montreal, Valleyfield and Soulanges Navigation Co. Ltd., which operated the s.s. Hebron between the points named, has gone out of business, the vessel now being operated by La Traverse de Lachine Ltd., Lachine, Que.

Ontario and the Great Lakes.

The name of the steam tug D. J. Burke, owned by Canadian Stewart Co., Toronto, has been changed to Mary Stewart.

The Algoma Eastern Ry. s.s. Valcartier, which was, last year, operated by hte Algoma Steel Corporation, will this year, be under the Algoma Central Steamship Line's control.

The Toronto, Hamilton and Buffalo Navigation Co.'s. car ferry Maitland No. 1 was laid up recently for repairs and overhaul, after having been on the route between Port Maitland, Ont., and Ashtabula, Ohio, for a year, making a return trip every 15 hours, except when held up owing to freight shortage.

Judgment has been given against the Northern Navigation Co., as owner of the s.s. Majestic, for $500 and costs, in favor of F. McGibbon and Sons, Sarnia, for the loss of the old wooden steamship Cataract, when the Majestic took fire and drifted against the Cataract at Sarnia, Dec. 15, 1915. The Cataract has been practically a derelict since 1910.

The Detroit and Windsor Ferry Co. raised its rates for passengers recently from 10 tickets for 25c. to 8 tickets for 25c. on the ground that the increases in operating expenses made it necessary. Windsor City Council protested against this, and desired to send auditors to examine the company's books, but the company declined to allow this to be done.

The Central Canada Coal Co., Brockville, has sold its s.s. Samuel Marshall to Eliasoph and Co., Montreal, and during the forthcoming season will only operate the barge F. A. Georger. The s.s Samuel Marshall was built at Grand Haven, Mich., in 1888, and is screw driven by engine of 72 n.h.p. Her dimensions are, length 198 ft., breadth 33.4 ft., depth 14.6 ft.; tonnage, 772 gross, 540 register.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for February, as follows: Superior, 602.08; Michigan and Huron, 580.66; St. Clair, 575.02; Erie, 572.20; Ontario, 245.91. Compared with the average February levels for the past ten years, Superior was 0.83 ft. above; Michigan and Huron 0.79 ft. above; Erie 0.65 ft. above, and Ontario 0.50 ft. above.

British Columbia and Pacific Coast

The Union Steamship Co. of British Columbia's s.s. Cheakamus, after being thoroughly overhauled at Esquimalt, has resumed her service.

The C.P.R. s.s. Princess Beatrice was

taken off the Gulf route, Mar. 12, for her annual overhaul, her place being taken by the s.s. Princess Patricia.

The Prince Rupert Board of Trade has petitioned the Dominion Government for a mail subsidy for a purely local steamship service between Prince Rupert and coastal points within approximately 100 miles.

The Union Steamship Co. of British Columbia is operating the s.s. Chelohsin on the Rivers Inlet-Bella Coola route; the s.s. Camosun on the Prince Rupert Anyox route, and the s.s. Venture on the Surf Inlet, Prince Rupert and Naas route; all out of Vancouver.

The Grand Trunk Pacific Coast Steamship Co. is operating the s.s. Prince John on a fortnightly schedule on the Prince Rupert-Queen Charlotte Islands route, calling at Prince Rupert on the return from Massett before going to the South Islands. The s.s. Prince Albert is being operated in the general freight service, without schedule.

The C.P.R. has bought the steam tug Dola from MacDonald and Marpole, Vancouver, for its British Columbia Coast Service. The Dola was owned formerly by the Vancouver Tug and Barge Co. Ltd., and was built at Vancouver in 1907, her dimensions being, length 96.3 ft., breadth 21.8 ft., depth 10.9 ft.; tonnage, 176 gross, 120 register. She is screw driven by engine of 39 n.h.p.

The name of the s.s. Nellie G. Thurston, owned by the Vancouver Machinery Depot, Ltd., Vancouver, has been changed to Esdud. She was originally a sailing vessel, and was built at Gloucester, Mass., in 1883. She is driven by a screw, with engine of 19 n.h.p. Her dimensions are, length 79 ft., breadth 22.6 ft., depth 8.5 ft.; tonnage, 100 gross, 60 register. She was, at one time, owned by the British Columbia Transport Co. Ltd., London, Eng.

Judgment was delivered in favor of the C.P.R. Mar. 15, restraining the B.C. Workmen's Compensation Board from paying out further compensation to dependents of the company's employes who lost their lives in the sinking of the s.s. Princess Sophia in the Lynn Canal, Alaska, last year. The contention, on which the judgment was based, is that the Compensation Act does not extend to the scene of a wreck in foreign waters. It is stated that the judgment is being appealed against.

Cargo Steamship Building in Canada for British Government.

Steamships Under Construction.—Of the 43 steel steamships and 46 wooden steamships ordered in Canada by the Imperial Munitions Board on behalf of the British Government, 32 steel and 45 wooden ships have been launched. The ones still under construction are as follows:—British American Shipbuilding Co., Welland, Ont., War Racoon, 3,500 tons d.w.; Canadian Allis-Chalmers Ltd., Bridgeburg, Ont., War Vixen, War Wallaby, War Wombat, 3,500 tons each; J. Coughlan & Sons, Vancouver, B.C., War Chariot, War Column, War Company, 8,800 tons each; Midland Shipbuilding Co., Ont, War Fury, War Magic, 3,400 tons each; Polson Iron Works Ltd., Toronto, War Algoma, War Halton, 3,500 tonc each; a total of 11 steamships aggregating 54,200 tons. The one wooden steamship remaining is on order with Grant and Horne, St. John, N.B., and will be named War Moncton. It is the same type as adopted as standard for all the wooden steamships built in Canada for the British Government, and will be approximately 3,080 tons d.w.

Steamship Deliveries.—With the sailing of the steamships War Suquash and War Tanoo, towards the end of March, the last of the wooden steamships to be built on the Pacific Coast, for the British Government, under orders from the Imperial Munitions Board, left for Great Britain, where, after discharge of cargo, they will be handed over to John Hardie & Co., Glasgow, Scotland, to whom they have been assigned as managing owner by the British Ministry of Shipping. The first of these vessels to be launched on the Pacific Coast was the War Songhee, by the Foundation Co., Victoria, Dec. 28, 1917, and the first to be fully equipped and dispatched to Great Britain, was the War Yukon, by Cameron-Genoa Mills Shipbuilders Ltd., Victoria, which was launched Jan. 24, 1918.

Steamships Launched.—Following are particulars of cargo steamships ordered by the Imperial Munitions Board for the British Government, and which had been officially reported as launched up to Mar. 20, giving in each case the date of the launching, the name of the steamship, the name and address of the building company and the deadweight tonnage:—

May [illegible] 1917—War Dog, Wallace Shipyards, North Vancouver, B.C. 4,500
July [illegible] 1917—War Wasp, Nova Scotia Steel & Coal Co., New Glasgow, N.S. 1,800
Aug. [illegible] 1917—War Fish, Port Arthur Shipbuilding Co., Port Arthur, Ont. 4,300
Nov. 3, 1917—War Dance, Port Arthur Shipbuilding Co., Port Arthur, Ont. 3,400
Mar. 16, 1918—War Camp, J. Coughlan & Sons, Vancouver, B.C. 8,800
Mar. 23, 1918—War Power, Wallace Shipyards, North Vancouver, B.C. 4,600
Apr. 3, 1918—War Isis, Port Arthur Shipbuilding Co., Port Arthur, Ont. 3,400
May 8, 1918—War Wizard, Collingwood Shipbuilding Co., Collingwood, Ont. 2,900
May 21, 1918—War Bee, Nova Scotia Steel & Coal Co., New Glasgow, N.S. 2,400
May 27, 1918—War Osiris, Port Arthur Shipbuilding Co., Port Arthur, Ont. 3,400
June 8, 1918 War Earl, Canadian Vickers Ltd., Montreal 7,000
June 29, 1918—War Duchess, Canadian Vickers, Ltd., Montreal 7,000
July 20, 1918—War Hathor, Port Arthur Shipbuilding Co., Port Arthur, Ont. 3,400
July 29, 1918—War Charger, J. Coughlan & Sons, Vancouver, B.C. 8,800
Aug. 19, 1918—War Chief, J. Coughlan and Sons, Vancouver, B.C. 8,800
Aug. 21, 1918—War Weasel, British-American Shipbuilding Co., Welland, Ont. 3,500
Sept. 6, 1918—War Witch, Collingwood Shipbuilding Co., Collingwood, Ont. 2,900
Sept. 19, 1918—War Taurus, Polson Iron Works, Ltd., Toronto 3,500
Sept. 28, 1918—War Faith, Canadian Vickers Ltd., Montreal 7,000
Sept. 28, 1918—War Noble, J. Coughlan & Sons, Vancouver, B.C. 8,800
Sept. 28, 1918—War Storm, Wallace Shipyards, Ltd., Vancouver, B.C. 4,600
Oct. 5, 1918—War Horus, Port Arthur Shipbuilding Co., Port Arthur, Ont. 3,400
Oct. 15, 1918- War Hydra, Polson Iron Works, Ltd., Toronto 3,500
Oct. 24, 1918—War Fiend, Midland Shipbuilding Co., Midland, Ont. 3,400
Oct. 26, 1918 War Karma, Port Arthur Shipbuilding Co., Port Arthur, Ont. 3,400
Oct. 29, 1918--War Joy, Canadian Vickers, Ltd., Montreal 7,200
Dec. 18, 1918—War Convoy, J. Coughlan & Sons, Vancouver, B.C. 8,800
Dec. 22, 1918--War Hamilton, Polson Iron Works, Ltd., Toronto 3,500
Jan. 21, 1919—War Badger, British American Shipbuilding Co., Welland, Ont. 3,500
Feb. 8, 1919—War Timiskaming, Polson Iron Works, Ltd., Toronto 3,500
Mar. 3, 1919—War Leveret, Canadian Allis-Chalmers Ltd., Bridgeburg, Ont. 3,500
Mar. 15, 1919 War Cavalry, J. Coughlan and Sons, Vancouver, B.C... 8,800

Total 32 steel steamships 157,100

Wooden Steamships.

Dec. 28, 1917—War Songhee, Foundation Co., Victoria, B.C. 3,080
Jan. 4, 1918—War Nootka, Western Canada Shipyards, Vancouver, B.C... 3,080
Jan. 24, 1918—War Yukon, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C. 3,080
Feb. 16, 1918—War Puget, Wm. Lyall Shipbuilding Co., Vancouver, B.C. 3,080
Mar. 6, 1918—War Selkirk, Western Canada Shipyards, Vancouver, B.C... 3,080
Apr. 10, 1918—War Caribou, Wm. Lyall Shipbuilding Co., Vancouver, B.C. 3,080
Apr. 11, 1918—War Comox, New Westminster Construction & Engineering Co. , New Westminster, B.C. 3,080
Apr. 11, 1918—War Masset, Foundation Co., Victoria, B.C. 3,080
Apr. 13, 1918—War Tyee, Pacific Construction Co., Coquitlam, B.C.... 3,080
Apr. 25, 1918—War Haida, Cameron-Genoa Mills, Victoria, B.C. 3,080
Apr. 27, 1918—War Cayuse, Wm. Lyall Shipbuilding Co., Vancouver, B.C. 3,080
May 11, 1918—War Mohawk, Quinlan & Robertson, Ltd., Quebec, Que..... 3,080
May 11, 1918—War Sioux, Port Arthur Dredging Co., Port Arthur, Ont. 3,080
May 21, 1918—War Atlin, Wm, Lyall Shipbuilding Co., Vancouver, B.C. 3,080
May 23, 1918—War Tatla, Western Canada Shipyards, Ltd., Vancouver, B.C. 3,080
June 12, 1918—War Skeena, Cameron-Genoa Mills Shipbuilders, Ltd., Victoria, B.C. 3,080
June 13, 1918—War Seneca, Quinlan & Robertson, Quebec, Que. 3,080
June 14, 1918—War Edensaw, New Westminster Construction & Engineering Co., B.C. 3,080
June 15, 1918—War Babine, Foundation Co., Victoria, B.C. 3,080
June 24, 1918—War Nicola, Wm. Lyall Shipbuilding Co., Vancouver, B.C. 3,080
June 28, 1918—War Quebec, Quebec Shipbuilding & Repairing Co., Quebec, Que. 3,080
June 29, 1918—War Ontario, Toronto Shipbuilding Co., Toronto 3,080
July 5, 1918—War Huron, Fraser, Brace & Co., Montreal 3,080
July 5, 1918—War Erie, Fraser, Brace & Co., Montreal 3,080
July 6, 1918—War Casco, Western Canada Shipyards, Ltd., Vancouver, B.C. 3,080
July 12, 1918—War Sumas, Pacific Construction Co., Port Coquitlam, B.C. 3,080
July 24, 1918—War Suquash, Wm. Lyall Shipbuilding Co., Vancouver, B.C. 3,080
July 27, 1918—War Gaspe, Quinlan & Robertson, Quebec, Que. 3,080
July 27, 1918—War Ottawa, Fraser, Brace & Co., Montreal 3,080
Aug. 5, 1918—War Chilkat, Western Canada Shipyards, Vancouver, B.C... 3,080
July 29, 1918—War Stikine, Cameron-Genoa Mills Shipbuilders, Victoria, B.C. 3,080
Aug. 22, 1918—War Tanoo, Western Canada Shipyards, Vancouver, B.C... 3,080

Sept. 23, 1918—War Matane, Quinlan & Robertson, Quebec, Que. 3,080
Sept. 26, 1918—War Ewen, New Westminster Construction & Engineering Co., New Westminster, B.C. 3,080
Oct. 15, 1918 War Mingan, Three Rivers Shipyards, Ltd., Three Rivers, Que. 3,080
Oct. 26, 1918- War Toronto, Toronto Shipbuilding Co., Toronto 3,080
Nov. 2, 1918—War Radnor, Three Rivers Shipyards, Ltd., Three Rivers, Que. 3,080

Total, 45 wooden steamships 138,600

Aggregate deadweight tonnage of 32 steel and 45 wooden steamships launched, 295,700 tons.

Canadian Allis-Chalmers Ltd., Bridgeburg, Ont.—The first of the four steel cargo steamships which this company is building for the British Government, under orders from the Imperial Munitions Board, was launched, Mar. 3, and christened War Leveret. She is of steel, with single screw, single deck, with straight stem and semielliptic stern, classed 100 A1 at Lloyd's, and according to the British Board of Trade regulations relating to freight steamships. She has a deadweight capacity of 3,500 tons, and has the following dimensions:—length between perpendiculars 251 ft., beam moulded 43½ ft, depth moulded 23 ft. The main engine is of the vertical, direct acting, triple expansion, surface condensing type, with cylinders 20 x 33 x 54 x 40 in. stroke, developing 1,400 h.p., and supplied with steam by 2 Scotch marine, single end, return tubular boilers, 14 ft. diar., by 12 ft. long, for a working pressure of 120 lbs. It is expected that the second vessel will be launched during April, and named War Vixen. Two other vessels remain to be launched to complete the order. They will be named War Wallaby and War Wombat respectively.

J. Coughlan and Sons, Vancouver, B.C., launched on Mar. 15, the sixth of the 9 steel steamships of 8,800 tons d.w., to be built for the British Government, under orders from the Imperial Munitions Board. She was named War Cavalry. Three other vessels of the same type and capacity, are still to be built by this company, and will be named War Chariot, War Column and War Company, respectively.

The s.s. War Convoy underwent her trial trips, Mar. 17, maintaining an average speed of 12.50 knots over a 6 mile course.

Prince Rupert Drydock & Engineering Co. Ltd., Prince Rupert, B.C., which is operating the Grand Trunk Pacific Ry. drydock and shipbuilding plants there, and which has contracts from the Marine Department to build 2 steel cargo steamships 8,100 tons d.w. each, advises us that it expects to lay the keel of the first ship, department's contract 42, builders' yard no. 1, about May 15, and for the second ship, department's contract 43, builders' yard no. 2, about Oct. 15, the approximate launching dates being Oct. 1, 1919 and Feb. 1, 1920 respectively. The officers of the company are: Chairman of Board, Newman Erb, New York, N.Y.; President, John L. Mullen, Pittsburg, Pa.; Vice President, F. F. Schellenberg, Prince Rupert, B.C.; Treasurer, H. M. Wadden, New York, N.Y.; Secretary, H. B. Blanchard, New York, N.Y.; Superintendent of Drydock, J. H. Pillsbury, Prince Rupert, B.C.; The Vice President and Superintendent of Drydock will be in active charge of the shipbuilding.

United States Vessels Going Out by St. Lawrence.

Quebec, Que., press dispatch Mar. 25:—Capt. E. Hough, representing the U.S. Shipping Board, who arrived in Quebec recently, to superintend the business attending the arrival of a large fleet of steamships built during the winter on the Upper Lakes for the board, that are due to arrive here within the coming month en route to U.S. ocean ports, says that the ships built average 3,500 tons register, and will stop at Montreal and Quebec for any repairs that might be needed in consequence of their trip through the canals. These ships will come here with port cargoes for Montreal and Quebec, each carrying 1,200 tons of coal, and as the canals between Lake Erie and the St. Lawrence River will be opened by April 15 or thereabouts, it is anticipated that there will be a big rush of ships down the St. Lawrence.

Protecting Devices for Canal Lock Entrances.

At the Dominion Marine Association's recent annual meeting, as reported in Canadian Railway and Marine World for March, the question of the necessity of providing protecting devices, such as spring buffers, at entrances to canal locks, was discussed. A. A. Wright, A. E. Mathews, and the association's Counsel, F. King, were appointed a committee to take the question up again with the Railways and Canals Department. As Mr. Wright has been urging action in this connection for several years, we asked him, recently, for his views on the matter, in response to which he has favored us with the following memorandum:

"As you are doubtless aware, steel steamships, using the Welland and St. Lawrence Canals, receive a great deal of damage from canalling, and suffer in addition, serious delays on account of the entrances to the locks being of stone or concrete. Many of these require practically new bows after two or three years canalling, unless they tie up every time it is blowing hard and only lock through in fine weather, and even then, on account of cross currents at some of the entrances, they receive a great deal of damage.

"I have repeatedly pointed out, in past years, that this could be avoided, if a cluster of spring piles was driven in from 75 to 100 feet from the entrance to each lock, so that a steamship would get her bow entered, and be practically stopped in there, and be held straight, so that she could go into the lock without striking the stone piers, save all damage to the ship, and also make sure that the head or foot gate would never be carried away, because the ship would be compelled to stop when she got between the piles and she would not have to proceed under full speed, as now has to be done, to be sure to make the entrance at all, when it is blowing hard across the canal.

"Where the bottom is rock, so that it would be impracticable to drive piles, cribs could be sunk, the same width apart as the entrance to the canal, and timbers, with coil springs behind them, to take up the shock, could be fixed to the timbers, to ease the blow to the ship and avoid damage, the distance of the cribs or spring piles from the entrance to the lock to be anywhere from 100 ft. down, according to local conditions.

"Engineers engaged in the construction of canals have never attempted to place anything of this kind and do not seem eager to try it, but there is absolutely no question that the lack of these protectors at the entrances to locks is serious, and causes vessel owners a very heavy bill, because the rate of insurance on canalers is very much higher than on ships not using canals, and, in addition, a great deal of the damake is not chargeable against underwriters and has to be borne by the owners. I hope I have made the matter clear, and I trust that the Railways and Canals Department will take it up and as early as possible."

Steamships for Canadian Export Trade.

London, Eng., cablegram to Montreal Gazette.—The Canadian Trade Mission is making every effort to secure shipping for Canadian exports, both by increasing the number of vessels on existing routes and creating new routes. Shipping facilities are still inadequate for the world's trade, but there is every prospect that Canada will shortly receive more attention.

For the West Indies trade there are two lines, the Quebec Steamship Co., from New York, and the Royal Mail Steam Packet Co. from Halifax. The former company had 4 steamships in pre-war days, but one, the Trinidad, was requisitioned by the British Government. The company has purchased a much larger boat to replace the Trinidad. Ninety per cent. of the trade of this company is Canadian. The Royal Mail Co. is subsidized by the Canadian Government, and also has a direct line from Great Britain to the West Indies, subsidized by the Imperial Government. The proposition has been made that a joint service from Southampton via Halifax to the West Indies be subsidized by both governments. This does not meet with the approval of Canadians, who desire their own service, and fear that complications might arise in the division of space between British and Canadian exporters.

The Elder-Dempster Co. is arranging a direct service from Montreal and Halifax to Cape Town. This is much desired by both Canadians and South Africans, and will be the subject of a joint conference as soon as General Botha and Sir Robert Borden finish their Peace Conference work.

For the Mediterranean trade expected with Serbia, Roumania, and Greece it will be possible to secure Greek tonnage for a direct line from Montreal to Greece until Canadian tonnage is available.

Australia has announced the inception of a government owned and operated steamship line from England to Australia, beginning Mar. 21.

Wireless Restrictions Removed.—All censorship regulations restricting the use of wireless telegraphy to and from ships in the west Atlantic and in the Pacific, are now completely removed. All ships are now permitted to exchange wireless messages in plain language, code or cypher, anywhere in the Pacific, and west of long. 40 deg. west in the Atlantic, such messages may also be exchanged with Canadian commercial coast stations. British naval stations no longer accept messages on ships' business free of coast charges.

Canadian Government Merchant Marine, Ltd., Shipbuilding, Operation, Etc.

Canadian Voyageur in Service.—The s.s. Canadian Voyageur, 4,300 tons d.w., the first of the steel cargo steamships built for the Marine Department, which left Quebec, Que., Jan. 21, and arrived at Halifax, N.S., Feb. 4, was transferred there by the Department to the Canadian Government Merchant Marine Ltd., and was subsequently turned over to the Royal Mail Steam Packet Co., for a voyage to Barbadoes. After loading a cargo of flour, lumber and general merchandise, she left Halifax, Mar. 2, at 5.15 p.m., arriving at Barbadoes, Mar. 11 at 7 a.m. She then proceeded to Port of Spain, Trinidad, and Georgetown, Demerara, leaving the latter place Mar. 21, for Barbadoes, intending to leave there about Mar. 28, and to arrive in New York about Apr. 5, with a cargo of sugar, etc.

Steamship Management.—Canadian Railway and Marine World for March gave the names and addresses of the managing owners of the steel and wooden steamships built in Canada for the British Government, through the Imperial Munitions Board. We are advised by the Director of Ship Management Branch, Transport Department, Ministry of Shipping, London, Eng., that the general terms of management of these steamships are that the details of managing owners are carried out by actual ship owners, under the instructions of the Ministry of Shipping as regards voyages.

Contracts Signed.—Since Canadian Railway and Marine World for March was published, the following additional contracts between the Marine Department and the Port Arthur Shipbuilding Co. were signed on Mar. 1. Department's contracts 19A and 20A, builders' yard nos. 41 and 42, two steel cargo steamships, 3,400 tons d.w. each; department's contracts 32 and 33, builders' yard nos. 43 and 44, two steel cargo steamships, 4,300 tons d.w. each.

Names of Ships.—Since Canadian Railway and Marine World for March was published, the following additional names for steel cargo steamships to be operated by Canadian Government Merchant Marine Ltd., have been decided on by the Marine Department. Canadian Aviator, Canadian Scout, Canadian Trader, Canadian Sailor, Canadian Navigator, Canadian Seigneur, Canadian Miller, Canadian Spinner, Canadian Planter, Canadian Beaver. Particulars showing the builders' name in each case, the department contract number, and the builders' yard number, are given in the full page table, "Orders for steel cargo steamships for Canadian Government Merchant Marine, Ltd.", on another page of this issue.

Prevention of Profiteering.—The acting Minister of Marine, in answering a question in the House of Commons recently, as to what steps the government had taken to prevent profiteering in the building of steel cargo steamships, and to ascertain the total cost of labor for construction, the total cost of material used, total overhead expenses, gross tonnage and net profit respectively, said: "By inspection, in order to determine if the specifications are being adhered to. All steel materials are purchased by the Marine Department. All other sub-contracts let by builders are submitted to the department for approval, wherever possible, being confined to the Dominion. The total cost of labor for each branch and the total cost of material entering into construction is estimated by the technical officers of the department before contracts are awarded. To the above is added overhead charges of the various firms, in some cases estimated, in others known from audited returns, to which is added approximately 10% for profit. Extra allowances are made for British Columbia districts, where labor and other conditions differ from conditions in Eastern Canada."

British American Shipbuilding Co.—Welland, Ont., which has contracts from the Marine Department for 2 steel steamships of 4,350 tons d.w. each, advised us March 13 that it was waiting for steel, but expected to lay the keel for department's contract 44, builders' yard no. 4, within a fortnight. The keel for department's contract 45, builders' yard no. 5, will not be laid until the launching of builders' yard no. 3, the s.s. War Racoon, 3,500 tons d.w., which the company is building for the British Government. This launching is expected to take place about the end of April.

Halifax Shipyards Ltd., which has contracts from the Marine Department for 2 steel cargo steamships of 8,100 tons each, and for 2 of 10,500 tons each, laid the keel for contract 21, builders' yard no. 1, of 8,100 tons, Feb. 24, and for contract 22, builders yard no. 2, of 8,100 tons, March 15, if the keel plates were received in time. The concrete foundations for the company's power plant building were being poured at the end of February, and the erection of the steel frame work was to start on March 6. The concrete foundations for the plate shop, 600 x 75 ft., were also being poured at the end of February, and it was expected to start the erection of the steel work about March 15. The erection of the air compressor and stores building was expected to be started during March. We were advised recently that it was impossible to state the launching dates for any of the vessels ordered, but that the company expected to fulfill its contracts in this regard, although some allowance may have to be made for the fact that it did not receive steel in time to lay the first keel in the middle of December, when the building berth was ready for it.

Harbor and Marine Co. Ltd.—Victoria, B.C., which is constructing a shipbuilding plant, to carry out the contract for 2 steel cargo steamships of 8,100 tons each for Canadian Government Merchant Marine Ltd., given to the Victoria Machinery Depot, Ltd., is reported to have awarded a contract to S. Cameron for the erection of a plate shop at Hospital Point. Building operations were expected to commence during March.

British Government Shipbuilding.—In reply to a question in the British House of Commons, recently, it was announced that the government, after full consideration, had decided not to retain the shipyards which it had built during war pressure as government undertakings, provided they could be disposed of on fair terms.

United States Merchant Ship-Building Statistics.

The total merchant shipping built in the U.S., including shipping for foreign nations, and officially numbered by the Commerce Department's Navigation Bureau, during 1918, was as follows:

	No.	Gross tonnage
Seagoing steel ships	460	1,861,321
Seagoing wooden ships	361	735,705
Total	821	2,597,026
Non-seagoing ships	1,061	124,255
Grand total	1,882	2,721,281

..**St. John, N.B., Harbor Work.**—Satisfactory progress is reported to have been made on the excavation of the dry dock at Courtenay Bay, and also on the construction of the breakwater. During the early part of March, three steam shovels were at work, and it was expected that another would be on the job later in the month. The hydraulic dredge No. 3, and the steam hopper barge Piper, have been taken over from the North Griffiths Construction Co., the former contractors, and the former, which is a 22 in. hydraulic pipe line discharge dredge, is being repaired, with new boilers, and being thoroughly overhauled preparatory to proceeding with the dredging work. The Piper has a capacity of 500 cu. yd. The general contractor for the whole work is the St. John Dry Dock and Shipbuilding Co., and the subcontractor, the Bedford Construction Co.

The White Star Line's war record is one on which the company has every reason to be proud. More than 300 of its vessel officers were attached to the Navy throughout the war and 36 decorations have been conferred on them, while praise is due to the men of lower ratings, whose courage, fidelity and skilled work fully matched the officers', thus making possible the regular crossing of the oceans with cargoes of munitions and food. Of the fleet, 9 large steamships, totalling 146,145 tons, were sunk by the enemy. During the war, the passenger vessels were used for carrying oil, in the deep tanks, a total of 88,000 tons being so carried, for which, the company received the Admiralty's thanks.

C. G. S. Canada.—The acting Minister of Marine, in answering a question in the House of Commons recently, said that the C.G.S. Canada had been employed in the Naval Service Department's work since the outbreak of war, refit repairs having cost as follows: 1914, nil; 1915-16, $14,435.63; 1916-17, $13,283.12; 1917-18, $30,572.53; 1918-19, $6,122.12. The vessel is able to carry out long steaming periods at moderate speed, and is at present due for refit, and cannot carry out long steaming periods at maximum speed.

Purchase of H.M.C.S. Mildred McColl.—The acting Minister of Marine, in answering a question in the House of H.M.C.S. Mildred McColl was bought by the government during the war, from the Canadian Sardine Co., for $4,000, and was used by the Naval Service Department, as a dispatch boat, in Halifax harbor. She was under repairs from Sept. 4 to Dec. 14, 1918, being delayed by waiting for new parts for the engine. The refit repairs cost in 1916-17, $762.87, and in 1917-18, $721.27

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships whic the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. Where a contract date is not given the contract had not been signed a the time of our latest official advice.

The following contractions are used in the column giving the type of the vessels to be built:—s.d., single deck; 2.d., two deck; 3.d., three deck; lake, lake type; p., poop; b., bridge; f'c's'le, forecastle.

Con-tract no.	Contract date	Builder	Yard no.	Tons d.w.	Price per ton d.w.	Total price	Type	Classifi-cation	Speed, knots	Approximate delivery date	Keel laid	Launched	Name

Mainly About Marine People.

Capt. Andrew H. Allen, formerly General Assistant, H. & A. Allan, agents, Allan Line Steamship Co., and latterly in active service in the 245th Battalion, B.E.F., has been appointed Freight Manager for Great Britain and the European Continent, Canadian Pacific Ocean Services Ltd., London, Eng.

Capt. E. Anderson, who was, for about 35 years, in service with the old Beatty Line, on the Great Lakes, which was later incorporated with the C.P.R. Great Lakes Steamship Service, and also with the Northern Navigation Co., died at Sarnia, Ont., Mar. 15, as the result of a stroke. He retired from active service about two years ago.

Hon. C. C. Ballantyne, M.P., Minister of Marine, and of the Naval Service, was sufficiently recovered from his operation, and subsequent illness, to leave the Royal Victoria Hospital, Montreal, Feb. 22. After resting at his house in Montreal, he left there March 10 for Atlantic City, N.J., expecting to remain about three weeks and then to return to Ottawa.

G. M. Bosworth, Chairman, Canadian Pacific Ocean Services Ltd., and Mrs. Bosworth, visited Virginia Hot Springs early in March. They are expected to sail for England by the s.s Grampian, on April 25.

Duncan Cameron, formerly in C.P.R. service and latterly with Dodwell and Co., agents (Blue Funnel Line), Vancouver, has been appointed their manager, there, vice H. B. Davenport, transferred to the company's head office at Seattle, Wash.

Jas. Carruthers ,ex President, Canada Steamship Lines Ltd., returned to Montreal Mar. 3, from a trip to the Pacific Coast.

George C. Dew, who has been appointed Asiatic Freight Agent, Canadian Pacific Ocean Services Ltd., Montreal, was born at Toronto, Aug. 9, 1886, and entered transportation service in Mar., 1907, as stenographer to Assistant Freight Traffic Manager, C.P.R., Toronto, and later, on the removal of that office, at Montreal, and in Jan., 1909, he was transferred to the Traffic Vice President's office, where he was successively, secretary, clerk, and chief clerk,.until 1914, when he was appointed Contracting Freight Agent, Asiatic and Australian Freight Traffic, and in Jan., 1917, he was appointed Asiatic Freight Agent, which position he held until his transfer to Canadian Pacific Ocean Services Ltd., Mar. 1.

Leonard C. Hanna, for many years active head of M. A. Hanna and Co., owners of one of the largest fleets on the Great Lakes, died recently at Cleveland, Ohio.

Alex. Johnston, Deputy Minister of Marine, left Ottawa, March 5, with Thos. Ahearn, President, Ottawa Electric Ry., to spend some weeks at Coronada Beach, Cal.

Mrs. C. Gardner Johnson, wife of Lloyd's Agent at Vancouver, B.C., expects to leave there early in April, for an extended visit to England.

Capt. H. St. George Lindsay will, according to an Ottawa press dispatch, resume his position as General Superintendent, River St. Lawrence Pilotage, at Quebec, shortly. During the early part of the war, he was acting under the Militia Department in connection with transport matters, and as a result of the enquiry into the Halifax pilotage commission, subsequent to the disastrous explosion of Dec. 1917, he was appointed Superintendent of Pilotage at Halifax, N.S.

William Thomas Marlow, who has been appointed General Sreight Agent, Canadian Pacific Ocean Services, Ltd., Montreal, was born at Limerick, Ireland, Oct. 25, 1872, and entered transportation service in Sept., 1886, since when he has been to Apr., 1888, junior in dispatcher's office, C.P.R., Toronto; May, 1888, to Mar., 1889, junior clerk, Assistant Superintendent's office, C.P.R., Toronto; Mar., 1889, to Feb., 1896, clerk, Assistant Freight Traffic Manager's office, C.P.R., Toronto; Feb. 1896, to Mar. 1897, chief tariff clerk, C.P.R., Montreal; Mar. 1897 to Nov. 1902, clerk, General Freight Agent's office, C.P.R., Hong Kong, China; Apr. 1903 to Mar. 1904, Assistant to Foreign Freight Agent, C.P.R., Montreal; Mar. 1904 to Aug. 1914, Import Freight Agent, C.P.R., Montreal; Aug. 1914 to Sept. 1918, Assistant Director, Overseas Transport, Dominion Government, Montreal; Sept. 1918 to Mar. 1919, Deputy Director General, British Ministry of Shipping (Canada), Montreal.

Lieut.-Col. Bartlett McLennan, D.S.O., formerly President, Montreal Transportation Co., who was killed in France, Aug. 3, 1918, left an estate of $903,593. Among his bequests was one of $5,000 to L. L. Henderson, Managing Director, Montreal Transportation Co.

Brevet Col. G. Patterson Murphy, C.M.G., of the Canadian Army Service Corps, and President, Ottawa Transportation Co., left Ottawa, early in March, with Mrs. Murphy, to spend a few weeks at Atlantic City, N.J.

H. M. Perry, Purchasing Agent, Shipbuilding Department, Imperial Munitions Board, did not remove from Ottawa to Montreal, with the other officials of the department recently. He is now with the Imperial Munitions Board in Toronto, attending to various matters in connection with its liquidation.

S. I. Preston, Agent for Lloyd's Register, at Quebec, Que., sincce Nov., 1918, has been transferred to Kobe, Japan, and sailed from New York, Mar. 15, to take up his new duties. Until another appointment is made, the work is being undertaken by the Montreal Agency.

Capt. A. H. Reed, harbor master at Vancouver, B.C., who has been on active service with the Royal Navy, since about the commencement of the war, has returned to Canada. During his war service he was in charge of one of, what were known as, the Q boats, dealing with enemy submarines.

Senator H. W. Richardson, President, Great Lakes Transportation Co., who died at Kingston, Ont., some months ago, left $100,000 for hospital buildings, or assisting hospital work for consumptives; also $5,000 to the Kingston Orphans Home, for building purposes.

Guy D. Robinson, who has been appointed European Freight Agent, Canadian Pacific Ocean Services Ltd., Montreal, was born at St. John, N.B., Dec. 7, 1877, and entered transportation service in Nov. 1895, since when he has been, to Aug. 1907, junior clerk, Travelling Freight Agent and chief clerk to General Freight Agent, C.P.R., St. John, N.B.; Aug. 1907 to Jan. 1909, chief clerk, General Foreign Freight Agent's office, C.P.R., Montreal; Jan. 1909 to May 1915, Assistant Export and Import Freight Agent, C.P.R., Toronto; May 1915 to May 1917, Export Freight Agent, C.P.R., Montreal; May 1917 to May 1918, in chrage of grain transports, Overseas Transport Department, Dominion Government, Montreal; May to Sept. 1918, in charge of ocean steamships, Overseas Transport Department, Dominion Government, Montreal; Sept. 1918 to Mar. 1919, director, ocean steamship department, British Ministry of Shipping (Canada), Montreal.

H. B. Smith, of Owen Sound, Ont., President, Collingwood Shipbuilding Co., has been spending a short holiday in Florida.

Mrs. Steedman, wife of J. A. Steedman, one of the directors of Canada Steamship Lines, died suddenly at Hamilton, Ont., Mar. 25.

J. W. Troup, Manager, British Columbia Coast Service, C.P.R., Victoria, who suffered a breakdown in health late in February, is in California, and is expected to be away for some time. During his absence, Capt. C. D. Neroutsos is acting as Manager at Victoria, James McGowan at Vancouver, and Capt. P. J. Hickey as Marine Superintendent.

Lorne C. Webster, President, Webster Steamship Co., and Mrs. Webster, left Montreal, early in March, for Old Point Comfort, Va.

Canadian Trawlers in War Service.—The acting Minister of Marine, in answering a question in the House of Commons recently, said that 12 Canadian trawlers were in the Naval Service Department's service during the period of the war. Of these, six, Messines, Ypres, Vimy, St. Julien, St. Eloi and Festubert, were built by Polson Iron Works, Toronto, at a cost of $176,194.65. The cost of refits were as follows: Festubert, $3,987.92; Messines, $5,373.83; St. Eloi, $3,987.70; St. Julien, $3,960.34; Vimy, $3,869.95; Ypres, $5,706.58. They have not at all times been ready for patrol service. In 1918 certain repairs were necessary to them, the carrying out of which was protracted, due to the scarcity of labor prevailing at that time. The repairs were due in part to the Halifax disaster of Dec. 6, 1917. Since repairs were completed the vessels were brought forward for service. A log of each trawler can be obtained, showing the number of hours they did at sea.

Purchase of H.M.C.S. Stadacona.—The acting Minister of Marine, in answering a question in the House of Commons recently, said that the H.M.S. Stadacona was bought by the government, during the war, from J. H. Ladew, for $70,000, and was employed in connection with naval service work. The refit repairs since her purchase by the Government were as follows: Refittings, $39,025.14; 1915-16, $7,529.57; 1916-17, $11,262.57; 1917-18, $17,844.01; 1918-19, $7,465.67.

Chartering of s.s Prince George.—The acting Minister of Marine, in answering a question in the House of Commons recently, said that the Naval Service Department chartered the s.s. Prince George from Aug. 8 to Sept. 23, 1914, from the Grand Trunk Pacific Ry., at $500 a day, for use as a hospital ship on the Pacific Coast. The total cost was $47,569.52; viz: charter, $23,500; refit repairs, $5,467.15; other expenses, $18,602.37.

The Canadian Naval Service's Part in the War.

The following is taken from "Canada's Part in the Great War," a booklet issued by the Dominion Government recently:—

Cruisers.—At the outbreak of war in 1914 the Canadian Government possessed only 2 naval vessels, the Niobe, a cruiser of 11,000 tons displacement, with a main armament of sixteen 6-in. guns, stationed at Halifax, N.S., and the Rainbow, a small cruiser of 3,600 tons displacement, armed with two 6-in., six 4.7 in., and four 12-pounder guns, stationed at Esquimalt, B.C. The Rainbow, which was ready for sea, patrolled, with other ships on the Pacific station, as far south as Panama, and captured several ships carrying contraband of war. After the entry of the United States into the war, she became depot ship on the Pacific coast. The Niobe was made ready for sea in Sept. 1914, and remained in commission one year, during which she steamed 30,000 miles on patrol duty. She afterwards became depot ship at Halifax.

Smaller Vessels.—At the beginning of hostilities, various small craft were taken over by the Naval Department from the Marine and Customs Department, and were armed and manned from the R.C.N.V.R. for the performance of patrol dutis off the Atlantic coast. Two submarines, which were bought just befor the declaration of war, patrolled the approaches to Victoria and Vancouver, and helped in keeping Admiral von Spee's squadron away from the Pacific ports. H.M. sloop Shearwater was taken into the Canadian service, as mother ship to these submarines, and, in the summer of 1917, these three vessels went, by way of the Panama canal, to Halifax.

Trawlers and Drifters.—A patrol and mine-sweeping service has been carried on since the outbreak of war. The vessels used at first were government and private vessels, which were taken over and equipped for the purpose. Some of these were placed at the Government's disposal free of charge. Early in 1917 the Naval Service Department undertook to have 60 trawlers and 100 drifters built in Canada for the Imperial Government. They were built at various places on the St. Lawrence and the Great Lakes; many of them were in service, in Canadian and European waters in 1917, and all were in service in 1918. The area patrolled under the department stretched from the Straits of Belle Isle to the Bay of Fundy, and from Quebec to east of the Virgin Rocks. Within this area the department had control of patrols, convoys, mine-sweeping, the protection of fishing fleets, etc., Only one large vessel was lost by enemy attack in this area. At the date of the armistice the vessels in the Canadian Naval Service were as follows:—

On the Pacific.—H.M.C.S. Rainbow, depot and training ship; H.M.C.S. Shearwater, submarine depot ship, and 2 submarines; H.M.C.S. Grilse, torpedo-boat destroyer; 9 auxiliary patrol ships, 47 armed trawlers, 58 armed drifters, 11 armed mine-sweepers and tugs, and a large flotilla of motor launches.

The crews of these vessels consisted of men from all parts of Canada, principally members of the Royal Canadian Naval Volunteer Reserve. At the date of the armistice the personnel of the service was:—Officers and men of Royal Canadian Navy, 749; Officers and men of Royal Canadian Naval Volunteer Reserve, 4,374.

Naval College.—Canada is fortunate in the possession of a small but excellent Naval College. More than 50 officers, who passed out of the college as cadets, are serving in either the Imperial or Canadian navy. Many of them have gained distinction, and four lost their lives in the battle of Coronel.

Canadians in Imperial Naval Forces.—In addition to the men serving on Canadian vessels, over 1,700 have been recruited in Canada for the Imperial Navy, and are on service in European waters; 73 surgeon probationers and a number of hydrographic survey officers have been sent from Canada and 580 Canadians were enrolled as probationary flight lieutenants in the Royal Naval Air Service, before recruiting for the Royal Air Force began in Canada. More than 500 Canadians holding commissions in the Royal Naval Volunteer Reserve are in the British Auxiliary Patrol and similar services.

The Royal Canadian Naval Air Service was established in the summer of 1918, with stations at Halifax and North Sydney. It has co-operated with the United States Naval Aviation Corps in patrolling the coast and escorting convoys through the danger zone.

The Canadian Radiotelegraph Service controls about 200 stations ashore and afloat. Several new stations have been erected or taken over by the Naval Service Department, and there is now an unbroken chain of radio communication from St. John's, Newfoundland, to Demerara. The department opened a training school for wireless operators, from which about 200 men have been sent out for service in all parts of the world.

Dockyards.—Important refitting, repairing, and supply work has been done by Canadian dockyards. Large refits of Imperial and other ships were made at Esquimalt, including H.M.S. Kent, after the battle of the Falkland Islands, and the Japanse battleship Asama, after grounding on the coast of lower California. Several large cruisers were refitted at Halifax and Montreal. Other work included the defensive armament of merchant ships, the refitting of transports for troops, horses, and special cargo, and the loading and securing on ships' decks of 600 launches, tugs, etc., of large size. The Halifax dockyard was seriously damaged by the explosion in the harbor on Dec. 6, 1917, but immediate steps were taken to enable the services of the yard to be carried on.

Stores.—The Canadian Naval Service provided supplies for the ships of the Royal Canadian Navy and for a number of Imperial and allied ships in Canadian waters, as well as many of the requirements of H.M. dockyards at Bermuda and Hong Kong. Large supplies were shipped from Halifax dockyard for provisioning the fleets in European waters. A large coaling depot was established at Sydney, N.S., for the use of patrolling vessels and of all convoys leaving the St. Lawrence.

The growth of the Naval Service since the outbreak of war is shown by the increase in the quantites of stores purchased in the last three fiscal years:—

1915-16	$ 2,500,000
1916-17	7,500,000
1917-18	10,000,000

Overseas Transport. By arrangement with the Admiralty and the British Ministry of Shipping, the Director of Overseas Transport appointed by the Canadian Government controlled the inland traffic, by rail or otherwise, in food supplies and munitions for transport overseas, the reception and storage at ports of shipment, the allocation of cargo and its stowage on board the ships. The average monthly export was: in 1915, 50,000 tons; in 1916, 170,000 tons; in 1917, 331,000 tons; and in 1918 (to Dec. 1), 387,000 tons. From Jan. 1, 1915, to Dec. 1, 1918, over 11,250,000 tons of freight was shipped.

Shipbuilding.—The Naval Service had the following vessels built for various governments during the war:

For Imperial Government.—Twelve submarines, 60 armed trawlers, 100 armed drifters, 550 coastal patrol motor boats, and 24 steel lighters for use in Mesopotamia, which were shipped in sections.

For French Government.—Six armed trawlers and 36 coastal patrol motor boats.

For Italian Government.—Six submarines.

For Russian Government.—One large armed icebreaker and some submarines.

German Warships Suggested for Hudson Bay Commercial Service.

M. Taylor, of Hamilton, wrote recently, as follows:—I note a news dispatch from London, concerning a suggestion for the conversion of some of the German warships into refrigerator meat carriers for the Australian meat trade. It has occurred to me that some of these vessels might be usefully adapted and employed in Canada for the grain trade in Hudson Bay with some structural alterations.

The writer, who is a civil engineer, and whose specialty is harbor work, made the trip to and from Hudson Bay by water in 1912, spending 11 days in the ice on the way up, about the end of June, and returning in November, which gave an opportunity to note navigation conditions in Hudson Bay and Strait at both ends of the open season.

I would propose removing the guns and gun turrets, and heavy deck and other unnecessary equipment, both internal and external, and also the removal of the heavy side and deck armor plate, and its replacement by say 2 in. plate on the sides. Structurally the ships are built very strongly to resist gun shock, and the bottoms are double. They have also very high engine power, and their rudders and propellers are protected, having what is known as the cruiser type of stern, which would protect them from the ice. They are oil burners, which increases the space available for cargo. The removal of the crew's quarters, ammunition space, etc., and the consequent general lightening up of the vessel by the removal of dead weight, which is unnecessary if they should be used for commercial purposes, would increase their cargo carrying capacity. A vessel of 25,000 tons should, if thus remodeled, carry a large amount of grain. Traveling at low speed they could be operated economically.

With their heavy engine power, they would be able to act as self icebreakers and fight their way through any ice floes, and their heavy build would protect them against ice shoves. Beyond the cost of remodeling them, the capital expenditure on them would be nothing, and this would make it economically possible to lay them up during the winter with just enough crew to care for them, and consequently there would be no overhead expense in the winter.

This is the great argument against the construction of special vessels for use in Hudson Bay, it being claimed that vessels of sufficient strength to use that route under ice conditions could not be used economically on other routes in winter, and would have to be laid up, with consequent loss of earnings to their owners.

A dozen of such converted vessels would move an enormous quantity of grain from the terminal elevator at Port Nelson in the open season in Hudson Strait. Ordinary ice breakers would be comparatively useless in Hudson Strait, as the currents carry the ice about in all directions and soon block up the small channel which such a vessel makes in order to assist other vessels through the ice.

Each vessel must be able to force its own way through the ice when necessary, especially at the beginning of the open season.

I am writing this in order to give the idea publicity and so as to invite criticism. It certainly seems a tremendous economic waste if these vessels cannot be used to advantage somewhere, and this might be a possible means of solving the embarassing question of how to get rid of them without scrapping them or retaining them for their present use.

Electric Welding in Shipbuilding.

Electric welding in connection with the building of steel ships by the U.S. Government was discussed at some length recently by C. A. Adams, President, American Institute of Electrical Engineers. Both the processes of spot welding and arc and electric welding are applied to shipbuilding. A committee appointed by the A. I. E. E. to make an investigation concluded that the operator is the principal factor in arc-welding, the type of current regulation being of relatively small importance compared with his skill in manipulating the arc. In a test of 15 different makes of arc-welding appliances, no appreciable difference in the strength of the weld was found, all showing a strength of at least 94% of that of the plate itself.

The test showed also that the strength of the weld was increased to a certain degree as a stronger current was used and that apparently it made no difference whether the current was alternating or direct.

Another point that was deduced from the test is that it apparently makes no difference in the results whether the electrode used is of absolutely pure iron or of an iron containing small impurities, since the characteristics of the metal change in going across the arc.

Particular investigation as to the effect of vibrations in producing fatigue of the metal of the welds was made, and in one set of tests alone the committee used 20 tons of samples. The relative strength of 94% of the value of the plate as produced by arc-welding can be appreciated when compared with that of a riveted point, which ranges from 50 to 70%, depending upon whether one, two or three rows of rivets are used.

Spot-welding as compared with arc-welding has the disadvantage that very heavy machinery is required. For welding a ½-in. plate, the machine will weigh about 3 tons, and consume a large amount of electric current. It, however, requires less time and labor, and the reason for the heavy weight is the necessity for producing a pressure of approximately 25 tons when ½-in. plate is being welded. For spot-welding, the power requirements range from 400 to 700 k.w. in the commercial machines, and a machine is being used experimentally which is rated at 2000 kilowatts.

The Underwriters' Classification Committee, which passes on metals before they are insured, has approved of arc-welding for the minor parts of ships, of which there are about 500,000 on each vessel produced in yards like that at Hog Island.

Acquirement and Disposition of the s.s. Tuna.—The acting Minister of Marine, in answering a question in the House of Commons recently, said that the s.s. Tuna was donated by J. K. L. Ross to the Dominion Government, and was taken over by the Naval Service Department, Sept. 24, 1914. The refits and repairs from the date of her commissioning to the date she was sold, were: $44,885. She was sold to C. Brister & sons Ltd., for $800, as a hulk, after machinery and fittings had been removed.

Sale of
Surplus Military and Naval Stores

Dry Goods, Camp Supplies, Food Hardware, Scrap Metal, Junk

Cloth; new and second-hand clothing, equipment, hardware, tents, blankets, camp supplies, etc.

Flour, jam, canned evaporated milk, tea, coffee, etc.

Condemned clothing, junk, old brass, metals, leather, rubber, etc.

Sales Will Be Made By Sealed Tender

Persons desiring to tender are requested to communicate with **THE SECRETARY OF THE WAR PURCHASING COMMISSION, BOOTH BUILDING, OTTAWA,** stating the items in which they are interested, whether new or second-hand or both.

Arrangements will be made to have samples on exhibition at places throughout Canada; specifications, full details, and tender forms will be mailed when ready to those who have registered as suggested above.

IF INTERESTED PLEASE APPLY NOW

Institutions May Make Direct Purchase Without Tender

Dominion, Provincial, and Municipal departments, hospitals, charitable, philanthropic, and similar institutions which are conducted for the benefit of the public and not for profit may purchase goods without tender at prices established by the War Purchasing Commission.

All communications should be addressed to the Secretary, War Purchasing Commission, Booth Building, Ottawa, who will be glad to supply lists and further details to those interested.

Shipbuilding Discussion in the Dominion Parliament.

In moving the address in reply to the speech from the throne at the opening of the Dominion Parliament's current session, R. J. Manion, M.P. for Fort William and Rainy River, said among other things:—"In shipbuilding, including ships built to the order of the Imperial Munitions Board and other private contracts, we built 103 ships, with a dead weight carrying capacity of 367,000 tons. We built for the Imperial Government over 700 small armed trawlers and drifters of various types; for the French Government over 40 armed trawlers, and coastal patrol motor boats. Why, in my own inland port city of Fort William, 1,500 miles from the Atlantic coast, up there on the shores of Lake Superior, which were explored 200 years ago by French voyageurs and courieurs des bois, we built for the native land of these Frenchmen 12 armed trawlers, which sailed down the lakes and rivers of what was originally New France, on their way to the shores of Old France. What a historical romance for the pen of a Parker!"

The Minister of Public Works, Hon. F. B. Carvell, in a subsequent debate, said: "The government is spending a large amount of money this year—I am not sure as to the exact amount, but I imagine it must be $20,000,000 or $25,000,000—and it expects to spend about $30,000,000 during the next fiscal year in the construction of steel ships in Canada. I know there will be criticism of this; at least, I assume there will during the session, because criticism has already been launched in the public press, and, so far as I am concerned, I want to meet it here and to give my views very plainly. It is always a very easy matter to be wise after the event. A year ago there was nothing which the civilized world needed so much as shipping. Shipping was more vital to winning the war than were men or shells or anything else. The greatest cry of the allied armies a year ago was for ships, ships to carry United States soldiers across the ocean, and ships to carry food to the allied armies. The Canadian Government decided to undertake a shipbuilding programme which involved the construction of 52 ships varying in size from 3,500 tons d.w. to 10-000 tons d.w. One of these has already been completed and is in service. I do not deny—I do not for a moment try to conceal the fact that those ships are going to cost more than they would have, had the Government gone out into the open market after peace was declared and bought them. But buying the ships after peace was declared would not have helped furnish ships in order to carry on the war; and if the war had continued, as most people expected it would, over another winter and another summer, two-thirds or at least one-half of those ships would have been at the service of the country. Even today, while we admit that the war is over and the crying necessity for those ships has ceased to exist, the construction of them plays an important part in many portions of Canada in furnishing labor to the unemployed, a task which I look upon as the paramount duty of this government and of the government of every province and every municipality at present. So far as I am concerned—and I speak for my colleagues, so far as we are concerned collectively—in the allocation of the public moneys, we have taken into consideration practically altogether the probable requirements to take care of unemployment in the labor world generally, rather than the advantage which a particular work or expenditure of money will be to the people in the vicinity in which the work is done or the money expended. That has been the underlying principle in the making up of the estimates. The ships are being built today at Montreal, at Toronto, at the head of the Great Lakes, at Port Arthur and Fort William, and at Vancouver and Victoria. Were those works not going on in those localities, especially on the Pacific coast, you would find a very different condition of affairs from what exists today. I, therefore, make no apology. No apology is required. I am simply pointing out that we are doing this in order to try to meet the pressing requirements of the moment and to place the country in a position to get back to a peace basis."

Mr. Carvell was evidently in error in saying that vessels for the Canadian Government Merchant Marine are being built in Toronto, as no orders have been given to Toronto builders.

J. H. Sinclair, M.P. for Guysborough, N.S., said:—"The Minister of Public Works referred to the construction of ships. He told us the government had embarked on a policy of building ships, and that a very large sum of money was to be expended. He admitted he could go into the market at present and buy ships cheaper than he could possibly build them. If that be true, why pay more than they are worth? As far as my information goes, I believe that the government is paying under these contracts about four times the normal value for the ships it is proposing to build. In normal times ships can be built for about $50 a gross ton, but in the contracts I have seen the government is paying something like $200 a ton. [Editor's note: This is per ton d.w.] The government will never see its money again; I fear it is an improvident proposal. It took the government four years finally to make up its mind to build ships. The time to have built ships, if they were to be of service in the war, was in 1914, when war broke out, but the government waited until the war was about over, and then embarked on a very expensive programme of building ships for which it proposes to pay four times the normal price. Such a policy is not at all likely to promote the building of ships in Canada. If the government could devise a way of promoting and assisting shipbuilding in Canada, that would be a very wise and proper move to make, but to build ships at four times the normal price is certainly not likely to stimulate the building of ships by private enterprise. I am not in favor of government ownership of tramp vessels; I do not think the policy is a wise one, and I do not think it will do much to solve the problem of providing employment which I understand the minister to say was the main reason for its adoption. If this is the government's object, I can say that I know of no other industry that gives so little employment of labor for the amount of money expended as the building of steel ships. The government could easily have found some other industry where it could have employed a larger number of people with a smaller expenditure of money. Is there not something we can do in this country that would bring us in some return? Would it not better, for instance, to buy tractors and plough up the western prairies and produce wheat?"

Michael Clark, M.P. for Red Deer, Alta.:—"We would need the ships to carry the wheat."

J. H. Sinclair:—"I am afraid if we make the rates of freight correspond with the outlay on the ships the wheat would be too expensive. Would it not be a saner policy to expend part of this money in building branch lines of railway lines in Nova Scotia? I can show him places in my own constituency where by the construction of a branch line, he would open up the country and encourage production and help at the same time to make the Intercolonial Ry. profitable. Building branch lines of railway where they are needed would be doing something for the country, and would be a far better policy than buying expensive ships for which there does not seem to be any future to justify the expenditure involved."

Canadian Merchant Service Guild Recommendations.

The Canadian Merchant Service Guild, at an executive meeting in Toronto recently, decided to make the following recommendations to the parliamentary committee:—

That the Dominion Government be asked to create a fund which will give seamen free hospital attention, when necessary, the same privilege to be extended to fishermen and lighthouse keepers.

That all bridges across Canadian rivers and canals be provided with suitable signals to inform those in charge of a vessel that such will be opened before approaching close enough to endanger life and property.

That every Canadian vessel be officered by Canadians, and that every such vessel leaving port be in charge of a certified person.

That every Canadian vessel of 500 tons or over be provided with a master, first officer and second officer, and that every Canadian vessel less than 500 tons and operating more than 12 hours a day, with the exception of vessels employed solely in fishing, shall be provided with a master and one officer, these officers to be recognized as such by the government.

That every Canadian vessel be manned as may be found necessary to the safety of public life and property afloat.

That Canadian coastwise trade be reserved solely for vessels truly and without fraud owned by the [illegible] of Canada.

That the Canada Shipping Act be revised to conform to the [illegible] of our mercantile marine.

That every master, pilot and officer who considers himself not fairly dealt with by our courts of inquiry shall have the privilege of appealing to the Admiralty Court for final decision.

That a ruling be given regarding the article supplied to our coasting vessels as it contains the insignia of the British Empire, and at present people do not seem to understand its importance.

That the government be asked to introduce legislation which will give all seamen of Canada the use of their franchise.

That Otter Head light, on the north

shore of Lake Superior, be immediately put into commission, and a fog signal installed at that point.

That the government without further delay take up the matter of installing life-saving stations, equipped with wireless, and especially along the north shore of Lake Superior.

It was decided that the nautical school in Collingwood be put under the guild's auspices, and that similar educational institutions be inaugurated throughout the Dominion as soon as the progress of the institution will allow.

The Reid Newfoundland Co's. Steamship Services.

Reports were current recently that the s.s. Bruce, formerly owned by the Reid Newfoundland Co., and sold some time ago to the Russian Government, and which happened to be in Glasgow, Scotland for repair, at the time of the Russian revolution, was likely to return to that company's ownership, and that she would be replaced in service between Port aux Basques, Nfld., and North Sydney, N.S. We are officially advised that the s.s. Bruce is not now owned by the company, and it is therefore not interested in the matter. The company's steamship services at present in operation, are as follows:

Port aux Basques and North Sydney, daily, steamships Kyle and Sagona, when North Sydney is a closed port, on account of ice, the vessels call at Louisburg, N.S.; Port aux Basques and Placentia, Nfld., weekly, s.s. Glencoe; Placentia Bay, Nfld., weekly to each side of the bay, s.s. Argyle; St. John's and North Sydney, s.s. Meigle, and other vessels; during the heavy traffic movement it was necessary to charter steamships for this service. On the opening of navigation in the bays, the following steamship service will be given in addition to the forgoing:—Trinity Bay, two trips weekly, s.s. Petrel; Notre Dame-Bonavista Bay, two trips weekly, steamships Clyde and Dundee; Green Bay, weekly, s.s. Home; Humbermouth-Battle Harbor, weekly, s.s. Ethie. Between June 1 and Oct. 1, a service is given between St. John's and ports of call on Labrador.

The Chats Falls Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with $50,000 authorized capital and office at Ottawa, Ont., to own and operate steam and other vessels, wharves, docks and other navigation facilities, and to carry on a general navigation business. W. J. Graham, O. Martin, L. G. Roy, C. Emery and W. J. Carson, Ottawa, and H. Keaey, Fitzroy Harbor, Ont., are the incorporators. It is reported that a contract has been placed in Aylmer, Que., for the construction of a vessel 90 ft. long, and 22 ft. wide, for $15,000, for a service of two trips daily between Britannia Bay and Fitzroy Harbor. The company has purchased the tug Fashion from the Public Works Department, as hauled out at the Victoria Island shipyard at Ottawa. She was built at West Bay City, Mich., in [illegible], and is equipped with compound engine with cylinders 14 and 24 in. diar. by 13 in. stroke, 24 n.h.p., supplied with steam by a boiler 70 in. diar. by 105 in. long, jet condenser, duplex feed pump and 6 ft. propeller. Her dimensions are: length 52 ft., beam 16 ft., draft 7½ ft.; tonnage, 43 gross, 27 register. The hull was recently condemned.

Canadian Bulk Freight Steamships On The Great Lakes.

Following is a list of Canadian bulk freight steamships trading on the Great Lakes, which were enrolled in the Dominion Marine Association for 1918. Those marked with an asterisk were not operating on the Great Lakes at the close of 1918, having been transferred to ocean service, chiefly for overseas service:

*A. E. Ames, *A. E. McKinstry, Advance, Arabian, *Atikokan, Barge No. 41, *Beaverton, Bickerdike, Cadillac, *Canadian, City of Hamilton, City of Ottawa, E. B. Osler, Easton, Emperor, *Glenellah, Glenmount, *H. M. Pellatt, Haddington, Hamonic, Huronic, Imperial, Iocolite, Iocoma, Ionic, J. H. G. Hagarty, Joyland, *Kenora, Laketon, Mapleton, Martian, Midland King, Midland Prince, Noronic, *Paipoonge, *Renvoyle, Riverton, *Rosedale, *Royalite, Sarnian, *Sarnolite, Seguin, W. D. Matthews, W. Grant Morden, Westmount, *Winona, Yorkton.

It will be noticed that the list shows the steamships Atikokan and Paipoonge, as not being operated on the Great Lakes at the end of 1918. During that year, both vessels were sold to foreigners, and were cut in two, to allow of the passage through the Welland Canal. After this was done, the foreign purchasers defaulted in payment, and by sale under an order of the court, the vessels returned to Canadian ownership, being bought by the Collingwood Steamship Co.

A Dream Come True.—The London, Eng., Daily Mail rhapsodizes on the enthusiasm of the Toronto populace as the troopships pull along the quaysides with their loads of returning soldiers. Toronto will, probably, be an ocean port one day, but the current season was opened by the customary steamship from Hamilton.

Public Works Department's Work.—The Minister of Public Works, Hon. F. B. Carvell, in speaking in the House of Commons recently, said: "In the department's engineering branch, we are doing repair work and maintaining the works. There were some places, particularly down in the lower St. Lawrence, where tremendous damage was done by storms last year. In such cases repairs must be made, but I may as well tell the house that we are not putting in new works of a very extensive character, simply because we believe we can expend the money on other work, such as highways, railways and canals, shipbuilding and such things as these which will produce better results and give more employment."

Compensation for British Ships Sunk.
Col. Leslie Wilson, is credited with saying that the amount paid by the British Government to shipowners in compensation for British ships sunk by the enemy while under government requisition and at direct government risk, between Aug. 4, 1914, and the armistice, was $520,156,355. The first cost to the owners of these ships was estimated at $255,584,030. In addition $5,844,125 was paid in respect of 25 ships whose first cost is not known. There are also a few cases not yet settled. No taxation is levied on these sums, which represent capital, not income, and are required to replace the vessels. Building costs are now from two to three times what they were before the war.

A Little Bit of Nonsense.

"Circumstances alter not only cases but words as well."

"Explain yourself."

"When the captain of a vessel ships a cook he hires him; but when a housewife ships her cook she fires her."—Boston Transcript.

Wines are terribly scarce in Great Britain just at present, and are likely to remain so for some time owing to the reduction of tonnage. Our ships, however, are doing their best to make port as quickly as possible.

Shipping Federation of Canada, Annual Report and Meeting.

At the Shipping Federation of Canada's annual meeting, in Montreal, recently, John Torrance, who presided, referred to the death of the President, Andrew A. Allan, who was elected to the position in 1909, and filled it ably and satisfactorily. Following are extracts from the annual report:—

"The total number of sea-going vessels which arrived at Montreal during 1918 was 674, of 1,933,482 tons register, an increase of 27, compared with 1917. The past season was the busiest ever experienced at Montreal, the export shipments were the heaviest on record. A unique fature was the large number of U.S. Emergency Fleet Corporation ships which visited the port. these vessels were all built on the lakes and the greater part of them loaded cargo at Montreal for U.S. Atlantic ports and others for Europe direct.

"As regards shipping conditions during 1918, it is true the government increased the "blue book rates," in the early part of the year, but even with this increase, shipowners are not receiving what they should, in comparison with the services they have rendered to the nation. Now that the war has been victoriously won, pressure is being brought to bear on the government to demobilize shipping as soon as possible, and it is understood that the government is making arrangements to release shipping under its control after March 1. It is obvious that when owners are permitted to manage their own business and order the ships they require, then the work of reconstructing their trades and fleets can commence. It is not an easy task nor a quick one, but if shipowners are left to themselves, I am certain they can accomplish it. All shipowners recognize more or less that competition from our allies and neutrals will be keen, and the least the government can do is to give the shipping industry a free hand, by withdrawing the restrictions which are now preventing it from expanding."

"It is needless for me to say that the St. Lawrence Power Co's. application for permission to dam the St. Lawrence river at the Long Sault Rapids was strenuously opposed by the federation, acting in conjunction with other commercial bodies interested in the welfare of the St. Lawrence route. A similar scheme was brought out in 1910, but at that time we were fortunate enough to have the measure defeated. This time, however, the power company was backd by the U.S. War Department, and, in view of this, the International Joint Commission, as an interim measure, granted the petitioners permission to construct and maintain a dam for five years, or until the termination of the war, whichever shall come first. Now that the war is over, it is to be expected that our government will immediately take steps to have a sufficient supply of water to accommodate the largest vessels which visited this port throughout the season."

A total of 190 vessels of 1,119,828 gross tons were entered with the federation during 1918, an increase of 295,433 tons over 1917.

The officers of 1918 were re-elected for 1919, John Torrance succeeding the late A. A. Allan as President, and A. E. Cooke being added to the executive council.

The Minister of Marine on Government and Other Shipbuilding.

The Minister of Marine, Hon. C. C. Ballantyne, M.P., is reported to have said in an interview at Montreal, March 6, just before leaving for Atlantic City to recuperate after his serious illness, as follows:—

"I intend to make a full statement in the House of Commons on my return to Ottawa, and therefore do not care to say much regarding this now. When I announced in the house last session the government's shipbuilding programme, I explained Canada's great need for ships at that time, more particularly to work in conjunction with the Canadian National Railways. I also stated that the government hoped that shipbuilding would be permanent. Since then many difficulties have arisen. The cost of skilled and unskilled labor has greatly increased, as well as the cost of all materials that enter into the building of ships, which will make it more difficult to maintain shipbuilding in Canada on a permanent foundation.

"However, I am in hopes that these conditions will change for the better, within the near future, and that it may be possible for Canada, at least in some of our best yards, to continue permanently to build ships. The government made no mistake in going in for shipbuilding, and I will go into all the details regarding this when I make my statement to parliament. In the meantime all the yards in Canada have government contracts to keep them fully occupied all this year, and possibly a part of next, with the exception of one or two yards which have been building ships for the British Government through the Imperial Munitions Board.

"My colleague, the Minister of Public Works, Mr. Carvell, stated in the house the other day that the government is building ships in order to give employment. Undoubtedly he had reference to the necessity of giving employment at present. This was not the reason the government entered into shipbuilding at the time it did, but, on the contrary, because, owing to the world's great shortage of tonnage, and the impossibility of ships being contracted for in any country, and England and other countries being willing to place large contracts in Canadian shipyards at greatly advanced prices over what the government was paying, it would have been an unwise policy in the interests of Canada had she not gone in for shipbuilding on her own account. Further details will, however, be given when I return to the house. I cannot say more at present as to the shipbuilding policy. As to the future of shipbuilding, it will be discussed fully by the cabinet on my return to Ottawa."

"I have nothing to say regarding Canada's naval policy at the present time," said the minister, in answer to a query, "although I have my own views on this important subject. It would be unwise, in fact, for me to make any statement at present until after Admiral Lord Jellicoe's visit, and before the cabinet decides what its policy will be."

Shovelling and Trimming Charges at Grain Elevators.

These matters were dealt with in the Dominion Marine Association's annual report recently (Canadian Railway and Marine World for March, pg. 166). The Board of Grain Commissioners' Secretary wrote the Dominion Marine Association's Counsel on March 11 as follows:

"So far as shovelling is concerned, the board has decided that it is not policy for it to acquire any jurisdiction over this charge, as quite a percentage of the grain received at the eastern public elevators is of United States origin, over which the board has no jurisdiction. The board therefore prefers to leave the matter of the shovelling charge to be arranged between the elevators and the carriers.

"As the government has decided to place the trimming of western grain into vessels at Fort William and Port Arthur under the board's jurisdiction for the purposes of eliminating any profiteering, the board is of opinion that the best way to handle the matter would be to license the trimmers, subject to certain rules and regulations. Part of the regulations would of necessity, include the approval of the rates to be charged for this service, and as the U.S. lake carriers, along with all the other Canadian carriers, with the exception of the Canada Steamship Lines, have advised the board that they are willing for the board to make whatever rules and regulations they think proper, the board feels that it will hardly be necessary to call a session for the discussion of this matter."

Telegraph, Telephone and Cable Matters.

E. N. Hurley, President U.S. Shipping Board, predicts that New York business men soon will be taking and placing orders in South American ports by wireless telephone.

Marconi is reported to have said that wireless telephone communication between New York and London will be in effect within three months. Three minute conversation will cost $5.

The Marconi Wireless Telegraph Co. has, according to a Montreal press dispatch, established wireless telephone communication between Newcastle, N.B., and Lyons, France, and also with Belmar, N.Y.

The Quebec Public Utilities Commission has authorized the National Telephone Co., operating in L'Islet County, to raise its rates considerably to the following figures: Branch lines, business, $25; house, $20. Party lines, business, $18; house, $15.

The Marconi Wireless Telegraph Co. resumed wireless telegraph service across the Atlantic Mar. 10., for the general public. Until further notice the service will be for full rate traffic only. During the war, official messages only were handled.

The C.P.R. Co's. Telegrph Department is stringing a new copper wire from Halifax to Montreal, and the work is expected to be completed very shortly. As there are 800 miles in the telegraph route and it takes 210 lb. of wire a mile, the total weight of the wire is 168,000 lb., or 84 tons. In addition, a number of other copper wires will be strung on different parts of the system this year.

The Marconi Wireless Telegraph Co. has, according to a Montreal press dispatch, completed arrangements for supplying airgrams to aviators who may attempt to cross the Atlantic. A complete series of bulletins about weather conditions over the area to be traversed will be compiled from advices of ships at sea and will be sent out from the company's Glace Bay, N.S., station, to be picked up by the aviators.

The Great North Western Telegraph Co. has opened offices at Burlington, and Pass Lake, Ont.; Eaton, and Madison, Sask.; and has closed offices at Cap Rouge station, Cartierville, Little Metis lighthouse, Neuville station, Perthuis, and Portage du Fort, Que.; Camp Mohawk, Chaffeys Locks, Melbourne, and Mitchell, Ont.; and Dropmore and Hodgsen, Man. The name of its office at River Henry, Que., has been changed to Henry River.

The Pacific Cable Board is considering representations made to it by Canadian and U.S. interests, for a duplication of the cable between Canada and Australia. It is pointed out that during the war the cable facilities were greatly overtaxed, and there appears to be no diminution in the traffic. In this connection, it is reported that the Marconi Wireless Telegraph Co. has made a proposal to certain Australian newspapers for a British news service on a 10 year contract at 50c a word, which is stated to be for too long a term and at too high a rate. It it is however stated that the Marconi proposal may mean the life or death of the Pacific cable, but it is considered that there is sufficient traffic for both cable and wireless.

Among the Express Companies.

G. Ford, General Superintendent, Dominion Express Co., Winnipeg, has been on a trip to California.

R. C. Mellish has been appointed 1st express freight agent, Canadian Ex. Co., Toronto.

M. W. Corrigan has been appointed 1st express freight agent, Canadian Ex. Co., Winnipeg.

V. J. Smith has been appointed cashier, Canadian Ex. Co., Windsor, Ont., vice J. V. Yeoman promoted.

J. T. Madigan has been appointed route agent, Canadian Ex. Co., Hamilton, Ont., a new position.

W. B. Bray has been appointed agent, Canadian Ex. Co., Sydney, N.S., vice A. C. Millar resigned.

W. J. Tretaway has been appointed agent, Canadian Northern Ex. Co., Quebec, Que., vice M. G. Donnelly deceased.

R. H. Jones, heretofore route agent, has been appointed Assistant to Superintendent, Canadian Ex. Co., Toronto.

S. H. Bellett, heretofore agent, Windsor, Ont., has been appointed route agent, Canadian Ex. Co., Toronto, vice R. H. Jones promoted.

J. V. Yeoman, heretofore cashier, has been appointed acting agent, Canadian Ex. Co., Windsor, Ont., vice S. H. Bellett, agent, promoted.

The board of conciliation appointed to deal with complaints of the Canadian Ex. Co's. messengers, helpers, drivers, clerks, porters and other employes, filed its report with the Dominion Labor Department at Ottawa, Mar. 18. The enquiry covered the whole system, and the award favors an eight hour day, with increases in wages ranging from 10 to 15%, with time and a half for overtime and legal holidays.

The American Railway Ex. Co. reports that after a 30 days campaign for the better packing and marking of express matter, concrete results have been achieved. At a meeting of the company's local employes at Montreal, Mar. 13, it was stated that not only were packages received in better condition, but there was a noticeable falling off in consignments that were sent to the "no mark" bureau, the decrease being about 50%. The company thanked the local merchants for their co-operation. The campaign is being continued in Canada, and meetings are being held at various points, with the view of instructing both employes and the public on the advantage of greater care in packing and marking.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Independent Pneumatic Tool Co., Chicago, Ill., and 334 St. James St., Montreal, has issued circular 30, describing and illustrating Thor pneumatic tools.

Metal & Thermit Corporation, 120 Broadway, New York, and 15 Emily St., Toronto, has issued a wall calendar for 1919, which contains a map showing the new railway time zones in the United States, which went into effect Jan. 1, together with the continuation of these zones in Canada.

The Canadian Ingersoll-Rand Co. has absorbed the Jenckes Machine Co. of Sherbrooke, Que., and now has two plants, the Rand plant and the Jenckes plant. The products of the "Jenckes plant" will continue to be structural and plate work; tanks, penstocks, etc.; mining machinery and equipment, ore crushers, cars, cages, etc., and pulp and paper equipment such as barkers, grinders, water wheels, etc. The Canadian Ingersoll-Rand Co's. headquarters are at 260 St. James St., Montreal.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

Belleville Railway Men's Educational Club—[illegible] 7.30 p.m. F. A. Pinkston, Belleville, Ont.

Canadian Car Service Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.

Canadian Electric Railway Association—Acton Burrows, [illegible] Street, Toronto.

Canadian Freight Association (Eastern lines)—G. C. Ransom, Canadian Express Building, Montreal.

Canadian Freight Association (Western lines)—W. E. Campbell, [illegible] Winnipeg.

Canadian Railway Club—J. Powell, St. Lambert, Que. Meetings at Montreal 2nd Tuesday, each month [illegible] p.m., except June, July and August.

Canadian Railway War Board—W. M. Neal, Montreal.

Dominion Marine Association—F. King, Counsel, Kingston, Ont.

Canadian Ticket Agents' Association—E. de la Hooke, London, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Wolsey, 94 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Ham, Montreal.

Great Lakes and St. Lawrence River Rate Committee—James Morrison, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. F. Dion, Quebec.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Toronto Transportation Club—W. A. Gray, 143 Yonge Street, Toronto.

Transportation Club of Vancouver—H. W. Schofield, 556 Church Street, Vancouver, B.C.

NOTICE TO CONTRACTORS.

The Timiskaming and Northern Ontario Railway Commission.

Toronto, Ont., March 26th, 1919.

SEALED TENDERS for the works (other than steel bridges) necessary to the complete construction of the roadbed, ready for the ties and rails, also the tracklaying, ballasting and fencing, upon that section of the Timiskaming and Northern Ontario Commission's railway, extending from Timmins to Mattagami River, a distance of two (2) miles, will be received at the office of the Secretary Treasurer of the Commission, 56 Church Street, Toronto, until twelve o'clock (noon) on the 15th day of April, 1919.

On receipt of a request in writing, a copy of each of the following documents:

Instructions to Bidders.
Form of Tender
Specifications.
Form of Contract

will be furnished to intending bidders at the office of the Secretary Treasurer of the Commission, Toronto; or at the office of the Chief Engineer of the Commission, North Bay, where plans and profiles pertaining to the work may also be seen.

The right is reserved to reject any or all bids.

(Sgd.) W. H. MAUND,
Secretary Treasurer, Timiskaming and Northern Ontario Railway Commission.

CANADIAN NATIONAL RAILWAYS.

Eastern Lines, Ontario District.

SEALED TENDERS addressed to the undersigned and endorsed "Tender for Concrete Abutments, piers and culverts, Nipigon Subdivision," will be received at this office until twelve o'clock noon, Wednesday, April 9th, for the construction of four abutments, two piers and two culverts on the Nipigon Subdivision, between Jellicoe and McKirdy.

Drawings, specifications and form of contract may be seen and form of tender obtained at the office of the Engineer, Maintenance of Way, no. 7 Adelaide St. East, Toronto.

Tenders will not be considered unless made on the form supplied by the Railway Company and accompanied by an accepted cheque on a Chartered bank for the sum of Three Thousand Dollars ($3,000.00), payable to the order of the Treasurer of the Canadian National Railways.

NOTE: Blue print copies of the drawings may be obtained at the office of the Engineer, Maintenance of Way, by depositing an accepted bank cheque for the sum of Ten Dollars ($10.00) payable to the Treasurer, Canadian National Railways, the said cheque to be returned if the intending tenderer submits a regular tender.

The lowest or any tender not necessarily accepted.

A. F. STEWART,
Chief Engineer,
Eastern Lines.
Canadian National Railways,
27 Wellington St. East,
Toronto.

CANADIAN PACIFIC RAILWAY COMPANY.

NOTICE TO SHAREHOLDERS.

The Thirty-eighth Annual General Meetnig of the Shareholders of this Company, for the election of Directors to take the places of the retiring Directors and for the transaction of business generally, will be held on Wednesday, the seventh day of May next, at the principal office of the Company, at Montreal, at Twelve o'clock noon.

The Common Stock Transfer Books will be closed in Montreal, New York and London at 3 p.m. on Tuesday, the fifteenth day of April. The Preference Stock Books will be closed in London at the same time.

All books will be re-opened on Thursday, the eighth day of May.

By order of the Board,
ERNEST ALEXANDER,
Secretary.
Montreal, March 19th, 1919.

Shipbuilding Discussion in the Dominion Parliament.

In moving the address in reply to the speech from the throne at the opening of the Dominion Parliament's current session, R. J. Manion, M.P. for Fort William and Rainy River, said among other things:—"In shipbuilding, including ships built to the order of the Imperial Munitions Board and other private contracts, we built 103 ships, with a dead weight carrying capacity of 367,000 tons. We built for the Imperial Government over 700 small armed trawlers and drifters of various types; for the French Government over 40 armed trawlers, and coastal patrol motor boats. Why, in my own inland port city of Fort William, 1,500 miles from the Atlantic coast, up there on the shores of Lake Superior, which were explored 200 years ago by French voyageurs and courieurs des bois, we built for the native land of these Frenchmen 12 armed trawlers, which sailed down the lakes and rivers of what was originally New France, on their way to the shores of Old France. What a historical romance for the pen of a Parker!"

The Minister of Public Works, Hon. F. B. Carvell, in a subsequent debate, said: "The government is spending a large amount of money this year—I am not sure as to the exact amount, but I imagine it must be $20,000,000 or $25,000,000—and it expects to spend about $30,000,000 during the next fiscal year in the construction of steel ships in Canada. I know there will be criticism of this; at least, I assume there will during the session, because criticism has already been launched in the public press, and, so far as I am concerned, I want to meet it here and to give my views very plainly. It is always a very easy matter to be wise after the event. A year ago there was nothing which the civilized world needed so much as shipping. Shipping was more vital to winning the war than were men or shells or anything else. The greatest cry of the allied armies a year ago was for ships, ships to carry United States soldiers across the ocean,\ and ships to carry food to the allied armies. The Canadian Government decided to undertake a shipbuilding programme which involved the construction of 52 ships varying in size from 3,500 tons d.w. to 10-000 tons d.w. One of these has already been completed and is in service. I do not deny—I do not for a moment try to conceal the fact that those ships are going to cost more than they would have, had the Government gone out into the open market after peace was declared and bought them. But buying the ships after peace was declared would not have helped furnish ships in order to carry on the war; and if the war had continued, as most people expected it would, over another winter and another summer, two-thirds or at least one-half of those ships would have been at the service of the country. Even today, while we admit that the war is over and the crying necessity for those ships has ceased to exist, the construction of them plays an important part in many portions of Canada in furnishing labor to the unemployed, a task which I look upon as the paramount duty of this government and of the government of every province and every municipality at present. So far as I am concerned and I speak for my colleagues, so far as we are concerned collectively—in the allocation of the public moneys, we have taken into consideration practically altogether the probable requirements to take care of unemployment in the labor world generally, rather than the advantage which a particular work or expenditure of money will be to the people in the vicinity in which the work is done or the money expended. That has been the underlying principle in the making up of the estimates. The ships are being built today at Montreal, at Toronto, at the head of the Great Lakes, at Port Arthur and Fort William, and at Vancouver and Victoria. Were those works not going on in those localities, especially on the Pacific coast, you would find a very different condition of affairs from what exists today. I, therefore, make no apology. No apology is required. I am simply pointing out that we are doing this in order to try to meet the pressing requirements of the moment and to place the country in a position to get back to a peace basis."

Mr. Carvell was evidently in error in saying that vessels for the Canadian Government Merchant Marine are being built in Toronto, as no orders have been given to Toronto builders.

J. H. Sinclair, M.P. for Guysborough, N.S., said:—"The Minister of Public Works referred to the construction of ships. He told us the government had embarked on a policy of building ships, and that a very large sum of money was to be expended. He admitted he could go into the market at present and buy ships cheaper than he could possibly build them. If that be true, why pay more than they are worth? As far as my information goes, I believe that the government is paying under these contracts about four times the normal value for the ships it is proposing to build. In normal times ships can be built for about $50 a gross ton, but in the contracts I have seen the government is paying something like $200 a ton. [Editor's note: This is per ton d.w.] The government will never see its money again; I fear it is an improvident proposal. It took the government four years finally to make up its mind to build ships. The time to have built ships, if they were to be of service in the war, was in 1914, when war broke out, but the government waited until the war was about over, and then embarked on a very expensive programme of building ships for which it proposes to pay four times the normal price. Such a policy is not at all likely to promote the building of ships in Canada. If the government could devise a way of promoting and assisting shipbuilding in Canada, that would be a very wise and proper move to make, but to build ships at four times the normal price is certainly not likely to stimulate the building of ships by private enterprise. I am not in favor of government ownership of tramp vessels; I do not think the policy is a wise one, and I do not think it will do much to solve the problem of providing employment which I understand the minister to say was the main reason for its adoption. If this is the government's object, I can say that I know of no other industry that gives so little employment of labor for the amount of money expended as the building of steel ships. The government could easily have found some other industry where it could have employed a larger number of people with a smaller expenditure of money. Is there not something we can do in this country that would bring us in some return? Would it not better, for instance, to buy tractors and plough up the western prairies and produce wheat?"

Michael Clark, M.P. for Red Deer, Alta.:—"We would need the ships to carry the wheat."

J. H. Sinclair:—"I am afraid if we make the rates of freight correspond with the outlay on the ships the wheat would be too expensive. Would it not be a saner policy to expend part of this money in building branch lines of railway lines in Nova Scotia? I can show him places in my own constituency where by the construction of a branch line, he would open up the country and encourage production and help at the same time to make the Intercolonial Ry. profitable. Building branch lines of railway where they are needed would be doing something for the country, and would be a far better policy than buying expensive ships for which there does not seem to be any future to justify the expenditure involved."

Canadian Merchant Service Guild Recommendations.

The Canadian Merchant Service Guild, at an executive meeting in Toronto recently, decided to make the following recommendations to the parliamentary committee:—

That the Dominion Government be asked to create a fund which will give seamen free hospital attention, when necessary, the same privilege to be extended to fishermen and lighthouse keepers.

That all bridges across Canadian rivers and canals be provided with suitable signals to inform those in charge of a vessel that such will be opened before approaching close enough to endanger life and property.

That every Canadian vessel be officered by Canadians, and that every such vessel leaving port be in charge of a certified person.

That every Canadian vessel of 500 tons or over be provided with a master, first officer and second officer, and that every Canadian vessel less than 500 tons and operating more than 12 hours a day, with the exception of vessels employed solely in fishing, shall be provided with a master and one officer, these officers to be recognized as such by the government.

That every Canadian vessel be manned as may be found necessary to the safety of public life and property afloat.

That Canadian coastwise trade be reserved solely for vessels truly and without fraud owned by the [illegible] of Canada.

That the Canada Shipping Act be revised to conform to the necessities of our mercantile marine.

That every master, mate and officer who considers himself not fairly dealt with by our courts of enquiry shall have the privilege of appealing to the Admiralty Court for final decision.

That a ruling be given regarding the articles supplied to our coasting vessels, as it contains the [illegible] of the British Empire, and at present [illegible] do not seem to understand its [illegible].

That the government be asked to introduce legislation which will give all [illegible] of Canada the use of their [illegible].

That Otter Head light, on the north

shore of Lake Superior, be immediately put into commission, and a fog signal installed at that point.

That the government without further delay, take up the matter of installing life-saving stations, equipped with wireless, more especially along the north shore of Lake Superior.

It was decided that the nautical school in Collingwood be put under the guild's auspices, and that similar educational institutions be inaugurated throughout the Dominion as soon as the progress of the institution will allow.

The Reid Newfoundland Co's. Steamship Services.

Reports were current recently that the s.s. Bruce, formerly owned by the Reid Newfoundland Co., and sold some time ago to the Russian Government, and which happened to be in Glasgow, Scotland for repair, at the time of the Russian revolution, was likely to return to that company's ownership, and that she would be replaced in service between Port aux Basques, Nfld., and North Sydney, N.S. We are officially advised that the s.s. Bruce is not now owned by the company, and it is therefore not interested in the matter. The company's steamship services at present in operation, are as follows:

Port aux Basques and North Sydney, daily, steamships Kyle and Sagona, when North Sydney is a closed port, on account of ice, the vessels call at Louisburg, N.S.; Port aux Basques and Placentia, Nfld., weekly, s.s. Glencoe; Placentia Bay, Nfld., weekly to each side of the bay, s.s. Argyle; St. John's and North Sydney, s.s. Meigle, and other vessels; during the heavy traffic movement it was necessary to charter steamships for this service. On the opening of navigation in the bays, the following steamship service will be given in addition to the foregoing:—Trinity Bay, two trips weekly, s.s. Petrel; Notre Dame-Bonavista Bay, two trips weekly, steamships Clyde and Dundee; Green Bay, weekly, s.s. Home; Humbermouth-Battle Harbor, weekly, s.s. Ethie. Between June 1 and Oct. 1, a service is given between St. John's and ports of call on Labrador.

The Chats Falls Navigation Co., Ltd., has been incorporated under the Dominion Companies Act, with $50,000 authorized capital and office at Ottawa, Ont., to own and operate steam and other vessels, wharves, docks and other navigation facilities, and to carry on a general navigation business. W. J. Graham, O. Martin, L. G. Roy, C. Emery and W. J. Carson, Ottawa, and H. Keoey, Fitzroy Harbor, Ont., are the incorporators. It is reported that a contract has been placed in Aylmer, Que., for the construction of a vessel 90 ft. long, and 22 ft. wide, for $15,000, for a service of two trips daily between Britannia Bay and Fitzroy Harbor. The company has purchased the tug Fashion from the Public Works Department, as hauled out at the Victoria Island shipyard at Ottawa. She was built at West Bay City, Mich., in 1893, and is equipped with compound engine with cylinders 14 and 24 in. diar. by 13 in. stroke, 24 n.h.p., supplied with steam by a boiler 70 in. diar. by 105 in. long, jet condenser, duplex feed pump and 6 in. propeller. Her dimensions are: length 52 ft., beam 16 ft., draft 7½ ft.; tonnage, 43 gross, 27 register. The hull was recently condemned.

Canadian Bulk Freight Steamships On The Great Lakes.

Following is a list of Canadian bulk freight steamships trading on the Great Lakes, which were enrolled in the Dominion Marine Association for 1918. Those marked with an asterisk were not operating on the Great Lakes at the close of 1918, having been transferred to ocean service, chiefly for overseas service:

*A. E. Ames, *A. E. McKinstry, Advance, Arabian, *Atikokan, Barge No. 41, *Beaverton, Bickerdike, Cadillac, *Canadian, City of Hamilton, City of Ottawa, E. B. Osler, Easton, Emperor, *Glenellah, Glenmount, *H. M. Pellatt, Haddington, Hamonic, Huronic, Imperial, Iocolite, Iocoma, Ionic, J. H. G. Hagarty, Joyland, *Kenora, Laketon, *Mapleton, Martian, Midland King, Midland Prince, Noronic, *Paipoonge, *Renvoyle, Riverton, *Rosedale, *Royalite, Sarnian, *Sarnolite, Seguin, W. D. Matthews, W. Grant Morden, Westmount, *Winona, Yorkton.

It will be noticed that the list shows the steamships Atikokan and Paipoonge, as not being operated on the Great Lakes at the end of 1918. During that year, both vessels were sold to foreigners, and were cut in two, to allow of the passage through the Welland Canal. After this was done, the foreign purchasers defaulted in payment, and by sale under an order of the court, the vessels returned to Canadian ownership, being bought by the Collingwood Steamship Co.

A Dream Come True.—The London, Eng., Daily Mail rhapsodizes on the enthusiasm of the Toronto populace as the troopships pull along the quaysides with their loads of returning soldiers. Toronto will, probably, be an ocean port one day, but the current season was opened by the customary steamship from Hamilton.

Public Works Department's Work.—The Minister of Public Works, Hon. F. B. Carvell, in speaking in the House of Commons recently, said: "In the department's engineering branch, we are doing repair work and maintaining the works. There were some places, particularly down in the lower St. Lawrence, where tremendous damage was done by storms last year. In such cases repairs must be made, but I may as well tell the house that we are not putting in new works of a very extensive character, simply because we believe we can expend the money on other work, such as highways, railways and canals, shipbuilding and such things as these which will produce better results and give more employment."

Compensation for British Ships Sunk.—Col. Leslie Wilson, is credited with saying that the amount paid by the British Government to shipowners in compensation for British ships sunk by the enemy while under government requisition and at direct government risk, between Aug. 4, 1914, and the armistice, was $520,156,355. The first cost to the owners of these ships was estimated at $255,584,030. In addition $5,844,125 was paid in respect of 25 ships whose first cost is not known. There are also a few cases not yet settled. No taxation is levied on these sums, which represent capital, not income, and are required to replace the vessels. Building costs are now from two to three times what they were before the war.

A Little Bit of Nonsense.

"Circumstances alter not only cases but words as well."

"Explain yourself."

"When the captain of a vessel ships a cook he hires him; but when a housewife ships her cook she fires her."—Boston Transcript.

Wines are terribly scarce in Great Britain just at present, and are likely to remain so for some time owing to the reduction of tonnage. Our ships, however, are doing their best to make port as quickly as possible.

Shipping Federation of Canada, Annual Report and Meeting.

At the Shipping Federation of Canada's annual meeting, in Montreal, recently, John Torrance, who presided, referred to the death of the President, Andrew A. Allan, who was elected to the position in 1909, and filled it ably and satisfactorily. Following are extracts from the annual report:—

"The total number of sea-going vessels which arrived at Montreal during 1918 was 674, of 1,933,482 tons register, an increase of 27, compared with 1917. The past season was the busiest ever experienced at Montreal, the export shipments were the heaviest on record. A unique fature was the large number of U.S. Emergency Fleet Corporation ships which visited the port. these vessels were all built on the lakes and the greater part of them loaded cargo at Montreal for U.S. Atlantic ports and others for Europe direct.

"As regards shipping conditions during 1918, it is true the government increased the "blue book rates," in the early part of the year, but even with this increase, shipowners are not receiving what they should, in comparison with the services they have rendered to the nation. Now that the war has been victoriously won, pressure is being brought to bear on the government to demobilize shipping as soon as possible, and it is understood that the government is making arrangements to release shipping under its control after March 1. It is obvious that when owners are permitted to manage their own business and order the ships they require, then the work of reconstructing their trades and fleets can commence. It is not an easy task nor a quick one, but if shipowners are left to themselves, I am certain they can accomplish it. All shipowners recognize more or less that competition from our allies and neutrals will be keen, and the least the government can do is to give the shipping industry a free hand, by withdrawing the restrictions which are now preventing it from expanding."

"It is needless for me to say that the St. Lawrence Power Co's. application for permission to dam the St. Lawrence river at the Long Sault Rapids was strenuously opposed by the federation, acting in conjunction with other commercial bodies interested in the welfare of the St. Lawrence route. A similar scheme was brought out in 1910, but at that time we were fortunate enough to have the measure defeated. This time, however, the power company was backd by the U.S. War Department, and, in view of this, the International Joint Commission, as an interim measure, granted the petitioners permission to construct and maintain a dam for five years, or until the termination of the war, whichever shall come first. Now that the war is over, it is to be expected that our government will immediately take steps to have a sufficient supply of water to accommodate the largest vessels which visited this port throughout the season."

A total of 190 vessels of 1,119,828 gross tons were entered with the federation during 1918, an increase of 295,433 tons over 1917.

The officers of 1918 were re-elected for 1919, John Torrance succeeding the late A. A. Allan as President, and A. E. Cooke being added to the executive council.

The Minister of Marine on Government and Other Shipbuilding.

The Minister of Marine, Hon. C. C. Ballantyne, M.P., is reported to have said in an interview at Montreal, March 6, just before leaving for Atlantic City to recuperate after his serious illness, as follows:—

"I intend to make a full statement in the House of Commons on my return to Ottawa, and therefore do not care to say much regarding this now. When I announced in the house last session the government's shipbuilding programme, I explained Canada's great need for ships at that time, more particularly to work in conjunction with the Canadian National Railways. I also stated that the government hoped that shipbuilding would be permanent. Since then many difficulties have arisen. The cost of skilled and unskilled labor has greatly increased, as well as the cost of all materials that enter into the building of ships, which will make it more difficult to maintain shipbuilding in Canada on a permanent foundation.
